Representatives of Egypt, Saudi Arabia and Iraq reportedly conferred in Cairo today on the possibility of replacing French aid to Tunisia with loans from other Arab states. Last week, France suspended financial aid to Tunisia on grounds it was supporting the Algerian independence movement.

The Supreme Court today set aside the "tax fix" conviction of Henry Grunewald on grounds that the jury which convicted him was improperly charged. The decision ordering a new trial for Grunewald and the two persons convicted with him was unanimous. In a split, 7-to-2 decision, the court refused to shorten the prison sentence of New York gambler Frank Costello, sentenced to five years for income-tax evasion. The Supreme Court agreed to review the appeal of the National Association for the Advancement of Colored People from a 100-thousand-dollar fine imposed by an Alabama court. The fine was for contempt of court...growing out of the refusal of the association to produce names and addresses of its members.

Edward R. Murrow: May 27, 1957. 7.45 p.m.

Chancellor Adenauer's visit to Washington is his fifth in four years. Each time he has been given an enthusiastic reception. In the past four years the influence and importance of the German Republic has grown remarkably. On earlier visits more was heard than this time of the part Dr. Adenauer has played in the transformation of Germany into a trusted member of the free world. It was a novelty, as well as something of a miracle. It still is something of a miracle, but the novelty has worn off. Dr. Adenauer has become a kind of institution. It is difficult to think of the German Republic without him.

to this Country - 4 years ago -

On his first visit, Dr. Adenauer faced a national election and his success in Washington undoubtedly contributed to his victory. This year he again faces an election, and success in Washington will again count in the election. But this time the help he needs from Washington is negative, rather than positive. He needs assurance that the present Eisenhower policy on disarmament is not going to condemn Germany to a long term of disunity. Presumably he can be given this assurance, since it is a principle in our new disarmament thinking that after a first short step in arms reduction, any second step must be linked with a solution of the problem of German unification. That was decided before Dr. Adenauer came. Dr. Adenauer may

wish that the first step in disarmament also would be linked with the issue of unification. Not that he or the Germans are opposed to disarmament. As much as any Europeans they want it eagerly. But they want unification even more eagerly. And if German voters should decide that loyalty to the United States may lead to postponement of unification, things will go badly for Dr. Adenauer's Christian Democratic party.at the polls.

Here we are confronted with a dilemma, and the Germans with another of their own. Our dilemma is that we may not be able to get any arms reduction whatever, without agreeing for a time to the present status in Eastern Europe. That is, we can't expect the Kremlin to reduce its forces if our political purpose is to liberate the satellites. If we can convince the Russians that we don't expect to roll them behind their own borders, politically as well as militarily, that would reduce tensions and enable both sides to cut defense budgets.

But if we convince them, we assent to the continued Soviet domination of East Germany and other satellites, and that would put off German unification for the time being certainly. Our dilemma is that we want reduction in arms, and we want Germany united in freedom, and we can't have

both at the same time. ~~We may believe that we can have them both, if tensions are sufficiently relaxed. That may be the hopeful gamble in the present policy.~~

The German dilemma is that they also want two things that seem irreconcilable. They want unification and they want it in freedom. Dr. Adenauer will not merge the two Germanys from the top down, because that would give the East German communists a vested interest in the government of a united Germany. He feels this would open the way to the ultimate communist domination of all Germany. He insists that Germany be united through free elections. And this the Kremlin would hardly grant, unless it was prepared to give up its control of the satellites, starting with East Germany.

But there are indications that the Kremlin would pay a part of this price to have Germany yanked out of the Western world and neutralized. How much of the price it is willing to pay, the Germans still have to learn. But just now they are heavily involved in the discussion of Russian proposals for neutrality and de-militarized zones. The Social Democrats in Germany are ready to go the whole way to neutralization as the price of unification. Dr. Adenauer himself has to be talking about it.

A new four thousand-word memorandum on German-Russian relations was being studied today in Moscow. In it Dr. Adenauer's government said it was quite willing to discuss a de-militarized zone in central Europe, if the Russians would agree to re-unification through free elections. At the same time he rejected a demand for the withdrawal of Western troops from Germany. His memo to Moscow was not a bid for favors, it was an accusation that it is the Russians who are blocking unification. But it showed neutralization is a big issue in the coming election, and Dr. Adenauer does not dare be against it.

Western policy in Germany since the war has been singularly successful, thanks in great measure to the character and philosophy of Dr. Adenauer and his associates. But the West cannot give the Germans all they want. As a defeated nation they want power and prestige, and this to some extent the West has given them. But quite as much they want to be united and this the West cannot give, not short of war. Only Russia can give it. So long as Russia withholds it, the Germans will remain with the West. But if Russia gives it, and makes the price attractive, the German voters cannot be expected to say No.

George Bryan

Word for Today

~~For more than ten years, the German people have been seeking reunification.~~ Russia has been insisting on negotiations between East and West Germany... and Chancellor Adenauer has joined us in insisting on free elections first. But only Russia can give the Germans their unity. If the price looks right, it is too much to expect the German people to resist. For as Finley Peter Dunne observed, "At cards or world politics, there are no friends."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

MONDAY, MAY 27, 1957
7:45--8:00 P.M., E.S.T.

This is the news:

Five power disarmament talks resumed today in London. The United States representative, Harold Stassen, did not present the new American proposals for a "first step" arms agreement. Stassen conferred with the delegates of Britain, France and Canada before the session and briefed them on the nature of the proposals. And there is speculation that Stassen may not submit the American program formally for several days, in order to give the other western delegates time to consult their governments. Before they went into today's meeting..which lasted only 20 minutes..Stassen and the Soviet representative, Valerian Zorin, both said they were prepared for serious negotiations.

In Washington today, West German Chancellor Adenauer and Secretary of State Dulles discussed world problems..including unification of Germany and disarmament..for four hours. Adenauer said this evening that they had had a "very frank and very candid discussion." Dulles is said to have reassured Adenauer that West Germany will be "fully consulted" before any first step disarmament agreement with Russia is developed. The chancellor had luncheon today with President Eisenhower, at the White House. The communique summing up the talks is due tomorrow.

House Republican leaders will try to restore only 300-million of the two and a half billion dollars slashed from President Eisenhower's defense budget by the House Appropriations Committee. Mr. Eisenhower said last week that the Administration would try to "live with" a billion, 300-million dollars of the cut..that it was "nothing but a bookkeeping operation anyway." But the other billion, 200-million, he said, was essential. The House Republican Policy Committee met today and decided to try to restore 300-

million dollars. As for the rest of the two and a half billion dollars cut, Republican Leader Martin said, "We've got to face reality." There were signs late today that..with the help of House Democrats..as much as 500-million dollrrs might be restored.

Special Ambassador James P. Richards testified before the Senate Foreign Relations Committee today on his recent missinn to the Middle East. On that mission, Richards explained the Eisenhower Doctrine to countries of the area..and committed the United States to 120-million dollars in military aid. Richards said today that the program already has scored "a notable success." But Mr. Eisenhower, he said, needs to have continuing authority to act. He warned, "This cannot be a one- shot operation."

President Eisenhower today signed an appropriation bill..carrying 3-billion, 192 - million dollars for the Post Office Department in the next fiscal year. This is 58 - million dollars less than the Administration requested. Mr. Eisenhower. said..in signing the measure..that unless Congress voted more money, postal services will have to be "substantially"curtailed, starting July first. Postamster General Summerfield says that special delivery rates..and fees for money orders and insured mail..will be raised, effective July first.

The joint congressional atomic energy committee opened hearings today on the effects of radio - active fallout. Dr. Charles Dunham testified that with care , release of radio - active material in the utilization of nuclear energy can be reduced."But," he said, "if we continue to reduce the fraction we are willing to release, we eventually reach a "cost of control" which makes the operation prohibitive." Dr. Dunham is director of Atomic Energy Commission' division of medicine. Dr. Alvin Graves of the Los Alamos laborarory said it is : possible to make cleaner bombs. "But complete cleanliness in nuclear weapons," he said, "is impossible to achieve."

The United States indicated today that it will reject Hungary's demand that 13 members of the staff of the American legation in Budapest be sent home. The Hungarian note had accused legation personnel of "illegal intelligence activity". A State Department spokesman said, "The United States rejects the concept implicit in this note that the Hungarian regime enjoys the prerogative of deciding the size of our diplomatic mission." It was indicated, however, that some members of the legation staff will be withdrawn.

Russia and Hungary have signed an agreement covering the status os Soviet troops "temporarily" based in Hungary. According to the Soviet news agency Tass, Russian troops stationed in Hungary will be subjected to Hungarian law.

Representatives of Egypt, Saudi Arabia and Iraq reportedly conferred in Cairo today on the possibility of replacing French aid to Tunisia with loans from other Arab states. Last week, France suspended financial aid to Tunisia on grounds it was supporting the Algerian independence movement.

The Supreme Court today set aside the "tax fix" conviction of Henry Gruenwald on grounds that the jury which convicted him was improperly charged. The decision ordering a new trial for Gruenwald and the two persons convicted with him was unanimous.

In a split, 7 - to - 2 decision, the court refused to shorten the prison sentence of New York gambler Frank Costello, sentenced to five years for income - tax evasion.

The Supreme Court agreed to review the appeal of the National Association for the Advancement of Colored People from a 100-thousand - dollar fine imposed by the Alabama court. The fine was for contempt of court... growing out of the refusal of the association to produce names and addresses of its members.

On his first visit to this country - four years ago - Dr. Adenauer faced a national election and his success in Washington undoubtedly contributed to his victory. This year he again faces an election, and success in Washington will again count in the election. But this time the help he needs from Washington is negative, rather than positive. He needs assurance that the present Eisenhower policy on disarmament is not going to condemn Germany to a long term of disunity. Presumably he can be given this assurance since it is a principle in our new disarmament thinking that after a first short step in arms reduction, any second step must be linked with a solution of the problem of German unification. That was decided before Dr. Adenauer came. Dr. Adanauer may wish that the first step in disarmament also would be linked with the issue of unificatoon. Not that he or the Germans are opposed to disarmament. As much as any Europeans they want it eagerly. But they want unification even more eagerly. And if German voters should decide that loyalty to the United States may lead to postponement of unification, things will go badly for Dr. Adenauer's Christian Democratic party at the polls.

Here we are confronted with a dilemma, and the Germans with another of their own. Our dilemma is that we may not be able to get any arms reduction whatever, without agreeing for a time to the present status in Eastern Europe. That is, we can't expect the Kremlin to reduce its forces if our political purpose is to liberate the satellites. If we can convince the Russians that we don't expect to roll them behind their own borders, politically as well as militarily, that would reduce tensions and enable both sides to cut defense budgets.

But if we convince them, we assent to the continued Soviet domination of East Germany and other satellites, and that would put off German unification for the time being certainly. Our dilemma is that we want reduction in arms, and we want Germany united in freedom, and we can't have both at the same time.

The German dilmema is that they also want two things that seem irreconcilable. They want unification and they want it in freedom. Dr. Adenauer will not merge the two Germanys from the top down, because that would give the East German communists a vested interest in the government of a united Germany. He feels this would open the way to the ultimate communist domination of all Germany. He insists that Germany be united through free elections. And this the Kremlin would hardly grant, unless it was prepared to give up its control of the satellites, starting with East Germany.

But there are indications that the Kremlin would pay a part of this price to have Germany yanked out of the Western world and neutralized. How much of the price it is willing to pay, the Germans still have to learn. But just now they are heavily involved in the discussion of Russian proposals for neutrality and de-militarized zones. The Social Democrats in Germany are ready to go the whole way to neutralization as the price of unification. Dr. Adenauer himself has to be talking about it.

A new four thousand - word memorandum on German - Russian relations was being studied today in Moscow. This is the news:

President Eisenhower and West German Chancellor Adenauer today issued a joint communique summing up their Washington talks. The two leaders agreed that if initial disarmament steps succeed, they should be followed "within a reasonable time" by a comprehensive arms agreement. A comprehensive agreement, they said, "must necessarily presuppose a prior solution of the problem of German reunification." Adenauer suggested that conclusion of a "first-step" arms agreement might be "an appropriate time" for a four-power foreign ministers conference on the reunification of Germany. Mr. Eisenhower agreed that the United States would consult with the French and British governments regarding this matter. The communique reaffirmed the western position that Germany must be reunited "on a free and democratic basis by peaceful means." It said, "If the Soviet rulers really desire peace and

→

the relaxation of international tension, they can give no better proof than to permit the reunification of Germany through free elections." The communique said...on the subject of NATO...that West Germany will proceed "as rapidly as possible" with building up its contribution to Western European defense. "The United States," it said, "intends to maintain forces in Europe as long as the threat to the area exists."

Chancellor Adenauer told the House of Representatives today... in a speech...that nobody in West Germany "plays with the idea" of trying to solve the reunification problem by force.

The disarmament talks in London have again recessed...and the United States delegate, Harold Stassen, flew tonight to Paris. American sources say Stassen went to Paris to report to the NATO Council, and that this is in line with the United States policy of keeping its allies informed on the latest developments. A high French source in Paris gives a different reason for Stassen's trip. France, according to this source, [redacted] strongly opposes the part of the American disarmament proposal which...reportedly...would restrict possession of nuclear weapons to the countries which already have them---namely, Russia, Britain and the United States. In any case, the London talks are expected to resume by the first of next week.

The United States today conducted the first of its 1957 series of nuclear tests at the Nevada proving grounds. Firing of the device had been postponed for 12 days, due to unfavorable weather conditions. The blast today...from a 500-foot tower... had the force of 10-thousand tons of T.N.T. (That is about half the force of the first atomic bomb dropped on Hiroshima in World War Two). In Tokyo, the Japanese Foreign Office issued a statement of "sincere regret" that the test had been carried out.

Republican Representative Patterson of Connecticut said tonight that the Air Force probably will launch the first intercontinental ballistic missile "within two days." He identified the missile as the Atlas...and gave its launching site as the Patrick Air Force Base in Florida. Patterson is a member of the House Armed Services Committee. It is "anticipated", he said, that the missile will travel about 22-hundred miles.

The joint congressional committee on atomic energy heard more testimony today on the dangers of radio-active fallout. Dr. Lester Machta said there is evidence that fallout from nuclear weapons tests is being concentrated in the north temperate zone. Dr. Machta is in charge of Weather Bureau research on fallout. He declined to speculate on the effect of this concentration of radioactive dust on grounds that he is "only a meteorologist".

Charles Shafer, another Weather Bureau scientist, said he had been "advised" that...by 1960...Russia would have the capability of hitting the United States with hydrogen bombs equivalent to two and a half billion tons of T.N.T. He said...assuming no advance evacuation of cities... a death toll of 82-million persons was possible. Although an employe of the Weather Bureau, Shafer is regularly assigned to the Civil Defense Administration.

The House adjourned tonight without a final vote on the defense appropriations bill. An amendment to restore 80-million dollars in Army funds was rejected this afternoon by a vote of 145 to 113.

Today... in Havana, Cuba... an underground explosion wrecked the city's power system. The Basista government blamed the blast on saboteurs. In the mountains of eastern Cuba, Cuban Army troops clashed with rebel forces. The army concedes there were casualties on both sides.

~~The House Interior Committee today approved the Alaska statehood bill by a vote of 24 to 6. The measure now goes to the House Rules Committee, and from there...if it gets clearance...to the House floor.~~

~~The Senate voted today to lower the down payment required on F.H.A. insured loans. The purpose of the amendment is to make it easier for low and middle income families to own their own homes and at the same time stimulate home construction.~~

The Federal Power Commission ruled today that 59 major electric companies had illegally charged off expenses in their campaign against public power to operating expenses. Democratic Representative Chudoff of Pennsylavnia, who is chairman of a House government operations subcommittee, announced the ruling. He said the companies...as a result..."may be liable for millions of dollars in back taxes."

Secretary of Defense Wilson said today that the anti-American riots on Formosa have not made any "big change" in the reasons for American forces being stationed on the island. ~~He said, he said, "an isolated incident."~~ Wilson added, however, ~~the riots "highlighted" the need for the United States to have another look at its military aid program to "nationalist China."~~

~~Wilson told the Senate Foreign Relations Committee that he is seeking a 12 percent reduction in the number of military men assigned to all foreign aid and advisory groups overseas.~~ The State Department said the United States is "actively considering" a reduction in the number of American civilian and military personnel stationed on Formosa.

For the background of the Formosa incident...what was really behind it... I asked my colleague, Bob Pierpoint, to come up from Formosa with a report. Here is his analysis of the situation.

(Pierpoint tape runs 5:00
Ends on cue: "Now back to Edw R.
Murrow in N.Y.

Bob Pierpoint - Formosa A.

George Bryan -

Word for Today

One factor in the Formosa outbreak was resentment of the comparative luxury enjoyed by American personnel. The Roman historian Livy said, "Envy, like flame, soars upward." Good advice in such a situation as confronts us on Formosa would appear to have been given by Cicero. "The higher we are placed," he said, "the more humbly we should walk."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Tuesday, May 28, 1957
7:45 - 8:00 P.M.

MURROW: ... Today in Havana, Cuba, an underground explosion wrecked the city's power system. The Batista Government blamed the blast on saboteurs. In the mountains of eastern Cuba, Cuban Army troops clashed with rebel forces. The Army concedes that there were casualties on both sides.

The State Department said today that the United States is actively considering a reduction in the number of American civilians and military personnel stationed on Formosa. For the background to the Formosa incident, what was really behind it, I asked my colleague Bob Pierpoint to come up from Formosa with a report. Here is his analysis of the situation.

PIERPOINT: Some of the Chinese here in Taipei are now calling May 24th "Black Friday." In terms of Chinese-American relations, they may well be right. Certainly the violent destruction of American property, the brutal attacks against American personnel, the insulting desecration of the American Flag will not be soon forgotten.

The Chinese Government has the specific responsibility for the protection of American lives and property on Chinese soil. In several respects the Chinese government failed in that responsibility. Chinese officials, from President Chiang-Kai-shek on down, have recognized their failure and have apologized. On a more personal level, there is probably not a single American on all Formosa who has not received an embarrassed personal apology from a Chinese friend. In this correspondent's opinion, there's no doubt whatever that most Chinese, officials and plain citizens, genuinely regret what happened on Black Friday.

But perhaps the fault is not altogether on the side

of the Chinese. For quite a time now, it's been evident to some observers in Taipei that relations between the Chinese and American communities here were not all that they should be. The Chinese are a sensitive people, proud of their long history of culture and civilization. It has not been easy for them to continually accept American aid, American guns and American advice. But they are realists and they have very little choice. Furthermore, in the beginning, there was that bright hope of a return to the mainland. Slowly that hope has faded, as the Chinese Communists have entrenched themselves deeper and deeper, and as the world's family of nations, one by one, have recognized and begun to do business with Peking.

Most recently, even the United States has contributed to the unrest here in Formosa with talk that America might be moving toward a rapprochement with Communist China. Add to this uneasiness the nine thousand Americans who now live on this over-crowded Chinese island. Americans with fine homes and shiny cars and well-stocked Post Exchanges selling the latest American goods. As one Chinese friend had said recently, with only a slight touch of bitterness, "Your sergeants live much better here than our generals."

Into this atmosphere then came the American military trial of M/Sgt. Robt. Reynolds for the slaying of Liu-Chi-jen. Under Chinese law, a man is guilty until he proves himself innocent. At the Reynolds trial there was no real discussion about the fact that Sgt. Reynolds shot Liu-Chi-jen. There were many unproved rumors outside the courtroom, but the defense lawyer proved that Liu was peeking into the Reynolds' bathroom window at Reynolds' wife; and the Tribunal returned a verdict of acquittal on grounds of self-defense. The Chinese were shocked at the outcome of the trial. To make matters worse, the American spectators, in the crowded courtroom, broke into spontaneous applause, while some of the incredulous Chinese actually wept. For a proud people, long acquainted with the extraterritorial laws of

the white Westerners, this was simply too much.

Many Chinese officials expected trouble from that moment. The trouble came the next morning, Friday, May 24th. Since some officials had expected trouble, there are those here who maintain that the Government could have prevented it. This is a fair point. There are also those here who believe that the trouble was organized. Granted the possibility that some sort of demonstration might have been planned or at least allowed by certain Government officials, it is still very difficult to believe that anyone ever expected the demonstration to reach such extremes of violence.

In an emotionally-charged situation, with even high-ranking Chinese officials openly criticizing the outcome of the Reynolds trial, the police were perhaps understandably slow to use force against the crowd in order to stop what they initially believed to be a peaceable demonstration. The fact is that emotions here were charged far too high. And when the police finally acted it was far too late. That, at least, is the opinion of this reporter.

Here is one more opinion: We still need the Chinese Nationalists; and they still need us. Only the Communists in Peking stand to gain from any other conclusion. This is Bob Pierpoint in Taipei - and now back to Edward R. Murrow in New York.

MURROW: Secretary of Defense Wilson said today that the anti-American riots on Formosa have not made any big change in the reasons for American forces to be stationed on the island.

He identified the missile as the Atlas..and gave its launching site as the Patrick Air Force Base in Florida. Patterson is a member of the House Armed Services Committee. It is "anticipated", he said, that the missile will travel about 22 - hundred miles.

The joint congressional committee on atomic energy heard more testimony today on the dangers of radio - active fallout. Dr. Lester Machta said there is evidence that fallout from nuclear weapons tests is being concentrated in the north temperate zone. Dr. Machta is in charge of Weather Bureau research on fallout. He declined to speculate on the effect of this concentration of radioactive dust on grounds that he is "only a meteorologist".Charles Shafer, another Weather Bureau scientist, said he had been "advised" that..by 1960... Russia would have the capability of hitting the United States with hydrogenbombs equivalent to two and a half billion tons of T.N.T.. He said ..assuming no

advance evacuation of cities..a death toll of 82 - million persons was possible. Although an employe of the Weather Bureau, Shafer is regularly assigned to the Civil Defense Administration.

The House adjourned tonight without a final vote on the defense appropriations bill. An amendment to restore 80-million dollars in Army funds was rejected this afternoon by a vote of 145 to 113.

Today...in Havana, Cuba..an underground explosion wrecked the city's power system. The Batista government blamed the blast on saboteurs. In the mountains of eastern Cuba, Cuban Army troops clashed with rebel forces. The army concedes there were casualties on both sides.

The Federal Power Commission ruled today that 59 major electric companies had illegally charged off expenses in their campaign against public power to operating expenses. Democratic Representative Chudoff of Pennsylvania, who is chairman of a House government operations subcommittee, announced the ruling. He said the companies...as a result..."may be liable for millions of dollars in back taxes."

The State Department said the United States is "actively considering" a reduction in the number of American civilian and military personnel stationed on Formosa.

For the background on the Formosa incident..what was really behind it.. I asked my colleague, Bob Pierpoint, to come up from Formosa with a report. Here is his analysis of the situation.

PIERPOINT: Some of the Chinese here in Taipei are now calling May 24th "Black Friday." In terms of Chinese - American relations, they may well be right. Certainly the violent destruction of American property, the brutal attacks against American personnel, the insulting desecration of the American Flag will not soon be forgotten.

The Chinese Government has the specific responsibility for the protection of American lives and property on Chinese soil. In several respects the

Chinese government failed in that responsibility. Chinese officials, from President Chiang-Kai-shek on down, have recognized their failure and have apologized. On a more personal level, there is probably not a single American on all Formosa who has not received an embarrased apology from a Chinese friend. In this correspondent's opinion, there's no doubt whatever that most Chinese, officials and plain citizens, genuinely regret what happened on Black Friday.

But perhaps the fault is not altogether on the side of the Chinese. For quite a time now, it's been evident to some observers in Taipei that relations between the Chinese and American communities here were not all that they should be. The Chinese are a sensitive people, proud of their long history of culture and civilization. It has not been easy for them to be continually accept American aid, American guns and American advice. But they are realists and they have very little choice. Furthermore, in the beginning, there was that bright hope of a return to the mainland. Slowly that hope has faded, as the Chinese Communists have entrenched themselves deeper and deeper, and the world's family of nations, one by one, have recognized and begun to do business with Peking.

Most recently, even the United States has contributed to the unrest here in Formosa with talk that America might be moving toward a rapprocahement with Communist China. Add to this uneasiness the nine thousand Americans who now live on this over-crowded Chinese island. Americans with fine homes and shiny cars and well - stocked Post Exchanges selling the latest American goods. As one Chinese friend has said recently, with only a slight tough of bitterness, "Your sergeants live much better here than our generals."

Into this atmosphere then came the American military trial of Master Sergeant Robert Reynolds for the slaying of Liu-Chi-jen. Under Chinese law, a man is guilty until he proves himself innocent. At the Reynolds

trial there was no real discussion about the fact that Sergeant Reynolds shot Liu-Chi-jen. There were many unproved rumors outside the courtroom, but the defense lawyer proved that Liu was peeking into the Reynolds' bathroom window at Reynold's wife; and the Tribunal returned a verdict of acquittal on grounds of self - defense. The Chinese were shocked at the outcome of the trial. To make matters worse, the American spectators in the crowded courtroom, broke into spontaneous applause, while some of the incredulous Chinese actually wept. For a proud people, long acquainted with the extraterritorial laws of the White Westerners, this was simply too much.

Many Chinese officials expected trouble from that moment. The trouble came the next morning, Friday, May 24th. Since some officials had expected trouble, there are those here who maintain that the Government could have prevented it. This is a fair point. There are also those here who believe that the trouble was organized. Granted the possibility that some sort of demonstration might have been planned or at least allowed by certain Government officials, it is still very difficult to believe that anyone ever expected the demonstation to reach such extremes of violence.

In an emotionally - charged situation, with even high-ranking Chinese officials openly criticizing the outcome of the Reynolds trial, the police were perhaps understandlbly slow to use force against the crowd in order to stop what they initially believed to be a peaceable demonstration. The fact is that emotions here were charged far too high. And when the police finally acted it was too late. That, at least, is the opinion of this reporter.

Here is one more opinion: We still need the Chinese Nationalists; and they still need us. Only the Communists in Peking stand to gain from any other conclusion. This is Bob Pierpoint in Taipei - and now back to Edward R. Murrow in New York.

MURROW: Secretary of Defense Wilson said today that the anti-American riots on Formosa have not made any big change in the reasons for American forces to be stationed on the island.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: One factor in the Formosa outbreak was resentment of the comparative luxury enjoyed by American personnel. The roman historian Livy said, "Envy, like flame, soars upward." Good advice in such a situation as confronts us on Formosa would appear to aave been given by Cicero. "The higher we are placed," he said, "the more humbly we should walk."

Goodnight and Good Luck!

Edward R. Murrow Wed., May 29, 1957

This is the news:

Secretary of the Treasury Humphrey resigned today to return to private business. He asked, in his letter of resignation, to be relieved of his duties no later than the end of the current session of Congress. President Eisenhower accepted the resignation with "profound regret" and named Robert Anderson, former deputy secretary of defense, to take Humphrey's place. Anderson immediately issued a statement...saying he would carry forward the policies "which have guided President Eisenhower and Secretary Humphrey in the conduct of the government's fiscal affairs." Humphrey's resignation was not unexpected; the President had known his desire to leave government service for more than two years. ~~Democratic Senator Byrd, on hearing of the resignation, called Humphrey "an outstanding public servant who will be~~

sorely missed." (Byrd, like Humphrey, is a staunch advocate of economy in government). Chairman Cannon of the House Appropriations Committee, called Humphrey's resignation "the beginning of a general exodus from the cabinet." The resignation was significant, he said, "as a commentary on the fiscal policies of this Administration."

The House today passed a money bill giving President Eisenhower two and a half billion dollars less than he requested for defense. The House ignored Mr. Eisenhower's warning that a billion, 200-million dollars of the cut represented a "risky gamble" with national security. It even refused to restore 313 ~~325~~-million dollars, which Republican leaders hoped might be acceptable as a last-ditch compromise. The show-down test came on a motion to send the bill back to committee with instructions to add to the appropriations. This motion was defeated, 242 to 151. Thirty-nine Republicans joined 203 Democrats in opposing it. [It was obvious the Administration cause...so far as the House was concerned...was lost. And the final vote approving the so-called "economy measure" was 393 to 1. The lone dissenter was Republican Representative Canfield of New Jersey. The bill now goes to the Senate.]

Congress completed action today on a money bill...providing 96-million dollars for the United States Information Agency. This is 6-million dollars more than originally voted by the Senate, but about 48-million dollars less than requested by the President. Other parts of the omnibus money bill cover appropriations for the State and Justice Departments and the judiciary. ~~The measure gives 189-million dollars to the State Department, including 20-million for the student exchange program. The Justice Department gets 226-million dollars.~~ Taken as a whole, Congress slashed the President's request for these departments and agencies by nearly 103-million dollars.

~~In Paris, Rene Pleven today abandoned his effort to form a new government. Pleven told President Coty he had been unable to get the major parties to agree on a coalition program.~~

The NATO Council in Paris was briefed today on developments at the London disarmament conference. The report was given by Harold Stassen and Jules Moch, the American and French delegates respectively at the disarmament talks. They assured the NATO meeting that "all countries affected by arrangements under consideration will be consulted."

In Washington today, Secretary of State Dulles told a news conference that the disarmament talks must not be allowed to get bogged down. He said that in reaching a first-step agreement with Russia for inspection, the United States is ready to agree on "any area which is sufficiently free of political complications." West German Chancellor Adenauer indicated in Washington yesterday that his country would not be involved in any initial inspection agreement. Mr. Dulles would not say today whether this conflicts with the American view. But he said, "In this disarmament task, the important thing is to get going somewhere, somehow, just as rapidly as possible. He warned, at the same time, against expecting even an initial

agreement overnight. Dulles said the possibility of a Big Four meeting on German unification also is not something "just around the corner." He pointed out that any such meeting would not be held until after a first-stage disarmament agreement is reached.

Mr. Dulles said the anti-American rioting on Formosa does not mean any change in "basic" American policy in the Far East, or in this country's relations with Nationalist China. The incident, he said, may serve to accelerate a study being made on ways to reduce tensions that arise when troops are based on foreign soil. He said that in this the United States faces a world-wide problem. And he indicated that the number of troops stationed in some countries may be "pared down".

On Formosa, the Chinese Nationalist government today imposed new restrictions...aimed, it said, at preventing further disorders. The new edict prohibits all public gatherings, petitions and strikes. It is in addition to last Friday's martial law decree and applies throughout the island.

Russian newspapers today blamed Friday's anti-American riots on what it called America's "colonialist policy." Pravda said, "The whole Chinese people are aroused."

In Tokyo today, U.S. Army Specialist William Girard refused to choose a defense lawyer as directed by a Japanese court. The court insists that it has the right to try Girard on manslaughter charges...growing out of the death of a Japanese woman who trespassed on an American firing range, outside of Tokyo. A U.S. Army spokesman says Girard refused to engage an attorney because he still hopes to be tried by a United States court martial. Secretary of Defense Wilson has ordered him to be held in American custody, pending a complete review of the case.

Japanese students demonstrated in front of the United States Embassy in Tokyo today...demanding an end to American atomic tests. There was a brief scuffle with police but no injuries.

The State Department today made public a note it sent to the Dominican Republic on May 2nd in connection with the Galindez case. The note said, "Sufficient evidence has now been uncovered to indicate that the American pilot, Gerald Murphy, may have been connected with the disappearance of Dr. Jesus de Galindez in New York on or about March 12, 1956, acting on behalf of...or in association with...certain Dominican and American nationals." The note said it would be "desirable and appropriate" for General Espaillat, the former Dominican consul general in New York, to waive his diplomatic immunity so he could be questioned regarding the two cases. The Dominican Republic has not yet replied to the note. The State Department said it is continuing its investigation into the disappearance of Mr. Murphy "by all available means."

In Cuba, the Batista government claims that it has killed Calixto Sanchez White, the rebel leader who recently landed with a small expeditionary force on the Cuban coast. In Havana, electric power is being gradually restored, after rebel saboteurs blew up four generators at the main power station.

Senate hearings on the danger of radio-active fallout have now gone through their third day. My colleague, George Herman, has been covering the testimony. And here is his report.

(Tape runs 5:02
Ends on cue: "--to Edw R. Murrow
in N.Y."

That was my colleague, George Herman, reporting from Washington on one of the most vital questions ever taken up by a body of Congress.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now here is George Bryan.

.....

Word for Today

The atom holds for man both promise and peril. It is written in one of the books of the Apocrypha, "There is a city full of good things, but its approach is narrow, along a steep path flanked by fire on one side and deep water on the other. Now if this city is given to man for an inheritance, how shall he receive it unless he pass through the danger set before him?"

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

WEDNESDAY, MAY 29, 1957
7:45 to 8:00 PM

MURROW: Senate hearings on the danger of radioactive fallout have now gone through their third day. My colleague, George Herman, has been covering the testimony and here is his report.

HERMAN: The very existence of the Hollafield hearings constitutes a sort of tacit recognition by both sides that the once clear dividing line between politics and science has disappeared almost entirely in some areas. When the politicians must appropriate the money for science, then science becomes partly political; and when the politicians must decide what is scientifically safe for the world and the nation, then the politicians must become part-time scientists. The division of powers is emphatic and inescapable though that scientists alone can do the inventing, the primary assessing and the educating; and the politicians alone can do the paying and the controlling.

Before the Hollafield Committee has come a parade of scientists discussing the side effects and after effects of using and testing nuclear weapons. The politicians want to know whether the United States and the world is in danger from nuclear weapons testing or from possible nuclear war. For their part, the scientists don't have a yes or no answer. Science requires the slow, careful assemblage of infinitely detailed bits of knowledge and careful step-by-step moves this week, the Hollafield Committee is amassing a considerable amount of these specialized bits and pieces of knowledge, and also a few broader generalizations.

For example, a weather man, Dr. Lester Mafta, said that new evidence seems to show that the strontium 90 blown into the stratosphere by hydrogen bombs does not settle out equally all over the world, as was earlier believed. Within the past two weeks, said Dr. Mafta, information received shows that the poisonous dust stays largely within the northern hemisphere if the bomb fired is even a short distance north

of the equator. And more important, the fallout occurs mostly in the north temperate zone. That means an increase in the danger for the United States, Europe and much of Russia over what was previously believed. Another weather specialist showed the pattern of danger for the United States if an enemy should attack us with 250 hydrogen bombs, each of ten megaton size. By present standards, he indicated, a possible and not improbable scope of nuclear attack. You probably saw his headline estimates- 82,000,000 dead from such an attack.

Today, another scientist, studying another compartment of knowledge, added an important footnote. Dr. Lawrence Kulp, of Columbia University, said that such an attack, would after a period of years result in the fallout on all the United States of 100 times the amount of strontium 90 currently considered permissible. "What about the strontium 90 fallout on the rest of the world in the northern hemisphere?" I asked him. "One and a half times the permissible amount all over the world," said Dr. Kulp, after screwing up his forehead and writing on an imaginary blackboard. For the north temperate zone, from four and a half to seven and a half times that permissible amount.

Other witnesses later greatly increased those figures by altering their calculations of some of the major factors involved. Now, of course, these are not new figures or ideas behind the secrecy which surrounds all atomic data. The idea that a single massive H-bomb attack on any country would endanger the entire human race has been faced in laboratories and on blackboards all over this country and, presumably, in Russia and in Great Britain as well. And those calculations and equations are implicit in every meeting of the London Disarmament talks.

The other major set of calculations getting world attention are the results of nuclear weapons tests. And Dr. Kulp testified today that our present test rates, continued another 50 or 60 years, by all nuclear powers, would give American children one-quarter the amount the Atomic Energy Commission's safe or one-half the amount the National Academy

of Sciences considers safe. The next witness, Dr. Neuman, disagreed; said that his calculations show that the tests we have already held will give us pretty close to what he considers the safe dose and that we must seriously consider stopping all tests right now.

One major political problem in these scientific matters must effect all equations and all measurements; and that is - is the safe amount ther permissible amount, and is what the AEC calls the permissible amount safe? And here the philosophy, not stated aloud but implicit in every single decision, is to say "No". The amount considered permissible for the whole world is not what is safe for everybody. Nuclear civilization is going to have to advance over some bodies. AEC's Dr. Merril Eisenbud said the only way to have complete safety is to stop all nuclear progress, even our atomic power plants. "Or else," he said, "there would be some additional leukemia, some additional cancer, some genetic damage." But no one has yet called for a halt. "Any more", says one AEC member, "than any one has seriously proposed prohibiting all automobiles because they kill so many people on the highways every year." This is George Herman in Washington; now back to Edward R. Murrow in New York.

The next witness, Dr. Neuman, disagreed; said that his calculations show that the texts we have already held will give us pretty close to what he considers the safe dose and that we must seriously consider stopping all tests right now.

One major political problem in these scientific matters must effect all equations and all measurements; and that is - is the same amount the permissible amount, and is what the AEC calls the permissible amount safe? And here the philosophy, not stated aloud but implicit in every single decision, is to say "No". The amount considered permissible for the whole world is not safe for everybody. Nuclear civilization is going to have to advance over some bodies. AEC's Dr. Merril Eisenbud said the only way to have complete safety is to stop all nuclear progress, even our atomic power plants. "Or else," he said, "there would be some additional leukemia, some additional cancer, some genetic damage." But no one has yet called for a halt. "any more", says one

AEC member "than any one has seriously proposed prohibiting all automobiles because they kill so many people on the highways every year." This is George Herman in Washington; now back to Edward R. Murrow in New York.

MURROW: That was my colleague, George Herman, reporting from Washington on one of the most vital quest ons ever taken up by a body of Congress.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: The atom holds for man both promise and peril. It is written in one of the books of the Apocrypha, "There is a city full of good things, but its approach is narrow, along a steep path, flanked by fire on one side and deep water on the other. Now if this city is given to man for an inheritance, how shall he receive it, unless he pass through the danger set before him?"

Goodnight and good luck!

Edward R. Murrow Thurs., May 30, 1957

This is the news:

Britain today relaxed its curbs on trade with Red China. British Foreign Secretary Selwyn Lloyd told the House of Commons that Britain's trade with China will now be expanded to the same level as its trade with Russia and the eastern satellite states. This means that, henceforth, British companies will be allowed to sell the Chinese Communists 207 additional items, including railroad locomotives, certain types of machine tools, electric generators, tractors and trucks. Selwyn Lloyd said that strategic items...such as radar equipment...currently embargoed for the Soviet Union will continue to be embargoed by Britain for Red China. It has been Britain's argument that the other embargoed goods...taken off the control list today...have been reaching China through Russia anyway.

→

Japan and America's NATO allies---with the exception of Iceland---agreed to restrict their trade with Red China in 1951, when it entered the Korean War. For the past three weeks, the 15 countries maintaining these controls have been discussing the question at a meeting in Paris. Britain made its announcement today...when the meeting ended in deadlock. And other countries such as Japan are expected to follow Britain's example.

In Washington, the State Department said the United States is "most disappointed" by the British action. A department spokesman said, "The United States contemplates no change in its policy of total embargo on trade with Communist China." The new British policy, he said, will have the effect of assisting the Chinese Communists in their economic development."

Britain and Egypt today broke off their trade talks in Rome. A brief communique said: "The two delegations, having carried out the current discussions as far as practicable, propose now to return and report to their governments." This was being done, it said, "with a view to resuming contact at a later date." The communique contained no hint that any firm agreements had been reached.

The government of Lebanon says the situation there is "well in hand." At least five persons were killed in Beirut this morning when pro-Egyptian demonstrators rioted... and troops had to be called to restore order. Among those injured was former Premier Salam. The government accuses Salam of helping incite the trouble, and a warrant is said to have been issued for his arrest. The official communique calls the riot part of a plot to overthrow the government. It notes that many of the demonstrators were not Lebanese. And a government official said, "Today's events constitute a true copy of the events carried out by foreign Arab elements in Jordan last month."

Britain today rejected a bid by Archbishop Makarios for bilateral talks on the future of Cyprus. The Greek Cypriot leader had said...in a letter to Prime Minister Macmillan... that he was ready to take part in such talks "on behalf of the people of Cyprus and on a basis of the application of self-determination." He charged that British forces were still carrying out major military operations, despite the truce observed by the resistance movement since the middle of March. Macmillan said...in reply...that it is the "duty" of Britain to seek out and apprehend known malefactors so long as the threat of renewed terrorism remains." The prime minister

observed that Makarios would exclude the Turkish community of Cyprus from the talks. "Other interests," he said, "have a right to be consulted." Tonight...in Athens...Archbishop Makarios called Macmillan's reply "unrealistic."

The United States has ordered an assistant military attache...assigned to the Hungarian legation in Washington...to leave the country by Monday. The State Department leveled no specific charge. It said simply that the presence of the Hungarian attache "is no longer agreeable to the United States government." Last month, the Kadar government ordered an American attache out of Hungary.

At Arlington National Cemetery, the customary Memorial Day wreath was laid by Air Secretary Quarles on the Tomb of the Unknown Soldier. Memorial Day ceremonies were also held at the 21 cemeteries for American war dead in Europe.

Two Navy Panther jets collided...and crashed...while flying in a Memorial Day exercise over a cemetery in Minneapolis. One of the aircraft fell into a residential neighborhood and set four homes on fire. The pilot, Commander Newell Olson, was killed. The pilot of the other plane parachuted to safety. Six civilians received treatment for burns

and flying debris. ~~Senator Humphrey of Minnesota called for an investigation. He said the accident "emphasizes that military flying should be absolutely confined to actual training flights."~~

The death toll on the nation's highways...so far this holiday...stands at 55. The National Safety Council has predicted 120 auto deaths between 6 o'clock last night and midnight tonight.

There were no fatalities today at the Indianapolis Speedway, where Sam Hanks won the 500-mile auto race...averaging 135 point 6 miles an hour, a new record. It was the first time Hanks won the race in 12 tries.

Edward R. Murrow: May 30, 1957. 7.45 p.m.

Mao Tse Tung, the boss of Chinese Communism, has made two secret speeches that may prove to be as historic as the one secretly made by boss Khrushchev on the evils of Stalinism. They were speeches on doctrine, and advocated a milder approach to domestic problems inside China. That suggests at once that the head of the Chinese regime realizes that the brutal and oppressive tactics of the Communists no longer pay dividends.

And that, in a sense, was what Khrushchev was saying in his famous speech on Stalin. But Mao Tse Tung also criticized the Soviet conduct of the Hungarian crisis sharply, as though he wanted above everything to make sure that the same mistake will not be made in his own country. In doing so, he laid down a doctrine that in some particulars is miles apart from the communism preached and practised by the Kremlin.

This is important not only for its effect on six hundred million Chinese. It affects Communists everywhere. Already it has served to give strength and direction to the independent communism of Gomulka in Poland. But what may be still more significant, it sets up a second center of Communist orthodoxy, and so puts Peiping into potential rivalry with Moscow for control of the Communist world. That could have most far-reaching consequences.

Apparently Mao Tse Tung was not reaching out for world leadership when he talked. He was the head of the state at an intimate Party session, and on February 27th he talked four hours, from notes. A second speech was made March 12th. Neither speech has been published, though an official version of it, possibly with some hindsight revision, is promised soon. Polish leaders, however, have an abridged version of the February speech and have circulated it to their members.

The principle Mao stressed was that a Communist regime must not use the same power against its own people, that it uses against an enemy. In China, he said, the class struggle is over. Divergences still remain, even between bourgeoisie and the proletariat, but these are only an internal conflict among the people, and must be dealt with by so-called democratic means; that is, by persuasion and free discussion. He said that if the Kremlin had dealt with the Hungarian crisis in this way, the violent outbreak of last Autumn would have been avoided. The events in Hungary, he said, were due to the dissatisfaction of working people with the Communist leadership, not to the antagonism of the old bourgeoisie. And he added that Russia could expect more large-scale uprisings in Eastern Europe unless it changed its policy.

These statements certainly are irreconcilable with the official Peiping line on Hungary, which is one of complete approval of the suppression of the Hungarian uprising. One can only conjecture that Mao, as the sage of the Party, said in privacy what was on his mind, while Chou En Lai as Foreign Minister said what was deemed to be expedient.

The Mao speech is remarkable for more than the criticism of the Kremlin's handling of the Hungarians. He declared that strikes are a form of protest against the bureaucracy, and must not be suppressed, or the strike leaders punished. He re-affirmed last year's slogan: "Let all flowers bloom together, let diverse schools of thought contend." Capitalists and intellectuals, he said, must be re-educated by mild, persuasive methods, to combat bourgeois mentality. The same treatment should be given national minorities and religion. He even said that the complete works of Chiang Kai Shek would be published so that, as he put it, all the people might realize why he is a "great reactionary". And he said that broadcasts of the British Broadcasting Corporation would be carried over the Chinese Radio, together with some material from the Voice of America.

One effect of these speeches has been a new campaign in China, known as the "Change the Wind" campaign. Small discussion groups are meeting

for heart-to-heart talks, with non-party members attending. ~~Criticism~~ is not ~~being imposed on persons who do not accept it, and discipline is not meted out simply for being wrong~~. One feature is a direct result of Mao's advice. Party leaders are being made to do physical work alongside the rank and file, in one typical district, for twenty-four hours a week.

In this campaign, the Party is finding out who is dissatisfied with the regime, and if the winds change again, it will know on whom to crack down. For the present, more discussion is being allowed inside China, and the right to opposition is being recognized, at least in theory. But this does not mean that anybody in the Communist Party, from Mao down, dreams of allowing the Opposition to win out or take over. It appears that the harsh wind has been tempered, at least temporarily.

Carl Sandburg once told this reporter, "When we say a patriot is one who loves his country, what kind of love is it we mean? You have heard that the shroud has no pockets. You have also heard the dead hold in their clenched hands only that which they have given away. In this we begin to approach the meaning of a patriot."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

THURSDAY, MAY 30, 1957
7:45--8:00 P.M., E.D.S.T.

This is the news:

Britain today relaxed its curbs on trade with Red China. British Foreign Secretary Selwyn Lloyd told the House of Commons that Britain's trade with China will now be expanded to the same level as its trade with Russia and the eastern satellite states. This means that, henceforth, British companies will be allowed to sell the Chinese Communists 208 additional items, including railroad locomotives, certain types of machine tools, electric generators, tractors, and trucks. Selwyn Lloyd said that strategic items..such as radar equipment..currently embargoed for the Soviet Union, will continue to be embargoed by Britain for Red China. It has been Britain's argument that the other embargoed goods....taken off the control list today..have been reaching China through Russia anyway. Japan and America's NATO allies -- with the exception of Iceland -- agreed to restrict their trade with Red China in 1951, when it entered the Korean War. For the past three weeks, the 15 countries maintaining these contools have been discussing the question at a meeting in Paris. Britain made its announcement today..when the meeting ended in deadlock. And other countries such as Japan are expected to follow Britain's example. In Washington, the State Department said the United States is "most disappointed" by the British action. A department spokesman said, " The United States contemplates no change in its policy of total embargo on trade with Communist China." The new British policy, he said, will have the effect of assisting the Chinese Communists in their economic development."

Britain and Egypt today broke off their trade talks in Rome. A brief communiuqe said" "The two delegations, having carried out the current discussions as far as practicable, propose now to return and report to their governments." This was being done, it said, "with a view to resuming contact at

a later date." The communique contained no hint that any firm agreements had been reached.

The government of Lebanon says the situation there is "well in hand." At least five persons were killed in Beirut this morning when pro-Egyptian demonstrators rioted...and troops had to be called to restore order. Among those injured was former Premier Salam. The government accuses Salam of helping incite the trouble, and a warrant is said to have been issued for his arrest. The official communique calls the riot part of a plot to overthrow the government. It notes that many of the demonstrators were not Lebanese. And a government official said, "Today's events constitute a true copy of the events carried out by foreign Arab elements in Jordan last month."

Britain today rejected a bid by Archbishop Makarios for bilateral talks on the future of Cyprus. The Greek Cypriot leader had said...in a letter to Prime Minister Macmillan.....that he was ready to take part in such talks "on behalf of the people of Cyprus and on a basis of the application of self-determination." He charged that British forces were still carrying out major military operations, despite the truce observed by the resistance movement since the middle of March. Macmillan said..in reply..that it is the "duty" of Britain to seek out and apprehend known malefactors "so long as the threat of renewed terrorism remains." The prime minister observed that Makarios would exclude the Turkish community of Cyprus from the talks. "Other interests", he said, "have a right to be consulted." Tonight...in Athens..Archbishop Makarios called Macmillan's reply "unrealistic."

The United States has ordered an assistant military attache..assigned to the Hungarion legation in Washington..to leave the country by Monday. The State Department leveled no specific charge. It said simply that the presence of the Hungarian attache "is no longer agreeable to the United States government."

Last month, the Kadar government ordered an American attache out of Hungary.

At Arlington National Cemetery, the customary Memorial Day wreath was laid by Air Secretary Quarles on the Tomb of the Unknown Soldier. Memorial Day ceremonies were also held at the 21 cemeteries for American war dead in Europe.

Two Navy Panther jets collided...and crashed..while flying in a Memorial Day exercise over a cemetery in Minneapolis. One of the aircraft fell into a residential neighborhood and set four homes on fire. The pilot, Commander Newell Olson, was killed. The pilot of the other plane parachuted to safety. Six civilians received treatment for burns and flying debris.

The death toll on the nation's highways...so far this holiday..stands at 55. The National Safety Council has predicted 120 auto deaths between 6 o'clock last night and midnight tonight.

There were no fatalities today at the Indianapolis Speedway, where Sam Hanks won the 500-mile auto race..averaging 135 point 6 miles an hour, a new record. It was the first time Hanks won the race in 12 tries.

Mao Tse Tung, the boss of Chinese Communism, has made two secret speeches that may prove to be as historic as the one secretly made by boss Khrushchev on the evils of Stalinism. They were speeches on doctrine, and advocated a milder approach to domestic problems inside China. That suggests at once that the head of the Chinese regime realized that the brutal and oppressive tactics of the Communists no longer pay dividends.

And that, in a sense, was what Khrushchev was saying in his famous speech on Stalin. But Mao Tse Tung also criticized the Soviet conduct of the Hungarian crisis sharply, as though he wanted above everything, to make sure that the same mistake will not be made in his own country, In doing so, he laid down a doctrine that in some particulars is miles apart from the Communism preached and practiced by the Kremlin.

This is important not only for its effect on six hundred million Chinese. It affects Communists everywhere. Already it has served to give strength and direction ot the independent communism of Gomulka in Poland. But what may be still more significant, it sets up a second center of Communist orthodoxy, and so puts Peiping into potential rivalry with Moscow for control of the Communist world. That could have most far - reaching consequences.

Apparently Mao Tse Tung was not reaching out for world leadership when he talked. He was the head of the state, at an intimate Party session, and on February 27th he talked four hours, from notes. A second speech was made March 12th. Neither speech has been published, though an official version of it, possible with some hindsight revision, is promised soon. Polish leaders, however, have an abridged version of the February speech and have circulated it to their members.

The principle Mao stressed was that a Communist regime must not use the same power against its own people, that it uses against an enemy. In China, he said, the class struggle is over. Divergences still remain, even between bourgioisie and the proletariat but these are only an internal conflict among t he people, and must be dealt with by the so-called democratic means; that is, by persuasion and free discussion. He said that if the Kremlin had dealt with the Hungarian crisis in this way, the violnet outbreak of last Autumn would have been avoided. The events in Hungary, he said, were due to the dissatisfaction of working people with the Communist leadership, not to the antagonism of the old bourgioisie. And he added that Russia could expect more large-scale uprisings in Eastern Europe unless it changed its policy.

These statements certainly are irreconcilable with the official Peiping line on Hungary, which is one of complete approval of the suppression of the Hungarian uprising. One can only conjecture that Mao, as the sage of the Party, said inprivacy what was on his mind while Chou in Lai, as Foreign Minister said what seemed to be expedient.

The Mao speech is remarkable for more than the criticism of the Kremlin's handling of the Hungarians. He declared that strikes are a form of protest against the bureaucracy and must not be suppressed, or the strike leaders punished. He re-affirmed last year's slogan :"Let all flowers bloom together, let diverse schools of thought contend." Capitalists and intellectuals, he said, must be re-educated by mild, persuasive methods to combat bourgeois mentality. The same treatment should be given national minorities and religion. He even said that the complete works of Chiang Kai Shek would be published so that, as he put it, all the people might realize why is is a "great reactionary". And he said that broadcasts of the British Broadcasting Corporation would be carried over the Chinese Radio, toeether with some material from the Voice of America.

One effect of these speeches has been a new campaign in China, known as the "Change the Wind" campaign. Small discussion groups are,meeting for heart-to-heart talks, with non-party members attending. One feature is a direct result of Mao's advice. Party leaders are being made to do physical work alongside the rank and file, in one typical district, for twenty-four hours a week.

In this campaign, the Party is finding out who is dissatisfied with the regime, and if the winds change again, it will know on whom to crack down. For the present, more discussion is being allowed inside China, and the right to opposition is being recognized at least in theory. But this does not mean that anybody in the Communist Party, from Mao down, dreams of allowing the opposition to win out or take over. It appears that the harsh wind has been tempered, at least temporarily.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: Carl Sandburg once told this reporter, "When we say a patriot is one who loves his country, what kind of love is it we mean? You have heard that the shroud has no pockets. You have also heard the dead hold in their clenched hands only that which they have given away. In this we begin to approach the meaning of a patriot."

Goodnight and good luck!

Edward R. Murrow Fri., May 31, 1957

This is the news:

Britain today exploded its second hydrogen bomb. The nuclear device was dropped from a Valiant jet bomber flying at high altitude near Christmas Island, in the Central Pacific. The device is said to have exploded with the force of 5-million tons of T.N.T., making it considerably more powerful than the prototype tested on May 15th. #

The special Senate committee investigating political campaign spending and lobbying practices today issued its report. This is the committee appointed last year, after Republican Senator Francis Case told Congress he had been offered...and had rejected...a 25-hundred-dollar contribution by an oil lobbyist. Congress at the time was debating the natural gas bill. In its 162-page report, the committee recommended passage of a new law whereby persons employed to influence legislation would be required to

register and file regular reports on receipts and expenditures. A person failing to comply would be subject to a year in jail, or a fine of 10-thousand dollars, or both. This recommendation was unanimous. And Chairman McClellan already has introduced a measure to carry it out. The committee said one of the "striking circumstances" of its 14-month investigation was that it heard no new, specific complaint such as that reported by Senator Case. Regarding campaign contributions, the committee proposed legislation to take the place of the Corrupt Practices Act... which, it said, is outmoded. The new law would do away with any limitation on spending in presidential campaigns. In congressional campaigns, the ceiling on spending would be raised. There would, at the same time, be a fuller accounting of all money spent. And contributions by any individual, in a single calendar year, would be limited to 15-thousand dollars. Four members of the committee---three Democrats and one Republican---thought the legislation should also cover primaries. Both laws concerning lobbying and campaign spending would be administered by the comptroller general. With respect to political broadcasts, the committee said the requirement that equal time be accorded to all legally qualified candidates should be eliminated. It recommended, instead, that this apply only to major party

candidates and those of minor parties able to show a certain percentage of voter support.

A federal judge today found playwright Arthur Miller guilty of contempt of Congress on two counts. Last summer, Miller refused...on grounds of conscience...to give the House Un-American Activities Committee the names of writers attending a Communist meeting in New Work in 1947. Chairman Walter said the committee hearings were concerned with fraudulent procurement and misuse of passports. (Miller had a passport application pending at the time). Defense counsel argued that refusal to name persons attending the Communist meeting had no pertinency to a passport inquiry. Miller answered all other questions. He said he had supported Communist causes in the past but had never been under party discipline. He said he had not supported Communist causes in recent years. In today's decision, Judge Charles McLaughlin ruled that the questions Miller refused to answer were pertinent to the committee's passport investigation. He said the hearings were being held for a "legislative purpose"...and that Miller was being questioned persuant to that purpose. Neither the playwright nor his attorney had any immediate comment. An appeal is regarded probable. Under the

conviction, Miller faces a maximum penalty of a one-thousand-dollar fine and one year in jail. No date for sentencing was set.

President Coty of France tonight called on "all civilized peoples" to break contact with those who support the Algerian revolt. Coty made his appeal in a special broadcast to the French nation. It was precipitated by a massacre in Algeria, in which more than 300 Moslems were slain... apparently as the result of rivalry between two nationalist groups. The massacre took place in a village, 80 miles southeast of Algiers. According to reports...relayed by the French... every man and boy in the village over the age of 15 was slain. The French president said in his broadcast tonight: "I ask all civilized peoples if the time has not come to signify that they refuse to listen to the killers and the agents of this horrible terrorism."

Tunisia told the United Nations today that French troops had violated Tunisian territory. It said the French crossed the border at two points, killing three Tunisian soldiers and wounding seven civilians. The Tunisian cabinet decided today to impose customs tariffs on imports from other countries, including France.

West German Chancellor Adenauer said today that it may be two or three years before the way can be cleared for a Big Four foreign ministers conference on German reunification. ~~The communique issued earlier this week...after the talks between Adenauer and President Eisenhower in Washington...suggested the possibility of a Big Four conference on Germany after an initial agreement with Russia for limited disarmament. Adenauer made his statement today to a news conference on his return to Bonn.~~

Britain today relaxed its restrictions on trade with North Korea and North Vietnam. This is in line with its decision yesterday to ease trade restrictions with Red China. Foreign Secretary Selwyn Lloyd said in a broadcast tonight that Britain eased the restrictions on "a basis of common sense"...and, he said, [redacted] in the "long-term" interest of the Anglo-American alliance.

Edward R. Murrow: May 31, 1957. 7.45 p.m.

The decision of the British to increase trade with Red China is not going to bring British exporters any bonanza. The value of present ~~imports~~ Exports to that country is 28 million dollars, which is expected to rise to 72 millions. That sum is less than one percent of Britain's total exports. British manufacturers were glad of the tidbit, and the decision was popular with the British business community. But it is not likely that the British broke their unity with us over such an insignificant amount of trade. Something else was at issue.

And one can say in the same breath that more than the volume of trade was behind our strong opposition to the British proposal. We were disturbed that an increase in some of the items would speed up Chinese industrialization, and so add to Peiping's power. But we knew the amount would not be very great. So the British were willing to proclaim their disunity with us, and we were not willing to pay a price to keep them from doing so. Deeper things were involved.

In looking for the deeper things, one can say right away that the trouble is not one that is going to shatter the alliance with Britain or Europe. It may be serious, but it is not that serious. We will not cancel the plans laid at the Bermuda Conference to share guided missiles with the

British. We go on co-operating intimately in defense of Europe and against the Soviet Union.

But there is a parting of company on a joint policy isolating China. That, however, has been only a temporary policy growing out of the Korean War. Before that the British went their own way. They recognized Red China without our approval, now they have reverted to their old independence on this subject. They still share with us the collectible security responsibilities in Southeast Asia. But isolation of Red China seems to be scotched. The vote of the fifteen nations on trade with Red China was eight to seven in favor of the continued embargo. This was hardly a working majority, and the British pulled out.

This is going to be felt most of all in Japan and in the United Nations. Japan has a strong case to demand more trade with mainland Asia, and now that the British are going after Red China trade, the Japanese will hardly lag behind. This may well have political consequences, as it will tend to bring the Japanese and Communist Chinese into co-operation. In the United Nations, the isolation policy has been important and will be difficult to maintain. So far the British had gone along with us in blocking attempts to seat the Communist regime as representing the Chinese people. But they

did this on a year-to-year basis. They have recognized Red China and they cannot well oppose U.N. membership as a matter of principle, so next year, when the issue comes up again, the British may refuse to help us shelve it again.

If the result is that Red China enters the U.N. and takes a seat on the Security Council, the results will be serious. The two Communist powers would have an invulnerable nucleus on the Security Council, and the influence of the West would fall sharply. It may be that the bargaining over the admission of Red China may include an enlargement of the Security Council to offset such a rise in Communist strength. There has been talk of India being made a PERMANENT member of the Council, which would offset Communist strength but not bolster Western influence. It is easy to understand why the Administration has dreaded such developments, and wanted to put off any action.

We have had another reason for wanting to isolate Red China. It is to keep alive in the Far East a faith that the present Communist domination of Red China is not inevitable and everlasting. So we have felt it important to give Chinese not living on the mainland an alternative allegiance. That has been one explanation for our support of Chiang Kai Shek in Formosa.

It has helped the millions of Chinese in the Philippines, Malaya, Thailand, Indonesia and other countries, from going over wholesale to the Peiping regime, and threatening the independence of these countries from within.

But such a policy had to promise a future. It had to be linked with a prospect of a successful invasion of the China mainland by the Nationalists. And if it had no future, it had a deadline. Now the possibility of Nationalist invasion of the mainland is ruled out. Chiang cannot do it by himself, and we are not going to do it with him at the risk of major war. So now the deadline is coming into effect. The isolation of Red China is coming to an end. And that is what the British action is bringing to pass. Our State Department experts would agree that the isolation policy at best was a play for time. They are not sorry they made it. But now the time is running out.

George Bryan

Word for Today

The problem of trade with Red China recalls two observations ~~once~~ made by the home-spun American philosopher, Petroleum Nasby. He said, "A man who duz things from principle kin stand a good deal." This might be Mr. Dulles' argument. But Nasby also said (and this might apply to Britain), "My conscience won't allow me to support it any longer. And, besides, it don't pay."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

FRIDAY, MAY 31, 1957
7:45--8:00 P.M., E.D.S.T.

This is the news:

Goodnight and good luck!

Edward R. Murrow Mon., June 3, 1957

This is the news:

The White House expressed hope tonight that the Russian people..."and not just our grandchildren"...will someday soon live under a free system of government." The comment was made by News Secretary Hagerty in reference to Communist Party Boss Khrushchev's statement yesterday. on the CBS News and Public Affairs program "Face the Nation". Khrushchev had said, "I can prophesy that your grandchildren in America will live under socialism." At another point in the program, Khrushchev called for the "normalization" of relations between Russia and the United States. A State Department spokesman said today, "To the extent that the Soviet government demonstrates that it seeks to reach acceptable agreements, it will find a ready reception from the United States government and the American people." There was some criticism in Congress that

Khrushchev was permitted to speak on an American network. House Republican Leader Martin said, "I think it is poor to give the Communists such a great American forum. They wouldn't do it for us." Other members of Congress thought it was a good thing. Democratic Senator Mansfield, who is a member of the Senate Foreign Relations Committee, said, "I think the fact the show was put on indicates our strength. We have nothing to be afraid of," he said. "We would hope that Americans of similar stature would have the right to make a broadcast to the Russian people and that the Russians would be given the same chance to listen."

At the disarmament talks today...in London... Russia complained of the "delay" of the United States in formally presenting its new proposals. At the same time, the Soviet delegate... Valerian Zorin... again suggested an immediate agreement to halt nuclear weapons tests. ~~(I should like to discuss the Khrushchev interview and its relation to disarmament in a few minutes).~~ further

The Supreme Court ruled today that the DuPont Company maintains illegal control of General Motors. / The decision is based on the acquisition by DuPont...in 1917...of 23 percent of G.M.'s outstanding capital stock. In 1949, the Justice Department filed an anti-trust suit against DuPont in district court in Chicago. After a trial that lasted seven months, the district court dismissed the case, on grounds that the government failed to prove conspiracy, or restraint of trade. / The Justice Department appealed. / And today the Supreme Court upheld the appeal in a split 4-to-2 decision. The majority opinion...written by Justice Brennan...said although DuPont and General Motors are not competitors, the conclusion is "inescapable" that the acquisition of G.M. stock by DuPont violated the Clayton Anti-Trust Act. Justices Burton and Frankfurter dissented. They said the government's basic contention was that DuPont violated the Sherman Anti-Trust Act...in allegedly obtaining an unlawful preference in the purchase of materials from DuPont. They contend that in today's ruling this issue is ignored. ~~And the DuPont Company issued a statement noting what it called the "long retreat (of the government) from the sweeping charges made in the complaint initially filed."~~ "On appeal," it said, "the government

~~accepted without question the trial court's finding that there was no conspiracy relating to trade between the two companies.~~ The Supreme Court directed...in its majority opinion today...that the case be sent back to the trial court for determination of how much G.M. stock DuPont should now be required to sell.

The Supreme Court also ruled today that the government must produce relevant secret files in criminal cases, or dismiss the charges. The ruling came in a 7-to-1 decision...ordering a new trial for Clinton Jencks, a former union official, convicted of falsehood in filing a non-Communist affidavit. Part of the testimony against him came from turn-about witness Harvey Matusow. The Supreme Court said Jencks was entitled to see the reports Matusow gave the F.B.I. In his dissenting opinion, Justice Clark said that if the decision stands, "those intelligence agencies of our government engaged in law enforcement may as well close up shop."

President Eisenhower today asked Congress for another 149-million dollars for running the Post Office Department in the next fiscal year. The additional funds would have to be provided in the form of a supplemental money bill. Congress already has passed the regular appropriations measure...giving the department less than Postmaster General Summerfield said was essential.

Congress completed action today on the appropriations bill for the Commerce Department. Funds requested were cut by about 25 percent.

President Eisenhower was guest of honor today at a "harmony luncheon" attended by Republican members of the House. Republican Leader Martin told reporters afterward that the President said he stands "100 percent" behind the party platform. He quoted Mr. Eisenhower as saying, "Those who work for its enactment will certainly have me as an ally."

~~Republican Leader Martin told reporters afterward that the President stands "100 percent" behind the party platform. He said Mr. Eisenhower told the Republican representatives in attendance, "Those who work for its enactment will certainly have me as an ally."~~

President Eisenhower's civil rights bill suffered a setback today in the Senate Judiciary Committee. By a vote of 7 to 3, the committee approved an amendment that would guarantee trial by jury in contempt cases involving the right to vote. ~~Attorney General Brownell had said the change would "undermine" the effectiveness of the civil rights legislation.~~ The amendment was introduced by ~~Democratic~~ Democratic Senator Ervin of North Carolina. ~~Southern senators argued that the bill, as originally written, would violate the right of trial by jury.~~

Governor Thompson of Wisconsin said today that he will call a special election to fill the Senate seat left vacant last month by the death of Senator McCarthy. Thompson said the election date will be announced later this week.

The United States today joined the military committee of the Baghdad Pact. The action means that although the United States is not a full member of the pact, there are now American representatives on all the principal

7

committees. The full members of the anti-Communist alliance are Britain, Turkey, Pakistan, Iran and Iraq.

The Israeli parliament today approved Prime Minister Ben Gurion's acceptance of the Eisenhower Doctrine. Ben Gurion won the confidence test by a vote of 59 to 5, after 39 opposition members decided to abstain. [redacted] prime minister said [redacted] any assistance against any aggressor if it wishes to live."

In Algiers today, three time-bombs exploded...killing at least four persons and injuring 84. The bombs were hidden in the base of lamp posts in the downtown business district. Two of the fatally injured were women.

Edward R. Murrow: June 3, 1957. 7.45 p.m.

Nikita Khrushchev's appearance on Face the Nation was more than an historic event in international communications. It also was an opening gambit in a new phase of negotiations over disarmament. The interview should leave no one in doubt that the Russians are tough negotiators. Mr. Khrushchev was pleasant and agreeable, as he needed to be if he really wanted to improve relations with this country and leave a good impression on world opinion. But he was more than affable, he was adroit. He threw into the negotiations, even before they have reached the most serious stage, a counter-proposal to the offer expected from Harold Stassen. Mr. Stassen is going to propose a first step. So Mr. Khrushchev proposed a first step. And in London today, as part of the Soviet strategy, Mr. Zorin proposed still another first step. Mr. Stassen's first step will be of limited reach, one that does not affect power relationships between East and West, but tests out mutual good will so that further steps can be taken. Mr. Khrushchev's first step goes a long way, it is to withdraw all troops from central and eastern Europe. It does affect power relationships. Mr. Zorin's first step is to halt all nuclear tests forthwith, before controls can be worked out. And this, too, affects relative power, since we are further along in nuclear development than the Russians.

The Khrushchev offer, in particular, outbids what Mr. Stassen is permitted to offer as a first step. It sweeps aside the Western concept of the inter-dependence of the various phases of disarmament. Now, if the negotiations go well, the Russians will be in the position to claim the credit, and if they don't go well, they will charge us with the blame.

Let me elaborate for a moment on the American proposals. They haven't been divulged in detail, as our NATO allies are still studying them. But they can be described under three headings. One has to do with nuclear power. We are ready to abandon tests as Mr. Zorin asks, or reduce them, but on terms. What we do about them must be part of a long-range program, in which nuclear energy is confined to peacetime uses under international control, and the nuclear material now made into weapons is transformed for peaceful use.

This needs even more international inspection and control. Under a second heading comes reduction in conventional arms, which also must be guaranteed by international controls. And a third calls for aerial inspection, first of a limited test region, but ultimately covering all the critical areas. Just what our first step is going to be is not clear. It might be to fence off an arctic region for air inspection. It might

be to surrender to an international agency a percentage of actual weapons in use, conventional and nuclear. Both have been forecast in Washington reports.

Mr. Khrushchev said yesterday that he would go along on a first step. But then he proposed as such a step the withdrawal of troops from Europe, which he knew was a proposition Mr. Stassen is not authorized to accept. He also knew that Chancellor Adenauer cannot accept it before Germany is unified in freedom. So he knew he was asking more than he could get. And the Zorin offer of the first step of suspending nuclear tests, without controls, also was asking more than the Russians can get at this stage. They could ask it without taking a stand on Mr. Stassen's first step. So they can appear to be generous and co-operative without being put to the proof. When the time comes to take a stand on Mr. Stassen's offer, they can evade it or not, as they choose, and blame us if they reject it.

We had one of our first experiences of Soviet toughness in negotiations early in the war, when we and the British first decided to supply materials and munitions to the Soviet Union far surpassing anything the Russians had ever dreamed of receiving, enough, in fact, to make it possible for them to share the victory. Lord Beaverbrook and Ambassador Harriman were sent to

Moscow to break the good news. They sat down with Stalin and his associates, who could hardly believe their ears. The first meeting ended in undisguised gratitude and good feeling. But the next day the mood had mysteriously changed. Stalin was surly, rude, and as Harriman reported: "He rode us pretty hard". He turned on Harriman and asked: "Why is it that the United States can only give us one thousand tons of armor plate for tanks? a country with a production of fifty million tons." It was as though Stalin and his advisors, having learned they could get something, dropped courtesy and gratitude overnight to get more than was offered.

That has been the keynote for all negotiations with the Kremlin since then. It is what is to be expected in the future. And Mr. Khrushchev and Mr. Zorin have said nothing to change that expectation.

Word for Today

The Russians are demonstrating all over again that when it comes to bargaining, they are tough. Harriman expressed it when he said of Stalin, "He rode us pretty hard." The former foreign minister of France...Georges Bidault...expressed it another way. "When it comes to laying cards on the table," he said, "the Russians never play anything but clubs."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

MONDAY, JUNE 3, 1957
7:45--8:00 P.M., E.D.S.T.

This is the news:

The White House expressed hope tonight that the Russian people..."and not just our grandchildren..will someday soon, live under a free system of government." The comment was made by News Secretary Hagerty in reference to Communist Party Boss Khrushchev's statement yesterday. Khrushchev had said, "I can prophesy that your grandchildren in America will live under socialism." At another point in the program, Khrushchev called for the "normalization" of relations between Russia and the United States. A State Department spokesman said today, "To the extent that the Soviet government demonstrates that it seeks to reach acceptable agreements, it will find a ready reception from the United States government and the American people." There was some criticism in Congress that Khrushchev was permitted to speak on an American network. House Republican Leader Martin said, "I think it is poor to give the Communists such a great American forum. They wouldn't to it for us." Other members of Congress thought it was a good thing. Democratic Senator Mansfield, who is a member of the Senate Foreign Relations Committee, said, "I think the fact the show was put on indicates our strength. We have nothing to be afraid of," he said. "We would hope that Americans of similar stature would have the right to make a broadcast to the Russian people and that theRussians would be given the same chance to listen."

At the disarmamant talks today...in London..Russia complained of the "delay" of the United States if formally presenting its new proposals. At the same time, the Soviet delegate, Valerian Zorin..again suggested an immediate agreement to halt nuclear weapons tests.

The Supreme Court ruled today that the DuPont Company maintains illegal control over General Motors. The decision is based on the acquisition by DuPont...in 1917..of 23 percent of G.M.'s outstanding capital stock. In 1949, the Justice Department filed an anti-trust suit against DuPont in district court in Chicago. After a trial that lasted seven months, the district court dismissed the case on grounds that the government failed to prove conspiracy or restraint of trade. The Justice Department appealed. And today the Supreme Court upheld the appeal in a split 4 - to - 2 decision. The majority opinion..written by Justice Brennan..said although DuPont and General Motors are not competitors, the conclusion is "inescapable" that the acquistion of G.M. stock by DuPont violated the Clayton Anti-Trust Act. Justices Burton and Frankfurter dissented. They said the government's basic contention was that DuPont violated the Sherman Anti-Trust Act..in allegedly obcaining an unlawful preference in the purchase of materials from DuPont. They contended that in today's ruling this issue is ignored. The Supreme Court directed..in its majority opinion today...that the case be sent back to the trial court for determination of how much G.M. stock DuPont should now be required to sell.

The Supreme Court also ruled today that the government must produce relevant secret files in criminal cases, or dismiss the charges. The ruling came in a 7 - to - 1 decision..ordering a new trial for Clinton Jencks, a former union official convicted of falsehood in filing a non-Communist affidavit. Part of the testimony against him came from turn - about witness Harvey Matusow. The Supreme Court said Jencks was entitled to see the reports Matusow gave the F.B.I.. In his dissenting opinion, Justice Clark said that if the decision stands, "Those intelligence agencies of our government engaged in law enforcement may as well close up shop."

President Eisenhower today asked Congress for another 149-million dollars for running the Post Office Department in the next fiscal year. The

additional funds would have to be provided in the form of a supplemental money bill. Congress already has passed the regular appropriations measure..giving the department less than Postmaster General Summerfield said was essential.

Congress completed action today on the appropriations bill for the Commerce Department. Funds requested were cut by about 25 percent.

President Eisenhower's civil rights bill suffered a setback today in the Senate Judiciary Committee. By a vote of 7 to 3, the committee approved an amendment that would guarantee trial by jury in contempt cases involving the right to vote.

Governor Thompson of Wisconsin said today that he will call a special election to fill the Senate seat left vacant last month by the death of Senator McCarthy. Thompson said the election date will ba announced later this week.

The United States today joined the military committee of the Baghdad Pact. The action means that although the United States is not a full member of the pact, there are now American representatives on all the principal committees. The full members of the anti-Communist alliance are Britain, Pakistan, Iran and Iraq.

The Israeli parliament today approved Prime Minister Ben Gurion's acceptance of the Eisenhower Doctrine.

In Algiers today, three time-bombs exploded..killing at least four persons and injuring 84.

Nikita Khrushchev's appearance on "Face the Nation" was more than an historic event in international communications. It also was an opening gambit in a new phase of negotiations over disarmament. The interview should leave no one in doubt that the Russians are tough negotiatiors. Mr. Khrushchev was pleasant and agreeable, as he needed to be if he really wanted to improve relations with this country and leave a good impression on world opinion.

But he was more than affable, he was adroit. He threw into the negotiations, even before they have reached the most serious stage, a counter- proposal to the offer expected from Harold Stassen. Mr. Stassen is going to propose a first step. So Mr. Khrushchev proposed a first step. And in London, today, as part of the Soviet strategy, Mr. Zorin proposed still another first step. Mr. Stassen's first step will be of limited reach, one that does not affect power relationships between East and West, but tests out mutual good will so that further steps can be taken. Mr. Khrushchev's first step goes a long way, it is to withdraw all troops from central and eastern Europe. It does affect power relationships. Mr. Zorin'a first step is to halt all nuclear tests forthwith, before controls can be worked out. And this, too, affects relative power, since we are further along in nuclear development that the Russians.

The Khrushchev offer, in particular, outbids what Mr. Stassen is permitted to offer as a first step. It sweeps aside the Western concept of the inter-dependence of the various phases of disarmament. Now, if the negotiations go well, the Russians will be in the position to claim the credit, and if they don't go well, they will charge us with the blame.

They could ask it without taking a stand on Mr. Stassen's first step. So they can appear to be generous and co-operative without being put to the proof. When the time comes to take a stand on Mr. Stassen's offer, they can evade it or not, as they choose, and blame us if they reject it.

We had one of our first experiences of Soviet toughness in negotiations early in the war, when we and the British first deciced to supply materials and munitions to the Soviet Union far surpassing anything the Russians had ever dreamed of receiving, enough, in fact, to make it possible for them to share the victory. Lord Beaverbrook and Ambassador Harrmman were sent to Moscow to break the good news. They sat down with Stalin and his associates, who could hardly believe their ears. The first meeting ended in undisguised gratitude and good feeling. But the next day the mood had mysteriously changed. Stalin was surly, rude, and as Harriman reported: "He rode us pretty hard." He turned on Harriman and asked:"Why is it that the United States can only give us one thousand tons of armor plate for tanks?...a country with a production of fifty million tons." It was as though Stalin and his advisors, having learned they could get something, dropped courtesy and gratitude overnight to get more than was offered.

That has been the keynote for all negotiations with the Kremlin since then. It is what is to be expected in the future. And Mr. Khrushchev and Mr. Zorin have said nothing to change that expectation.

This is Ed Murrow. I'll be back in a moment. Now, here is George Bryan.

BRYAN:

MURROW: The Russians are demonstrating all over again that when it comes to bargaining, they are tough. Harriman expressed it when he said of Stalin, "He rode us pretty hard.". The former foreign minister of France..Georges Bidault...expressed it another way. "When it comes to laying cards on the table," he said, "the Russians never play anything but clubs."

Goodnight and good luck.

This is the news:

The United States agreed today to allow Army Specialist William Girard to be tried by a Japanese court. Girard is accused of manslaughter in the death of a Japanese woman who trespassed on a firing range near Tokyo. It was decided last month that the American soldier would be tried by the Japanese under a status-of-forces agreement, rather than by a U.S. Army court martial. This decision, however, was not implemented. Secretary of Defense Wilson ordered Girard held in Army custody, pending review of the case. Today Wilson and Secertary of State Dulles announced jointly that Girard would be turned over to the Japanese authorities for trial "in order to preserve the integrity of the pledges of the United States." In Tokyo, the Japanese Foreign Ministry has expressed gratification over the American action. In Congress, the chairman of the House Foreign Affairs Committee...

Representative Gordon of Illinois...says his group will investigate the case "thoroughly", before acting on foreign aid legislation. The State Department said it is satisfied Girard will be given a fair trial. And White House News Secretary Hagerty says "certainly" President Eisenhower approved the decision to give Japan jurisdiction in the case.

Hagerty said the President has "no intention" of trying to reply to Communist Party Boss Khrushchev on Soviet radio or television, as the result of Khrushchev's appearance on CBS radio and television last week-end. Hagerty left open the possibility of some formal reply by an American other than the President on facilities in the United States.

A surprise maneuver in the House of Representatives may have delayed signing of a 95-million-dollar agreement with Poland. ~~The House is considering a measure...already approved by the Senate...to authorize the sale of a billion dollars' worth of farm surpluses abroad for foreign currencies. This would have cleared the way for exchanging nearly 50-million dollars' worth of surplus American wheat and cotton for Polish currency, as part of the economic agreement. Now House passage of the bill has been delayed.~~ Democratic Representative Rooney of New York today raised a technical

point of order...contending that the measure is not a simple legislative matter because it involves appropriations. In that case, it should have been considered by the House Appropriations Committee. A showdown was put off until later this week.

A joint Senate-House committee heard more testimony today on the dangers of radioactive fallout. A geneticist from the University of Wisconsin...Dr. James Crow...said that if nuclear tests continue at their present rate, "we can be sure than several thousands or perhaps more persons will be diseased, or deformed, or will die prematurely, as a consequence of fallout." Dr. Bentley Glass, of Johns Hopkins, said he thought a biologist should be named to the Atomic Energy Commission to insure that the importance of the health factor is emphasized at the top level. He said the danger to future generations may already have been underestimated.

The American Cancer Society reported today that men who smoke cigarettes are 10 times as likely to die of lung cancer as non-smokers. The report was based on a four-year survey... involving 188-thousand men from 50 to 70 years of age. The report said a "clear-cut association" between cigarette smoking and heart disease was also indicated. It said the death rate...due to heart disease...was almost three times greater among heavy smokers than among non-smokers. No attempt was made to determine the effect of smoking on women. The report was presented to the annual meeting of the American Medical Association, here in New York. In rebuttal, the tobacco industry research committee reiterated its stand that "the causes of cancer and heart disease are not yet known." It says the report contains "unsupported assumptions"...and that it "still shares the widely held position that the basic origins of cancer and heart disease will eventually be learned by careful laboratory and clinical study, not through statistical reports that are subject to differing interpretations from the innumerable variables involved."

Dave Beck, Jr., son of the teamsters union president, today refused to answer questions put to him by the Senate rackets committee. Altogether, he invoked the Fifth Amendment 130 times. One question he declined to

answer on grounds of possible self-incrimination was whether he received nearly 65-thousand dollars in salary and expenses from the teamsters union in the last three years. He refused...on the same grounds...to say whether he knew his father, or to state his occupation. Chairman McClellan called this a "flagrant abuse of the Fifth Amendment", and ordered contempt of Congress proceedings.

In Tacoma, Washington, Dave Beck, Sr. pleaded innocent today to charges of income tax evasion.

Democratic Representative Walter of Pennsylvania introduced legislation today to limit the scope of yesterday's Supreme Court decision affecting ~~[illegible]~~ producing of evidence. The court ruled...7 to 1...that the government must produce relevant F.B.I. reports in criminal cases, or dismiss the charges. The bill introduced by Representative Walter would permit the attorney general to refuse disclosure of any information if...in the language of the proposed legislation...such disclosure would be prejudicial to "the public interest, safety or security of the United States."

Republican Chairman Meade Alcorn reported to President Eisenhower today on the state of the Republican Party. Alcorn told the President that the party is having trouble raising money "because of a feeling among some contributors that the budget is too high." He predicted that Republican gains in next year's congressional elections will be "more than sufficient" to give the Republican Party control of the House. But the situation in the Senate, he said, will be "touch and go." He said Mr. Eisenhower will play "a vital role" in the campaign.

Edward R. Murrow: June 4, 1957. 7.45 p.m.

The decision of the Administration to let Japanese courts try Army Specialist Girard for the death of a Japanese woman, accidentally killed on a firing range, has stirred some protest in Congress. Senator Bricker at once called Girard a sacrifice to Japanese public opinion.

The Japanese incident does not stand alone. It was followed by the Formosa riot, which was set off by the acquittal of an American ~~officer~~ Soldier for manslaughter in an American military court. The two cases are quite dissimilar and involve widely different issues. But both had to do with the trial of American Army personnel for actions resulting in the death of civilians. There is no question that the two incidents have stirred up hostility in the Far East. The Girard case has been hotly debated in the Japanese parliament and press.

We have a status-of-forces agreement with Japan, that governs the rights of Japanese courts over American personnel in their relations with civilians, and the rights of American military courts over personnel for actions committed during the performance of duty. The case against Girard is that he launched an empty shell-case as a warning to civilians on a firing range, and struck and killed a woman. If he had been performing a duty in

launching the shell-case, the Japanese could hardly have challenged the right of an American court to try him. The statement issued by Secretary Wilson and Secretary Dulles today says that Girard had "not been authorized to fire the empty shell-case."

The Army has been urging an American trial on the ground that Specialist Girard was on duty, which he was, since he had been assigned to protect a machine-gun on the firing range. But being on duty and doing his duty are apparently not the same thing.

Our status-of-forces agreement governing such incidents was amended four years ago, and the amendment contained a sentence that is ambiguous, but can be interpreted to give the Japanese jurisdiction in the Girard case. We accepted the ambiguous statement at the time. But what is even more to the point, the agreement calls for a joint U.S.-Japan committee to review cases where interpretation is disputed. This joint board met and reviewed the case, and on May 16 decided that Girard should be tried in a Japanese court. In reaching this decision, the United States agreed not to exercise an asserted right to try Girard.

Obviously Mr. Wilson and Mr. Dulles felt that the finding of the review board was the clinching factor in the matter. If a dispute over jurisdiction

were now to be prolonged, they stated, it would: "create a situation which would basically affect the United States' relations not only with Japan, but also with many other nations." In supporting this decision Mr. Wilson was not reversing himself. At the time the review board in Japan reached its decision, he did order that Girard be kept in American custody, but it was to be "pending a complete review of the matter by the general counsel of the Defense Department." Later President Eisenhower broadened this "review of the review" to include the State Department, and instructed the two departments to work out a solution. And this is what has been done.

I might recall at this point a report made by my colleague Bob Pierpoint on this program, after visiting the firing range where the fatality had taken place. He found the Japanese inhabitants in a nearby village had been making a business of gathering up empty shell-cases on the range. Both the American and Japanese armies used the range, and both declared it off limits to civilians. But neither army really enforced the rule. It is agreed that Girard had not meant to injure Mrs. Sakai, who was killed. He said he fired from the waist without aiming at her, trying to frighten her off the range. Mr. Sakai, her husband, told Pierpoint that he had cautioned his wife against gathering shell-cases, and he said that

whichever side tried Girard should be merciful. One resident remarked wryly that both Mrs. Sakai and Girard had been "very unlucky."

Mr. Pierpoint did not find local feeling very high. So this is not a case arising out of an angry local demand for vengeance. It is on another level, involving jurisdiction, the interpretation of an agreement, and then its fulfilment by regular procedures. It was on this level that the Administration reached its decision, and Senator Knowland said today, that under the conditions confronting the Administration, the decision was the only one it could take. Now it remains to be seen whether Girard will get a fair trial in a Japanese court. The chief of the district court today promised that for the sake of good relations with the United States, he would.

/

Word for Today

The Japanese say that Army Specialist William Girard will be given a fair trial...that justice will be done. Many wise words have been spoken on the subject of justice. Woodrow Wilson said, "Unless justice be done to others, it will not be done to us." The Japanese may be aware of this. And Wilson also said, "Justice has nothing to do with expediency."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

TUESDAY, JUNE 4, 1957
7:45--8:00 P.M, E.S.T.

This is the news:

The United States agreed today to allow Army Specialist William Girard to be tried by a Japanese court. Girard is accused of manslaughter in the death of a Japanese woman who trespassed on a firing range near Tokyo. It was decided last month that the American soldier would be tried by the Japanese under a status - of - forces agreement, rather than by a U.S. Army court martial. This decision, however, was not implemented. Secretary of Defense Wilson ordered Girard held in Army custody, pending review of the case. Today Wilson and Secretary of State Dulles announced jointly that Girard would be turned over to the Japanese authorities for trial "in order to preserve the integrity of the pledges of the United States." In Tokyo, the Japanese Foreign Ministry has expressed gratification over the American action. In Congress, the chairman of the House Foreign Affairs Committee... Representative Gordon of Illinois..says his group will investigate the case "thoroughly", before acting on foreign aid legislation. The State Department said it is satisfied Girard will ge given a fair trial. And White House News Secretary Hagerty says "certainly" President Eisenhower approved the decision to give Japan jurisdiction in the case.

Hagerty said the President has "no intention" of trying to reply to Communist Party Boss Khrushchev on Soviet radio or television, as the result of Khrushchev's appearance on CBS radio and television last week - end. Hagerty left open the possibility of some formal reply by an American other than the President on facilities in the United States.

A surprise maneuver in the House of Representatives may have delayed signing of a 95-million dollar agreement with Poland. Democratic Representative Rooney of New York today raised a technical point of order..contending that

the measure is not a simple legislative matter because it involves appropriations. In that case, it should have been considered by the House Appropriations Committee. A showdown was put off until later this week.

A joint Senate-House committee heard more testimony today on the dangers of radioactive fallout. A geneticist from the University of Wiscoson.. Dr. James Crow..said that if nuclear tests continue at their present rate, "We can be sure that several thousands or perhaps more persons will be diseased, or deformed, or will die prematurely, as a consequence of fallout." Dr. Bently Glass, of Johns Hopkins, said he thought a biologist should be named to the Atomic Energy Commission to insure that the importance of the health factor is emphasized at the top level. He said the danger to future generations may already have been underestimated.

The American Cancer Society reported today that men who smoke cigarettes are 10 times as likely to die of lung cancer as non-smokers. The report was based on a four - year survey...involving 188-thousand men from 50 to 70 years of age. the Far East. The Girard case has been hotly debated in the Japanese parliament and press.

We have a status-of-forces agreement with Japan, that governs the rights of Japanese courts over American personnel in their relations with civilians, and the rights of American military courts over personnel for actions committed during the performance of duty. The case against Girard is that he launched an empty shell - case as a warning to civilians on a firing range, and struck and killed a woman. If he had been performing a duty in launching the shell-case, the Japanese could hardly have challenged the right of an American court to try him. The statement issued by Secretary Wilson and Secretary Dulles today says that Girard had "not been authorized to fire the empty - shell case."

The Army has been urging an American trial on the ground that Specialist Girard was on duty, which he was, since he had been assigned to protect a machine - gun on the firing range. But being on duty and doing his duty are apparently not the same thing.

Our status - of - forces agreement governing such incidents was amended four years ago, and the amendment contained a sentence that is ambiguous but can be interpreted to give the Japanese jurisdiction in the Girard case. We accepted the ambiguous statement at the time. But what is even more to the point, the agreement calls fora a joint U.S. Japan committee to review cases where interpretation is disputed. This joint board met and reviewed the case, and on May 16 decided that Girard should be tried in a Japanese court. In reaching this decision, the United States agreed not to exercise an asserted right to try Girard.

Obviously Mr. Wilson and Mr. Dulles felt that the finding of the review board was the clinching factor in the matter. If a dispute over jurisdiction were not to be prolonged, they stated, it would: "create a situation

which would basically affect the United States relations not only with Japan, but also with many other nations." In supporting this decision Mr. Wilson was not reversing himself. At the time the review board in Japan reached its decision, he did order that Girard be kept in American custody, but it was to be "pending a complete review of the matter of the general counsel of the Defense Department." Later President Eisenhower broadened this "review of the review" to include the State Department, and instructed the two departments to work out a solution. And this is what has been done.

I might recall at this point a report made by my colleague Bob Pierpoint on this program, after visiting the firing range where the fatality had taken place. He found the Japanese inhabitants in a nearby village had been making a business of gathering up empty shell - cases on the range. Both the American and Japanese armies used the range, and both declared it off limits to civilians. But neither army really enforced the rule. It is agreed that Girard has not meant to injure Mrs. Sakai, who was killed. He said he fired from the waist without aiming at her, trying to frighten her off the range. Mr. Sakai, her husband, told Pierpoint that he had cautioned his wife against gathering shell - cases, and he said that whichever side tried Girard should be merciful. One resident remarked wryly that both Mrs. Sakai and Girard had been "very unlucky."

Pierpoint did not find local feeling very high. So this is not a case arising out of an angry local demand for vengeance. It is an another level, involving jurisdiction, the interpretation of an agreement, and then its fulfilment by regular procedures. It was on this level that the Administration reached its decision, and Senator Knowland said today that under the conditions confronting the Administration, the decision was the only one it could take. Now it remains to be seen whether Girard will get a fair trial in a Japanese court. The chief of the district court today promised that for the sake of good relations with the United States, he would.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: The Japanese say that Army Specialist Girard will be given a fair trial...that justice will be done. Many wise words have been spoken on the subject of justice. Woodrow Wilson said, "Unless justice be done to others, it will not be done to us." The Japanese may be aware of this. And Wilson also said, " Justice has nothing to do with expedience."

Goodnight and good luck.

Edward R. Murrow Wed., June 5, 1957

This is the news:

President Eisenhower said today that he would favor a total ban on testing of nuclear weapons, if there were a fool-proof system outlawing their use in any war. / Mr. Eisenhower said he "doubts" that the United States will ever test another hydrogen bomb...such as the one exploded in the South Pacific in 1954. / That was the first so-called "super bomb". / And it caused more radio-active fallout than any American test so far. / The first question put to the President today...at his news conference...concerned the current debate over fallout and his estimate of the danger. / He had this to say:

Tape runs 5 mins
Ends on cue: "--and what I think
is proper to say."

A member of the Atomic Energy Commission...Dr. WILLARD Libby...said today that the question whether to continue nuclear tests amounts to this: "Are we willing to take this very small and rigidly controlled risk (due to fallout), or would we prefer to run the risk of annihilation which might result if we surrendered the weapons which are so essential to our freedom and actual survival?" Libby made the statement before the joint congressional committee investigating the effects of radiation. ~~A nuclear physicist...Dr. Ralph Lapp...told the committee that Japanese scientists have determined from the examination of fallout from Soviet tests that Russia had developed a fission-fusion-fission...or multiple-stage hydrogen weapon... by September, 1954.~~

Today...in Nevada...the United States set off the third atomic device in its current series of tests. The relatively small explosion was detonated for the first time from a balloon. The test was officially described as "quite successful from the technical viewpoint."

The United States and Britain today broke their deadlock over the exchange of certain atomic information for peaceful purposes. An announcement... issued on behalf of both countries...said agreement had been reached "on

a wide range of subjects", including the United States request for more information on Britain's major plant for producing electricity from nuclear power.

Soviet Premier Bulganin said today that Russia is ready to conclude what he called "an appropriate agreement on the whole problem of disarmament." Bulganin made the offer in a letter to the International Labor Organization meeting in Geneva. "In my view," he said, "it is of paramount importance to the preservation of peace that an end should be made to the armaments race." He made clear that...for Russia...an "appropriate" over-all agreement would include the immediate cessation of nuclear weapons tests.

At his news conference today, President Eisenhower welcomed Khrushchev's statement...last week-end...that Russia was prepared to seek a "first-step" disarmament agreement. He said he never rejects a hopeful sign "until it has been explored to the full." The President, however, denounced Khrushchev's proposal for withdrawal of United States troops from Europe in return for withdrawal of Soviet forces from the satellite states. He said the proposition seemed calculated to "drive a wedge" between the United States and its allies. And he noted that Khrushchev had said nothing

about unifying Germany. Mr. Eisenhower said he would not try to answer the Communist leader on Russia's 14 television stations, or on the Soviet radio. On the other hand, he said, if some American should be invited to make a broadcast in Russia...and there was a promise of no interference... "somebody in this government would be glad to accept." Frank Stanton, president of CBS, offered the President the facilities of the network for any comments on the Khrushchev interview which he might care to make. N.B.C. has made a similiar offer.

In the Girard case, President Eisenhower expressed confidence that Army Specialist William Girard will receive a fair trial. Japanese courts, he said, have a reputation for fairness. He said if any injustice should occur, "it would be a case that would be taken up diplomatically, of course." The United States will be watching the proceedings closely. Girard faces manslaughter charges in the death of a Japanese woman who trespassed on an Army firing range, outside of Tokyo. The Administration decided yesterday to allow the soldier to be tried by a Japanese court.

A Senate armed services subcommittee called defense officials to a closed door meeting today, to explain the Girard case. Republican Senator Flanders of Vermont said the Pentagon had not exhausted all its rights before agreeing to a Japanese trial. Another Republican senator...Allott of Colorado...suggested that a special Senate committee be set up, to make what he called a "full and complete" investigation of the case. The

House Foreign Affairs Committee is scheduled to make a similar inquiry later this month.

Mr. Eisenhower commented...at his news conference...on Britain's decision to relax trade with Red China. "Frankly," he said, "I am of the school that believes that trade, in the long run, cannot be stopped." But he said that so long as there is a "law" against American trade with the Chinese Communists, the ban so far as the United States is concerned will remain in force.

The United States, Britain and France are rejecting the Soviet proposal for a coordinated policy among the Big Four in the Middle East. They are sending separate notes to Moscow to this effect.

In London, the five-power disarmament talks have ~~been adjourned~~ until next Tuesday because ~~of Britain's Whitsunday holiday. According to informed sources, the United States will now formally present its new arms proposals soon after the talks resume.~~

In Paris today, the Christian Democratic leader, ~~Pierre Pflimlin,~~ abandoned his efforts to form a new government. ~~President Coty has now~~ turned the task over to Maurice Bourges-Maunoury, ~~former minister in the~~ Mollet cabinet ~~which resigned on May 21.~~

BOOR-GEZ MON'-OO-REE

French military authorities...in Algeria... report 152 rebels killed in three battles in the past 24 hours. French casualties are put at 16 dead and 15 wounded.

Defense Secretary Wilson said tonight...in a Boston speech...that "there is reason to believe that the rise of Communism has reached and passed its peak." Wilson said much of this is due to "our international policies and our strong defense."

STET

In Congress, ~~the House~~ voted today to call ~~the Administration's civil~~ rights bill up ~~for debate tomorrow. Formal debate will continue until next Tuesday, when the House will take up amendments.~~

Hazel: This last story was used +

Word for Today

Dr. Albert Einstein once made this comment on the subject of nuclear war. If such a war comes, he said, "I do not believe that civilization will be wiped out. Perhaps two-thirds of the people of the earth might be killed. But enough men capable of thinking...and enough books...would be left to start again, and civilization would be restored."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Wednesday, June 5, 1957
7:45 - 8:00 P.M.

MURROW: ... President Eisenhower said today that he would favor a total ban on the testing of nuclear weapons if there were a foolproof system outlawing their use in any war. Mr. Eisenhower said he doubts that the United States will ever test another hydrogen bomb, such as the one exploded in the South Pacific in 1954; that was the first so-called super bomb. And it caused more radioactive fallout than any American test so far. The first question put to the President today, at his news conference, concerned the current debate over fallout and his estimate of the danger. He had this to say:

PRES. EISENHOWER: Last October, we published a very long report from the National Academy of Sciences which gave a very full discussion of this whole matter, bringing up the amount of radiation you get from natural sources, the sun, and X-ray pictures and all the rest of it, I believe down even to include the phosphorous on the dial of your watch, and things of that kind. That is the authoritative document by which I act up to this moment because there's been no change that I know of.

Now, on the other hand, here is a field where scientists disagree. Incidentally, I noticed that in many instances scientists had seemed to be out of their own field of competence, are getting into this argument, and it looks like almost an organized affair.

I am concerned, just as much as I am of this fallout, I'm concerned of the defense of the United States. I have tried, and this Government has tried, to make the abolition of tests a part of a general system of disarmament, controlled and inspected disarmament. If we can do that, we'd be glad enough and very quickly to stop tests. But we do have the job of protecting the country. Our tests, in recent years, the last couple of years, have been largely of the ... in the defensive type of arma-

ment to defend against attack from the air, and particularly, to make bombs cleaner, so there isn't so much fallout. We have reduced the fallout from bombs by nine-tenths. So that our tests of smaller weapons have been in that direction, to see how clean we could make them.

RESTON: Reston of the New York Times. The comments here this morning, sir, about fallout are, I think, open the the inference that this is just an organized campaign and that the scientists, who are disturbed about it ... (inter.)

PRES. EISENHOWER: Oh, no, I didn't say that, no. I said there does seem to be some organization behind it - I didn't say it was a wicked organization.

RESTON: No, but I ... I think it is, the way it is left right now, this is merely an opinion, is open to that inference and I ... (inter.)

PRES. EISENHOWER: Well, I don't mean that at all. There's ... many of these people are just as honest as they can be, there's no question about that. But as I say, when they begin to talk a little bit out of their fields, well, then I ... I would rather go myself to the Academy of Sciences, which has no axe to grind of any kind, is not looking for publicity, and say 'Now, what do you people think?' And I mentioned that I was living by the document that they've given to? this moment.

SPEAKER: May I ask two questions about this whether you have any plans to deal with the anxiety in the country about fallout, and second, whether in any way you are modifying your plan about such (indistinct)

PRES. EISENHOWER: Well, I wouldn't say I've got a plan, because the plans that we have for testing are all bound up in the plans we have for disarmament, which we think is necessary. We think if you're going to include these weapons as a positive or almost certain weapons of war in any future global thing, we would be foolish indeed to be behind anybody else.

Now, that means testing, because the scientists in your laboratories, each year, believe they've found something that makes them cleaner, better, more efficient or particularly what we're working on so hard, as you know, is the defense against hostile aircraft. So, those people can't continue to work unless they can test them. On the other hand, I would like to allay all anxiety in the world by a total and complete ban of all testing, based upon total disarmament in this field.

SPEAKER: Well, again, (indistinct) test H-bombs similar to the one (indistinct) the Pacific (indistinct) ... wide protest?

PRES. EISENHOWER: The early one?

SPEAKER: Yes.

PRES. EISENHOWER: I would doubt that anything like that would ever be repeated. But I want to say this, again, our plans and even our thinking on this, we are trying to weave into programs which we must con ... concert with our Allies before they are of great value. And if I have not been as frank in this one subject as you people think I should, remember this, if I say something that Britain or France or some other great ally or Canada cannot accept, and they get irritated or embarrassed by it, then our whole program of trying to achieve real disarmament and real cessation in all these terrible fields is hurt. So I've told you what I think is public property and what I think is proper to say.

MURROW: A member of the Atomic Energy Commission, Dr. Willard Libby, said today that the question whether to continue nuclear tests amounts to this: Are we willing to take this very small and rigidly controlled risk, due to fallout, or would we prefer to run the risk of annihilation, which might result if we surrendered the weapons which are so essential to our freedom and actual survival.

So I've told you what I think is public property and what I think is proper to say.

MURROW: A member of the Atomic Energy Commission, Dr. Willard Libby, said today that the question whether to continue nuclear tests amounts to this: Are we willing to take this very small and rigidly controlled risk, due to fallout, or would we prefer to run the risk of annihilation, which might result if we surrendered the weapons which are so essential to our freedom and acutal survival ?" Libby made the statement before the joint congressional committee investigating the effects of radiation.

Today...in Nevada...the United States set off the third atomic device in its current series of tests. The relatively small explosion was detonated for the first time from a balloon. The test was officially described as "quite successful from the technical viewpoint."

The United States and Britain today broke their deadlock over the exchange of certain atomic information for peaceful purposes. An announcement ...issued on behalf of both countries...said agreement had been reached "on a wide range of subjects", including the United States request for more information on Britain's major plant for producing electricity from nuclear power.

Soviet Premier Bulganin said today that Russia is ready to conclude what he called "an appropriate agreement on the whole problem of diarmament." Bulganin made the offer in a letter to the International Labor Oragnization meeting in Geneva. "In my view," he said, "it is of paramount importance to the preservation of peace that an end should be made to the armaments race." He made clear that...for Russia..an "appropriate" over-all agreement would include the immediate cessation of nuclear weapons tests.

At his news conference today, President Eisenhower welcomed Khrushchev's statement...last week-end ..that Russia was prepared to seek a "first-step" disarmament agreement. He said he never rejects a hopeful sign "until it has been explored to the full." The President, however, denounced Khrushchev's proposal for withdrawal of United States troops from Europe in return for withdrawal of Soviet forces from the satellite states. He said the proposition seemed calculated to "drive a wedge" between the United States and its allies. And he noted that Khrushchev has said nothing about unifying Germany. Mr. Eisenhower said he would not try to answer the Communist leader on Russia'a 14 television stations or on the Soviet radio. On the other hand, he said, if some American should be invited to make a broadcast in Russia... and there was a promise of no interference.."somebody in this government would be glad to accept." Frank Stanton, president of CBS, offered the President the facilities of the network for any comments of the Khrushchev interview which he might care to make. N.B.C. has made a similar offer.

Army Specialist William Girard will receive a fair trial. Japanese courts, he said, have a reputation for fairness. He said if any injustice should occur, "it would be a case that would be taken up diplomatically, of course." The United States will be watching the proceedings closely. Girard faces manslaughter charges in the death of a Japanese woman who trespassed on an Army firing range, outside of Tokyo. The Administration decided yesterday to allow the soldier to be tried by a Japanese court.

A Senate armed services subcommittee called defense officials to a closed door meeting today to explain the Girard case. Republican Senator Flanders of Vermont said the Pentagon had not exhausted all its rights before agreeing to a Japanese trial. Another Republican senator...Allott of Colorado ...suggested that a special Senate committee be set up to make what he called a "full and complete" investigation of the case. The House Foreign Affairs Committee is scheduled to make a similar inquiry later this month.

Mr. Eisenhower commented..at his news conference..on Britain's decision to relax trade with Red China. "Frankly", he said, "I am of the school that believes that trade, in the long run, cannot be stopped." But he said that so long as there is a "law" against American trade with the Chinese Communists, the ban, so far as the United States is concerned, will remain in force.

The United States, Britain and France are rejecting the Soviet proposal for a coordinated policy among the Big Four in the Middle East. They are sending separate notes to Moscow to this effect.

French military authorities..in Algeria..report 152 rebels killed in three battles in the past 24 hours. French casualties are put at 16 dead and 15 wounded.

Defense Secretary Wilson said tonight..in a Boston speech..that "There is reason to believe that the rise of Communism has reached and passed its peak." Wilson said much of this is due to "our international policies and our strong defense."

In Congress, the House voted today to call the Administration's civil rights bill up for debate tomorrow. Formal debate will continue until next Tuesday, when the House will take up amendments.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: Dr. Albert Einstein once made this comment on the subject of nuclear war. If such a war comes, he said, "I do not believe that civilization will be wiped out. Perhaps two-thirds of the people of the earth might be killed. But enough men capable of thinking..and enough books..would be left to start again and civilization would be restored."

Goodnight and good luck.

Edward R. Murrow Thurs., June 6, 1957

This is the news:

A federal judge today ordered the government to show cause why Army Specialist William Girard...who faces trial in a Japanese court... should not be returned to the United States. The order, signed by Judge Joseph McGarraghy, directed that Girard "shall not be delivered to custody, or control, of any foreign government or power", pending hearing next Tuesday on a petition for a writ of habeas corpus. The petition was filed by two of Girard's attorneys. It asks that the Army specialist...who is in Tokyo...be brought before the federal court in Washington for a hearing. The government decided earlier this week that Girard should stand trial before a Japanese court. The charge is manslaughter...growing out of the death of a Japanese women who trespassed on an Army firing range. Judge McGarraghy said he could not

order the soldier's immediate return until he had a more complete record of the case. ~~The Army announced tonight that its assistant judge advocate general, Brigadier General Charles Decker, is flying to Japan at once "to insure that Girard's legal rights are fully protected." In Congress, Republican Representative Wharton of New York introduced a resolution to prevent foreign countries from having jurisdiction over American armed forces stationed on their territory. The resolution requires approval by both the Senate and House.~~

President Eisenhower spent most of the day on the super-carrier Saratoga, off the Florida coast. In a surprise demonstration, two Navy Crusader jets landed on the deck of the carrier...after flying from the Pacific coast in three hours and 28 minutes.

Vice President Nixon called today for a "united, fighting Republican Party." The controversy over "modern Republicanism", Mr. Nixon said, arises solely from efforts to define the term. The vice president was ~~[illegible]~~ addressing a meeting of Republican leaders in Washington. National Chairman Alcorn told the opening session of the two-day party conference that ~~President Eisenhower~~ there will be "intense participation" by President Eisenhower in next year's congressional campaign.

The House opened debate today on President Eisenhower's civil rights program. Almost immediately, Democratic Representative Smith of Virginia raised a point of order which...if accepted...would have sent the legislation back to committee. Smith argued that the report the Judiciary Committee sent along with the measure was incomplete and that consequently, the bill was not ready for debate. Speaker Rayburn ~~[illegible]~~ ruled the objection invalid. The debate is now scheduled to continue for three days, after which time amendments will be offered.

~~The Senate Foreign Relations Committee agreed tentatively today to vote the Administration the full 2-billion, 800-million dollars it requested for military aid to friendly countries in fiscal 1958. But it agreed, also tentatively, to scale this figure down by nearly 600-million dollars in fiscal 1959. The committee rejected President Eisenhower's request for a "continuing" authorization of the mutual military aid program. It granted him, instead, an authorization that would run just two years. The committee has yet to consider the program of economic aid.~~

The Senate rackets committee opened hearings today into the alleged misuse of funds by some officials of the Bakery Workers Union. Anthony Conforti,

head of Chicago local No. 1, told the committee he gave the union's former vice president, George Stuart, more than 6-thousand dollars of union money for an organization drive which, he said, apparently never came off. Stuart himself refused to answer committee questions on grounds of possible self-incrimination.

The Senate Internal Security Subcommittee said today that it has subpoenaed Dr. Linus Pauling, of the California Institute of Technology, to testify regarding his petition calling for an end to nuclear bomb tests. Robert Morris, subcommittee counsel, said other scientists who signed the petition may also be called for questioning. The subcommittee, he said, wants to find out if any "Communist organizations" are behind the campaign to stop the tests. A public hearing has been scheduled for June 18th.

Senate Democratic Leader Johnson today urged the Administration to redouble its efforts to achieve an end to nuclear weapons tests. Johnson said he agrees with the President that this must be done "without jeopardizing our security"...that there must first be a "foolproof" disarmament agreement.

Democratic Senator Anderson of New Mexico suggested...as a start...that Mr. Eisenhower propose a treaty under which Russia and Britain would join the United States in agreeing to limit the amount of radio-active fallout released in a single year.

Conflicting testimony was given today to the joint congressional committee investigating the effects of radio-active fallout. An atomic scientist, Dr. Walter Selove of the University of Pennsylvania said last year's estimate by the American Academy of Sciences (on the dangers of radiation) is "seriously out of date." Dr. Shields Warren of Boston disagreed. Warren, who helped write the academy report, said there are at present "no available facts which would warrant a change to a significant degree as far as the pathological effects are concerned."

Today...in Paris...police arrested 126 Algerians on suspicion of complicity in the Algerian revolt. The government says a quantity of arms and propaganda material was confiscated.

The Baghdad Pact countries ~~[illegible]~~ said today that the threat of Communist aggression...direct and indirect...still exists. They said in a communique issued after a four-day council meeting in Karachi that agreement had been reached on measures required to improve the "defense potential" of the member states. "Deep gratification" was expressed for assistance provided under the Eisenhower Doctrine. The countries belonging to the Baghdad Pact are Britain, Turkey, Pakistan, Iran and Iraq. The United States is a member of three of the principal committees, including the military committee which it joined this week.

~~Lebanon today closed its frontier with Syria...and all Palestinian refugees were ordered confined to their camps. The moves were precautionary in preparation for next Sunday's general election. The government wants to forestall violence, such as the rioting in Beirut last week...~~.which took seven lives.

A delegation of Soviet leaders...including Khrushchev and Bulganin... arrived in Finland today for a seven-day visit. My colleague, Daniel Schorr, whose base of operations is Moscow, is in Helsinki tonight...covering this development. Here is his report:

Tape runs 4:55
Ends on cue: "--to Edw. R. Murrow
in N.Y."

That was Daniel Schorr, reporting from Finland on the first visit Russia's leaders have made to a non-Communist country of Europe since the Hungarian uprising.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

About the only legitimate pretext the Russian leaders have for visiting Finland is the negotiation of an economic agreement...~~and perhaps~~ the ~~token return of some annexed territory.~~ Some members of the huge Soviet delegation may learn something themselves. Will Durant said, "The crossroads of trade are the meeting place of ideas, the attrition ground of rival customs and beliefs."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

THURSDAY, JUNE 6, 1957
7:45 to 8:00 PM

MURROW: A large delegation of Soviet leaders, including Khrushchev and Bulganin, arrived in Finland today for a seven day visit. My colleague, Daniel Schorr, whose base of operations is Moscow, is in Helsinki tonight covering this development. Here is his report.

SCHORR: They arrived at the Helsinki railway station this evening, Soviet Premier Bulganin and a man carefully listed as Member of the Presidium of Russia's Parliament, Nikita Khrushchev, for the Finns don't recognise him as chief of the Communist party. At the railway station the speeches were made by Finnish Premier Sukselainen and by Bulganin. Also tonight, at a candle-lit dinner in the Presidential palace. Khrushchev is, for protocol purposes, just a guy in the group. Bulganin's speeches at the railroad station and at the dinner tonight were about friendship and co-existence, and the 4,000,000 Finns were glad to hear it. After 17 wars against Russia, after reparations that bled them white and contributed to the current galloping inflation in this country, after a peace treaty that restricted their forces to 42,000 men, they find no other policy but co-existence and neutrality possible. They are committed by treaty to resist any invasion of Russia through their territory. It can be taken for granted they would also resist any invasion going the other way. Their airforce consists of 60 British Vampire jets. These planes, their Air Force commander told me, are in the air almost continuously to train many more than 60 pilots. But although the Finnish military chiefs are chafing at being the only country still banned by treaty restrictions, they've long since been lifted or ignored in Germany, Japan, Italy and Soviet satellites, still that's not the issue now. And military commanders have not even been invited to the reception for B & K. The issue is: trying to get along with both east and west. One Finn put it this way, "We are Western educated, but Eastern situated." They walk a tightrope

that reminded me of Poland, but when I mentioned this parallel to a Finn, he said, "Yes, but there's one big difference. We have never been occupied by the Russians." Not occupied, no. And the official guide book has the words "Sovereign Republic" in italic letters, but political sovereignty is always qualified by economic needs, and the need of Finland is great. The spiral of wages and prices has reached a point where Premier Sukselainen announced the other day there is no money left for subsidies to hold down food prices. Finland's railways run on broad guage, Russian-type tracks. More than a quarter of her trade is with the Soviet bloc. The Soviets could put the squeeze on Finland any time they wanted. They haven't done so. This seems to say the Russians are very correct, very proper, very friendly; very careful to respect Finnish sovereignty, as long as Finland stays strictly neutral. But when the Russians crushed the Hungarian rebellion, The Finns had to swallow their indignation and avoid voting the Western line in the United Nations. Instead, they collected money for Hungarian relief. The Finns really react like a Western peoples, but Finland cannot afford the luxury of expressing sentiment in national policy. The Finns, who are a little puzzled at the B & K sudden touristic interest in their country, will be satisfied to have co-existence confirmed, will be pleased if a few more economic favors are doled out, will be happy, but surprised, if there's a token return of some annexed territory like the port of Viborg. But the Russians, it's clear, are not so much interested in Finland itself as in prying open a window to the West, displaying Finland as a showcase of co-existence, giving a push to the Soviet peace offensive. In short, the Russians are soliciting from Finland an unsolicited testimonial about how nice the Soviets are. And the Finns hope that in order to get this the Russians will be very nice. On such schemes does the weak little nation depend. Now back to Edward R. Murrow in New York.

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

THURSDAY, JUNE 6, 1957
7:45--8:00 P.M., E.S.T.

This is the news:

A federal judge today ordered the government to show why Army Specialist William Girard...who faces trial in a Japanese court...should not be returned to the United States. The order, signed by Judge Joseph McGarraghy, directed that Girard "shall not be delivered to custody, or control, of any foreign government or power", pending hearing next Tuesday on a petition for a writ of habeas corpus. The petition was filed by two of Girard's attorneys. It asks that the Army specialist...who is in Tokyo...be brought before the federal court in Washington for a hearing. The government decided earlier this week that Girard should stand trial before a Japanese court. The charge is manslaughter...growing out of the death of a Japanese woman who trespassed on an Army firing range. Judge McGarraghy said he could not order the soldier's immediate return until he had a more complete record of the case.

President Eisenhower spent most of the day on the super-carrier Saratoga, off the Florida coast. In a surprise demonstration, two navy Crusader jets landed on the deck of the carrier..after flying from the Pacific coast in three hours and 28 minutes.

Vice President Nixon called today for a "united", fighting Republican Party." The controversy over "modern Republicanism", Mr. Nixon said, arises solely from efforts to define the term. The Vice President was addressing a meeting of Republican leaders in Washington. National Chairman Alcorn told the opening session of the two-day party confernece that there will be "intense participation" by President Eisenhower in next year's congressional campaign.

The House opened debate today on President Eisenhower's civil rights program. Almost immediately, Democratic Representative Smith of Virginia raised a point of order which...if accepted...would have sent the legislation back to committee. Smith argued that the report the Judiciary Committee sent along with the measure was incomplete and that consequently the bill was not ready for debate. Speaker Rayburn ruled the objection invalid. The debate is now scheduled to continue for three days, after which time amendments will be offered.

The Senate rackets committee opened hearings today into the alleged misuse of funds by some officials of the bakery Workers Union. Anthony Conforti, head of Chicago local No. 1, told the committee he gave the union's former Vice President George Stuart, more than 6 - thousand dollars of union money for an organization drive which, he said, apparently never came off. Stuart himself refused to answer committee questions on grounds of possible self - incrimination.

The Senate Internal Security Subcommittee said today that it has subpoenaed Dr. Linus Pauling, of the California Institute of Technology, to testify regarding his petition callnng for an end to nuclear bomb tests. Robert Morris, subcommittee counsel, said other scientists who signed the petition may also be called for questioning. The subcommittee, he said, wants to find out if any "Communist organizations" are behind the campaign to stop the tests. A public hearing has been scheduled for June 18th.

Senate Democratic Leader Johnson today urged the Administration to redouble its efforts to achieve an end to nuclear weapons tests. Johnson said he agrees with the President that this must be done "without jeopardizing our security"...that there must first be a "foolproof" disarmament agreement.

Democratic Senator Anderson of New Mexico suggested as a start..that Mr. Eisenhower propose a treaty under which Russia and Britain would join the United States in agreeing to limit the amount of radio - active fallout

released in a single year.

Conflicting testimony was given today to the joint congressional committee investigating the effects of radio-active fallout. An atomic scientist, Dr. Walter Selove of the University of Pennsylvania said last year's estimate by the American Academy of sciences (on the dangers of radiation) is "seriously out of date." Dr. Shields Warren of Boston disagreed. Warren, who helped write the academy report, said there are at present "no available facts which would warrant a change to a significant degree as far as the pathalogical effects are concerned."

Today...in Paris..police arrested 126 Algerians on suspicion of complicity in the Algerian revolt. The government says a quantity of arms and propaganda material was confiscated.

The Baghdad Pact countries said today that the threat of Communist aggression...direct and indirect...still exists. They said in a communique issued after a four - day council meeting in Karachi that agreement had been reached on measures required to improve the "defense potential" of the member states. "Deep gratification" was expressed for assistance provided under the Eisenhower Doctrine. The countries belonging to the Baghdad Pact are Britain, Turkey, Pakistan, Iran and Iraq. The United States is a member of three of the principal committees, including the military committee which it joined this week.

A delegation of Soviet leaders...including Khrushchev and Bulganin.. arrived in Finland today for a seven - day visit. My colleague, Daniel Schorr, whose base of operations is Moscow, is in Helsinki tonight...covering this development. Here is his report.

SCHORR: They arrived at the Helsinki railway station this evening, Soviet Premier Bulganin and a man carefully listed as Member of the Presidium of Russia's Parliament, Nikita Khrushchev, for the Finns don't recognize him as chief of the Communist Party. At the Railway station the speeches were made by Finnish Premier Sukselainen and by Bulganin. Also tonight, at a candle-lit dinner in the Presidential placce. Khurshchev is, for protocol purposes, just a guy in the group. Bulganin's speeches at the railroad station and at th dinner tonight were about friendship and co-existence, and the 4,000,000 Finns were glad to hear it. After 17 wars against Russia, after reparations that bled them white and contributed to the current galloping inflation in this country, after a peace treaty that restricted their forces to 42,000 men, they find no other policy but co-existence and neutrality possible. THey are committet by treaty to resist any invasion of Russia through their territory. It can be taken for granted they would also resist any invasion going the other way. Their airforce consists of 60 British Vampire jets. These planes, train more than 60 pilots. But although the Finnish military chiefs are chafing at being the only country still banned by treaty restrictions, they've long since been lifted or ignored in Germany, Japan, Italy and the Soviet satellites, still that's not the issue now. And military commanders have not even been invited to the receition for B & K. The issue is: trying to get along with both east and west. One Finn put it this way, "We are Western educated, but Eastern situated." They walk a tightrope that reminded me of Poland, but when I mentioned this parallel to a Finn, he said, "Yes, but there's one big difference. We have never been occupied by the Russians." Not occupeid, no. And the official guide book aas the words "Sovereign Republic" in italic letters, but political sovereignty is always qualified by economic needs, and the need of Finalnd is great. The spiral of wages and prices has reached a point where Premier Sukselainen announced the other day there is no money left for subsidies

to hold down food prices. Finland's railways run on broad guage, Russian - type tracks. More than a quarter of her trade is with the Soviet bloc. The Soviets could put the squeeze on Finalnd any time they wanted. They haven't done so. This seems to say the Russians are very correct, very proper, very friendly; very careful to respect Finnish sovereignty, as long as Finland stays strictly neutral. But when the Russians crushed the Hungarian rebellion, the Finns had to swallow their indignation and avoid voting the Western line in the United Nations. Instead, they collected money for Hungarian relief. The Finns really react like a Western peoples, but Finland cannot afford the luxury of expressing sentiment in national policy. The Finns, who are a little puzzled at the B & K sudden tourist interest in their country, will be satisfied to have co-existence confirmed will be pleased if a few more economic favors are doled out, will be happy, but surprised, if there's a token return of some annexed territory like the port of Viborg. But the Russians, it's clear, are not so much interested in Finalnd itself as in pyring open a window to the West, displaying Finland as a showcase of co-existence, giving a push to the Soviet peace offensive. In short, the Russians are soliticing from Finaland an unsolicited testimonial about how nice the Soviets are. And the Finns hope that in order to get this the Russians will be very nice. On such schemes does the weak little nation depend. Now back to Edward R. Murrow in New York.

MURROW: That was Daniel Schorr, reporting from Finland on the first visit Russia's leaders have made to a non-Communist country of Europe since the Hungarian uprising.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: About the only legitimate pretext the Russian leaders have for visiting Finland is the negotiation of an enconoic agreement. Some members of the huge Soviet delegation may learn something themselves. Will Durant said, "The crossroads of trade are the meeting place of ideas, the attrition ground of rival customs and beliefs."

Edward R. Murrow Fri., June 7, 1957

This is the news:

The United States and Poland today signed a 49-million-dollar economic agreement. Under its terms, Poland will receive a loan of 30-million dollars from the Export-Import Bank. Most of this money would be used to buy iron ore, coal mining machinery and wool. The United States would also sell Poland for Polish currency nearly 19-million dollars' worth of cotton, fats and oils. The two governments also agreed to enter into negotiations...soon...for the settlement of American property claims against Poland...resulting from nationalization measures taken by the Communist regime since World War Two. The unblocking of Poland's prewar assets in the United States would also be discussed. This constitutes roughly half the American program of aid to Poland. The United States

promises to sign another agreement...covering the sale of 46-million dollars' worth of American wheat and cotton...as soon as Congress completes action on the Surplus Disposal Bill. Passage of the measure is being delayed due to a technical point of order which has been raised in the House. ~~These agreements are the result of three and a half months of negotiations. The Polish government asked for considerably more than it was granted. The United States said today that it would continue to "study" the Polish request for additional goods. The implication was that Poland could expect more aid if its so-called "nationalist" Communist government continues to show independence of Moscow. First shipments...under the today's agreements...are expected in about two weeks.~~

The Communist government of Hungary tonight released two American students held since May 26th, when they crossed the Hungarian frontier without visas. The two students are Myron Gilbert and Warren Hair, both of South Carolina. They have arrived safely at Nickelsdorf, a checkpoint on the Austrian border.

The State Department said today that Harold Stassen, the United States representative at the London disarmament talks, is coming home this week-end for consultations.

The five-power conference has recessed until Tuesday...because of Britain's Whitsun holidays. Stassen is expected to present the new American disarmament proposals soon after the conference resumes.

The Senate Foreign Relations Committee tonight approved a foreign aid program giving President Eisenhower only 252-million dollars less than he requested. ~~Mr. Eisenhower asked for 3-billion, 889-million dollars, and the committee voted...12 to 3...to give him 3-billion, 637-million.~~ Two hundred ~~million dollars~~ ~~[illegible]~~ of the cut was ~~in the military aid feature of the program.~~ The President's request for 168-million for so-called "Point Four" ~~[illegible]~~ technical assistance came through unscathed.

The legislation requires...with regard to aid to Yugoslavia...that Mr. Eisenhower "continuously assure himself" that ~~[illegible]~~ it is not being used to further Communist aims and is "in the best interests of the national security of the United States." ~~Besides the "new money", the bill carries a provision authorizing expenditure of 500-million dollars in left-over funds from the current fiscal year.~~ The Bill ~~[illegible]~~ provides for the long-term "revolving fund" Mr. Eisenhower requested for handling most economic aid in the future on a loan basis. The total military aid appropriation amounts to 2-billion, 600-million dollars. But only a two-year military aid

program was authorized. The President had asked that the program be put on a permanent basis. The measure now goes to the Senate floor.

President Eisenhower told Republican congressional leaders today that they have a "special responsibility" to see that the promises made in the party platform are translated into law. Mr. Eisenhower told the national Republican strategy conference in Washington that he would "use every power at his disposal" to see that platform pledges are carried out. The President defended his budget. "Our need for economy," he said, "must be balanced against the things that need to be done. We must not forget that to be truly conservative today is to be alert to dangers of loose spending and of tampering with our [redacted] fiscal integrity." He said it also involves "providing those things which would keep this country growing and secure."

Mr. Eisenhower returned to Washington after spending the better part of two days on the United States carrier Saratoga, from which he witnessed maneuvers off the Florida coast. The trip was marked by tragedy when a Navy jet crashed at sea, killing its pilot. The name of the pilot was [redacted] withheld, pending notification of next of kin. Another pilot who made a forced landing at sea was rescued by helicopter.

The Senate Internal Security Subcommittee decided today to suspend its scheduled investigation of possible Communist influences in the debate...in this country...over whether to stop nuclear weapons tests. Yesterday, the subcommittee subpoenaed Dr. Linus Pauling, the Nobel Prize winning bio-chemist, to testify on June 18th. Pauling recently released a petition signed by 2-thousand American scientists, calling for an end to the tests. The subcommittee said today that it was abandoning its hearings...at least for the present...because Dr. Pauling could not keep the June 18th date, and because it did not wish to "interfere" with the current congressional inquiry into radiation hazards. Pauling says he did not tell the subcommittee he would be unable to attend the hearing scheduled for the 18th of June. He says, "I requested that the matter be moved forward to the 11th, 12th, 13th, or 14th," because of a long-standing engagement to lecture at the University of Paris on June 18.

A member of the Atomic Energy Commission...Dr. Willard Libby...today told the joint committee investigating radiation dangers, that the weapons development program of the United States would be "crippled" by a cessation of tests. "There is no substitute," he said, "for testing to determine the reliability of a weapon---conventional or atomic." He added that

the United States should limit its test shots, however, "to those essential for the survival of the free world."

Edward R. Murrow: June 6, 1957. 7.45 p.m.

Probably the biggest event of the last days has been the decision of the British not to explode the final hydrogen bomb in their current tests, and President Eisenhower's hint that we, too, are through with the testing of the biggest hydrogen bombs. In the atomic age, these are the first retreats being publicly made in development of atomic weapons.

We need more information to judge how much the retreats are due to public pressure. They have been made at a time when the opposition to nuclear test explosions is being vigorously expressed. The Labor opposition in London has been vehement in arguing for curtailment of the tests. The hydrogen bomb issue was injected into the last presidential campaign by Adlai Stevenson. Scientists of all kinds have voiced opinions. ~~It is obvious that~~ To some extent the issue has been taken over by organized propaganda, for protest demonstrations abroad have been held only against British and American tests, and were singularly missing when the Russians exploded their last hydrogen bombs, which may have been the most dangerous yet set off in respect to fall-out. Lord Cherwell, British nuclear scientist is quoted as saying: "The efficiency of the Communist propaganda machine is shown by the fuss. It is really shameful to see how many decent people are being taken in by it." The Russian Radio continues to demand an immediate end to all tests.

But it is safe to say that neither the British nor American Governments retreated in the matter of the H-bomb because of Communist propaganda. Indeed it would be more than unfortunate - it might be highly dangerous -- if all criticism of the tests was to be swept aside simply because there is such propaganda. What is happening is that science and governments alike are both feeling their way into the new powers of nuclear energy, and still cannot be sure what is safe and not safe. The retreat from the big hydrogen bomb may have been hastened by public pressure -- as in the House of Commons -- but it is essentially the result of the growth of scientific knowledge.

The fact that scientists themselves disagree makes it harder for governments to know what risks to run. Mr. Eisenhower said yesterday that he accepted the findings of the American Academy of Sciences. But Dr. H. Bentley Glass of John Hopkins University, one of the geneticists responsible for the Academy's estimate of the safety level last year, told the Joint Congressional committee that this estimate might have to be revised, as the danger now appears to be greater. [redacted] An atomic scientist, Dr. Walter Selove of the University of Pennsylvania, told the committee [redacted] that the academy's estimate is "seriously out of date." Dr. Shields Warren of

Boston disagreed. Warren, who helped write the academy report, said there are at present "no available facts which would warrant a change to a significant degree, as far as the pathological effects are concerned."

Mr. Eisenhower [redacted] stressed the greater cleanliness of American bombs, and the British are elated to find that their hydrogen bombs have been remarkably clean. The British radiologist who rode through the atomic cloud after the last explosion to take samples said: "There was no fall-out at all." But he added: "Ultimately the fall-out will come down, some time in the next year or two." And that assertion is a reminder that the radiation is there, ready to do the injury that radiation causes.

One fact the public is beginning to understand is that there are two kinds of damage from radiation. One is to bones and tissues, the other is to genes. When some scientists speak of a safety level below which radiation does not injure humans, they refer to injury to the tissues and bones of persons now living. The geneticists, the scientists of heredity, say there may be no level of safety whatever, because the damage to genes is transmitted to persons not yet born. The geneticists talk in a different time-span. That explains the sensational figures they give of the vast numbers that will be damaged by nuclear tests.

Dr. James Crow of the University of Wisconsin told the Congressional Joint Committee that the tests so far made will produce 80,000 cases of gross genetic abnormalities, 300,000 childhood deaths and stillbirths, 700,000 embryonic deaths, plus an unknown number of minor defects. ~~Actually the damage from radiation is a small fraction of the normal human misery from death and disease.~~ Now governments and scientists have to decide whether it is more justifiable to kill or maim millions over a prolonged period than over a short period. At any rate the geneticists argue that the risks taken have to be justified.

To some ~~extent Mr. Eisenhower was justifying them yesterday in saying~~ he is responsible not only ~~for fall out~~ but for national defense. Dr. Willard Libby, the only scientist on the Atomic Energy Commission, also undertook to justify them. He told the committee that the risk from radiation was "very small" compared with the "risk of annihilation that might result if we surrendered the weapons essential to freedom and actual survival." He said the decision was not one for scientists as such, but called for political and sociological judgment. But he also argued that there is comparative safety in small doses of radiation. And here the geneticists do not follow him. They are not sure there is such a thing.

Word for Today

Regarding the effects of radio-active fallout, there is disagreement---even among the experts. This is an issue in which the distinction between what is known...and what is not known...needs to be clearly drawn. Thoreau said, "To know that we know what we know and that we do not know what we do not know, that is true knowledge." It might in this case be survival itself.

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

FRIDAY, JUNE 7, 1957
7:45--8:00 P.M., E.D.S.T.

This is the news:

The United States and Poland today signed a 49-million - dollar economic agreement. Under its terms, Poland will receive a loan of 30-million dollars from the Export-Import Bank. Most of this money would be used to buy iron ore, coal mining machinery and wool. The United States would also sell Poland, for Polish currency, nearly 19-million dollars' worth of cotton, fats and oils. The two governments also agreed to enter into negotiations..soon... for the settlement of American property claims against Poland...resulting from nationalization measures taken by the Communist regime since World War Two. The unblocking of Poland's prewar assets in the United States would also be discussed. This constitutes roughly half the American program of aid to Poland. The United States promises to sign another agreement...covering the sale of 46 - million dollars' worth of American wheat and cotton..as soon as Congress completes action on the Surplus Disposal Bill. Passage of the measure is being delayed due to a technical point of order which has been raised in the House.

The Communist government of Hungary tonight released two American students held since May 26th, when they crossed the Hungarian frontier without visas. The two students are Myron Gilbert and Warren Hair, both of South Carolina. They have arrived safely at Nickelsdorf, a checkpoint on the Austrian border.

The State Department said today that Harold Stassen, the United States representative at the London disarmament talks is coming home this week end for consultations. The five - power conference has recessed until Tuesday ..because of Britain's Whitsun holidays. Stassen is expected to present the new American disarmament proposals soon after the conference resumes.

The Senate Foreign Relations Committee tonight approved a foreign aid program giving President Eisenhower only 252 - million dollars less than he requested. The President's request for 168 - million for so-called " Point Four" technical assistance came through unscathed. The legislation requires.. with regard to aid to Yugoslavia..that Mr. Eisenhower "continuously assure himself " that it is not being used to further Communist aims and is "in the best interests of the national security of the United States." The bill provides for the long - term "revolving fund" Mr. Eisenhower requested for handling most economic aid in the future on a loan basis. The total military aid appropriation amounts to 2 - billion, 600-million dollars. But only a two-year military aid program was authorized. The President had asked that the program be put on a permanent basis . The measure now goes to the Senate floor.

President Eisenhower told Republican congressoonal leaders today that they have a "special responsibility" to see that the promises made in the party platform are translated into law. Mr. Eisenhower told the national Republican strategy conference in Washington that he would "use every power at his dis - posal" to see that platform pledges are carried out. The President defended his budget. "Our need for economy," he said, "must be balanced against the things that need to be done. We must not forget that to be truly conservative today is to be alert to dangers of loose spending and of tampering with our fiscal integrity." He said it also involves "providing those things which would would keep this country growing and secure."

Mr. Eisenhower returned to Washington after spending the better part of two days on the United States carrier Saratoga, from which he witnessed maneuvers off the Florida coast. The trip was marked by tragedy when a Navy jet crashed tt sea, killing its pilot. The name of the pilot was withheld, pending notification of next of kin. Another pilot who made a forced landing at sea was rescued by helicopter.

The Senate Internal Security Subcommittee decided today to suspend its scheduled investigation of possible Communist influences in the debate .. in this country...over whether to stop nuclear weapons tests. Yesterday, the subcommittee subpoenaed Dr. Linus Pauling, the Nobel Prize winning bio-chemist, to testify on June 18th. Pauling recently released a petition signed by 2 - thousand American scientists calling for an end to the tests. The subcommittee said today that it was abandoning its hearings...at least for the present... because Dr. Pauling could not keep the June 18th date and because it did not wish to "interfere" with the current congressional inquiry into radiation hazards. Pauling says he did not tell the subcommittee he would be unable to attend the hearing scheduled for the 18th of June. He says, "I requested that the matter be moved forward to the 11th, 12th, 13th, or 14th" because of a long-standing engagement to lecture at the University of Paris on June 18.

A member of the Atomic Energy Commission, Dr. Willard Libby..today told the joint committee investigating radiation dangers that the weapons development program of the United States would be "crippled" by a cessation of tests. "There is no substitute," he said, "for testing to determine the reliability of a weapon -- conventional or atomic." He added that the United States should limit its test shots, however, "to those essential for the survival of the free world."

Probably the biggest event of the last days has been the decision of the British not to explode the final hydrogen bomb in their current tests, and President Eisenhower's hint that we, too, are through with the testing of the biggest hydrogen bombs. In the atomic age, these are the first retreats being publicly made in development of atomic weapons.

We need more information to judge how much the retreats are due to public pressure. They have been made at t time when the opposition to nuclear explosions is being vigorously expressed. The Labor opposition in London has

been vehement in arguing for curtailment of the tests. The hydrogen bomb issue was injected into the last presidential campaign by Adlai Stevenson. Scientists of all kinds have voiced opinions. To some extent the issue has been taken over by organized propaganda, for protest demonstrations abroadhave been held only against Britain and American tests, and were singularly missing when the Russeans exploded their last hydrogen bombs, which hay have been the most dangerous yet set off in respect to fall - out. Lord Cherwell, British nuclear scientist is quoted as saying:"The efficiency of the Communist propaganga machine is shown by the fuss. It is really shameful to see how many decent people are being taken in by it. " The Russian radio continues to demand an immediate end to all tests.

But it is safe to say that neither the British nor American Governments retreated in the matter of the H-bomb because of Communist propaganda. Indeed it would be more than unfortunate - it might be highly dangerous - if all criticism of the tests was to be swept aside simply because there is such propaganda. What is happening is that science and governments alike are both feeling their way into the new powers of nuclear energy, and still cannot be sure what is safe and not safe. The retreat from the big hydrogen bomb may have been hastened by public pressure - as in the House of Commons - but it is essentailly the result of the growth of scientific knowledge.

The fact that scientists themselves disagree makes it harder for governments to know what risks to run. Mr. Eisenhower said yesterday that he accepted the findings of the American Academy of Sciences. But Dr. H. Bentley Glass of John Hopkins University, one of the geneticists responsible for the Academy's estimate of the safety level last year, told the Joint Congressional committee that this estimate might have to be revised, as the danger now appears to be greater. An atomic scientist, Dr. Walter Selove of the University of Pennsylvania, told the committee that the academy's estimate is "seriously

out of date." Dr. Shields Warren of Boston disagreed. Warren, who helped write the academy report, said there are at present "no available facts which would warrant a change to a significant degree, as far as the pathalogical effects are concerned."

Mr. Eisenhower stressed the greater cleanliness of American bombs, and the British are elated to find that their hydrogen bombs have been remarkably clean. The British radiologist who rode through the atomic cloud after the last explosion to take samples said: "There was no fall-out at all." But he added: "Ultimately the fall - out will come down, some time in the next year ot two." And that assertion isa reminder that the radiation is there, ready to do the injury that radiation causes.

One fact the public is beginning to understand is that there are two kinds of damage from radiation. One is to bones and tissues, the other is to genes. When some scientists speak of a safety level below which radiation does not injure humans, they refer to injury to the tissues and bones of persons now living. The geneticists, the scientists of heredity, say there may be no level of safety whatever, because the damage to genes is transmitted to persons not yet born. The geneticists talk in a different time-span. That explains the sensational figures they give the vast numbers that will be damaged by nuclear tests.

Dr. James Crow of the University of Wisconsin told the Congressional Joint Committee that the tests so far made will produce 80,000 cases of gross genetic abnormalities, 300,000 childhood deaths and stillbirths, 700,000 embryonic deaths, plus an unknown number of minor defects. Now governments and scientists have to decide whether it is more justifiable to kill or maim millions over a prolonged period than over a short period. At any rate the genetecists agrue that the risks taken have to be justified.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: Regarding the effects of radio - active fallout, there is disagreement -- even among the experts. This is an issue in which the distinction between what is known..and what is not known...needs to be clearly drawn. Thoreau said, "To know that we know what we know and that we do not know what we do not know, that is true knowledge." It might in this case be survival itself.

Goodnight and good luck.

The Supreme Court ruled today that civilians who accompany members of the armed forces overseas are not subject to military justice. The decision was returned in the case of two women convicted by courts martial of killing their husbands while on overseas assignment. Today's ruling was by a 6-to-2 vote. Justice Black wrote in the majority opinion, "Under our constitution, courts of law alone are given power to try civilians for their offenses against the United States."

The Supreme Court also ruled that Caryl Chessman, convicted California kidnaper, is entitled to a new hearing. The decision was split, 5 to 3. Although Chessman argued that the transcript of his trial was inaccurate, the majority opinion did not rule on the issue of accuracy. It ruled, instead, that the defendant "never had his day in court upon the controversial issues of fact and law involved."

Canada held a general election today...in which the liberal government of Prime Minister Louis St. Laurent is expected to retain power. Indications are that although the conservatives may gain some seats in parliament, they will not win ~~enough~~ anyway near a majority. The Liberty Party has been the majority party in Canada now for 22 years.

~~Lebanon is holding a parliamentary election today. Extreme nationalist forces are trying to upset the government, which has endorsed the Eisenhower Doctrine. Pro-Nasser [illegible] yesterday gave government candidates 15 of the 22 parliament seats at stake in Southern Lebanon. Voting on the north [illegible]~~

Jordan expelled two Egyptian diplomats today "for reasons connected with security." The Egyptians were identified as the consul general in the Jordan sector of Jerusalem and the military attache in Amman. The Egyptian attache was accused of taking part in an assassination ~~plot~~ plot. Egypt called this a "fabrication"...~~and~~ said it had asked Jordan to withdraw its ambassador from Cairo "within 24 hours." ~~[illegible]~~ The Jordanian government said its ambassador is being recalled. As the split between Jordan and Egypt widened, King Saud of Saudi Arabia was in Jordan, visiting with King Hussein.

(more)

In Cairo today, an Egyptian schoolteacher was sentenced to death on charges of spying for Britain. Verdicts for 15 other defendants, including four British citizens, accused of espionage, were postponed until June 22nd. All were arrested last summer on the eve of the Anglo-French invasion.

Word as follows.....

There has been much in the news of late on the subject of justice. And this is not surprising. Daniel Webster said, "Justice is the great interest of man on earth." H.L. Mencken once made an observation on this subject which was typical of H.L. Mencken. "Injustice," he said, "is relatively easy to bear. What stings is justice." Goodnight and good luck.

EDWARD R. MURROW WITH THE NEWS

MONDAY, JUNE 10, 1957
7:45 to 8:00 PM

MURROW: This is the news. The latest medical bulletin on the condition of President Eisenhower says he is making a good recovery from his mild stomach upset. For the full story, here is the report of our White House correspondent, Charles Von Fremd, direct from Washington.

VON FREMD: President Eisenhower will be confined to his bed again through most of tomorrow, all of his appointments postponed. But the doctors attending him now report they expect he'll be just about recovered Wednesday and able to return to his office. But that mild stomach upset threw official Washington into a real turmoil earlier today, when an impassive but grim-faced James Hagerty, the President's News Secretary, first broke the news to us, the earlier heart attack and ileitis operation flashed through our minds. For we were told on both those occasions that the Chief Executive was only bothered by a stomach ache. Anxiety over something more serious grew following Hagerty's first announcement, for there was not another word from the usually fast-acting News Secretary during the next two hours. Then, the tension broke. Shortly after noon, the three doctors attending the President told us, through Hagerty, that the President was making "satisfactory progress" and furthermore, his stomach upset had nothing to do with the heart attack or major intestinal operation. Subsequent medical bulletins continued to sound optimistic. It's revealed that the President had several cups of tea this afternoon, without ill effects. This evening, sat up and ate a small portion of milk toast. No one knows for sure what caused this stomach upset, but the most prevalent theory here is that a slab of blueberry pie was the villain. Mr. Eisenhower had the pie for dessert late last night at the White House. It may be that the pie was just the final straw and not the direct cause of the President's illness, for his usual spartan diet has been strained by richer foods than usual these past few days. At any rate, the President

Then, the tension broke. Shortly after noon, the three doctors attending the President told us, through Hagerty, that the President was making "satisfactory progress" and furthermore, his stomach upset had nothing to do with the heart attack or major intestinal operation. Subsequent medical bulletins continued to sound optimistic. It's revealed that the President had several cups of tea this afternoon, without ill effects. This evening, sat up and ate a small portion of milk toast. No one knows for sure what caused this stomach upset, but the most prevalent theory here is that a slab of blueberry pie was the villain. Mr. Eisenhower had the pie for dessert late last night at the White House. It may be that the pie was just the final straw and not the direct cause of the President's illness, for his usual spartan diet has been strained by richer foods than usual these past few days. At any rate, the President

first felt discomfort last night on his way to a nearby American University, where he received an honorary degree. He looked a little pale when he spoke to the large outdoor audience. Mrs. Eisenhower, concerned over the President's complaint of a stomach ache and nauseous sensation, probably remembering too this familiar sympton that preceded the other two illnesses, called the Chief Executive's personal physician, Howard Snyder, at his home. Snyder rushed to the White House, arriving there shortly after Mr. Eisenhower returned from the University. Vomiting set in during the night. Snyder and Mrs. Eisenhower stayed with the President until daylight, when Snyder called for two experts from Walter Reed as a precautionary measure. Heart specialist Mattingley and stomach and intestinal authority, Heaton, both gave the President a thorough checkup, then agreed it was nothing serious. And that, briefly, is the story of the President's stomach upset. Now back to Edward R. Murrow.

MURROW: Lewis Girard of Ottawa, Illinois called at the White House today to urge an American trial for his brother, Army Specialist William Girard. My colleague Bill Shadel covered this development in Washington.

SHADEL: Badly frightened but none the less determined, a still angry Lewis Girard was supported in his call at the White House today with petitions bearing nearly 17,000 names of hometowners, Ottawa, Illinois, urging that his brother William be given an American trial. Lewis was supported also by a home town editor, a banker, a theatre manager, a Senator, Dirkson of Illinois, and a representative of the state's other Senator, Paul Douglas. But after conferring with three White House officials, brother Lewis said he got no satisfaction there. The only satisfaction, in fact, in today's visit here was moral sympathy found on Capitol Hill. There Sen. Douglas charged that the administration was trying to appease Japan because of the recent riots on Formosa, after a court martial's acquittal there of an American soldier in another shooting. Sen. Russell

of Georgia represented Girard as "a sacrificial lamb." Senator Mansfield of Montana changed "the case is an illustration of too many different voices making U. S. policy." Senator Irvin of North Carolina complained last week that after his subcommittee questioned defense and State Department officials, he still didn't know who and what was responsible for the decision to turn Girard over to Japanese officials. Today, the Senator issued a statement ot the effect that soldier Girard was on duty when the killing occurred; that this is the key to the issue and, therefore, Girard could only be tried by an American military court. Well, informed sources here are betting that the administration will not reverse its decision, but the decision could be reversed in Federal Court, where Judge McGarighty has ordered the government to show cause why Girard should not be returned from Japan. Late today the government filed its reply, asking the Court to quash subpoenas for Sec. Wilson and Dulles to appear in court tomorrow along with relevent documents, records and files, which are privileged and confidential. And that's how the case stands at the moment. Now back to Ed.Murrow.

MURROW: In Tokyo, my colleague Bob Pierpoint has found some new information in the background of the Girard case. Here is his report.

PIERPOINT: This reporter has been told on very good authority that before the Japanese courts took jurisdiction of the case of Specialist 3/C William Girard, the U. S. Army was preparing a military court martial against Girard with a charge of second degree murder. Under military laws, second degree murder carries a penalty of from 15 years to life imprisonment if found guilty. Furthermore, those who were preparing the court martial against Girard were quite sure they could get a conviction. In other words, Specialist Girard would probably be spending a long time in prison, if tried by the U. S. Army. On the other hand, Girard will probably get off much easier if tried by the Japanese. It is true enough that there are some basic differences between Japanese and American legal procedures. The most important difference is that in Japan a man is not brought to

trial unless the prosecutor is almost certain that he has an airtight case against the defendent and that the court will find him guilty. This means, in effect, that the court assumes the defendent is guilty until and unless the man proves his innocence, instead of the other way around as in America. The judge's attitude is generally that the man brought before him by the prosecution is guilty or he would not be there at all. At the same time, and this is especially important in the Girard case, Japanese courts are allowed much more leniency in their sentences than American courts. As one American lawyer, who has a highly successful practice in Japan explains it, If the defendent throws himself on the mercy of the court, he will usually get off with a very light sentence. Certainly the records of American servicemen tried in Japanese courts has its proof. From over 14,000 cases in which the Japanese either took jurisdiction or could have if they had wanted to, less than 100 were ever confined to Japanese jails. According to American military officers, practically all of those Americans convicted by the Japanese have gotten off with very light senteness or complete suspension. This includes two Americans found guilty of murder and given only from 5-15 years with the probability of much earlier parole. In view of all this, it appears quite clear, that Specialist Girard will be much better off if his friends in America will calm down a bit and let the Japanese courts proceed with his case. This is Bob Pierpoint in Tokyo; and now back to Edward R. Murrow in New York.

This is the news:

President Eisenhower was "virtually recovered" today from his stomach upset. He worked for an hour and fifteen minutes at his desk...dictating letters and signing government papers. He told reporters he "could do with a few steaks."

The New York Stock Market advanced on the report of the President's recovery...with gains up to five dollars a share.

The White House announced today that Queen Elizabeth...and her husband Prince Philip...will visit the United States in October at the invitation of the President. The royal couple will be in this country for six days, starting October 16th. Their first stop...after a prior visit in Canada... will be Jamestown, Virginia, the first permanent English settlement in what is now the United States. They will then spend four days in Washington.

(more)

It is expected that October 21st...the last day of their American visit... will be spent in New York. This ~~dm~~ will be the queen's first ~~mmmm~~ trip to North America as a reigning monarch. Her visit to Ottawa and Washington in 1951 was made when she was still a princess.

Add hard news....

Secretary of State Dulles said today that the United States will not disregard the views of its allies in order to hasten a disarmament agreement. Dulles acknowledged at his news conference that "procedural complications" exist. Some allies feel that Europe should be left out of any arms agreement with Russia, until the problem of German reunification is solved. Britain and France reportedly have complained about the private talks the United States disarmament representative, Harold Stassen, has had with the Soviet delegate at the London conference. Today, Dulles tried to reassure those countries. He said, "We are not going to throw into the discard the views of our allies merely in the interest of making progress on a bilateral basis." The United States, he said, attaches first importance to the relationship with its allies. It will not

(more)

12

sacrifice that relationship. Dulles said the United States is not much interested in what he called a "one-shot" reply to Khrushchev's recent statements on American radio and television. The United States, he said, is interested in a series of monthly programs in which the Soviet position would be set forth in this country and the American view could be expressed without hindrance in Russia. Dulles said the United States made this proposal at the foreign ministers conference in Geneva in 1955, but that Russia turned it down. Dulles rejected Republican Senator Knowland's suggestion that Norway be neutralized in exchange for Soviet troop withdrawal from Hungary. He did not feel it was proper that any free country...participating in a collective security arrangement...should be made to withdraw. Knowland said tonight that his proposal had been "misinterpreted". Such an agreement, he said, would naturally hinge on Norway's consent.

Today...in Florida...the Air Force conducted its first test-firing of the Atlas intercontinental ballistic missile. The test is reported... unofficially...to have failed. Civilian spectators say the missile began wobbling off-course almost immediately, then exploded. An Air Force

(more) 29 →

spokesman said there were no casualties. "Valuable information was gained," he said, "as a result of the test."

In Washington, federal judge [illegible] heard opening arguments today in the Girard case. The question was [illegible] to grant the petition for a writ of habeas corpus, filed by the attorney representing Army Specialist William Girard. If [illegible] to be granted, Girard [illegible] The attorneys [illegible] argued that [illegible] brought home from Japan for hearing before an American court. The [illegible] is "[illegible]" [illegible] stated that Japan [illegible] His attorneys

Add hard news.....

In Washington, Federal Judge McGarraghy heard opening arguments today in the Girard case. The question before the court is whether to grant the petition for a writ of habeas corpus, filed by the attorneys representing Army Specialist William Girard. Should the petition be granted, Girard would be returned from Japan for hearing before an American court. His attorneys argue that Japan has no right to try Girard in the death of a Japanese woman...on grounds that he was on duty at the time. Judge McGarraghy today quashed subpoenas sought by Girard's counsel for the appearance of Secretary Defense Wilson and Secretary of State Dulles at the hearings. He also rejected counsel's request that the government produce in court documents dealing with the case. McGarraghy withheld a ruling on the petition for a habeas corpus writ, pending further argument.

52

A new name has been emblazoned on our northern horizon. It is John Diefenbaker, who became leader of the Progressive Conservative Party only nine months ago, and yesterday led his party to the sensational overthrow of the Liberal government of Prime Minister St.Laurent. The outcome fell short of an outright victory, and Diefenbaker will have to be content with heading a minority government, depending for support on the small Social Credit Party.

The Liberals had been in power for 22 years. A number of factors led to their defeat. Probably the most potent was the cry of "Time for a change". But one of the most impelling ones was John Diefenbaker, who waged a campaign of unprecedented vigor. He traveled and spoke tirelessly. He drew big crowds. People liked his old-fashioned eloquence, his milk-drinking, Sabbath-observing respectability, and his political promises.

How far Canada has swung to the right in its thinking is not easy to say in terms of Diefebbaker's own political philosophy. In his native and liberal Saskatchewan, where he is a criminal lawyer, he has never stressed his anti-liberalism. During

the ~~His~~ campaign he promised tax cuts, but also an ~~promised to~~ increase in old age pensions. But In some respects, the Conservative campaign ~~of the conservatives~~ was isolationist and anti-American in tone, which means that voters may have ~~been~~ responsive to that turn of talk. One reason is the plight of Canadian farmers, who are suffering from a gigantic wheat surplus. Our selling our own farm surpluses as part of our foreign policy has narrowed Canadian markets. The Liberal government complaimmd strongly of this in Washington, as recently as during our trade negotiations with Poland. Naturally Conservatives ~~the Diefenbaker campaign~~ stressed the plight of the farmers and promised increased foreign trade.

¶ It is too soon to say how far a Diefenbaker government will depart from the intimate relationship we had with St. Laurent and Lester Pearson. ~~But~~ We may ~~shall~~ have to expect a new look at our mutual defense arrangements in the ~~north~~ Arctic, as Secretary Dulles today suggested. And we shall have to recognize we had at least a small part in the election result. ¶

¶ Probably the biggest effect of the election on ~~in~~ world affairs is the elimination, for the timebeing at least, of Lester Pearson, minister of external affairs. He is one of the new coterie of small-nation statesmen with insight, skill and a persuasiveness not limited by vast national

interests, who can work out solutions among the big powers. He has been constructive in many fields, particularly British Commonwealth relations with the rest of the Free world, NATO and disarmament.

Under Canadian procedures, Mr. Pearson cannot join the ~~Diefenbaker~~ Diefenbaker government. He is a Liberal, and will not be in office until the Liberals form another government. How soon that will be depends on the life of the new ~~government. It has,~~ regime. The Conservatives have by last count, 116 seats in a parliament of 265. The Liberals have 103. The Conservatives will have the support of the Social Credit Party with 19 seats. The leader of this ~~group~~ party has announced that he will support Diefenbaker so long as he follows acceptable policies. Since the Social Credit Party, though ~~somewhat~~ generally conservative, ~~in many respects~~, advocates a highly unorthodox treatment of national and state finances, its association with the Conservatives ~~will hardly~~ might not be of long duration. It is generally believed the new government will stay in office about a year, and that the Conservatives will be eager to go to the country asking for a working majority.

An interesting feature of the Canadian election has been that the polltakers were way off in forecasting the ~~outcome~~ results. They were more wrong than in the Truman election of 1948. They predicted a Liberal victory by a smaller but substantial margin. Ten days ago they ~~indicated~~ predicted a 47 percent share of the popular vote for the Liberals,

comparable to ministers in etc.

and raised this to 48 percent on the eve of election. ~~But~~ In the results tabulated so far, the Liberals had ~~only~~ 41 percent. The pollsters gave the Conservatives 33 percent of the popular vote ten days ago, and 34 percent on the eve of election. So far they have 39 percent. The popular vote and the number of seats won are not necessarily in line in Canada. The Liberals won fewer seats than the Conservatives but had the larger popular vote. But the result of the election was a stunning surprise to everyone, the Liberals, the Conservatives themselves, and most of all to the pollsters. ~~The election result has thus liberated all elections from what might be called the uninspiring fatalism of the pollsters. And that, for the sake of a blessed belief in the unpredictability of free people,~~ may have been quite a healthy result.

In a sense, ~~it has liberated~~ are thus liberated all elections from the uninspiring fatalism of so-called scientific forecasting. And that, for the sake of ~~the~~ a blessed belief in the ~~unpredictability~~ unpredictability of free people, may ~~have been~~ be quite a healthy result.

The Canadian election confounded the experts, perhaps because people are unpredictable. Sidney Hyman said, "If anything is certain in politics, it is the habitual way fate intrudes overnight." The uncertainty of politics is proverbial. Will Rogers said, "It's sorter like a World Series. You got to have the breaks."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

TUESDAY, JUNE 11, 1957
7:45--8:00 P.M., E.S.T.

This is the news:

President Eisenhower was "virtually recovered" today from his stomach upset. He worked for an hour and fifteen minutes at his desk...dictating letters and signing government papers. He told reporters he "could do with a few steaks."

The New York Stock Market advanced on the report of the President's recovery..with gains up to five dollars a share.

The White House announced today that Queen Elizabeth..and her husband Prince Philip..will visit the United States in October at the invitation of the President. The royal couple will be in this country for six days, starting October 16th. The first stop...after a prior visit in Canada..will be Jamestown, Virginia, the first permanent English settlement in what is not the United States. They will then spend four days in Washington. It is expected that October 21st.. the last day of their American visit..will be spent in New York. This will be the queen's first trip to North America as a reigning monarch. Her visit to Ottawa and Washington in 1951 was made when she was still a princess.

Secretary of State Dulles said today that the United States will not disregard the views of its allies in order to hasten a disarmament agreement. Dulles acknowledged at his news conference that "procedural complications" exist. Some allies feel that Europe should be left out of any arms agreement with Russia until the problem of German reunification is solved. Britain and France reportedly have complained about the private talks the United States disarmament representative, Harold Stassen, has had with the Soviet delegate at the London conference. Today, Dulles tried to reassure those countries. He said, "We are not going to throw into the discard the views of our allies merely in the interest of making progress on a bilateral basis." The United States, he said, attaches first [illegible]

importance to the relationship with its allies. It will not sacrifice that rel--ationship. Dulles said the United tates is not much interested in what he called a "one-shot_ reply to Khrushchev's recent statements on American radio and television. The United States, he said, is interested in a series of monthly programs in which the Soviet position would be set forth in this country and the Amercian view could be expressed without hinderance in Russia. Dulles said the United States made this proposal at the foreign ministers conference in Geneva in 1955. but that Russia turned it down. Dulles rejected Republican Senator Knowland's suggestion that Norway be neutralized in exchange for Soviet troops withdrawal. from Hungary. He did not feel it was proper than any free country...participating in a collective security arrangement..should be made to withdraw. Knowland said tonight that his proposal had been "misinterpreted". Such an agreement, he said, would naturally hinge on Norway's consent.

Today ..in Florida..the Air Force conducted its first test - firing of the Atlas intercontinental ballisitc missile. The test reported..unofficially ...to have failed. Civilian spectators say the missile began wobbling off-course almost immediately, then exploded. An Air Force spokesman said there were no casualties. "Valuable information was gained," he said, "as a result of the test."

Thousands of Frenchmen rioted in Algiers today in an outburst of anti-nationalist feeling. At least 12 Moslems were killed...some of them dragged from their cars and clubbed to death...and more than 80 injured. Shops operated by Arabs were pillaged or set on fire. The trouble began with a demonstration of French students, protesting the bombing last week-end of a dance hall in which eight Europeans were killed. The demonstrations got out of hand, despite the arrival of troop reinforcements and the appeal of the local French Army commander for calm. Two hundred of the rioters are reported under arrest.

In Washington, Federal Judge McGarraghy heard opening arguments today in the Girard case. The question before the court is whether to grant the petition for a writ of habeas corpus, filed by the attorenys representing Army specialist William Girard. Should the petition be granted, Girard would be returned from Japan for hearing before an American court. His attorenys agrue that Japan has no right to try Girard in the death of a Japanese woman..on grounds that he was on duty at the time. Judge McGarraghy today quashed subpoenas sought by Girard's counsel for the appearance of Secretary Defense Wilson and Secretary of State Dulles at the hearings. He also rejected the counsel's request that the government produce in court documents dealing with the case. McGarraghy withheld a ruling on the petition for a habeas corpus writ, pending further argu-argument.

A new name has been emblazoned on our northern horizon. It is John Diefenbaker, who became leader of the Progressive Conservative Party only nine months ago, and yesterday led his party to the sensational overthrow of the Liberal government of Prime Minister St Laurent. The outcome fell short of an outright victory, and Diefenbaker will have to be content with heading a minority government, depending for support on the small Sociel Credit Party.

The Liberals had been in power for 22 years. A number of factors led to their defeat. Probably the most potent was the cry of "Time for a change" But one of the most impelling ones was John Diefenbaker, who waged a campaign of unprecedented vigor. He traveled and spoke tirelessly. He drew big crowds. People liked his old-fashioned eloquence, his milk-drinking, Sabath - observing respectabiiity, and his political promises.

How far Canada has swung to the right in its thinking is not easy to say in terms of Diefenbaker's own political philosophy. In his native and liberal Saskatchewan, where he is a criminal lawyer, he has never stressed his anti-liberalism. During the campaign he promised tax cuts, but also an increase

in old age pensions. But in some respects, the conservative campai n was isolationist and anti-American in tone, which means that voters may have been responsive to the turn of talk. One reason is the plight of Canadain farmers, who are suffering from a gigantic wheat surplus. Our selling our own farm surpluses as part of our foreign policy has narrowed Canadian markets. The Liberal government complained strongly of this in Washington, as recently as during our trade negotiations with Poland. Naturally conservatives stressed the plight of the farmers and promised increased foreign trade.

It is too soon to say how far a Diefenbaker government will depart from the intimate relationship we had with St. Laurent and Lester Pearson. We may have to expect a new look at our mutual defense arrangements in the Arctic, as Secretary Dulles today suggested. And we shall have to recognize we had a least a small part in the election result.

Probably the biggest effect of the election on world affairs is the elimination for the time being at least -- of Lester Pearson, minister of external affairs. He is one of the new coterie of small - nation statesmen with insight, skill and a persuasiveness not limited by vast national interests, who can work out solutions among the big powers. He has been constructive in many fields, particularly British Commonwealth relations with the rest of the Free World, NATO and disarmament.

Under Canadian procedures , Mr. Pearson cannot join the Diefenbaker government. He is a Liberal, and will not be in office until the Liberals form another government. How soon that will be depends on the life of the new regime. The Conservatives, by last count, have 110 seats in a parliament of 265. The Liberals have 103. The Conservatives will have the support of the Social Credit Party with 19 seats.The leader of this little group has announced that he will support Diefenbaker so long as he follows acceptable policies. Since the Social Credit Party though generally conservative, advocates a highly unorthodox treatment of national and state finances, its association with the Conservatives might

not be of long duration. It is generally believed the new government will stay in office about a year, and that the Conservatives will be eager to go to the country asking for a working majority.

An interesting feature of the Canadian election has been that the polltakers were way off in forecasting the result. They were more wrong than in the Truman election of 1948. They predicted a Liberal victory by a smaller but substantial margin Ten days ago they predicted a 47 percent share of the popular vote for the Liberals, and raised this to 48 percent on the eve of election. In the results tabulated so far, the Liberals had 41 percent. The Pollsters gave the Conservatives 33 percent of the popular vote ten days ago, and 34 percent on the eve of election. So far they have 39 percent. The popular vote and the number of seats won are not necessarily in line in Canada. Liberals won fewer seats than the Conservatives but had the larger popular vote, But the result of the election was a stunning surprise to everyone, the Liberals, the Conservatives themselves, and most of all to the pollsters.

In a sense, all elections are thus liberated from the uninspiring fatalism of so-called scientific forecasting. And that, for the sake of blessed belief in the unpredictability of free people, may be quite a healthy result.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: The Canadian election confounded the experts, perhaps because people are unpredictable. Sidney Hyman said, "If anything is certain in politics, it is the habitual way fate intrudes overnight." The uncertainty of politics is proverbial. Will Rogers said, "It's sorter like a World Series. You got to have the breaks."

Good night and good luck.

Edward R. Murrow

Pawling, N.Y.

New York.....

This is the news:

The French National Assembly tonight confirmed Maurice Bourgès-Maunoury as the new premier, succeeding Guy Mollet who resigned on May 21st. The assembly approved the cabinet appointed by Bourgès-Maunoury and his program. The new premier said he would press the war in Algeria... and, at the same time, great accomplishment the Arabs more political autonomy. The assembly, he said, must approve higher taxes and the European cannot refuse.

This [redacted]

The Peiping Radio charged today that United States naval aircraft had "invaded" the territorial waters of Red China...and that one American plane was hit by Communist anti-aircraft fire. The broadcast claimed that the planes came from the aircraft carrier Hornet and that the incident occurred in the Swatow area. Swatow is a seaport on the South China coast, opposite Formosa. The broadcast said the American plane "escaped in a southerly direction, belching smoke." It also claimed the destruction of two Chinese Nationalist aircraft which, it said, joined in the engagement. The State Department in Washington says it has received no report of any exercise which might have provoked such an incident. It says there was certainly no "invasion".

10

#2

The United States today accused Russia of waging a campaign of "threat and intimidation" in the Middle East. The charge was contained in a note rejecting the Soviet proposal...of April 19...that the United States, Britain and France join Russia in renouncing the use of force in the area. The American note says such a pledge is unnecessary...pointing out that the United States has "strongly supported the measures taken by the United Nations to reach peaceful and equitable adjustment of Middle East problems." Russia, it said, can demonstrate its desire for peace "by working constructively within the United Nations for solutions to fundamental problems in the area, among which," the note said, "the Arab-Israel dispute is outstanding." Moscow's proposal included an embargo on sending arms into the Middle East and the abandonment of the Baghdad Pact. The American note says "Soviet attacks on the governments of these states... together with subversive intervention in their domestic affairs..." gives them good cause to seek the strengthening of their security." Similar notes rejecting the Soviet proposal have been delivered by Britain and France.

26

#5

Russia and Finland today announced an agreement for increased trade between the two countries. The announcement...in a joint communique...marked the end of the visit of Russia's top leaders in Finland, which started a week ago. Russia will send Finland sugar, coal, oil and wheat, in return for electric cables and timber products, such as pulp. The increase in trade is represented as amounting to 25-million dollars over the present level. The Finnish premier joined Soviet Premier Bulganin in appealing for an international ban on atomic weapons. The communique said Finland would "deliberately" avoid anything which might promote international conflict. Finland, it said, will work for the removal of friction, especially in Scandanavia.

The Norwegian foreign ministry said today that it agrees "in principle" to the inspection of Norway's arctic territory as part of a first-step disarmament agreement. The Norwegian government, it said, assumes it would have an opportunity to study the details.

H6

In London, a United Nations spokesman says the five-power disarmament talks will resume on Friday. The United States representative at the conference, Harold Stassen, has been conferring this week with Administration leaders in Washington. He had another appointment today with Secretary of State Dulles...in which they were to discuss what Dulles has described as "procedural complications" with America's allies.

46

The Federation of American Scientists today urged the United States to take the lead...through the United Nations...in seeking an end to large nuclear weapons tests. The federation proposal envisages an international agreement to this effect which would not involve "complicated inspection systems." Nor, it said, would the plan preclude the testing of the smaller, tactical atomic weapons. The federation argues that inspection would not be necessary, in this instance, because the explosion of large nuclear weapons can be detected by monitoring systems outside national boundaries. And restricting the testing to small devices, it said, would reduce radioactive fallout.

56

#7

A new element was injected today in the case of Army Specialist William Girard. CBS News learned...from an authoritative source...that another American soldier may be implicated. According to this source, Army Specialist Victor Nickel of Inkster, Michigan, approached the Army's Criminal Investigation Division in Japan last Saturday with new information. Nickel was the only other soldier with Girard when Girard shot and killed a Japanese woman on an Army firing range. Girard has said the shooting was an accident...and he is being held for trial on charges of manslaughter before a Japanese court. A court ruling is also pending in Washington, on a writ of habeas corpus to have his case heard. According to the information obtained by CBS News, Nickel told the Army's criminal investigators that Girard fired a Japanese man and the second at the woman who fatally hurt. Nickel reportedly was instructed by Girard to entice the Japanese man and woman by throwing empty cartridges...which the Japanese hoped to salvage... closer to the point where the two soldiers were standing. According to Nickel, Girard fired first in the direction of the Japanese man and woman.

(more) 95 #8

Girard is then said to have shouted to the Japanese woman...in Japanese... that it was all right to come ahead. Nichol says Girard then fired again and the woman was hit. He says Girard asked him not to mention the first shot. Nichol reportedly told the Army Investigation Division that he was revealing this now because he became alarmed over his possible implication in the case. There has been no reaction to this report so far from Washington. [illegible], Kenji Fujiyama, reports from Tokyo that the Japanese people have expressed no particular surprise at this development, since the Japanese press has contended all along that Girard lured or enticed the victim before she was shot. Girard himself has denied this.

86

President Eisenhower demonstrated his recovery today by keeping his scheduled engagements. His first appointment was a buffet breakfast with 40 Republican members of the House. Mr. Eisenhower told them that he regards the school and foreign aid bills to be the most important legislation before Congress. Representative Brown of Ohio says he told the President that if Ohio congressmen voted for the school measure, "they would all get hung." The breakfast was the first of a series of five "harmony meetings" Mr. Eisenhower plans to have with Republican House members. He also plans two breakfasts with Republican senators.

The Senate today approved two appropriation measures. One of them provides 5-billion, 378-million dollars for running 17 independent government agencies in the next fiscal year. More than three-fourths of this money would go to the Veterans Administration. The amount approved represents a cut of about half a billion dollars. The other measure carries 2-billion, 885-million dollars for the Labor and Welfare Departments...or about 97-million dollars less than President Eisenhower requested. Both measures now go to a Senate-House conference committee.

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

WEDNESDAY, JUNE 12, 1957
7:45 to 8:00 PM

MURROW: This afternoon the Mayflower II tied up at a mooring buouy in Providence harbor to end the long voyage from Plymouth, England in seven weeks and four days. My colleague, Charles Ashley, no mean sailor himself, has been covering this story for us. We switch now to Boston for his report.

ASHLEY: Fifty-three days out of Plymouth, England, the stout Mayflower II is now riding on a special guest mooring at Provincetown on the tip of Cape Cod. Her skipper, the seafaring author, Alan Villiers, allows as how his 12-foot galleon, bark-rigged, will move off to Plymouth Harbor, reaching Gurnett Light at the entrance just after sunup tomorrow, even if she has to do it under tow from the Coast Guard tug, Yankton. Then tomorrow noon will come the whoop-de-do in Plymouth. The Plymouth Chamber of Commerce now calls it "Hometown, U.S.A.". The crossing of the Mayflower, to this reporter, is really two stories - one somewhat commercial. The other, a wonderful saga of the sea. It's been a job to honestly meld the two. For those who go down to the sea in ships, whether in putt-putts or actual cruisers, it goes without saying that sailing with no power across the Atlantic, 53 days at sea, not duty for sissies. No matter what might or manner of sly improvements they might have had. We watched the Mayflower heave and roll with no wind on days after a hard blow. That's when gills get green and that's when they separate the men from the boys. Well, the crew all turned out to be men, even the cabin boy, 17 year old Joe Meaney, who incidentally has decided to go to Notre Dame instead of Annapolis (he had a choice). In short it was a feat of derring-do, but with reward in sight. Skipper Villiers and cabin boy Meaney, who was the only American aboard, will be the only ones who can make a buck for a year. That was in the contract, no interviews, no magazine articles, just still pictures, no sound - and who knows, after a year, the actual story of the

crossing of the second Mayflower, may be as dead as (indistinct) As you probably have heard, there's been considerable of a tinge of commercialization. This correspondent isn't piffed because the Coast Guard would only take out one of the owners of the Mayflower; because the Navy blimp couldn't rendezvous to pick up film and tape; because the Mayflower has to hurry to New York to make money for the promoters. It takes money to build any building, and perhaps that will be the net result. The Mayflower leaves early tomorrow for Plymouth Rock. It will take time to get her into the backwoodsy channel. We've run aground many times in center border. So she'll be towed in for the very last leg of a real rugged voyage, but so was the original Mayflower. No diesel tug, but then the longboat with tired sailors at the sweeps, back in 1620. Well, after the stopover in Plymouth town, Mayflower II sails to New York, there to make more of the loot that it took to build her. When the ledgers are squared away, it's in the contract that the Mayflower II comes back to Plymouth to be permanently berthed in Eel River and the contract to Yankees Brewster and Hornblower, who stayed away from their State Street, Boston brokers offices for this deal, is a contract. It says, they tell us, that after the New York junket, the Mayflower must come down to the Eel River for good. Then she'll be in the heart of the replica Pilgrim Fathers' town - the meeting house, the little block fort, a few cabins. We broadcast there on this show about two years ago. The plan won't be like some of the other ventures here, on the West Coast and up in New York State. They tell us admission will not be charged. It will not be a wampum (sic) willage, but rather a Smithsonian scene to tell the story of America Pilgrim style. Henry Hornblower and Bill Brewster put it this way. "Charley, if a couple of years from now we, you and Ed Murrow can bring our boys down and just quietly, with no hawkers and no peddlers, go through the Mayflower and the villages, then we think it will be worth it." Now back to Ed Murrow.

No matter what might or manner of sly improvements they might have had. We watched the Mayflower heave and roll with no wind on days after a hard blow. That's when gills get

green and that's when they separate the men from the boys. Well, the crew all turned out to be men, even the cabin boy, 17 year old Joe Meaney, who incidentally has decided to go to Notre Dame instead of Annapolis (he had a choice). In short it was a feat of derring-do, but with reward in sight. Skipper Villiers and cabin boy Meaney, who was the only American aboard, will be the only ones who can make a buck for a year. That was in the contract, no interviews, no mazazine articles, just still pictures,no sound - and who knows, after a year, the actual story of the crossing of the second Mayflower, may be as dead as (indistinct) As you probably have heard, there's been considerable of a tinge of commercialization. This correspondent isn't piffed because the Coast Guard would only take out one of the owners of the Mayflower; because the Navy blimp could not rendezvous to pick up film and tape; because the Mayflower has to hurry to New York to make money for the promoters. It takes money to build any building, and perhaps that will be the net result. The Mayflower leaves early tomorrow for Plymouth Rock. It will take time to get her into the backwoodsy channel. We've run aground many times in center border. So she'll be towed in for the very last leg of a real rugged voyage, but so was the original Mayflower. No diesel tug, but then the longboat with tired sailors at the sweeps, back in 1620. Well, after the stopover in Plymouth town, Mayflower II sails to New York, there to make more of the loot that it took to build her. When the ledgers are squared away, it's in the contract that the Mayflower II comes back to Plymouth to be permanently berthed in Eel River and the contract to Yankees Brewster and Hornblower, who stayed away from their State Street Boston brokers offices for this deal, is a contract. It says, they tell us, that after the New York junket, the Mayflower must come down to the Eel River for good. Then she'll be in the heart of the replica Pilgrim Fathers' town - the meeting house, the little block fort, a few cabins. We broadcast there on this show about two years ago. The

plan won't be like some oth the other ventures here, on the West Coast and up in New York State. They tell us admission will not be charged. It will not be a wompum village, but rather a Smithonian scene to tell the story of America Pilgrim style. Henry Hornblower and Bill Brewster put it this way. "Charley, if a couple of years from now we, you and Ed Murrow can bring our boys down and just quietly, with no hawkers and no peddlers, go through the Mayflower and the villages, then we think it will be worth it." Now back to Ed Murrow.

MURROW: That was my colleague, Charles Ashley, reporting on the arrival today of the new Mayflower in Provincetown Harbor.

The United States today accused Russia of waging a campaign of "threat and intimidation" in the Middle East. The charge was continued in a note rejecting the Soviet proposal..of April 19..that the United States, Britain and France join Russia in renouncing the use of force in the area. The American note says such a pledge is unnecesaary....pointing out that the United States has "strongly supported the measures taken by the United Nations to reach peaceful and equitable adjustment of Middle East problems." Russia, it said, can demonstrate its desire for peace "by working constructively within the United Nations for solutions to fundamental problems in the area, among which," the note said, "the Arab - Israel dispute is outstanding." Moscow's proposal included an embargo on sending arms into the Middle East and the abandonment of the Baghdad Pact. The American note says "Soviet attacks on the governments of these states..together with subversive interventions in their domestic affairs.."gives them good cause to seek the strengthening of their security." Similar notes rejecting the Soviet proposal have been delivered by Britain and France.

Russia and Finalnd today announced an agreement for increased trade between the two countries. The announcement..in a joint communique...marked the end of the visit of Russia's top leaders in Finalnd, which started a week ago. Russia will send Finland sugar, coal. oil and wheat, in return for electric cables

and timber products, such as pulp. The increase in trade is represented as amounting to 25-million dollars over the present level. The Finnish premier joined Soviet Premier Bulganin in appealing for an international ban on atomic weasons. The communique said Finland would "deliberately" avoid anything which might promote international conflict. Finalnd, it said, will work for the removal of friction, especially in Scandanavia.

The Norwegian foreign ministry said today that it agress "in principle" to the inspection of Norway's arctic territory as part of a first - step disarmament agreement. The Norwegian government, it said, assumes it would have an opportunity to study the details.

In London, a United Nations spokesman says the five-power disarmament talks will resume on Friday. The United States representative at the conference, Harold Stassen, has been conferring this week with Administration leaders in Washington. He had another appointment today with Secretary of State Dulles...in which they were to discuss what Dulles has described as "procedural complications" with America'a allies.

The Federation of American Scientists today urged the United States to take the lead..through the United Nations..in seeking an end to large nuclear weapons tests. The federation proposal envisages an international agreement to the effect which would not involve "complicated inspection systems." Nor, it said, would the plan preclude the testing of the smaller, tactical atomic weapons. The federation argues that inspectoon would not be necessary in this instance, because the explosion of large nuclear weapons can be detected by monitoring systems outside national boundaries. And restricting the testing to small devices, it said, would reduce radioactive fallout.

A new element was injected today in the case of Army Specialist William Girard. CBS News learned ...from an authoritative source..that another American soldier may be implicated. According to this source, Army specialist Victor Nickel of Inkster, Michigan, approached the Ammy's Criminal Investigation Division in Japan last Saturday with new information. Nickel was the only other soldier with Girard when Girard shot and killed a Japanese woman on an army firing range. Girard has said the shooting was an accident...and he is being held for trial on charges of manslaughter before a Japanese court.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: The Mayflower Second has completed her voyage..and, notwithstanding certain commercial aspects, those aboard her have reason to be proud. The English philosopher, Alfred North Whitehead, said, "Without adventure, civilization is in full decay." And David Grayson pointed out, "Adventure is not outside a man. It is within."

Goodnight and good luck.

Edward R. Murrow Thurs., June 13, 1957

This is the news:

The Senate Foreign Relations Committee today approved United States membership in the international atoms-for-peace agency. The resolution... was approved... includes a proviso that the United States retains the right to quit the agency, if unacceptable changes are made in its charter. The treaty must next be ratified by the full Senate.

The Senate debated the foreign aid bill today...and Democratic Leader Johnson says he hopes action on the measure can be completed by Saturday night.

72

Harold Stassen left Washington today, to return to the disarmament talks in London. Reporters asked Stassen before he took off whether he had been reprimanded by Secretary of State Dulles. Stassen laughed and said, "No, of course not." There have been reports that Dulles felt Stassen had been giving the Russians too much information on the new American disarmament proposals, in advance of agreement between the United States and its allies. Some of our allies reportedly had objected. Stassen said today that he had received new instructions as to procedure but no new instructions as to substance...indicating that basic American policy regarding a first-step disarmament agreement remains unchanged. The London talks are scheduled to resume tomorrow. I should like to discuss this question of disarmament further in a few minutes.

12

A U.S. Army spokesman in Tokyo today denied the charge...made by Specialist William Girard...that the Army has been "pressuring" him to accept trial before a Japanese court. The spokesman said Girard has been getting "fair and impartial advice with a view to protecting his interests at all times." The Army confirms that Specialist Victor Nickel...who was with Girard at the time the Japanese woman was fatally shot...has been placed in "protective custody." The Army says the action was taken at Nickel's request, to keep correspondents from questioning him about the shooting. Nickel reportedly has told Army investigators that...at the suggestion of Girard...he helped lure the woman within range, by throwing out empty cartridges which she hoped to recover. Girard has denied resorting to any such practice. The Army spokesman said today, "The extent of Nickel's involvement in the Girard case is not yet determined." He said, "There are no courtmartial charges against him now."

The State Department says it "contemplates no action" against Red China for the damaging yesterday...by Communist anti-aircraft fire...of an American carrier-based plane off the China coast. The Navy has said that the aircraft appears to have strayed off course due to poor visibility.

30

(5)

A State Department official recommended today that the application of newsman William Worthy for renewal of his passport be turned down. The recommendation was made by Ashley Nicholas, legal officer for the Passport Division, and is still subject to approval by the State Department's Security and Consular Affairs Division. Worthy is one of three American newsmen who entered Red China last year in defiance of the State Department ban on visits to that country. If the department finally rejects his application, Worthy could then resort to the courts.

38

(6)

France announced today that, henceforth, French shippers may use the Suez Canal. This is a reversal of French policy. On May 13th, when other countries approved renewal of transit through the canal, only France refused to go along. France said it would not submit to the conditions imposed by Egypt for operation of the waterway. Today's decision...to reverse that stand...is one of the first actions to be taken by the new French government, headed by Premier Bourges-Maunoury...whose cabinet was approved by the General Assembly only last night.

46

President Kuwatly of Syria conferred again today with President Nasser in Cairo...and then flew back to Damascus.

Jordan reportedly is considering severance of diplomatic relations with Egypt, because of an alleged plot to assassinate members of the Jordanian royal family. Egypt already has expelled Jordan's ambassador, and this is given as a further reason why Jordan may close its embassy. Nineteen Jordanians were arrested today on charges of conspiring with Egypt to carry out the assassinations.

King Saud of Saudi Arabia has extended his state visit to Jordan until this week-end.

Tonight, King Hussein of Jordan and King Saud issued a joint communique...emphasizing their adherence to a policy of "positive neutrality". Jordan and Saudi Arabia, they said, will never join a foreign alliance, whatever its nature. They also agreed to defend "Arab sovereignty" over the Gulf of Aqaba.

In New York Federal Court, the government today asked for a summary judgment to block the proposed merger of the Youngstown Sheet and Tube Company with Bethlehem Steel. Action on the motion is not expected until sometime in the fall.

The Mayflower Second tied up in Plymouth Harbor today, about a hundred yards from Plymouth Rock. The 53-day voyage from Plymouth, England, thus officially came to an end.

¶ The Russians have suddenly raised the ante for a disarmament agreement. Khruschchev, AT a NEWS conference in Helsinki, poured scorn on the Arctic open skies plan which we are about to propose, and dimissed the principle of controls, both for disarmament, and for the abandonment of nuclear tests. He called it comical to suggest photographing the Arctic ice. And he dclared:"No system of control can solve the problem of disarmament, because it cannot prevent any state from planning aggression if it wants to." He did agree that if nuclear tests are to be abandoned, the Soviet Union will go along with international inspection posts inside the Soviet Union, as well as in the United States, Britain and other countries. But this seems to take the Russians back to the position they held before Mr. Zorin made his last offer in the disarmament subcommittee, which had included inspection and control.

¶ The modest first step in disarmament, to which the Administration is committed, is going to be harded to take than had been foreseen. However, this is not only due to the Russians being tough negotiators, for that was to be expected. We have another trouble . It is in conducting

negotiations as head of a coalition of allies. We are discovering that alliances can be just as unmanageable in peace-time as in war. Mr. Stassen's recent troubles in the London disarmament talks have been due not to the Russians but to our friends. A few weeks ago, when Mr. Zorin, the Soviet member, was going to introduce a new proposal, he slipped a copy of it to Mr. Stassen four days in advance, as if to say: "Here is something serious, not to be mistaken for the usual propaganda". This unprecedented act of fellowship was significant enough to help pred the Administration into drafting a first-step disarmament proposal. It was given to Mr. Stassen, and in due course he informed Mr. Zorin about it, as an act of good-will and reciprocity. Of course he told our allies about the plan, and also informed them what he had told Mr. Zorin. Then some ally, or allies, strenuously objected to this procedure on the ground that the Russians should have been told nothing before the coalition itself was in agreement. Who it was that objected has not been disclosed. CBS News learns from London that the British were quite surprise by the criticism of Mr.Stassen, and don't think he did anything out of the way. The Norwegians have come through with an Okay for an aerial inspection

over their part of the Arctic. So they were not the ones ~~who objected~~. There have been hints that the French did not like our proposal to end nuclear tests, because it would doom them never to become a nuclear power. We also know that West Germany is against including that country in a European open skies inspection system before unification has been achieved.

¶ The United States and the Soviet Union, being ~~are~~ the only two big military powers in the world, ~~and~~ any agreement to limit or reduce armaments must necessarily be between them first of all. They have to take the initiative, and find the common ground on which to meet. Even without the complication of coalition politics, the Kremlin is in a better bargaining position than we are, because Russian policy can be made by one or two men and imposed on the nation, ~~while~~ ours must overcome differences within the Administration, and then face the hazards of congressional disapproval and public misunderstanding. But the demands of the coalition add a new dimension to the difficulties. We wanted air inspection as a means to avert surprise attack. This was the ~~surprise~~ proposal President Eisenhower (Spring ~~made~~ at a United Nations assembly meeting. ~~It was~~ He was launching a trial balloon, and he could not have sounded out the other 14 membersof NATO before

doing so, ~~launching the trial balloon.~~ The trial balloon was a success and air inspection is now part of the thinking of both sides. But if one country in the Western Alliance says no, the coalition policy has to grind to a stop. Similarly, one of the basic ideas of a first ~~long~~ step disarmament plan is to ~~[illegible]~~ limit possession of nuclear weapons to countries now having them. This eliminates France, very nearly ~~which is said to be~~ ready to explode a test bomb of its own. If France says no to this feature of the plan, the coalition policy again grinds to a step. There may be other items of disagreement among the Allies. Any one of them could make agreement with the Russians difficult if not impossible.

This is a situation that puts the Kremlin in the driver's seat. Within bounds, it can do pretty much what it likes and blame the Allies if negotiations break down. ~~Just what it means the [illegible] that~~ ~~[illegible] in Helsinki went back [illegible]. But it is [illegible] that the Russians have [illegible] to [illegible]. We do not. They are [illegible] it. We can't. It is under these conditions that the negotiations in London are ~~[illegible]~~ about to resume. Mr. [illegible] said on leaving for London that he had seen what Mr. Khrushchev had said, but that he believes ~~[illegible]~~ closer to agreement on a first step in disarmament than three weeks ago. One can only hope he is right.

Word —

The disarmament talks are beset by disagreements. Yet there must be [redacted] perseverring belief that...in the end...reason will prevail. Josh Billings said, "Faith is no milksop but a live fighter. She don't set down and gro stupid with resignation and git weak with the buty of her attributes. She iz the heroine of [redacted] forlorn Hope."

Good night and good luck!

In New York Federal Court, the government today asked for a summary judgment to block the proposed merger of the Youngstown Sheet and Tube Company with Bethlehem Steel. Action on the motion is not expected until sometime in the fall.

The Mayflower Second tied up in Plymouth Harbor today, about a hundred yards from Plymouth Rock. The 54-day voyage from Plymouth, England, thus officially came to an end.

The Russians have suddenly raised the anti for a disarmament agreement. Khrushchev, at a news conference in Helsinki, poured scorn on the Arctic openskies plan which we are about to propose, and dismissed the principle of controls, both for disarmament, and for the abandonment of nuclear tests. He called it comical to suggest photographing the Arctic ice. And he declared :"No system of control can solve the problem of disarmament, because it cannot prevent any state from planning aggression if it wants to." He did agree that if nuclear tests are to ba abandoned, the Soviet union will go along with international inspection posts inside the Soviet Union, as well as in the United States, Britain and other countries. But this seems to take the Russians back to the position they held before Mr. Zorin made his last offer in the disarmament subcommittee, which had included inspection and control.

In the modest first step in disarmament, to which the Administration is committed, is going to be harder to take than has been foreseen. However, this is not only due to the Russians being tough negotiators, for that was to be expected. We have another trouble. It is in conducting negotiations as head of a coalition of allies We are discovering that alliances can be just as unmanageable in peace-time as in war. Mr. Stassen's recent troubles in the London disarmament talks have been due not to the Russians but to our friends. A few weeks ago, when Mr. Zorin, the Soviet member, was going to introduce a new proposal, he slipped a copy of it to Mr. Stassen four days in advance, as if to say: "Here is something serious, not to be mistaken for the usual propaganda." This unprecedented act of fellowship was significant enough to help prod the administration into drafting a first - step disarmament proposal. It was given to Mr. Stassen and in due course he informed Mr. Zorin about it, as an act of good-will and reciprocity. Of course he told our allies about the plan, and also informed them that he had told Mr. Zorin. Then some ally, or allies, strenuously objected to this procedure on the ground that the Russians should

have been told nothing before the coalition itself was in agreement.

Who it was that objected has not been disclosed. CBS News learns from London hhat the British were quite surprised by the criticism of Mr. Stassen, and don't think he did anything out of the way. The Norwegians have come through with an Okay for an aerial inspection over their part of the Arctic. So they were not the ones. There have been hints that the French did not like our proposal to end nuclear tests, because it would doom them never to become a nuclear power We also know that West Germany is against including that country in a European open skies inspection system before unification has been achieved.

The United States and the Soviet Union being the only two big military powers in the world, any agreement to limit or reduce armaments must necessarily be between them first of all. They have to take the initiative, and find the common ground on which to meet. Even without the complication of coalition politics, the Kremlin is in a better bargaining position than we are, because Russian policy can be made by only one or two men and imposed on the nation. Ours must overcome differences within the Administration and then face the hazards of congressional disapproval and public misunderstanding. But the demands of the coalition add a new dimension to the difficulties. We wanted air inspectionn as a means to avert surprise attack. This was the proposal President Eisenhower sprung at a United Nations assembly meeting. He was launching a trial baloon, and he could not have sounded out the other 14 members of NATO before doing so. The trial balloon was a success and air inspection is now part of the thinking of both sides. But if one country in the Western Alliance says no, the coalition policy has to grind to a stop.

Similarly, one of the basic ideas of a first step disarmament plan is to limit possession of nuclear weapons to countries now having them. This eliminates France, very nearly ready to explode a test bomb of its own. If

France says no to this feature of the plan, the coalition policy again grinds to a stop. There may be other items of disagreement amont the Allies. Any one of them could make agreement with the Russians difficult if not impossible.

This is a situation that puts the Kremlin in the driver's seat. Within bounds, it can do pretty much what it likes and blame the Allies if negotiations break down.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: The disarmament talks are beset by disagreements. Yet there must be perservering belief that...in the end..reason will prevail. Josh Billings said, "Faith is no milksop but a live fighter. She don't set down and gro stupid with resignation and git weak with the buty of her attributes. She iz the heroine of forlorn Hope."

Goodnight and good luck!

Edward R. Murrow Fri., June 14, 1957

This is the news:

Russia made a new proposal today for ending nuclear weapons tests. #

It suggested a moratorium on test explosions for two or three years, while negotiations continue for outlawing them altogether. /Russia has proposed such a ban before. /What makes today's proposal important is, that this time Russia suggested that inspection posts be set up inside the Soviet Union, as well as inside the United States and Britain, and in the test areas of the Pacific, to see that the agreement is carried out. /Under this new plan, inspection would be administered by an international commission, which would report to the United Nations. /The proposal was made as the five-power disarmament talks resumed in London, after a one-week recess. It was presented by Valerian Zorin, the Soviet delegate. /Western sources call it "a major step forward." /But they warn against over/optimism.

→

The French delegate...Jules Moch...pointed out that suspension of tests does not mean the same thing as stopping production of hydrogen bombs. (The Western position, all along, has been that a ban on test explosions must also apply to the preparation of fissionable materials for military purposes.) Harold Stassen, who represents the United States, asked Zorin if Soviet thinking had also changed in this respect. Zorin did not reply. Moch warned that France would not be bound by any agreement to stop tests reached by the three present nuclear powers---Russia, Britain and the United States---without a parallel agreement regarding fissionable materials. The Western delegates will study the Russian proposal over the week-end.

The State Department said today that Administration leaders "obviously" have full confidence in Stassen. The department said, "The fact that Governor Stassen returned to London as head of the United States delegation speaks for itself." The statement apparently was issued to counter-act talk of friction between Secretary Dulles and Stassen, over Stassen's conduct of the disarmament negotiations.

The Senate is driving for a final vote tonight on President Eisenhower's foreign aid program. This afternoon, an amendment to cut the military assistance funds by 500-million dollars was defeated by a vote of 61 to 26. Other amendments which would have reduced the program also went down to defeat.

Today...in the House... Southern representatives lost their fight to have a "jury trial amendment" attached to the Administration's civil rights measure. The amendment would have required a jury trial for persons accused of violating federal injunctions upholding the right to vote. The vote defeating this amendment was 199 to 167. Final House action is expected on Monday.

President Eisenhower urged approval of his defense and foreign aid budgets today when he met 42 Republican congressmen at a White House breakfast. This was the second in a series of informal meetings the President plans to have until he has seen all Republican members of Congress on behalf of his legislative program.

Secretary of the Treasury Humphrey (who will soon retire) said today that taxes must be maintained at their present level "at least until such time as we have a substantial excess of income over expenditures." Humphrey told a joint congressional committee investigating the national economy that a tax cut this year is "definitely out of the question." He said that if government spending is "properly" controlled, "we can look forward to a continuing period of high prosperity." He warned that one thing which could destroy this prosperity is "runaway inflation." For this reason, present restraints on credit will have to be kept.

President Eisenhower made a new statement today on the dependence of Great Britain and Japan on world trade. Mr. Eisenhower made no direct refenence to the recent British decision to relax its controls on trade with Red China. But B ritain and Japan, he said, must be permitted freer trade "if they are going to make a living." He said the United States would be

in "an awful fix"...if such countries were forced into a closer political relationship with the Communist world because of economic problems. Mr. Eisenhower made these remarks in an informal talk before a private organization set up to promote world trade.

The President today nominated Val Peterson, federal civil defense administrator, to be ambassador to Denmark. Former Governor ~~Hoegh~~ (Hoig) of Iowa was named to succeed Peterson in the civil defense post. Peterson has been head of the Civil Defense Administration since February, 1953. And for his service in that capacity, Mr. Eisenhower expressed "deep thanks."

FEE-NYOH-LEH'

The provisional president of Haiti...Daniel Fignolé...was ousted today in a bloodless Army coup and possibly sent into exile. Power was seized by a three-man junta, headed by the Army chief of staff. A state of emergency has been declared. ~~Fignolé had been in office only 19 days, after a series of earlier government upsets. A factor in his removal is said to have been the deteriorating economic situation.~~

Attorneys for Army Specialist William Girard today made their final arguments in Federal Court for a writ of habeas corpus, which would return the soldier to the United States. The attorneys argued that if Girard were tried by a Japanese court...as directed...it would constitute violation of his constitutional rights. The government contended that...in the Girard case...no constitutional right to trial by court martial is involved.

In Japan today, Girard denied ever saying that the Army was "pressuring" him to accept trial in a Japanese court. Girard issued the denial in the presence of two high-ranking Army officers.

The government of Nationalist China said today that 41 persons will be court-martialed for complicity in the anti-American rioting on Formosa on May 24th. It said four of the 41 defendants were found to have once had Communist connections...but that there was no evidence the riots were organized. ~~The violence was described, rather, as a spontaneous mob action set off by the exoneration of Master Sergeant Robert Reynolds in the death of a Chinese civilian. A U.S. Army courtmartial accepted Reynolds statement that he shot in self-defense.~~

An old reporter friend of mine...Jack Beck, who is news director of KNX in Los Angeles...has started out on a round-the-world trip. Right now, Jack is in Spain...and he sends along this recorded "taxpayers's report" from Madrid.

Tape runs 4:20
Ends on cue: "--This is Jack Beck reporting from Madrid."

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

The London disarmament negotiations have taken another favorable turn. The Western representatives at this meeting dare not succumb to pessimism on the one hand, or over-optimism on the other. The situation recalls this ancient Chinese proverb: "He dare not swallow for fear of a bone...nor spit it out for fear there is flesh."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Friday, June 14, 1957
7:45 - 8:00 P.M.

MURROW: ... An old reporter friend of mine, Jack Beck, who is news director of KNX in Los Angeles, has started out on a round-the-world trip. Right now Jack is in Spain - and he sends along this recorded taxpayers report from Madrid.

BECK: To most American taxpayers, of whom this reporter considers himself to be one, the question of how the Government dollars, spent overseas, is of more than passing interest, especially at a time when the echoes of budgetary quarrels at home can be heard echoing across the Atlantic. To the Congressmen in quest of non-essential items, the U. S. Information Agency abroad, has undoubtedly seemed a likely subject for the pruning shears; and it must be confessed by this traveller that the exact value rendered abroad by the U. S. I. A. has been enshrouded in the mists of hearsay. Admittedly, the job of reciting to foreign populations the attractions and guileless intent of our own nation, may seem a dispensable pursuit in a world where power usually decides issues anywhere. But for whatever interest it may hold for fellow-citizens who dread the approach of April 15th each year, we can say from some personal browsing about this part of the world, Spain, that the business of guaranteeing our extended military position involves a good deal more than simply sending some men and equipment to create an American colony in someone else's backyard. Until you have seen it, it is difficult to comprehend the extent to which Americans have become "the man who came to dinner" in so many foreign lands. You may recall that the crotchety character, created by Messrs. Kaufman and Hart, took over the household in which he was a guest and ran things in such an arbitrary fashion that he was cordially detested by his long-suffering hosts. To forestall that turn of events is essentially the job of U.S.I.A. here. Spain is not a member of NATO; and our five bases for Strategic Air Command operations were the result of

a bilateral negotiation outside the framework of the Western European defense community. Further, Spain represents a rather interesting bridgehead between the eighteenth and twentieth centuries and, to some extent, the European and Moslem worls. Traditionally isolated from Europe itself by geography and preference, Spain poses a problem in the communication of ideas long since accepted in our own country and those of our more immediate allies. Since they consider themselves the original anti-Communists, the present rulers of Spain are quite amenable to the installation of defensive power. But in a country where the one hundred mile an hour Diesel train, the Talgo, runs through a country where people are still plowing their fields with little more than oxen and a pointed stick, the job of getting global strategy accepted in a spirit of mutuality is a considerable one. This is the U.S.I.A. job.

For example - the problem of fuelling our SAC bases has made necessary the construction of a 485-mi. pipeline, extending three-quarters of the distance across Spain. When a bull-dozer shows up at some Andalusian farmer's fence, with the manifest intention of digging a ten foot furrow across his property, it is well if some one has been able to explain to him that Spain, and hence himself, is to derive some benefit from all this, as well as the United States of America.

Then there's the problem of integrating about fifteen thousand Americans with their vastly higher standard of living into the midst of one of the poorest of European countries, and the consequent problem of preventing a further inflation of the already wobbly Spanish economy. In short, there is the problem of being a gracious guest, since it is painfully obvious that the best bases in the world aren't of much use if you can't fly out of them.

As matters stand - there are now about 7200 American personnel in Spain involved in the creation of these bases. They will be joined very shortly by about 2500 more military and their dependents. In the next few months the bases will become operational.

Our people seem to feel that thus far we have established ourselves with a minimum of strain and embarrassment among an exceptionally proud people, whose traditions are more isolationist than our own. But they think that the months ahead will call on all the skill and tact we possess in selling our program to the Spanish people.

Whether all this is worth the tax dollars it is costing, presumably only our military can say. What is evident is the fact that the cold war, and its counter-poised elements of power, are costly and extremely complicated indeed and not to be reckoned solely in terms of the cost of strategic bombers and the weapons they carry.

This is Jack Beck reporting in Madrid.

EDWARD R. MURROW WITH THE NEWS

Friday, June 14, 1957
7:45 - 8:00 P.M.

MURROW: ... An old reporter friend of mine, Jack Beck, who is news director of KNX in Los Angeles, has started out on a round-the-world trip. Right now Jack is in Spain - and he sends along this recorded taxpayers report from Madrid.

BECK: To most American taxpayers, of whom this reporter considers himself to be one, the question of how the Government dollars, spent overseas, is of more than passing interest, especially at a time when the echoes of budgetary quarrels at home can be heard echoing across the Atlantic. To the Congressmen in quest of non-essential items, the U. S. Information Agency abroad, has undoubtedly seemed a likely subject for the pruning shears; and it must be confessed by this traveller that the exact value rendered abroad by the U. S. I. A. has been enshrouded in the mists of hearsay. Admittedly, the job of reciting to foreign populations the attractions and guileless intent of our own nation, may seem a dispensable pursuit in a world where power usually decides issues anywhere. But for whatever interest it may hold for fellow-citizens who dread the approach of April 15th each year, we can say from some personal browsing about this part of the world, Spain, that the business of guaranteeing our extended military position involves a good deal more than simply sending some men and equipment to create an American colony in someone else's backyard. Until you have seen it, it is difficult to comprehend the extent to which Americans have become "the man who came to dinner" in so many foreign lands. You may recall that the crotchety character, created by Messrs. Kaufman and Hart, took over the household in which he was a guest and ran things in such an arbitrary fashion that he was cordially detested by his long-suffering hosts. To forestall that turn of events is essentially the job of U.S.I.A. here. Spain is not a member of NATO; and our five bases for Strategic Air Command operations were the result of

a bilateral negotiation outside the framework of the Western European defense community. Further, Spain represents a rather interesting bridgehead between the eighteenth and twentieth centuries and, to some extent, the European and Moslem worls. Traditionally isolated from Europe itself by geography and preference, Spain poses a problem in the communication of ideas long since accepted in our own country and those of our more immediate allies. Since they consider themselves the original anti-Communists, the present rulers of Spain are quite amenable to the installation of defensive power. But in a country where the one hundred mile an hour Diesel train, the Talgo, runs through a country where people are still plowing their fields with little more than oxen and a pointed stick, the job of getting global strategy accepted in a spirit of mutuality is a considerable one. This is the U.S.I.A. job.

For example - the problem of fuelling our SAC bases has made necessary the construction of a 485-mi. pipeline, extending three-quarters of the distance across Spain. EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

FRIDAY, JUNE 14, 1957
7:45--8:00 P.M., E.D.S.T.

This is the news:

Russia made a new proposal today for ending nuclear weapons tests. It suggested a moratorium on test explosions for two or three years while negotiations continue for outlawing them altogether. Russia has proposed such a ban before. What makes today's proposal important is that this time Russia suggested that inspection posts be set up inside the Soviet Union, as well as inside the United States and Britain and in the test areas of the Pacific to see that the agreement is carried out. Under this new plan, inspection would be administered by tn international commission, which would report to the United Nations. The proposal was made as the five power disarmament talks resumed in London after a one-week recess. It was presented by Valerian Zorin, the Soviet delegate. Western sources call it "a major step forward." But they warn against over optimism. The French delegate..Jules Moch..pointed out that suspension of tests does not mean the same thing as stopping production of hydrogen bombs. The Western position, all along, has been that a ban on test explosions must also apply to the preparation of fissionable materials for military purposes. Harold Stassen, who represents the United States, asked Zorin if Soviet thinking had also changed in this respect. Zorin did not reply. Moch warned that France would not be bound by any agreement to stop tests reached by the three present nuclear powers, Russia, Britain and the United States, without a parallel agreement regarding fissionable materials. The Western delegates will study the Russian proposal over the week - end.

The State Department said today that Administration leaders "obviously" have full confidence in Stassen. The department said, "The fact that Governor Stassen returned to London as head of the United States delegation speaks for itself." The statement apparently was issues to counter-act talk of friction

between Secretary Dulles and Stassen, over Stassen's conduct of the disarmament negotiations.

The Senate is driving for a final vote tonighton President Eisenhower's foreign aid program. This afternoon, an amendment to cut the military assistance funds by 500-million dollars was defeated by a vote of 61 to 26. Other amendments which would have reduced the program also went down to defeat.

Today in the House..Southern representatives lost their fight to have a "Jury trial amendment" attached to the Administration's civil rights measure. The amendment would have required a jury trial for persons accused of violating federal injunctions upholding the right to vote. The vote defeating this amendment was 199 to 167, Final House action is expected on Monday.

Secretary of the Treasury Humphrey (who will soon retire) said today that taxes must be maintained at their present level "at least until such time as we have a substantial excess of income over expenditures." Humphrey told a joint congressional committee investigating the national economy that a tax cut this year is "definitely out of the question." He said that if government spending is "properly" controlled, "we can look forward to a continuing period of high prosperity." He warned that one thing which could destroy this prosperity is "runaway inflation." For this reason, present restraints onc credit will have to be kept.

President Eisenhower made a new statement today on the dependence of Great Britain and Japan on world trade. Mr. Eisenhower made no direct reference to the recent British decision to relax its controls on trade with Red China. But Britain and Japan, he said, must be permitted freeer trade "if they are going to make a living." He said the United States would be in "an awful fix" is such countries were forced into a closer political relationship with the Communist world because of economic problems. Mr. Eisenhower made these remarks in an informal talk before a private organization set up to promote world trade.

The President today nominated Val Peterson, federal civil defense adminis-trator, to be ambassador to Denmark. Former Governor Haig of Iowa was named to succeed Peterson in the civil defense post. Peterson has been head of the Civil Defense Administration since February, 1953. And for his service in that capacity, Mr. Eisenhower expressed "deep thanks".

The provisional president of Haiti..Daniel Fignole..was ousted today in a booodless Army coup, and possible sent into exile. Power was seized by a three-man junta, headed by the Army chief of staff. A state of emergency has been declared.

Attorneys for Army specialist William Girard today made their final arguments in Federal Court for a writ of habeas corpus, which would return the soldier to the United States. The attorneys argued that if Girard were tried by a Japnese court...as directed...it would constitute violation of his constitutional rights. The government contended that..in the Girard case...no constitutiinal r ight to trial by court martial is involved.

In Japan today, Girard deniec ever saying that the Army was "pressuring" him to accept trial in a Japanese court. Girard issued the denial in the presence to two high-ranking Army officers.

The government of Nationalist China said today that 41 persons will be court-martialed for complicity in the anti-American rioting on Formosa on May 24 th. It said four th the 41 defendants were found to have once had communist connections..but that there was no evidence the riots were organized.

An old reporter friend of mine..Jack Beck, who is news director of KNX in Los Angeles..has started out on a round-the-wordl trip. Right now, Jack is in Spain..and he sends along this recorded "taxpayers' report" from Madrid.

BECK: To most American taxpayers, of whom this reporter considers himself to be one, the question of how the Government dollars spent overseas is of more than passing interest, expecially at a time when the echoes of budgetary quarrels at home can be heard echoing across the Atlantic. To the Congressmen in quest of non-essential items, the U.S. Information Agency abroad has undoubtedly seemed a. likely subject for the pruning shears; and it must be confessed by this traveller that the exact value rendered abroad by the U.S.I.A. has been enshrouded in the mists of hearsay. Admittedly, the job of reciting to foreign populations the attractions and guileless intent of our own nation, may seem a dispensable pursuit in a world where power usually decided issues anywhere. But for whatever interest it may hold for fellow-citizens who dread the approach of April 15th each year, we can say from some personal browsing about this part of the world, Spain, that the business of guaranteeing our extended military position involves a good deal more than simply sending some men and equipment to create an American colony in someone else's backyard. Until you have seen it, it is difficult to comprehend the extent to which Americans have become "the man who came to dinner" in so . many foreign lands. You may recall that crotchety character, created by Messrs. Kaufman and Hart, took over the household in which he was a guest and ran things in such an arbitrary fashion that he was cordially detested by his long-suffering hosts. To forestall that turn of events is essentially the job of the U.S.I.A. here Spain is not a member of NATO; and our live bases for Strategic Air Command operations were the result of a bilateral negotiation outside the framework of the Western European defense community. Further, Spain represents a rather interesting bridgehead between the eighteenth and twentieth centuries and, to some extent, the Euroepan and Moslem worlds. Traditionally isolated from Europe itself be geography and preference, Spain poses a problem in the communication of ideas long since accepted in our country and those of our more immeditte allies. Since they consider themselves

the original anti-Communists, the present rulers of Spain are quite amenable to the installation of defensive power. But in a country where the one hundred mile an hour Diesel train, the Talgo, runs through a country where people are still plowing their fields with little more than oxen and a pointed stick, the job of getting global strategy accepted in a spirit of mutuality is a considerable one. This is the U.S.I.A. job.

For example - the problem of fuelling our SAC bases has been made necessary the construction of a 485 mile pipeline, extending three quarters of the distance across Spain. When a bull - dozer shows up at some Andalusian farmer's fence, with the manifest of intention of digging a ten foot furrow across his property, it is well of some one has been able to explain to him that Spain, and hence himself, is to derive some benefit from all this, as well as the United States of America.

And there's the problem of integrating about fifteen thousand Americans with their vastly higher standard of living into the midst of one of the poorest of European countries, and the consequent problem of preventing a further inflation of the already wobbly Spanish economy. In short, there is the problem of being a gracious guest, since it is painfully obvious that the best bases in the world aren't of much use if you can't fly out of them.

As matters stand - there are now about 7200 American personnel in Spain involved in the creation of these bases. They will be joined very shortly by about 2500 more military and their dependents. In the next few months the bases will become operational.

Our people seem to feel that thus far we have established ourselves with a minimum of strain and embarrassment among an expeptionally proud people, whose traditions are more isolationist than our own. But they think that the months ahead will call on all the skill and tact we possess in selling our program to the Spanish people.

Whether all this is worth the tax dollars it is costing, presumably only our military can say. What is evident is the fact that the cold war, and is counter-poised elemmenents of power are costly and extremely complicated indeed and not to be reckoned solely in terms of the cost of strategic bombers and the weapons they carry.

This is Jack Beck reporting in Madrid.

MURROW: This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: The London disarmament negotiations have taken what appears to be a favorable turn.. The Western representatives at this meeting dare not succumb to a pessimism on the one hand, or over - optimism on the other. The situation recalls this ancient Chinese proberb. It's about a man eating fish. "He dare not swallow for fear of a bone..nor spit it out for fear there is flesh."

Good night and good luck.

17 June 7/45p 1957

Good evening everyone - Here's what happened today -

The Supreme Court...in a far-reaching decision...upset the conviction of 14 leaders of the Communist Party in California. All 14 had been convicted in 1952 of plotting to teach and advocate the violent overthrow of the government. They were prosecuted under the Smith Act, found guilty by a Federal Court jury in Los Angeles, and sentenced to five years in prison. The Supreme Court ruled today...in a split 6-to-1 decision...that five of the 14 defendants should be set free on grounds of insufficient evidence. And it ordered a new trial for the other nine. Justice Harlan...who wrote the majority decision...said the high tribunal had to decide whether the Smith Act forbids advocating violent overthrow of the government as an "abstract" principle...or whether the law is aimed at the advocacy of concrete action towards that end. Justice Harlan said it was the view of the majority that the Smith Act does NOT forbid advocacy "in the sense of preaching abstractly the forcible overthrow of the government." The "essential" distinction, he said, is the difference in advocating someone to DO something, rather than merely to BELIEVE in something. It was also the opinion of the majority that the part of the indictment ...charging party organizing...was void because of the Statute of

Limitations. As a matter of fact, two of the Supreme Court justices... Black and Douglas...were of the opinion that all 14 defendants should be set free, on grounds that (in their judgment) freedom of speech, press and assembly had been abridged. Neither Justice Brennan nor Justice Whittaker took part in today's decision. But Justice Clark wrote a blistering dissent. Clark said the three-year Statute of Limitations did not apply. He accused his colleagues on the high bench of misinterpreting the intent of Congress when it wrote the Smith Act...and of "usurping" the function of the jury. "The majority ruling," said Clark, "frustrates the purpose of the Congress to curb the growing strength and activity of the Communist Party."

In another ruling, the Supreme Court acquitted John T. Watkins of contempt of Congress. And here again, the decision was split 6 to 1, with Justice Clark dissenting. Watkins...a labor organizer...was convicted of contempt for refusing to give the House Un-American Activities Committee the names of former Communist associates. He himself denied that he had ever been a card-carrying Communist. The majority decision was delivered by Chief Justice Warren. He said the present system of inquiry...used by the House committee...fails to provide adequate safeguards for the constitutional right of free speech. Mr. Warren said the subject of the

committee's investigation...in 1954..."was not made to appear with undisputable clarity." The power of Congress to investigate, he said, is broad but NOT unlimited. The ruling recalls the case of Playwright Arthur Miller, who was convicted of contempt of Congress last month on similar grounds. Attorneys for Miller say they plan an appeal...on the basis of today's decision.

In still another case, the Supreme Court ruled unanimously that John Stewart Service was wrongfully discharged in 1951 as a foreign service officer of the State Department. Service was dismissed after an unfavorable finding by the Government's loyalty review board...growing out of the famous "Amerasia case". Later, a special Senate committee found Service had been "indiscreet"--but NOT disloyal. And now today's Supreme Court decision that the firing of Service was a mistake. The court pointed out, that Service had been cleared by the State Department's own loyalty board before the unfavorable report by the Government's top loyalty review board.

Here in New York this afternoon, Service said he is "thankful" for the court's decision. He also expressed gratitude to his attorneys for pleading his case for six years.

In Congress today, the House tentatively approved President Eisenhower's civil rights program. A FINAL House vote had to be put off until tomorrow because of a last-minute parliamentary maneuver by Democratic Representative Davis of Georgia. Davis demanded an "engrossed copy" of the measure, and tomorrow is the earliest [redacted] printers can [redacted] make one available.

(An "engrossed" copy of a measure [redacted] is the legislation in its final form.)

As the civil rights bill is now written, it does NOT contain the so-called "jury trial amendment" sought by the Southern [redacted] bloc. This amendment would allow defendants in certain civil rights cases to demand trial by jury. A new attempt to get it written into the measure was voted down again today---on a standing vote of 163 to 141.

AND The Senate debated the treaty under which [redacted] the United States would join the [redacted] international atoms-for-peace agency. [redacted] No vote was taken on this. But ratification IS expected.

Today...at the London disarmament talks... an American spokesman said the latest Soviet proposal COULD represent "a major break-through." Britain showed its interest when Foreign Secretary Selwyn Lloyd took the place of the regular British delegate. But the Western representatives all stressed that...before an agreement can reached... "very important questions" remain to be solved. The latest Russian proposal...provoking this favorable reaction... is for a two-to-three year moratorium on nuclear explosions, with ground inspection under auspices of the U.N.

President Eisenhower has formally nominated two former officials of the Truman Administration to be members of the Atomic Energy Commission. They are: John Floberg, former assistant secretary of the Navy, [redacted], and John S. Graham, a former assistant secretary of the Treasury. Graham is a Democrat...and [redacted] succeeds the late John Von Neumann. Floberg is listed by the White House as a political independent. He was [redacted] named to succeed Thomas E. Murray, whose term expires at the end of this month.

Mr. Eisenhower also has nominated Jacob Beam, a career diplomat, to be the new United States ambassador to Poland. BEAM [redacted] was appointed to succeed Joseph E. Jacobs, who is planning to retire after 42 years in the foreign service.

ANOTHER

[redacted] story tonight of a young scientist who took his own life...on the eve of his scheduled appearance before the House Un-American Activities Subcommittee. The scientist was William K. Sherwood, who had been doing cancer research at Stanford University. When Sherwood died yesterday...from a dose of chemicals which police said "could not have been accidental"... he left a statement that friends say he intended to read to the House group. It said...in part...."The committee's trail is strewn with blasted lives and the wreckage of youthful careers." A committee spokesman in Washington said the suicide was "indeed a tragedy." The spokesman said Sherwood had been subpoenaed as a witness because of [redacted] information given the committee in December, 1955. It was thought, he said, that Sherwood's testimony might [redacted] prove "very valuable".

In Haiti, the situation is still very tense. The Army has been rounding up more people it suspects of opposing its rule. The ruling military junta has issued a decree outlawing strikes. But it remains to be seen whether the decree will be obeyed. Clandestine pamphlets are being circulated...calling on members of the Army to revolt. Former President (who was ousted by Army leaders on Friday) has told CBS News that he was kidnaped and forced to sign resignation papers at gunpoint. Fignole is now in New York.

Much of the United States continued to swelter today. It was 96 in Chicago this afternoon...tying the all-time record for the date. In New Jersey, Newark Airport recorded a high of 97, and here in New York we had 93.

STET

The Krushcheff interview on Face the Nation made news of such magnitude that its reverberations are still to be heard in this country. But it now appears [redacted] an even bet that its repercussions may be felt longer in the communist world than on our side of the [redacted] curtain.

Much has been said and written HERE, regarding its novelty [redacted] And about the [redacted] studied affability and hard-boiled persuasiveness demonstrated by the communist party's chief [redacted] Russian advocate - [redacted]...when he addressed himself to an american audience for the first time in history.

But as time wears on, its beginning to appear as tho the real news of the interview came in a delayed reaction. And that for all his [redacted] boldness and authority, Nikita Kruscheff [redacted] FANNED COMPLETELY [redacted] on [redacted] the slow curve pitched [redacted] to him by CBS news correspondent Daniel Shorr.

Those who heard the program may not have been immediately aware of the importance of Dan Shorr's pointed question to Kruscheff, when [redacted] The CBS NEWS Moscow corrspomdent asked the russian party boss whether any contradictions existed between the [redacted] Moscow party and the people.

Mr. Krushcheff blandly asserted that no such contradictions existed in Russia.. Now both question and answer may have sounded like mere excess verbiage to american ears.. But not so in the communist world, where the party members fanatically believe that the dogma foisted on the world by [redacted] Messers Marx and Engels more than a hundred years ago, has actually reduced the world's future [redacted] military and economic patterns to an exact science, to be exclusively interpreted for the ignorant masses By The High Priests [redacted] of Communism..

What most of us couldn't guess [redacted] was that CBS News correspondent Dan Schorr was aware of the unpublicized remarks of a rival COMMUNIST HIGH PRIEST [redacted]. Mr. Mao tse Dung of Communist China..

Now [redacted] In the fortnite since the Face the Nation interview, the world has now become aware of two important speeches made early this spring by the Chinese communist leader, to his [redacted] native communists [redacted] in Bayping.

CBS NEWS [redacted] correspondent Dan Schorr was clearly unable to broadcast his story [redacted] of these Mao Tse Dung speeches from Moscow.. So he took the occassion of the Face the Nation interview to plant his time-bomb...

And with it, Dan Schorr forced Nikita Krushcheff into such a marked divergence with the philosophy of Mao Tse Dung, that the Kremlin ordered this entire exchange of question and answers deleted immediately from the version circulated inside the communist world.

The acute caution with which Moscow treats China's Mao Tse Dung, is perhaps not suprising when we remember that next only to Stalin, Mao Tse Dung has been communism's most celebrated and oldest top leader... The Prestige of MAO ranks so high in the communist world, that Moscow was forced to appeal to him last AUTUMN to tour Eastern Europe, after the nationalist uprising in Poland and the brutal suppression of the Hungarians.

Then last Spring, Mao Tse Dung addressed his own people and told them that it was possible for contradictions to exist between the masses and their communist rulers. He explained his version of communist dogma by saying that the masses were used to working with their hands, while their rulers are white collar administrators.

Mao Tse Dung didn't seem to think there was anything seriously

wrong in possibility of contradictions arising in the desires of both elements,... He took for granted the communist theory that the rulers hold the power of life and death over the masses. For this gentle chinese philospher acknowledged that at least 8 hundred thousand members of the chinese masses have already been liquidated because of the contradictions that existed between them and their white-collar rulers..

it has now been made evident throughout the western world, if not inside Russia, that the masters of the Kremlin, are haunted by a paramount political fear... the fear of Berlin divided from Communist China..

Its rare that the Russians ever admit a weakness... But the correspondent of CBS NEWS in Moscow, forced Kruscheff himself to admit the possibility of Friction between Russia and Red China, a possibility which if properly exploited, may yet proove more destructive to the Kremlin's power, than all the Hydrogen bombs which will never be used.

I'll be back in a moment with a footnote to the news...But first..George Bryan.

Anyone Feeling the heat tonite might consider the efforts some people take to get away from it all..

From Katmandu, Nepal, the British leader of a mountain climbing expedition reports that five men have succeeded in scaling hitherto unconquered "fishtail peak" in the high Himalayas.

Their last obstacle when they got almost 5 Miles up — was an unbroken sheet of ice. the termperature there? a reasonable ten below zero.

This is Larry LeSueur---Goodnite.

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

MONDAY, JUNE 17, 1957
7:45--8:00 P.M., E.D.S.T.

LARRY LESUEUR REPORTING

Good evening, everyone---Here's what happened today---

The Supreme Court ...in a far-reaching decision, upset the conviction of 14 leaders of the Communist Party in California. All 14 had been convicted in 1952 of plotting to teach and advocate the violent overthrow of the government. They were prosecuted under the Smith Act, found guilty by a Federal Court jury in Los Angeles, and sentenced to five years in prison. The Supreme Court ruled today, in a split 6 - to - 1 decision..that five of the 14 defendants should be set free on grounds of insufficient evidence. And it ordered a new trial for the other nine. Justice Harlan..who wrote the majority decision..said the high tribunal had to decide whether the Smith Act forbids advocating violent over-throw of the government as an "abstract" principle...or whether the law is aimed at the advocacy of concrete action towards that end. Justice Harlan said it was the view of the majority that the Smith Act does not forbid advocacy "in the sense of preaching abstractly the forceable overthrow of the government." The essential distinction, he said, is the difference in advocating someone to do something, rather than merely to believe in something. It was also the opinion of the majority that the part of the indictment charging party organizing ..was void. because of the statute of limitations. As a matter of fact, two of the Supreme Court justices..Black and Douglas..were of the opinion that all 14 defendants should be set free, on grounds that in their judgement freedom of speech, press and assembly had been abridged. Neither Justice Brannan nor Justice Whittaker took part in today's decision. But Justice Clark wrote a blistering dissent. Clark said the three year statute of limitations did not apply. He accused his colleagues on the high bench of misinterpreting the intent of Congress when it wrote the Smith Act..and of

the function of the jury. "The majority ruling", said Clark, "frustrates the purpose of the Congress to curb the growing strength and activity of the Communist Party".

In another ruling, the Supreme Court acquitted John T. Watkins of contempt of Congress. And here again, the decision was split 6 to 1, with Justice Clark dissenting. Watkins ...a labor organizer..was convicted of contempt for refusing to give the House Un-American Activities Committee the names of former Communist Associates. He himself denied that he had ever been a card-carrying Communist. The majority decision was delivered by Chief Justice Warren. He said the present system of inquiry..used by the House committee ...fails to provide adequate safeguards for the constitutional right of free speech. Mr. Warren said the subject of the committee's investigation..in 1954..."was not made to appear with indisputable clarity." The power of Congress to investigate, he said, is broad but not unlimited. The ruling recalls the case of Playwright Amthur Miller, who was convicted of contempt of Congress last month on similar grounds. Attorneys for Miller say they plan appeal on the basis of today's decision.

In still another case, the Supreme Court ruled unanimously that John Stewart Service was wrongfully discharged in 1951 as a foreign service officer of the State Department. Service was dismissed after an unfavorable finding by the government's loyalty review board..growing out of the famous "Amerasia case". Later, a special Senate committee found Service had been "indiscreet" but not disloyal. And now today's Supreme Court decision that the firing of Service was a mistake. The court pointed out that Service had been cleared by the State Department's own loyalty board before the unfavorable report by the Government's top loyalty review board. Here in New YOrk this afternoon, Service said he is "thankful" for the court's decision He also expressed gratitude to his attorneys for pleading his case for six years.

In Congress today, the House tentatively approved President Eisenhower's civil rights program. A final house vote had to be put off until tomorrow because of a last-mintue parliamentary maneuver by Democratic Representative Davis of Georgia Davis demanded an "engrossed copy" of the measure, and tomorrow is the earliest printers can make one available. An "engrossed"copy of a measure is the legislation in its finalform. As the civil rights bill is now written, it does not contain the so-called "jury trial amendment"sought by the Southern bloc. This amendment would allow defendants in certain civil rights cases to demand trial by jury. A new attempt to get it written into the measure was voted down again today- on a standing vote of 163 to 141., and the Senate debated the treaty under which the United States would join the international atoms - for - peace agency. No vote was taken on this. But ratification is expected.

Today at the London disarmament talks, an American spokesman said the latest Soviet proposal could resresent "a major break-through." Britain showed its interest when Foreign Secretary Selwyn Looyd tolk the place of the regular British delegate. But the Western representatives all stressed that.. before an agreement can be reached.."very important questions remain to be solved. The latest Russian proposal provoking this favorable reaction is for a two to three year moratorium on nuclear explosions, with ground inspection under auspices of the U.N.

President Eisenhower was formally nominated two former officials of the Truman Administration to be members of the Atomic Energy Commission. They are John Floberg former assistant secretary of the Navy and John S. Graham, a former assistant secretary of the Treasury. Graham is a Democrat and succeeds the late John Von Neumann. Floeerg is listed by the White House as a political independent. He was named to succeed Thomas E. Murray, whose term expires at t he end of this month.

Mr. Eisenhower also has nominated Jacob Beam, a career diplomat, to be the new United States ambassador to Poland. Beam was appointed to succeed Joseph E. Jacobs, who is planning to retire after 42 years in the foreign service.

Another story tonight of a young scientist who took his own life..on the eve of his scheduled appearance before the House Un-American Activities Subcommittee. The scientist was William K. Sherwood, who had been doing cancer research as Stanford Univiersity. Sherwood died yesterday..from a dose of chemicals which police said "could not have been accidental"...he left a statement that friends say he intended to read to the House group. It said..in part.. "The committee's trail is strewn with blasted lives and the wreckage of youthful careers." A committee spokesman in Washington said the suicide was "indeed a tragedy". The spokesman siad Sherwood had been subpoenaed as a witness because of information given the committee in December 1955. It was thought, he said, thet Sherwood's testimony might prove "very valuable"

Much of the United States continued to swelter today. It was 96 in Chicago this afternoon..tying the all-time record for the date. In New Jersey Newark Airport recorded a high of 96 and here in New York we had 93.

The Khrushchev interview on "Face the Nation"made news of such magnitude that the reverberations are still to be heard in this country. But it now appears an even bet that its repercussions may be felt longer in the communist world than on our side of the curtain.

Much has been said and written here regarding its novelty and about the studied affability and hard-boiled persuasiveness demonstrated by the Communist party chief Russian advocate when he addressed himself to an American audience for the first time in history.

But as time wears on, its beginning to appear as though the real news of the interview came in a delayed reaction..and that for all his boldness...

and authority, Nikita Khrushchev fanned completely on the slow curve pitched to him by CBS news correspondent Daniel Schorr.

Those who heard the program may not have been immediately aware of the importance of Dan Schorr's pointed question to Khrushchev,when the CBS News Moscow correspondent asked the Russian party boss whether any contradictions existed between the Moscow party and the people.

Mr. Khrushcev blandly asserted that no such contradictions existed in Russia. Now both question and answer may have sounded like mere excess verbiage to American ears..but not so in the Communist world, where the party members fanatically believe that the dogma foisted on the world by Messers Marx and Engels more than a hundred years ago has actually reduced the world's future military and economic patterns to an exact science to be exclusively interpreted for the ignorant masses by the high priests of Communism.

What most of us couldn't guess was that CBS News correspondent Dan Schorr was aware of the unpublicized remarks of a rival Communist high priest Mr. Mao tse Tung of Communist China.

In the fortnite since the "Face the Nation interview, the world has now become aware of two important speeches made early this spring by the Chinese Communist leader, to his native communists in Peiping.

CBS News correspondent Dan Schorr was clearly unable to broadcast his story of these Mao Tse Tung speeches from Moscow..so he took the occasion of the "Face the Nation" interview to plant his time bomb.

And with it, Dan Schorr forced Nikita Khrushchev into such a marked divergence with the philosophy of Mao Tse Tung that the Kremlin ordered this entire exchange of questions and answers immediately deleated from the version circulated inside the Communist world.

The acute caution with which Moscow treats China's Mao Tse Dung, is perhaps not surprising when we remember that next only to Stalin, Mao Tse Dung has been communism's most celebrated and oldest top leader. The prestige of Mao ranks so high in the communist world, that Moscow was forced to appeal to him last autumn to tour Eastern Europe after the nationalist uprising in Poland and the brutal supression of the Hungarians.

Then last spring, Mao Tse Dung addressed his own people and told them that it was possible for contradictions to exist between the masses and their communist dogma by saying that the masses were used to working with their hands while their rulers are white collar administrators.

Mao Tse Dung didn't seem to think there was anything seriously wrong in possibility of contradictions arising in the desires of both elements. He took for granted the Communist theory that the rulers hold the power of life and death over the masses. For this gentle Chinese philosopher acknowledged that at least 8 hundred thousand members of the Chinese masses have already been liquidated because of the contradictions that existed between them and their white-collar rulers.

It has now been made evident throughout the western world, if not inside Russia, that the masters of the Kremlin, are haunted by a paramount political fear...the fear of being divided from Communist China.

Its rare what the Russians ever admit a weakness..But the correspondent of CBS News in Moscow, forced Khrushchev himself to admit the possibility of friction between Russia and Red China, a possibility which if properly exploited, may yet prove more destructive to the Kremlin's power than all the Hydrogen bombs shich will never be used.

I'll be back in a moment with a footnote to the news...but first..George Bryan.

BRYAN:

LESUEUR: Anyone feeling the heat tonight might consider the efforts some people take to get sway from it all.....From Katmandu, Nepal, the British leader of a mountain climbing expedition reports that five men have succeeded in scaling hitherto unconquered "fishtail peak' in the high Himalayas. Their last obstacle when they got almost 5 miles up----was an unbroken sheet of ice---the temperature there? A reasonable ten below zero.

This is Larry LeSueur---Goodnight.

Lesueur for Murrow Tues., June 18, 1957

Good evening... everyone Here's what happened today:

A federal judge overruled the government in the case of Army Specialist William Girard. Judge McGarraghy decided that Girard could not be tried by a Japanese court...as directed by the United States government...because his offense was committed in the performance of official duty. McGarraghy noted that Secretary of State Dulles and Secretary of Defense Wilson themselves had said the commanding general of Girard's division "certified" that Girard killed the Japanese woman in the course of performing official duty. McGarraghy said he was NOT ruling on the petition of Girard's attorneys for a writ of habeas corpus...but, rather, was treating the complaint as a petition for an injunction. The question, he explained, was not whether the soldier would receive a fair trial at the hands of the Japanese--this could be assumed on the basis of past experience. The

→

question, he said, was "whether Girard has a right under the Constitution to be tried by an appropriate American tribunal. and would that constitutional right be violated if he is delivered to the Japanese government for trial?" Then, after citing the arguments on both sides, Judge McGarraghy ruled that a Japanese trial in Girard's case WOULD be "in violation of the Constitution and laws of the United States."

~~There has been no comment so far from the Defense Department, or from the Department of State.~~ U.S. Attorney Oliver Gasch...who argued the government's case...says he will appeal the decision "as soon as it can be done." He indicates he will appeal directly to the Supreme Court. Premier Kishi of Japan declined comment. But he is due in Washington tomorrow...and it would be strange indeed if the Girard matter were not discussed. He is in San Francisco at the moment.

In Tokyo, the Japanese attorney-general told reporters that Japan will go ahead with plans for the trial, pending outcome of the appeal. Girard's attorneys say the decision means the soldier WILL be tried by an Army courtmartial. Girard's mother said the ruling had made her "very happy". "Right now," she said, "that's about all I can say."

Playwright Arthur Miller moved today to have his conviction on contempt of Congress charges reversed. He based his action on yesterday's Supreme Court decision in the case of John Watkins, a Midwest labor organizer. Like Miller, Watkins was convicted of contempt for refusing to name Communists with whom he had been associated in the past. In a split 6-to-1 decision, the Supreme Court reversed Watkins' conviction...declaring that Congress has no power "to expose for the sake of exposure." Today, Miller's attorneys filed a legal memorandum with United States District Judge Charles McLaughlin...who less than three weeks ago found Miller guilty. The memorandum said the Supreme Court had now made it "unmistakably clear" that a witness before a congressional committee does not have to plead the Fifth Amendment to avoid informing on others. (Miller had refused to name writers he had seen at a Communist meeting...not on grounds of possible self-incrimination but for reasons of conscience.) The memorandum filed by his attorneys today said the Supreme Court decision "requires" his acquittal...that it fits his case "like a glove."

Senators Eastland and Jenner accused the Supreme Court today of "boundless assumption of power" in its recent rulings in cases which

involve Communist issues. "Unless the Congress and the people call a halt to it," they said in a joint statement, "our liberties will be very much jeopardized in the years ahead." Eastland is chairman of the Senate Internal Security Subcommittee. Jenner is the senior Republican member of the subcommittee.

This morning, the United States fired the fourth "shot" in its current series of atomic tests at the Nevada proving grounds. And for the second time, the device was suspended from a balloon. It was not a "big" explosion...as nuclear explosions go. Reporters who watched from nearby Angel's Peak estimated its force as equivalent to 10-thousand tons of T.N.T., or about HALF the force of the so-called "nominal bomb" dropped on Hiroshima in the closing days of World War Two. Radiation experiments...with pigs and mice...were conducted in connection with today's test. The Atomic Energy Commission says, "Only traces of fall-out are expected outside the test site."

[redacted]

[redacted] Peiping radio today broadcast AN AUTHORIZED VERSION OF THE "secret speech" that Chinese Communist Boss Mao Tze-Dung made last February. The speech has been "leaking out" bit by bit every since last winter, and the text...as finally published... reveals new "contradictions" within the Communist movement in Red China...I'd like to examine it in a few minutes.

The House approved President Eisenhower's civil rights program today as expected, and sent it to the Senate. The measure was passed by a roll-call vote of 286 to 126 in substantially the form originally outlined by the Administration. Just before the final balloting, the Southern bloc made a fourth unsuccessful attempt to tack on a jury trial amendment. (This would have made a jury trial mandatory in contempt cases growing out of the civil rights program). The measure...as it is now written...would establish a new civil rights division in the Justice Department. It would create a bipartisan commission to investigate civil rights problems, with authority to recommend new legislation. And it would authorize the U.S. Attorney General to take civil rights cases directly to Federal Court...without having FIRST TO GO through the state courts. The measure has been sent to the Senate. But the Senate could NOT take it up immediately, because its still debating American membership in the international atoms-for-peace agency. It is the strategy of Republican Leader Knowland...and other supporters of the program...to try to have the bill taken up directly by the full Senate, without waiting for it to be passed on by the Senate Rules Committee. (That committee...of which

→

Senator Eastland of Mississippi is chairman...has been marking time on similar legislation since the middle of March). Even if this strategy succeeds, the measure faces a prolonged fight on the Senate floor. Southern opponents of the civil rights bill have threatened a filibuster. And, as time passes, members of Congress will be thinking more and more of when they can adjourn. ~~Senator Knowland said today, after the usual Tuesday meeting of Republican congressional leaders at the White House...that he is prepared to take "whatever steps necessary" to get [redacted] favorable Senate action. He did not spell out what those steps might be.~~

The Senate Finance Committee opened its investigation today of the Administration's fiscal and monetary policies. The first witness. Secretary of the Treasury Humphrey...read a 50-page statement. It said, in brief, that the Administration's so-called "tight-money" policy is the only practical way to block a new round of inflation. Humphrey warned that despite this policy, the threat of renewed inflation "is perhaps our most serious domestic economic problem."

~~The committee chairman...Byrd of Virginia...promised at the outset that the inquiry would be objective. But Republican Senator Bush of Connecticut charged that the government's money policy was being made the subject of "a political attack". Bush said he wanted to ask the Democrats who are complaining about high interest rates whether they want to let loose upon the people what he called the "sneak-thief" of inflation.~~

The Middle East News Agency...which is a semi-official mouthpiece for Egypt...said today that the Egyptian government has bought three Russian submarines...and that they have already joined the Egyptian fleet. The British government reported last week that three westbound Soviet submarines had passed through the English Channel. In Jerusalem, an Israeli spokesman commented on this development by [redacted] calling the submarines "an offensive weapon which Egypt cannot possibly need for any legitimate self-defense purpose."

West Germany announced today that it's ready to follow the example of Britain in relaxing the embargo on trade with Red China. The West German government said, however, that it is "reluctant" to take immediate, unilateral action. It prefers to lift the restrictions in conjunction with other Western powers who may choose to follow Britain's lead.

(1) (1)

Last night we ventured to suggest that the CBS NEWS Moscow correspondent Dan Schorr HAD planted a figurative time-bomb during the Face the Nation interview with Nikita Kruscheff...That was when Schorr asked Kruscheff a seemingly [redacted] mild question [redacted] whether any (contradictions) existed in Russia between the communist party and the people.

Kruschev's answer was in the negative...But later his answer was cut-out of the [redacted] (OF THE INTERVIEW) version circulated [redacted] INSIDE THE Soviet Union...

For Schorr had [redacted] clearly trapped the Russian leader into an obvious divergence with Red China's Mao Tse Dung...Apparently the Moscow chief ~~was~~ seem unaware that Schorr was cognizant of an unpublicized speech made in Bayping 2 months ago by the leader of the Chinese Communists..

The Face The Nation interview took place more than 2 weeks ago [redacted]...Since then, excerpts from [redacted] Mao Tse Dung's secret speech were leaked to the New York Times out of Poland..

And now today, Mao Tse Dung has seen fit to release the text of this secret speech to the world over radio Bayping...And there's no doubt whatsoever, that the CBS NEWS Moscow correspondent was on the right track when he trapped Kruschoff into a remark that was

promptly censored throughout the communist world.

The Mao Tse Dung speech, as released today by Radio Bayping, repeats the contradiction between Kruscheff and Mao over some communist philosphy that is of capital importance to the Reds..

The Mao Tse Dung text, concedes what Krushcheff denied for the Russian system...That contradictions exist in red China between the masses and the communist rulers.

But lest we confuse wishful thinking with realities, it must also be conceded that the speech of Red China's leader - seems to acknowledge the leadership of the Soviet Union... Indeed in many respects its a reaffirmation of Kruscheff's renunciation of Stalin... But just how many revisions were made in the text of the Red Chinese speech released today, we have no way of knowing... Beyond the fact that they were made... Becuz for fear of making Mao Tse Dung appear a liar to those communists who heard him make the speech last Spring, Bayping radio expressly stated today that Mao had gone over his text and made "Certain additions." It did NOT say what those additions were...

And it completely ignored the possibility that he may have made certain DELETIONS...

For there was no mention in the [redacted] text released today of previously attributed reports that MAO said the chinese communists had liquidated 800 thousand chinese who disagreed with them.. th[redacted]ts [redacted]s..

Despite the inconsistencies between the Mao text released today, and the exceprts from it which leaked to the N.Y Times out of Poland, one thing appears certain — ..That the leader of Red China, is establishing himself as the number one spokesman on communist philosophy — [redacted] Even though he was careful not to cut himself off from the Soviet Union, on which Red China is economically dependent.

Nevertheless, today's reaffirmation of at least one divergence with Nikita Kruscheff on high communist doctrine will certainly NOT make Red China's Boss LESS [redacted] popular with such communist leaders as Marshall Tito [redacted] who has established independent communism in Yugoslavia, and with that less independent but still decidedly nationalist leader of Poland, Wladyslaw Gomulka.

And despite Mao's reaffirmation of Red China's ties with Russia, his official repitition today, of the contradiction which Kruscheff had censored, cannot endear him to the Masters of the Kremlin.

For aside from all the words devoted to dispelling any western ideas of a falling out between Red China and Russia, the fact still remains, as broadcast officially by Radio Bapping, that contradictions still exist in Red China, between the party and the masses, after seven years of communist rule..

Now Mao Tse Dung's admission of this fact, is unique in Communist history...For under the Moscow interpretation of Communist doctrine, people just don't "disagree" with their communist rulers... they are branded "diversionists" or "counter-revolutionaries." and are treated accordingly..

We said earlier that we thought DAN SHORR had planted a time-bomb on Nikita Kruscheff, in forcing him to reveal a contradiction between Red China and Russia.. But there's some reason to hope it may even have a chain reaction.. For one fact stands out--- They still haven't published Mao Tse Dungs speech in Russia...The Red Chinese leader had to reveal it to the world by himself..

I'll be back in a moment--- Cue But first---George Bryan.

We've heard about selling [redacted] Ice-boxes to Eskimos, but we've always been somewhat skeptical about it.

Today President Eisenhower asked Congress for 2 million, 2 hundred thousand dollars for an exhibition of american life and industry in Moscow next year...And White House News Secretary Hagerty says Russia not only invited such an exhibit, but readily accepted our offer to build one.. And WHAT, according to Mr. Hagerty, will the american exhibit concentrate ON; for snowy Russia? Refrigerators and frozen food.

This is Larry LeSueur.....Goodnite

BRYAN:

LESUEUR: We've heard about selling Ice-boxes to Eskimos, but we've always been somewhat skeptical about it.

Today President Eisenhower asked Congress for 2 million, 2 hundred thousand dollars for an exhibition of American life and industry in Moscow next year, and White House News Secretary Hagerty says Russia not only invited such an exhibit, but readily accepted our offer to build one. And what , according to Mr. Hagerty, will the American exhibit concentrate on for snowy Russia? Refrigerators and frozen food.

This is Larry LeSueur. Goodnight.

Lesueur for Murrow Wed., June 19, 1957

Good evening, everyone... Here's what happened today:

Britain exploded its third hydrogen bomb. A British announcement said, "An explosion of a nuclear device took place at a high altitude in the Central Pacific," presumably in the vicinity of Christmas Island. The announcement ALSO said that the blast...equivalent to millions of tons of T.N.T... "completes this series of tests." And the operation, which began more than a month ago, was officially described as a "success."

At his news conference today, President Eisenhower said he regarded the latest Soviet disarmament proposal as "a hopeful sign." He said the Russian suggestion for a ~~two-year~~ 2 or 3 year moratorium on nuclear test explosions...WITH ground inspection..."deserves the most earnest and

sympathetic study." Mr. Eisenhower went on to say that a ban on production of nuclear weapons might not have to be included in any agreement to suspend tests. But he said he didn't want to commit himself on this point. Mr. Eisenhower's statement is drawing attention because the United States had been reported insisting on prohibition of nuclear weapons "production" as part of a "package" agreement.

The President described Harold Stassen, the American representative at the disarmament talks, as "a man dedicated to his job." He denied that Mr. Stassen had been reprimanded...although, he said, "there was some feeling maybe he was rushing too fast." Reports from London say Stassen will formally present America's new disarmament proposals to the conference tomorrow. According to informed sources, the American plan will be presented section by section. These sources say "several" of these sections were approved today by our allies at the conference---Britain, Canada, and France.

~~The Danish government announced today that it has accepted an American offer to supply Denmark with guided missiles. The missiles...of the ground-to-air type...were identified as the Nike and Honest John. The Danish defense minister said the missiles will NOT be equipped with atomic warheads.~~

~~Russia has warned that Denmark would be "obliterated" if it used such weapons in time of war.~~ And Denmark emphasized ~~today that it was accepting the missiles "strictly for purposes of self-defense."~~

My colleague, Eric Sevareid, learned today that Democratic Senate Leader Lyndon Johnson has changed his mind on the question of Senate representation at the London disarmament talks. According to Sevareid's information, a bipartisan delegation of six senators---three Republicans and three Democrats---probably will leave for London on Friday. The chairman of the group, says Sevareid, is expected to be Democratic Senator Hubert Humphrey, since Humphrey is head of the Senate subcommittee on disarmament. Right now, Senate Leader Johnson is trying to get assurances (..in writing..) from the State Department as to the exact role this bipartisan group would play. Reportedly, he wants them to sit in as "unofficial observers"---not "advisers". Johnson also is said to want assurance that the Senate delegation will be completely informed at all stages of negotiation, and not merely serve as "window-dressing." Sevareid says some kind of announcement on this may come from Johnson TONIGHT OR tomorrow.

Prime Minister Kishi of Japan arrived in Washington today for three

days of high-level talks. President Eisenhower told his news conference he believes the Kishi visit will lead to greater understanding between the United States and Japan... and to closer coordination in the policies of the two countries. The President declined to comment on the decision yesterday...by Federal Judge McGarraghy...that Army Specialist William Girard may not be turned over to a Japanese court for trial. He said that...in his opinion...it would be "bad" for anyone in authority to take advantage of official reports available to him and say anything which might "damage" Girard's case. The word in Washington tonight is that the Justice Department hopes to decide tomorrow whether to appeal Judge McGarraghy's decision directly to the Supreme Court. This could be done under a rule which permits questions of "grave emergency" to by-pass the Court of Appeals.

The Girard case could ~~affect the~~ relationship of the United States...not only with Japan...but with other countries around the world, wherever American troops are based. This is a matter of primary concern to the State Department. The CBS News correspondent who covers the State Department is Bill Downs. And we switch now to Washington for his report on the

background...AND significance...of what already has become a celebrated case.

Tape runs 5:12
Ends on cue: "Now back to
Larry Lesueur in NY.#

President Eisenhower was asked...at his news conference...what he thinks about the recent Supreme Court decisions...decisions which deal with the rights of individuals, and how they affect congressional investigations and law enforcement. Mr. Eisenhower said, like all "laymen in the law" he has fixed convictions on the subject. Some of these convictions, he said, are "pretty strong", but he declined to express them. The Justice Department, he said, is looking into the matter. And he would be guided by its legal advice.

Mr. Eisenhower defended his civil rights program, which the House passed yesterday, but which still faces a hard fight in the Senate. The program, he said, was conceived in the spirit of conciliation and moderation..."not of persecution of anybody." An attempt by Democratic Senator Russell of Georgia to send the civil rights bill to the Judiciary Committee...and hence delay action...was blocked in the Senate today. Another test comes tomorrow,

when Republican Senator Knowland will move that the measure be put on the Senate calendar. If this move succeeds...as expected...the measure will probably NOT ~~probably will not~~ be taken up for debate for two weeks. CBS News Correspondent Griffing Bancroft...who ~~[illegible]~~ covers the Senate...says we can look ~~then~~ THEN for a Southern filibuster.

Secretary of the Treasury Humphrey has given the Senate Finance Committee a list of his stock holdings at the time he entered the cabinet in January, 1953. The holdings...based on yesterday's closing prices...amount to somewhere in the neighborhood of 12-million dollars. In making the list public, Chairman Byrd said Mr. Humphrey had made the information available "gladly." — This is Lang Lee

I'll be back in moment with a footnote to The News. But first George Bray

Japan and the United States may be at odds over the case of Army Specialist Girard, but our President and their Prime Minister didn't let it interfere with their golf game.

Eisenhower presented Premier Kishi with a new set of golf clubs, and a golf bag and took him out ~~on the golf~~ to the Burning Tree course within a few hours after his arrival...THEY wouldn't reveal their scores...BUT we can REVEAL, that Kishi had a bad slice off the first Tee and Eisenhower a mean hook.

This is Larry LeSueur----Goodnight.

EDWARD R. MURROW WITH THE NEWS - LARRY LESUEUR

Wednesday, June 19, 1957
7:45 - 8:00 P.M.

LESUEUR: ... The CBS News correspondent who covers the State Department is Bill Downs, and we switch now to Washington for his report on the background and significance of what already has become a celebrated case.

DOWNS: William Girard was a four year old youngster in Ottawa, Illinois, when the Japanese attacked Pearl Harbor, and he was only eight years old when the Japanese laid down their arms in 1945. In the twelve years between VJ-Day and the afternoon of last January 30th, when Girard killed Mrs. Naka Sakai on a bleak Army firing range, in Japan, many things transpired which today have a bearing on the case. The hard-bitten veterans who had fought their island hopping campaign against bitter Japanese opposition went home, most of them hating their enemy but full of respect for his fighting qualities. The new groups of replacements who took over the occupation of Japan and of Germany, were green in the ways of war, resentful of having missed the fighting and at having been drafted.

The United States Government meanwhile began working toward ending the occupation of Japan and Germany, and evolved a plan wherein the former enemy nations would be enrolled in a worldwide mutual defense system, aimed at preventing and stopping Communist aggression. So the occupation troops changed their status to defense forces and the United States recognized the sovereignty of the reconstituted governments of Tokyo and Bonn. However, in order that the military forces of one sovereign government can be stationed on the territory of another sovereign government, there must be a treaty defining the purposes and position of American troops on foreign soil. For example, in Europe, the United States has what is called Status of Forces agreements with Germany and all the other fourteen nations of the North Atlantic Treaty Organization. This agreement covers

such things as currency control, shipping of replacements and equipment, customs control, and the legal status of American troops on and off their bases. In the case of Japan, the United States signed a so-called "security treaty" providing that American military forces be maintained in the Japanese islands as long as there is a Communist threat in the Far East. And under this security treaty, which was passed by the U.S. Senate, there is an administrative agreement, also OK'd by the Senate, which provides for a joint American-Japanese committee to enforce the status of forces provisions. This joint committee also decides in criminal cases involving American GIs which nation has the right to try the offender.

Until last January 30th when GI William Girard killed the Japanese woman, this arrangement had been working fine. Out of almost 14,000 criminal cases brought before the joint commission, the Japanese courts have claimed jurisdiction in only some 400 cases, and in most of the trials the sentences were minimum. In fact, there was no uproar either in Japan or the United States when last March 20th, a Japanese court ordered the death penalty for 24-yr. old Private Orvus Boone, of Galveston, Texas, and his girl friend, Shegiko Sasaki. They were convicted in the brutal robbery-murder of a Japanese woman after which the pair set fire to the victim's home. It was the first time an American GI had received the death penalty.

Well, the legal arguments over who has jurisdiction in the Girard case are long and complicated. Federal Judge Joseph McGarraghy says that the Constitution provides legal protection for every American soldier overseas, particularly if he's on duty. Department of Justice attorneys, the White House and the State Department see the Girard case as threatening the whole structure of our mutual defense system and our treaties with our allies where U.S. military forces are stationed. They are asking the Supreme Court in an appeal of the McGarraghy decision to re-

verse the ruling on the grounds that in firing that empty rifle cartridge at the woman, Girard was acting beyond his duties as a soldier. There are many other facets and contentions, which we have no time to discuss here. But what the Government fears is that in every auto accident, barrom brawl, or serious crime in which an American soldier is involved, on or off duty, that a soldier's American lawyer could demand U.S. legal jurisdiction. If this develops out of the Girard case, and the U.S. Supreme Court must decide, then it is highly likely that the people of France, Britain, Germany, Italy, Japan or anywhere else where there are American forces would not long tolerate them. As one Government official pointed out today, "Suppose we reverse the case, suppose it was a Japanese soldier who shot an American woman under questionable circumstances in this country and a Japanese court - thousands of miles away in Tokyo - said that an American court could not try that Japanese soldier. What do you think the reaction of the American people would be?" Well, thus has a 20-yr. old Ottawa, Illinois youth become the center of one of the great political diplomatic and military controversies of the post-war period. And Specialist 3/c Girard says the whole thing started out as a prank, he didn't mean to kill Mrs. Sakai. Now, back to Larry Lesueur in New York.

C.B.S. RADIO NETWORK

WEDNESDAY, JUNE 19. 1957
7:45--8:00 P.M., E.D.S.T.

LARRY LESUEUR REPORTING

Good evening, everyone....Here's what happened today:

Britain exploded its third hydrogen bomb. A British announcement said, "An explosion of a nuclear device took place at a high altitute on the Central Pacific," presumably in the vicinity of Christmas Island. The announcement also said that the blast..equivalent to millions of tons of T.N.T...."Completes this series of tests." And the operation, which began more than a month ago, was officially described as a "success".

At his news conference today, President Eisenhower said he regarded the latest Soviet disarmament proposal as "a hopeful sign". He said the Russian suggestion for a 2 or 3 year moratorium on nuclear test explosions with ground inspection "deserves the most earnest and sympathetic study." Mr. Eisenhower went on to say that a ban on production of nuclear weapons might not have to be included in any agreement to suspend tests. But he said he didn't want to commit himself on this point. Mr. Eisenhower's statement is drawing attention because the United States had been reportedly insisting on prohibition of nuclear weapons "production" as part of a "package" agreement.

The President described Harold Stassen, the American representative at the disarmament talks, as "a man dedicated to his job." He denied that Mr. Stassen had been reprimanded..although, he said, "there was some feeling maybe he was rushing too fast." Reports from London say Stassen will formally present America's new disarmament proposals to the conference tomorrow. According to informed sources, the American plan will be presented section by section. These sources say "several" of these sections were approved today by our allies at the conference -- Britain, Canada and France.

My colleague, Eric Sevareid, learned today that Democratic Senate Leader Johnson has changed his mind on the question of Senate representation at the London disarmament talks. According to Sevareid's informatin, a biparitsan delegation of six senators -- three Republicans and three Democrats -- probably will leave for London on Friday. The chairman of the group, says Sevareid is expected to be Democratic Senator Hubert Humphrey, since Humphrey is head of the Senate subcommittee on disarmament. Right now, Senate Leader Johnson is trying to get assurances..in writing..from the State Department as to the exact role this bipartisan group would play. Reportedly, he wants them to sit in as "unofficial observers"...not "advisers". Johnson also is said to want assurance that the Senate delegation will be completely informed at all stages of negotiation and not merely serve as "window dressing." Sevareid says some kind of announcement on this may come from Johnson tonight or tomorrow.

Prime Minister Kishi of Japan arrived in Washington today for three days of high - level talks. President Eisenhower told his news conference he believes the Kishi visit will lead to greater understanding between the United States and Japan,.and to closer coordination in the policies of the two countries. The President declined to comment on the decision yesterday by Federal Judge McGarraghy that Army Specialist William Girard may not be turned over to a Japanese court for trial. He said that...in his opinion.. it would be "bad" for anyone in authority to take advantage of official reports available to him and say anything which might "damage"Girard's case. The word in Washington tonight is that the Justice Department hopes to decide tomorrow whether to appeal Judge McGarraghy's decision directly to the Supreme Court. This could be done under a rule which permits questions of "grave emergency" to by-pass the Court of Appeals. The Girard case could affect the relationship of the United States...not only with Japan,.but with

other countries around the world, wherever American troops are based. This is a matter of primary concern to the State Department. The CBS News correspondent who covers the State Department is Bill Downs, and we switch now to Washington for his report on the background and significance of what already has become a celebrated case.

DOWNS: William Girard was a four-year-old youngster in Ottawa, Illinois, when the Japanese attacked Pearl Harbor, and he was only eight years old when the Japanese laid down their arms in 1945. In the twelve years between VJ-Day and the afternoon of last January 30th, when Girard killed Mrs. Naka Sakai an a bleak Army firing range, in Japan, many things transpired which today have a bearing on the case. The hard-bitten veterans who had fought their island hopping campaign against bitter Japanese oppostioin went home, most of them hating their enemy but full of respect for his fighting qualities. The new groups of replacements who took over the occupation of Japan and of Germany, were green in the ways of war, resentful of having missed the fighting and at having been draftedd

The United States Government meanwhile began working toward ending the occupation of Japan and Germany, and evolved a plan wherein the former enemy nations would be enrolled in a worldwide mutual defense system, aimed at preventing and stopping Communist aggression. So the occupation troops changed their status to defense forces and the United States recognized the s overeignty of the reconstituted governments of Tokyo and Bonn. However, in order that the military forces of one sovereign government can be stationed on the territory of another sovereign government, there must be a treaty defining the purposes and position of American troops on foreign soil For example, in Europe, the United States has what it called Status of Forces agreements with Germany and all the other fourteen nations of the North Atlantic Treaty Organization. This agreement covers such things as currency control, shipping of replacements and equipment, customs control, and the

legal status of American troops on and off their bases. In the case of Japan, the United States signed a so-called "security treaty" providing that American military forces be maintained in the Japanese islands as long as there is a Communist threat in the Far East. And under this security treaty, which was passed by the U.S. Senate, there is an administrative agreement, also OK'd by the Senate, which provides for a joint American-Japanese committee to enforce the status of forces provisions. This joint committee also decided in criminal cases involving American GI's which nation has the right to try the offender.

Until last January 30th when GI William Girard killed the Japanese woman, this arrangement had been working fine. Out of almost 14,000 criminal cases brought before the joint commission, the Japanese courts have claimed jurisdiction in only some 400 cases, and in most of the trials the sentences were minimum. Eisenhower presented Premier Kishi with a new set of golf clubs and a golf bag and took him out to the Burning Tree course within a few hours after his arrival. They wouldn't reveal their scores..but we can reveal that Kishi had a bad slice of the first tee and Eisenhower a mean hook.

This is Larry Lesueur---Goodnight.

Lesueur for Murrow Thurs., June 20, 1957

Good evening, everyone... Here's what happened today:

The government appealed Judge McGarraghy's decision in the Girard case to the Supreme Court. Judge McGarraghy decided last Tuesday that surrender of Army Specialist William Girard to a Japanese court...to be tried for manslaughter...would violate his constitutional rights. Today the Justice Department, in bypassing the Court of Appeals and taking the case directly to the Supreme Court, contended that further delay would "seriously aggravate an already unfortunate strain on United States-Japanese relations." It called the lower court decision "clearly wrong." It said: "Under the international agreements with Japan, the right to exercise primary jurisdiction in particular cases is the right of the United States, not of the individual soldier. The arrangements certainly do not confer upon each accused an option to be tried by court martial or local court, as he might choose." The brief submitted by the Justice Department included

a statement by Secretary of Defense Wilson...saying ~~that~~ "an early resolution of the legal issues raised is essential to the carrying out of "status of forces" agreements throughout the world." The Justice Department requested...in its brief...that Girard's lawyers be ordered to file an answer within two days. The department said it was ready to argue its case "at the earliest date convenient to the court." Girard's attorneys said tonight that THEIR next step will be to file a cross-petition, asking the Supreme Court to issue a writ of habeas corpus returning Girard to the United States.

Prime Minister Kishi of Japan went before Congress today...and made a brief, 12-minute speech. Kishi ~~The prime minister~~ made NO reference to the case of Army Specialist William Girard. He stressed the dedication of postwar Japan to democracy. "The Communists," he said, "are trying to demonstrate that their way is the quicker way to develop underdeveloped economies." He said Japan wants to show that ~~[illegible]~~ economic and social progress can be achieved without the Communist short-cut. And he expressed "firm conviction" that Japan...as a faithful member of the free world...has a constructive role to play in meeting the challenge of Communism. Kishi spoke first in

→

the Senate and then in the House. And in both chambers, he received a standing ovation. The prime minister, also conferred at length today with Secretary of State Dulles. He is reported to have told Mr. Dulles that cooperation with the United States is the "fundamental" policy of his government...but that this should be what he termed "a true partnership."

In a few hours from now, the United Nations Command in Korea will be meeting the Communists face-to-face again at Panmunjom...that place-name so current in the news from the Far East, just four years ago. CBS News Correspondent Robert Pierpoint...in Tokyo...says there is "good reason" to believe that the U.N. will announce its decision to scrap that provision of the Korean armistice agreement which the Communists have been violating all along--the provision forbidding the modernization of weapons by [redacted] either side. The provision says weapons north and south of the 38th parallel in Korea, can be replaced, but that new, more modern weapons cannot be brought in. The Reds in North Korea have been disregarding this agreement, by sending in new aircraft, artillery and other modern equipment. And now, Pierpoint says, the United States is going to do the same. Probably this will include weapons capable of mounting atomic warheads. But Pierpoint

→

says it is doubtful that the United States will bring any ATOMIC weapons into Korea at this time. An official announcement on this is expected later tonight. The South Korean ambassador in Washington says he "understands" the UN allies HAVE agreed on such a program.

Harold Stassen began presenting "the American position" today at the disarmament talks in London. Mr. Stassen told the disarmament conference that the United States is willing to cut its armed forces to two and a half million men--WITHOUT political preconditions--if Russia will do the same.

Such a step would be "dependent," however, on what Mr. Stassen called an "appropriate" agreement to stop nuclear bomb tests. The United States now has 2-million, 800-thousand men in its armed forces...so the United States is offering a cut of about 300-thousand men. Russia is believed to have some 4-million men in ITS armed forces. So if Russia accepts the offer, IT would have to demobilize about a million, 500-thousand men. The initial Soviet reaction to this American proposal today was non-committal. Mr. Stassen still has MORE of the United States "first step" disarmament program to present. What he had to say today was just a start.

President Eisenhower's civil rights program is nearing [redacted] a showdown vote in the Senate, after nearly six hours of debate over parliamentary procedure---whether the civil rights bill passed by the House can be placed directly on the Senate calendar, or whether it must be referred first to the Senate Judiciary Committee, where similar legislation has been bottled up for months. Vice President Nixon declined tonight to rule on the question...and turned it over to the Senate to decide.

~~The supporters of President Eisenhower's civil rights program have just won a victory in the Senate. Vice President Nixon, as the presiding officer, ruled tonight that the civil rights bill passed by the House can be placed on the Senate calendar, thus by-passing the Senate Judiciary Committee which has bottled up [illegible] for months. The victory, however, could be of short duration. Mr. Mason has submitted the question to the Senate for a vote. And that vote may come tonight.~~

The House Appropriations Committee today voted to give the Post Office Department most of the extra money Postmaster General Summerfield had requested. It approved a supplemental money bill for 133-million dollars.

The House today passed and sent to the Senate a bill to overhaul the federal laws governing excise taxes. The measure makes no appreciable change in over-all revenue...but, for the most part, simplifies current procedures. The matter of tax rates will be taken up later. However, the bill passed today would place a 10 percent tax on tape recorders, which are not for military or commercial use. And parochial schools would be allowed the same [redacted] exemption from federal excise taxes as public schools. The Senate is not expected to complete action on the measure until next year.

The United States eased its restrictions today on the shipment of non-strategic goods to Russia and its satellite states. To the list of so-called "peaceful goods"... which can be shipped without individual licenses...it added two hundred commodities, including such assorted items as flashlights, photographic film and home freezers. The government said the action "in no way reflects a [redacted] change in the policy of barring strategic goods to the Soviet bloc, nor in any way affects the complete embargo (by the United States) against shipments to Communist China." Britain, you'll recall, recently relaxed its ban on shipment of non-strategic goods to Red China.

The Communist leaders of Poland and East Germany signed a joint declaration tonight...dealing with future relations between the two countries. Unlike East Germany...where Stalinism persists...Poland has been following what it calls "its own road to Socialism." The text of tonight's declaration...signed after three days of talks in Berlin...was not published immediately. The East German premier...Otto Grötewohl... GROAT told reporters it proclaims the "unity of the socialist camp."

The Hungarian government has ordered the American air attache, in Budapest out of the [redacted] country within six days. The Communist regime accuses ~~the~~ our military attache...Colonel Welwyn Dallam of San Francisco...of photographing military objectives. Dallam calls the Communist charge — "ridiculous", but he is required to leave, nevertheless. Dallam is the second American attache to be expelled from Hungary in less than three months. And only last month, Hungary asked the United States to ~~reduce~~ cut the size of its legation. half

Not since the end of world war two, and the Nuremburg trials, have the acts of any government been so thoroughly condemned as the Soviet Union's today in a special UN committee report on the 1956 crushing of Hungary. //

Bits and pieces of this UN document have reached the press in advance of today's official publication, but they could only hint at the sensational nature of the full report.

Compiled by five investigating ambassadors from nations as widely separated politically and geographically as Ceylon, Tunisia and Uruguay, the report amounts to the most sweeping condemnation of Soviet communism ever issued from the United Nations.

It is written in a clear, narrative style, rarely seen in diplomatic circles, it was gathered from the sworn testimony of hundreds of escapees from the Hungarian blood-bath.

The five investigating ambassadors, chosen from nations scattered round the globe, began their task with individual attitudes toward human rights and freedom, but at the end of three months of exhaustive examination of eye witnesses, all five reached their conclusions with complete unanimity..

The report details almost the hour-by-hour events of the Hungarian uprising and its unbelievably brutal crushing. Of the torture and persecution inficted on the Hungarians, the committee says it was "deeply shocked" by what it learned of the sufferings inficted by the secret police. and by the"extent of the abuses that could be perpetrated by a police force that was all-powerful, pitiless, and unabashed by any shameful act."

And it adds that the verbatim records of the committee's meetings contain such appalling descriptions, that committee hesitated to publish them even if the necessity of protecting the families of the victims had not been an obstacle.

Among the committees conclusions is that the present Janosh Kadar puppet government has no supprt from the Hungarian people, and maintains its position only through the might of the Soviet Army..

The report also concludes that the previous government of Premier Nagy never invited the Russians to intervene, and that the russians nevertheless overthrew a legally constituted popular government by sheer brute force.

No [redacted] information could be gleaned about [redacted] the present whereabouts of former Premier Nagy. except that he was last seen in the hands of the Soviet Army. after he was tricked into leaving the [redacted] sanctuary of the Yugoslav Embassy-- a fact which the Yugoslavs have strongly protested..

The report indicates that far from the present Kadar government [redacted] being legally constituted, there was no government in Hungary [redacted] for days after the bloodbath. And Hungary [redacted] was ruled for some time by the Soviet Army alone -

There's also [redacted] evidence [redacted] of [redacted] conflict between the two high Soviet political leaders who arrived in Budapest after the uprising, and the Soviet Army command. . But the Soviet Army took over [redacted] and turned its heavy guns and tanks [redacted] on the practically defenseless Hungarians. . There is no evidence of Nature Hungarian troops firing on their own people, and even some of the Russian [redacted] troops clearly sympathized [redacted].

SOVIET INTERVENTION

In the final stages of the [redacted], the Soviet Army brought in Tartar and Mongol troops, who performed [redacted], ruthlessly. - [redacted].

The committee found no evidence that the revolt had been planned in advance, NOR [redacted] assisted from the outside. The two main factors [redacted] [redacted]g were the Hungarian desire for freedom, and the success of the Poles in winning a measure of independence from Russia.

The publication of this drastic anti-soviet report has [redacted] [redacted] drawn immediate reaction.. The United States [redacted] called for 24-nation strategy conference at the UN.. The British government backs this [redacted], and says the five small nations which investigated the Hungarian blodbath have performed an"invaluable service" to the world - ~~and their conclusions will be challenged only by those interested in"offsetting the record of crimes committed [redacted] in the name of communism against the Hungarian people.~~

Moscow radio calls [redacted] the report [redacted] a "crude, false, disgusting job. Blames [redacted] it on the United States.. The Australian government wants the UN Assembly promptly convened.. for [redacted] action on [redacted] this exposure of communist rule...

But the best bet is that this dramatic report will first be given [redacted] world-wide public circulation, until the foreign ministers of the world can meet to debate it [redacted] next September at the regular UN General Assembly session. This is LL..Ill be back in a moment with a footnote but first Gov Bra

The old [redacted] locomotive, in which Nikolai Lenin escaped from Russia to Finland [redacted] forty years ago, chugged back into Leningrad today.

in 1917, during one of the crises of the russian revolution, Lenin hopped aboard [redacted] and escaped north into Finland. It remained there until last week, when the Finnish government returned it [redacted] to Russia as a friendship gesture.

Krushchev jumped aboard [redacted], and shouted "at last it is ours!" [redacted] But maybe that [redacted] locomotive ought to come back here. It was manufactured in Richmond, Virginia..

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

THURSDAY, JUNE 20, 1957
7:45--8:00 P.M., E.D.S.T.

LARRY LESUEUR REPORTING:

Good evening, everyone...Here's what happened today:

The government appealed Judge McGarraghy's decision in the Girard case to the Supreme Court. Judge McGarraghy decided last Tuesday that surrender of Army Specialist William Girard to a Japanese court..to be tried for manslaughter ...would violate his constitutional rights. Today the Justice Departmnt, in bypassing the Court of Appeals and taking the case directly to the Supreme Court, contended that further delay would "seriously aggravate an already unfortunate strain on United States - Japanese relations." It called the lower court decision "clearly wrong." It said"Under the international agreements with Japan, the right to exercise primary jurisdiction in particular cases is the right of the United States, not of the individual soldier. The arrangements certainly do not confer upon each accused an option to be tried by court martial or local court as he might choose." The brief submitted by the Justice Department included a statement by Secretary of Defense Wilson... saying "an early resolution of the legal issues raised is essential to the carrying out of "status of forces" agreements throughout the world." The Justice Department requested..in its brief..that Girard's lawyers be ordered to file an answer within two days. The department said it was ready to argue its case "at the earliest date convenient to the court." Girard's attorneys said tonight that their next step will be to file a cross - petition, asking the Supreme Court to issue a writ of habeus corpus returning Girard to the United States.

Prime Minister Kishi of Japan went before Congress today...and made a brief, 12-minute speech. Kishi made no reference to the case of Army Specialist William Girard. He stressed the dedication of postwar Japan to democracy. "The Communists," he said, "are trying to demonstrate that their way is the quicker way to develop underdeveloped economies." He said Japan wants to show that economic and social progress can be achieved without the Communist short-cut. And he expressed "firm conviction" that Japan..as a faithful member of the free world..has a constructive role to play in meeting the challenge of Communism. Kishi spoke first in the Senate and then in the House. And in both chambers, he received a standing ovation. The prime minister also conferred at length today with Secretary of State Dulles. He is reported to have told Mr. Dulles that cooperation with the United States is the "fundamental" policy of his government..but that this should be what he termed "a true partnership."

In a few hours from now, the United Nations Command in Korea will be meeting the Communists face-to-face again at Panmunjom...that place name so current in the news from the Far East, just four years ago. CBS News Correspondent Robert Pierpoint..in Tokyo..says there is "good reason" to believe that the U.N. will announce its decision to scrap that provision of the Korean armistice agreement which the Communists have been violating all along---the provision forbidding the modernization of weapons by either side.. The provision says weapons north and south of the 38th parallel in Korea can be replaced, but that new, more modern weapons cannot be brought in. The Reds in NOrth Korea have been disgrgarding this agreement, by sending in new aircraft, artillery and other modern equipment. And now, Pierpoint says, the United States is going to do the same. Probably this will include weapons capable of mounting atomic warheads. But Pierpoint says it is doubtful that the United States will bring any atomic weapons into Korea at this

time. An official announcement on this is expected later tonight. The South Korean ambassador in Washington says he "understands the UN allies have agreed on such a program.

Harold Stassen began presenting "the American position" today at the disarmament talks in London. Mr. Stassen told the disarmement conference that the United States is willing to cut its armed forces to two and a half million men without political preconditions if Russia will do the same.

Such a step would be dependent however, on what Mr. Stassen called an "appropriate" agreement to stop nuclear bomb tests. The United States now has 2 - million, 800 thousand men in its armed forces..so the United States if offering a cut of about 300 thousand men. Russia is believed to have some 4-million men in its armed forces. So if Russia accepts the offer it would have to demobilize about a million, 500-thousand men. The initial Soviet reaction to this American proposal today was non -committal. Mr. Stassen still has more of the United States "first step" disarmament program to present. What he had to say today was just a start.

President Eisenhower's civil rights program is nearing a showdown vote in the Senate, after nearly six hours of debate over parliamentary procedure--whether the civil rights bill passed by the House can be placed directly on the Senate calender, or whether it must be referred first to the Senate Judiciary Committee, where similar legislation has been bottled up for months. Vice President Nixon declined tonight to rule on the question..and turned it over to the Senate to decide.

The House Appropriations Committee today voted to give the Post Office Department most of the extra money Postmaster General Summerfield had requested. It approved a supplemental money bill for 133 million dollars.

The House today passed and sent to the Senate a bill to overhaul the federal laws governing excise taxes. The measure makes no appreciable change in over-all revenue...but, for the most part, simplifies current procedures. The matter of tax rates will be taken up later. However, the bill passed today would place a 10 percent tax on tape recorders, which are not for military or commercial use. And parochial schools would be allowed the same exemption from federal excise taxes as public schools. The Senate is not expected to complete action on the measure until next year.

The United States eased its restrictions today on the shipment of non-strategic goods to Russia and its satellite states.Tothe the list of so-called "peaceful goods"..which can be shipped without individual licenses...it added two hundred commodities, including such assorted items as flashlights, photographic film and home freezers. The government said the action "in no way reflects a change in the policy of barring strategic goods to the Soviet bloc, nor in any way affects the complete embargo (by the United States against shipments to Communist China." Britain, you'll recall, recently relaxed its ban on shipment of non-strategic goods to Red China.

The Hungarian government has ordered the American air attache in Budapest out of the country within six days. The Communist regime accuses our military attache..Colonel Welwyn Dallam of San Francisco...of photographing military objectives. Dallam calls the Communist charge "ridiculous", but he is required to leave, nevertheless. Dallam is the second American attache to be expelled from Hungary in less than three months. And only last month, Hungary asked the United States to cut the size of its legation.

Not since the end of World War Two, and the Nuremburg trials, have acts of any government been so thoroughly condemned as the Soviet Union's today in a special UN committee report on the 1956 crushing of Hungary.

Bits and pieces of this UN document have reached the press in advance of today's official publication, but they could only hint at the sensational nature of the full report.

Compiled by five investigating ambassadors from nations as widely separated politically and geographically as Ceylon, Tunisia and Uruguay, the reports amounts to the most sweeping condemnation of Soviet communism ever issued from the United Nations.

It is written in a clear, narrative style, rarely seen in diplomatic circles. It was gathered from the sworn testimony of hundreds of escapees from the Hungarian blood-bath.

The five investigating ambassadors, chosen from nations scattered around the globe, began their task with individual attitudes toward human rights and freedom, but at the end of three months of exhaustive examination of eye-witnesses, all five reached their conclusions with complete unanimity.

The report details almost the hour-by-hour events of the Hungarian up-rising and its unbelievably brutal crushing. Of the torture and persecution inflicted on the Hungarians, the committee says it was "deeply shocked" by what it learned of the sufferings inflicted by the secret police. And by the "ex-tent of abuses that could be perpetrated by a police force that was all-powerful, pitiless, and unabashed by any shameful act."

It adds that the verbatim records of the committee's meetings contain such appaling descriptions, that the committee hesitated to publish them even if the necessity of protecting the families of the victims had not been an obstacle.

Among the committees conclusions is that the present Janos Kadar puppet government has no support from the Hungarian people, and maintains its pos-ition only through the might of the Soviet army.

The report also concludes that the previous government of Premier Nagy never invited the Russians to intervene, and that the Russians themselves overthrew a legally constituted popular government by sheer brute force.

No information could be gleaned about the present whereabouts of Premier Nagy...except that he was last seen in the hands of the Soviet Army after he was tricked into leaving the Sanctuary of the Yugoslav Embassy -- a fact which the Yugoslavs heve strongly protested.

The report indicates that far from the present Kadar government being legally constituted, there was no government in Hungary for days after the bloodbath and Hungary was ruled for some time by the Soviet Army alone.

There is also evidence of conflict between the two high Soviet political leaders who arrived in Budapest after the uprising, and the Soviet Army command. But the Soviet Army took over and turned its heavy guns and tanks on the practically defenseless Hungarians. There is no evidence of native Hungarian troops firing on their own people and even some of the Russian troops clearly sympathized. In the final states of the Soviet intervention, the Soviet Army brought in Tartar and Mongol troops, who performed ruthlessly.

The committee found no evidence that the revolt had been planned in advance, nor assisted from the outside. The two main factors were the Hungarian desire for freedom, and the success of the Poles in winning a measure of independence from Russia.

The publication of this drastic anti-soviet report has drawn immediate reaction. The United States called for 24-nation strategy conference at the UN. The British government backs this and says the five small nations which investigated the Hungarian bloodbath have performed an "invaluable service" to the world.

Moscow radio calls the report a "crude, false, disgusting job." It blames it on the United States. The Australian government wants the UN Assembly promptly convened for action on this exposure of Communist rule.

But the best bet is that this dramatic report will first be given world-wide public circulation, until the foreign ministers of the world can meet to debate it next Semtember at the regular UN General Assembly session.

This is Larry Lesueur. I'll be back in a moment with a Footnote to the News, but first...George Bryan.

BRYAN:

It remained there until last week, when the Finnish government returned it to Russia as a friendship gesture. Khrushchev jumped aboard and shouted "at last it is ours!" But maybe that locomotive ought to come back here. It was manufactured in Richmond, Virginia.

This is Larry LeSueur. Goodnight.

Lesueur for Murrow Fri., June 21, 1957

Good evening, everyone... Here's what happened today:

President Eisenhower and Prime Minister Kishi of Japan issued a joint communique, summing up their Washington talks. And, unlike many communiques issued of late, this one made news. It reveals the United States is [redacted] going to make a "prompt" withdrawal of all U.S. ground combat forces from Japan. The United States promises that this withdrawal will be completed "within the next year." The communique says "further reductions" in U.S. air and naval forces are planned, as Japan's own defensive strength grows. Kishi emphasized... in his conferences in Washington... "the strong desire of the Japanese people for the return of administrative control over the Ryukyu and Bonin Islands." (The most important of these islands in terms of defense is Okinawa).

The communique says Mr. Eisenhower acknowledged that Japan possesses "residual sovereignty" over these islands...but that, so long as tensions exist in the Far East, the United States "will find it necessary to continue the present status." In other words, the United States will continue to exercise its administrative control.

On the subject of nuclear tests, the Communique says Japan's views will "be taken into account in formulating the U.S. position at the current disarmament session in London."

Lesueur for Murrow Fri., June 21, 1957

RA

[redacted]

The Senate voted TODAY to authorize construction of a government dam in Hells Canyon, on the Snake River. The vote was 45 to 38. And the hotly disputed measure now goes to the House. The Idaho Power Company announced last night that it would NOT take the quick tax write-off the Office of Defense Mobilization had said it could have on two of the three dams it plans to ~~build~~ on the river. The write-offs had provoked bitter criticism. And the company said it wasn't accepting them "in order to eliminate further beclouding of the real issues." Today...on the Senate floor... Democratic Senator Magnuson of Washington State charged that the Idaho Power Company decision was "merely a stall...an expediency to affect the vote at the last minute." Democratic Senator Morse of Oregon called the company's action "a death-bed repentance"...a move, he said, to avoid the consequences of "improper conduct." The Idaho Power Company maintains

it has a legal right to the tax write-off. ...which critics have said would cost American taxpayers more than 83-million dollars. Certainly a basic issue is public versus private power. Construction of a high dam...by the government...would flood the sites of the three low dams planned by the utility company. The private project was defended today by Republican Senator Goldwater of Arizona, who called it "best adapted to comprehensive development of the Snake River." He pointed out that the Idaho Power Company was given the go-ahead by the Federal Power Commission after a year of study. The Snake River meanders (as its name suggests) along the border of Idaho and Oregon. It is a tributary of the Columbia River, and flows along the floor of what is the deepest canyon on this continent. The fight as to whether its power will be developed by public or private interests is by no means finished. There is greater opposition to public development in the House than in the Senate. And the vote today indicates that the Senate cannot override a presidential veto.

The House voted approval today of a farm surplus disposal bill, clearing the way for the sale of farm surpluses to Poland. The measure now goes to a Senate-House conference committee.

The Supreme Court decided today to hear arguments on July 8th, as to whether Army Specialist William Girard should be tried by a Japanese court. The Supreme Court WAS to have recessed for the summer next Monday. But now it will stay in session to hear the appeals entered both by the Justice Department and the attorneys for Girard. Each side will be granted two hours in which to present its case.

Prime Minister Kishi of Japan told the National Press club...in Washington today that the security treaty between the United States and Japan needs to be adjusted to conform to present conditions. Kishi said, in the question and answer period, "The time is approaching when American ground troops may be withdrawn from Japan as a result of the gradual build-up of Japan's own defense force." He promised that his country would never go Communist, nor neutralist. But Japan, he said, must increase its trade with Red China due to "sheer economic necessity." Kishi added that Japan would continue, however, to observe international control on the shipment of "STRATEGIC" goods."

Russia confirmed today that it has sold three submarines to Egypt. Moscow radio said... in a broadcast in Arabic... that Egypt purchased the submarines "to safeguard its security." And no one, said Moscow, can deny Egypt this "legal right" as an independent state.

In Washington, the State Department charges that Russia's action violates the U.N. resolution of November 2, 1956, against sending arms into the Middle East. The delivery of Russian submarines to Egypt, it says, is bound to increase tension.

King Feisal of Iraq flew to London today. There had been no advance announcement of such a visit.

The decision to arm American forces in Korea with modern weapons brought a blast today from the Chinese Communist radio in Peiping. Peiping calls the U.N. charge that the Reds have "beefed up" their forces in North Korea with modern weapons "nothing but an excuse." It says the allied action threatens to "totally destroy the armistice set-up."

The U.N. Command, of course, did not act without provocation. For a report on the objectives behind the U.N. decision, here is CBS News Correspondent Robert Pierpoint, reporting from Tokyo. ~~Tape runs 4:20, ends on cue, "Now back to Larry Lesueur in New York."~~

[redacted]

(5)

Canada's first Conservative prime minister in 22 years was sworn in today in Ottawa. John Diefenbaker...who succeeds Liberal Party Leader Louis St. Laurent...said the new government will follow the basic foreign policy established by his predecessor. For the present at least, Diefenbaker will serve as his own FOREIGN minister...succeeding Lester B. Pearson. And he set a precedent by appointing Mrs. Ellen Fairclough as secretary of state--the first time in Canada's history that a woman has held a position of cabinet rank.

The United States today "categorically" denied Hungary's charge that the American air attache in Budapest...Colonel Welwyn Dallam...had photographed military installations. This was the excuse the Kadar regime gave yesterday, when it ordered Dallam to leave the country within six days. A State Department spokesman said today that the accusation is "devoid of both truth and originality."

The Kremlin still has not told the Russian people about yesterday's U.N. report...condemning Russia's bloody intervention in the Hungarian revolt. So far, the Soviet press is silent on the subject. And so is Moscow radio in its DOMESTIC broadcasts. Russian broadcasts beamed overseas are continuing to attack the UN report as "propaganda".

West Germany and Italy announced today that they are relaxing their controls on NON-strategic trade with Red China. ~~As in the case of Britain, they are placing this trade on the same basis as trade with Soviet Russia.~~

Secretary of State Dulles has asked Senate leaders to name a bipartisan delegation of senators to attend the London disarmament talks. Mr. Dulles suggested, however, that to send such a delegation now would be "premature." Democratic Leader Johnson said, "Any time the President deems it essential that they go to London to participate in the conference, we shall participate."

A convention calling for a ban on slave labor was adopted in Geneva today by the UN's International Labor Organization. The convention does not become binding in each of the 78 ~~member countries until AFTER parliamentary~~ ratification.

Ill be back in moment with a footnote
The The news One But first George Bryan

H arry Truman was back in Washington again today.. still making news.. Said he was turning over to the government, about a half million dollars worth of gifts he received while in the White House... [redacted]d his theory is, if he hadn't been President he wouldn't have gotten them..

[redacted] asked how it felt to be a Grandfather, Mr. Truman replied: "Wonderful...the first thing [redacted] I've ever been mixed up in where there's no controversy...

This is Larry LeSueur .... [redacted] Goodnite..

(Ed Murrow will be here on Monday.)

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS - LARRY LESUEUR

Friday, June 21, 1957
7:45 - 8:00 P.M.

LESUEUR: ... The decision to arm American forces in Korea with modern weapons brought a blast today from the Chinese Communist radio in Peiping. Peiping calls the UN charge, that the Reds have beefed up their forces in North Korea with modern weapons, nothing but an excuse. It says the allied action threatens to tally destroy the armistice setup. The UN command, of course, did not act without provocation. For a report on the objectives behind the UN decision, here is CBS News correspondent Robert Pierpoint reporting from Tokyo.

PIERPOINT: Today's announcement to the Communists at Panmumjom that the United Nations will no longer honor Article 13-D of the Korean armistice agreement is a victory for American military officers here in the Far East. Entrusted with the military defense of South Korea, they have long felt themselves at a distinct disadvantage because they've been forced to live up to the armistice while the Communist side brazenly ignored it. As the Communists continued to modernize and build up their strength in North Korea, American officers in the United Nations Command here in Tokyo have long pressed to be allowed to do the same in the South. Perhaps the best illustration of this disparity has been the change in relative air strength of the two sides since the end of the Korean war. On the day the armistice was signed, the Reds did not have a single airfield in all of North Korea which was operational for jet aircraft. Our bombers and fighter bombers have seen to that. But as soon as the pressure was lifted, the Communists rebuilt their airfields and began bringing into North Korea modern jet fighters and bombers. The United Nations side has known about this right from the beginning but there was nothing it could do. Meantime, the U.S. Air Force was limited to maintaining, in Korea, the exact same amounts and types of aircraft that it had there the day the war ended. As a result of today's action, the U.S. Air Force will be able to regain some of its former position. Faster

and better jet aircraft will be flown into Korea to replace the outmoded types in use there since the end of the war. The biggest changes will be the introduction of some of the Century planes, F-100, to replace or supplement the obsolescent F-84s for faster and more efficient fighter bomber work. There is also a possibility that the Air Force may station some of its medium jet bombers, the B-57 Canberras, in South Korea now to give them greater striking range. The B-57s are capable of delivering the latest nuclear bombs against targets in North Korea or China from bases in South Korea. Air Force officers therefore feel that being freed from the restrictions of Article 13-D of the Korean armistice, gives them a much better opportunity to defend South Korea from the modernized military forces of the Communists to the North.

Generally speaking the same is true of other branches of the military services entrusted with the defense of South Korea. They will now be allowed to bring into Korea the latest and best in military equipment to deter or meet any threat from the North. This includes, for instance, such modern weapons as atomic rockets and guided missiles.

Now, no one has yet said publicly that the United States will bring these weapons into Korea. But at least now we can if we so choose.

There's another phase to this abrogation of the armistice which is almost equally important. Much of the weapons and equipment that American and United Nations soldiers have been forced to use in Korea - during these past four years - is now obsolete, completely out of production. Spare parts and replacements are, in many cases, either very expensive to obtain or impossible. Furthermore - when American soldiers and airmen arrive in South Korea, trained on the latest and best American military equipment they have to start learning all over again on the older materiele. Then when they leave Korea they must relearn to handle the modern equipment. The result has been a distinct handicap for our fighting forces.

By refusing any longer to bind itself to the re-

strictions of Article 13-D of the Korean armistice, the United Nations has thus freed itself to accomplish two objectives. First of all it will now be able to catch up with the steady Communist military modernization in North Korea of the past four years. And second, it will be able to put into South Korea the most modern weapons it has to be used by men trained to operate these weapons in defense of the free world.

This is Bob Pierpoint in Tokyo - and now back to Larry Lesueur in New York.

Perhaps the best illustration of this disparity has been the change in relative air strength of the two sides since

end of the Korean war. On the day the armistice was signed, the Reds did not have a single airfield in all of North Korea which was operational for jet aircraft. Our bombers and fighter bombers have their airfields and began bringing into North Korea modern jet fighters and bombers. The United Nations side has known about this right from the beginning but there was nothing it could do. Meantime, the U.S. Air Force was limited to maintaining, in Korea, the exact same amounts and types of aircraft that it had there the day the war ended. A a result of today's action, the U.S. Air Force will be able to regain some of its former position. Faster and better jet aircraft will be flown into Korea to replace the outmoded types in use there since the end of the war. The biggest changes will be the introduction of some of the Century planes, F-100, to replace or supplement the obsolescent F-84's for faster and more efficient fighter bomber work. There is also a possibility that the Air Force may station some of its medium jet bombers, the B-57 Canberras, in South Kroea now to give them greater striking range. The B-57's are capable of delivering the latest nuclear bombs against targets in North Korea or China from bases in South Kroea. Air Force officers therefore feel that being freed from the restrictions of Article 13-d of the Korean armistice, gives them a much better opportunity to defend South Kroea from the modernized military forces of the Communists to the North.

Generally speaking the same is true of other branches of the military service entrusted with the defense of South Korea. They will now be allowed to bring into Korea the latest and best in military equipment to deter or meet any threat from the North. This includes, for instance, such modern weapons as atomic rockets and guided missiles.

Now, no one has yet said publicly that the United States will bring these weapons into Korea. But at least now we can if we so choose.

There's another phase to this abrogation of the armistice which is almost equally important. Much of the weapons and equipment that American and United Nations soldiers have been forced to use in Korea - during these past four years - is now obsolete, completely out of production. Spare parts and replacements are, in many cases, either very expensive to obtain or impossible. Furthermore -when American soldiers and airmen arrive in South Kroea, trained on the latest and best American military equipment they have to start learning all over again on the older materiel . Then when they leave Korea they must relearn to handle the modern equipment. The result has been a distinct handicap for our fighting forces.

By refusing any longer to bind itself to the restrictions of Article 13-D of the Korean armistice, the United Nations has thus freed itself to accomplish two objectives. First of all it will now be able to catch up with the steady Communist military modernization on North Korea of the past four years. And second, it will be able to put into South Korea the most modern weapons it has to be used by men trained to operate these weapons in defense of the free world.

This is Bob Pierpoint in Tokyo - and now back to Larry Lesueur in New York.

LESUEUR: Canada's first Conservative prime minister in 22 years was sworn in today in Ottawa. John Diefenbaker, who succeeds Liberal Party Leader Louis St. Laurent, said the new government will follow the basic foreign policy established by his predecessor. For the present at least, Diefenbker will serve as his own foreign minister..succeeding Lester B. Pierson. And he set a precedent by appointing Mrs. Ellen Fairclough as Secretary of State --the first time in Canada's history that a woman has held a position of cabinet rank

The United State today "categorically" decied Hungary's charge that the American air attache in Budapest, Colonel Welwyn Dallam, had photographed

military installations. This was the excuse the Kadar regime gave yesterday, when it ordered Dallam to leave the country within six days. A State Depart ment spokesman said today that the accusation is "devoid of truth and originality."

The Kremlin still has not told the Russian people about yeaterday's U.N. report...condemning Russia's bloody intervention in the Hungarian revolt So far, the Soviet prese is silent on the subject. And so is Moscow radio in its domestic broadcasts. Russian broadcasts beamed overseas are continuing to attack the UN report as "propaganda."

West Germany and Italy announced today that they are relaxing their controls on non-strategic trade with Red China.

I'll be back in a moment with a Footnote to the News. But first, George Bryan.

BRYAN:

LESUEUR: Harry Truman was back in Washington again today...still making news. Said he was turning over to the government about a half-million dollars worth of gifts he received while in the White House. His theory is, if he hadn't been President, he wouldn't have gotten them. ...Asked about how it felt to be a grandfather, Mr. Truman replied: "Wonderful"...the first thing I've ever been mixed up in where there's no controversy.

This is Larry Lesueur. Ed Murrow will be here on Monday. Goodnight.

Edward R. Murrow Mon., June 24, 1957

This is the news:

The United States today challenged Russia to "a regular exchange of uncensored radio and television broadcasts." /The proposal was made in the form of a memorandum, handed to Soviet Ambassador Zarubin in Washington. The memorandum did not go into the technical problems involved...but did call for "an agreement in principle at an early date." /The purpose of the broadcasts, it said, would be "to promote a freer exchange of information and ideas on important world developments." A State Department spokesman said the recent appearance of Communist Party Boss Khrushchev on American television helped bring the [redacted] proposal for a regular exchange of programs to a head.

President Eisenhower is speaking tonight before the annual conference of governors at Williamsburg, Virginia. The text of his speech has been released. The President will suggest that the states take over certain functions of the national government...such as slum clearance and disaster relief...so as to help cut federal taxes. He will propose that a committee be set up to recommend what functions now financed by the federal government could be taken over by the states. The alternatives, he will say, are "clear and simple:" Either the states regain their "traditional responsibilities," or by failure to act they "create new vacuums into which the federal government will (in his words) plunge ever more deeply, impelled by popular pressures and transient political expediencies." Mr. Eisenhower will cite the Soviet Union as an example of "the results of extreme and dictatorial concentration of power." But even Russia, he will say, has "come to recognize some the deficiencies of extreme centralization."

The President's speech will be carried by most of these CBS Radio stations at 11:30 tonight, Eastern Time.

The Supreme Court today set aside the convictions of 13 MORE persons indicted either under the Smith Act or on the basis of their refusal to answer questions put to them by legislative committees. The court's action today...again with Justice Clark dissenting...was taken in conformity with two decisions it made last week. The court ruled...at that time...that in prosecuting under the Smith Act, a distinction must be made between advocating violent overthrow of the government as an abstract doctrine... and advocating it in a way calculated to incite unlawful action. The court also said last week that legislative investigating groups must have a legitimate legislative objective in their inquiries...and explain this objective to persons whom they are questioning. In accordance with these rulings, the Supreme Court today set aside the convictions of six "second-string" Communist leaders and sent their cases back to the lower courts. The court also set aside three contempt of Congress convictions...including that of the New York attorney, Harry Sacher... along with the conviction of three other persons charged with contempt of the Ohio Legislature. These three refused to answer questions put to them by the Ohio Un-American Activities Commission. Their cases are also to be reconsidered by the lower courts in the light of last week's decisions.

The Supreme Court also ruled today...in a 6-to-3 decision...that the constitutional guarantee of freedom of speech does not extend to obscene literature. Justice Brennan said on behalf of the majority that "obscenity is not expression protected by the First Amendment." Justices Black, Douglas and Harlan dissented. Douglas said, "To allow the state to step in and punish mere speech or publication that the judge or jury thinks has an undesirable impact on thoughts but that is not shown to be a part of unlawful action is drastically to curtail the First Amendment." The decision was returned in the case of Samuel Roth, a New York bookseller convicted of sending obscene material through the mail. The court also upheld New York and California state laws restricting the sale and distribution of obscene literature.

STET

Today...in Nevada...the United States fired the most powerful "shot" in its current series of nuclear tests. ~~The explosion was heard in Reno, 300 miles away, and a control building of reinforced concrete...14 miles~~ from Ground Zero...was cracked. Several doors in the building were torn from their hinges. The exact force of the explosion was not announced. The Atomic Energy Commission rated it "above 20 kilotons", which would make it more powerful than the bomb dropped on Hiroshima. The device was detonated from a balloon, 700 feet above the desert floor. The Atomic Energy Commission says, ~~"Only light fallout readings are anticipated."~~

President Eisenhower was informed today...by three scientists...that the United States is now able to produce nuclear weapons which are about 95 percent free of radio-active fallout. The scientists were Doctors Edward Teller, Ernest Lawrence and Mark Mills of the University of California radiation laboratory. They went to the White House...in company with Chairman Straws of the Atomic Energy Commission...to report to Mr. Eisenhower on the progress made toward producing a "clean" bomb. They told reporters they discussed only "technical developments."

~~The President recently said that the latest model nuclear bombs are~~

"nine-tenths clean." Today, Dr. Lawrence called Mr. Eisenhower's figure "highly conservative." He said that in his opinion the tests should continue.

The Army issued a draft call today for 11-thousand men in August. This is 2-thousand less than the quotas for April, May, June and July.

Chinese Communist shore batteries today subjected the Nationalist-held islands of Quemoy and Little Quemoy to what is described as their heaviest bombardment to date. The Nationalist government says the Communists fired 9-thousand, 395 rounds.

Premier Kishi of Japan held a news conference today, here in New York. Kishi said it would be "most desirable" if the case of Army Specialist William Girard were settled according to the "status of forces" agreement between the United States and Japan. It was under this agreement that the United States decided that Girard should be tried by a Japanese court. And it is this decision which will be argued on July 8th, before the United States Supreme Court.

In Paris tonight, [redacted] Premier Bourges-Maunoury won a vote of confidence in the French National Assembly. The assembly endorsed his program of higher taxes.

Edward R. Murrow, June 24, 1957. 7.45 p.m.

When the history of this epoch falls into perspective, it probably will contain no more remarkable chapter than our relations with Japan. We had to fight a bitter uphill war to curb and defeat Japanese conquest of the whole of Asia and the Pacific. / It took stupendous effort to beat the Japanese war machine. / We beat it utterly, and could write our own peace terms. / Then we turned aside from our hatred of the Japanese, ignored Japanese hatred for us, and instituted a new relationship between victor and vanquished. / We kept Japan from economic collapse, and gave it a heartening experience in self-government, in the midst of a military occupation. / We poured dollars into the country, we helped reform its land system, we even encouraged the writing of a constitution so liberal, that it abolished the right to maintain national arms. / If our behavior can be called remarkable, so was that of the Japanese. They broke with their past cleanly, as cleanly as did the Germans in Europe. That is, they co-operated rather than repented. / They were not abject. Instead, they worked with quiet faith for the day ~~when~~ that would end the last vestiges of subservience to the victor.

Our policy was generous, but it also was dictated by self-interest. We needed to make sure that Japan would not fall to the communists either

of the Soviet Union or mainland China. We knew all along that the easy time in Japan - the immediate post-war time -- would end, and the Japanese would want equality and freedom, the end of the occupation and the return of their nearby islands, and above all a leading place in Far East trade. The test of our policy would come when it was clear that a free Japan would remain in the free world, and not sell us out for a prize place in the world of communism.

With Nobusuki Kishi as premier came the beginning of this conclusive test. His present visit to this country is to be understood as part of the test. Mr. Kishi was no anti-American, but he has been more critical and independent than his predecessors, and he was chosen for that reason. The Japanese people are pressing for a more independent line. And under the surface of Japanese politics, the power of the left-wing elements is rising with a demand for conciliation with the Reds of Russia and China.

Looked at from our standpoint, Mr. Kishi has been a gratifying visitor. He has given every assurance that Japan will stay out of the Communist world. In his news conference today he said Japan would not now favor recognition of Red China or its entry into the United Nations. His brief address to Congress stressed Japan's dedication to the democratic ideal of

the dignity of the individual. He asked today for increased trade with mainland China, to the value of one hundred million dollars each way, restricted to non-strategic goods. This sounds perhaps like a modest request, being only a fraction of Japan's pre-war trade with that area. It is not modest because Mr. Kishi is unambitious, but because the scope of trade with China is small today. That is, Japan cannot live by trade with the Asiatic mainland, and must continue to rely on us.

Americans may not have been expecting the announcement last week of the ~~coming end of the occupation~~ REDUCTION OF OUR GROUND FORCES, but actually this was due to be announced whenever a suitable occasion arose, and it arose with the visit of the premier. Mr. Kishi said today he had not asked as well for the return of Okinawa. But that request will come in due course.

~~When Mr. Kishi played golf with President Eisenhower and was beaten by him, and threw out the ball for the Yankee-White Sox game and took a standing ovation from 65,000 spectators, he made a place for himself with the American public. It seemed to stamp his visit with the seal of success.~~

But Mr. Kishi's success is not crystal clear to his own countrymen. Most of the Japanese press was disappointed by the communique issued by President Eisenhower and his guest on Friday. There was some favorable

comment on the promised reduction of our ground forces and the establishment of a joint committee to study possible changes in the Japanese-American security treaty. But the ~~Asahi News,~~ Japan's largest daily, remarked that it appeared "as if Mr. Kishi is returning to Japan with the golf clubs given him by President Eisenhower as his only accomplishment.

That is to say the Japanese are getting impatient. It can be argued in Washington that they are not so impatient with us as with realities, since we have to go on protecting them until they are able to protect themselves. And we hope they go on wanting our protection. But the impatience is a reminder that the test of our policy with Japan is incomplete, and its outcome is still no foregone conclusion.

Word for the Day

The impatience of the Japanese is easy to understand. They want to administer the Ryuku Islands...including Okinawa...themselves. And they would like to see the last foreign soldier go home. Japan, however, is not ready to assume its defense responsibilities. In the meantime her people must be patient, ~~though it is not easy.~~ As Sarah Doudney said, "The waiting time is the hardest time of all."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

MONDAY, JUNE 24, 1957

And we hope they go on wanting our protection. But the impatience is a reminder that the test of our policy with Japan is incomplete, and its outcome is still no foregone conclusion.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan

BRYAN:

MURROW: The impatience of the Japanese is easy to understand. They want to administer. the Ryuku Islands..including Okinawa..themselves. And they would like to see the last foreign soldier go home. Japan, however, is not ready to assume its defense responsibilities. In the meantime, her people must be patient. As Sarah Doudney said, "The waiting time is the hardest time of all."

Goodnight and good luck.

Edward R. Murrow Tues., June 25, 1957

This is the news:

The disarmament talks resumed in London today after a five-day recess. The American delegate, Harold Stassen, proposed that the armed forces of the United States and Russia each be reduced to a million, 700-thousand men. Stassen suggested that this be done in three stages. In the first stage, the armed forces of the two countries would be cut to 2-million, 500-thousand men. (This part of the proposal is not new. It was advanced by Stassen last week without political conditions). Today, he suggested two additional stages---another cut to 2-million, 100-thousand men and then, in the third stage, to a million, 700-thousand. Stassen told the Soviet delegate, Valerian Zorin, that these last reductions in military manpower would depend on progress made in the settlement of outstanding political problems.

→

Stassen would not define these problems, despite pressure from Zorin for clarification on this point. The Russian also expressed regret that Stassen, so far, had not referred to the Soviet proposal...of June 14th... for a two or three year moratorium on nuclear weapons tests, backed by ground inspection.

Secretay of State Dulles undertook at his news conference today to clarify the American position. There has been insistence...on the part of the United States...that any agreement to suspend tests would have to include a ban on production of nuclear weapons. Last week, at his news conference, President Eisenhower indicated that this position might have been modified. Mr. Dulles said today that this country still wants any moratorium on tests and prohibition of nuclear arms production tied together in any first-step disarmament agreement. But implementation of the pledge to stop producing nuclear weapons, he said, could come later. Dulles emphasized that... initially...the United States would agree to suspension of tests for only a short period so that if Russia cheated, American scientists working on nuclear weapons development would not be placed at a disadvantage.

A reporter asked Dulles about Soviet Foreign Minister Gromyko's suggestion that the United States was using the London disarmament

conference as "a screen for a continuation and intensification of the arms race." Gromyko said he was impelled to raise the question because of the recent statement...by General Norstad, supreme commander of NATO...that the West now has the capability to destroy "anything that is of military significance in Russia at the present time." Mr. Dulles said Gromyko was indulging in propaganda. He pointed out that Norstad was speaking in terms of what NATO could do in the event of possible Soviet attack. Dulles said the United States "deplores" the sale of Russian submarines to Egypt. Washington, he said, has not yet considered whether to send compensating arms to Israel, though an imbalance in the military situation may have been created.

President Tito of Yugoslavia today accused Russia of maligning his government. Tito did not refer to Russia by name. He said leaders of "some" Communist countries profess friendship while...at the same time... they issue party directives saying "everything in Yugoslavia bristles with revisionism, anarchism and capitalism." Tito called this "unfriendly and malicious." He said, "We demand that our situation not be distorted and that what is good and positive in our country be stated. Only in such a way," he said, "can good relations be maintained." Tito spoke before a workers

congress in Belgrade...attended by delegates from 21 countries, including Red China. Tito noted that other Communist governments are not perfect. "It would be very bad," he said, "if we started counting their mistakes."

The Senate Foreign Relations Committee today approved a resolution calling for a special session of the United Nations General Assembly to take up the question of Soviet brutality in Hungary. It asks the State Department to press for such action...in light of the recent United Nations report on that subject.

Vice President Nixon said today that the money spent by the United States in economic assistance to uncommitted countries "is an investment in our freedom and independence." And anyone who would make a "substantial" cut in the defense budget, he said, is risking America's security. Mr. Nixon spoke before the United States Junior Chamber of Commerce meeting in Milwaukee.

The Labor Department says the cost-of-living went up three-tenths of one percent last month to reach a new all-time high. Living costs have now risen for nine consecutive months. The latest increase is due principally to higher prices for food. Nearly a million workers in the aircraft, metals

and meat packing industries...who have so-called escalator clauses written in their contracts...will automatically receive pay raises ranging from one to three cents an hour. The Labor Department indicates living costs will go still higher in June with a possible leveling off in July.

In Williamsburg, Virginia, the governors conference today took up President Eisenhower's proposal that certain functions of the federal government...such as disaster relief and slum clearance...be returned to the states. Mr. Eisenhower suggested that a joint federal-state committee be appointed to study the question. And a resolution calling for establishment of such a committee (is being drafted.) [redacted] Neither [redacted] Republican nor Democratic governors are showing enthusiasm for the President's proposal. [redacted]

The court martial of Colonel John C. Nickerson, the U.S. Army missiles expert, opened today in Huntsville, Alabama. The proceedings have been compared to those conducted against General Billy Mitchell in 1925. For the story of what happened today...and some of the background...we switch now to Bill Shadel in Huntsville, Alabama. (Tape runs 4:35). That was my colleague, Bill Shadel, reporting on what happened today at the

Colonel Nickerson court martial.

The first hurricane of the season developed today in the Gulf of Mexico. And a hurricane alert has been issued for the Texas and Louisiana coasts. The stprm...at last report...was centered 350 miles southeast of Brownsville, Texas, and moving north about five miles an hour. Winds at the center of the storm are estimated at 75 miles an hour.

This is Ed Murrow. I'll be back in a moment with the Word for Today.

Now, here is George Bryan.

Word for Today

A major element in the Nickerson case is the [redacted] rivalry [redacted] between the armed forces. In this instance, the rivalry between the Army and Air Force in developing the intermediate range missile. The Greek poet Hésiod said, "Rivalry is good for mortals." But in the realm of defense, there has to be a delegation of tasks. For as [redacted] Emerson said, "Concentration is the secret of strength."

Good night and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Tuesday, June 25, 1957
7:45 - 8:00 P.M.

MURROW: ... The courtmartial of Col. John C. Nickerson, the U.S. Army missiles expert, opened today in Huntsville, Alabama. The proceedings have been compared to those conducted against General Billy Mitchell in 1925. For the story of what happened today, and also for some of the background, we switch now to Bill Shadel in Huntsville, Alabama.

SHADEL: It took only a couple of claps of thunder with the accompanying stabs of lightning to clear the atmosphere at the very opening of the trial by courtmartial of Col. John C. Nickerson; it was as sudden as that. First came the prosecution's withdrawal of charge number two against the Colonel, charges covering espionage and perjury or false swearing. And while we were still blinking from that sudden change of the proceeding, the defense came up with its plea of "guilty" to the other remaining charge, which carrieswith it fifteen specifications on alleged disclosures of classified information to unauthorized persons. Legal officers and reporters were soon scraming about the courtroom to find out what next in the proceedings. At this distance now, the courtmartial would appear to be a sacrifice of Col. Nickerson's immmediate military future for the sake of the cause; the cause being nothing less than the far-reaching arguments against transfering the development and control of missiles of intermediate range from the Army to the Air Force. The cause being also Col. Nickerson's firm conviction that development at the Army's Red Stone Missile Center of the Jupiter missile was far superior and far ahead of anything else in the field, despite an order of Secretary of Defense Wilson to the contrary.

In interviews yesterday, the Colonel said he thought he had made some progress in getting those orders changed, the orders which threaten the very existence of the Jupiter missile. It would have been

disloyal of him, he said, if he hadn't challenged the Department of Defense - and he was proceeding in the best way he knew how.

Well, now, this afternoon a revealing start to the defense's case for mitigating circumstances. Rocket expert Dr. Ernst Stuhlinger testified openly to the effect that the Jupiter missile was far superior to the Air Force rival Thor and, to a dramatic question from defense counsel Jenkins, the doctor agreed the sooner Col. Nickerson got back on the job "the sooner we will have a completed Jupiter."

But this does not brush aside the remaining serious charges to which the Colonel pleaded guilty this morning, and according to which he will be sentenced with leniency or full penalty depending on the 10-man military court. Under the fifteen specifications remaining, a maximum sentence could be meted out of thirty years in jail. The prosecution will protect its case as presented today after and despite the plea of guilty. Exhibits 16 to 19, for instance, classified Top Secret documents, found in the Colonel's home unguarded; a letter to a magazine editor enclosing top secret analysis of the Jupiter missile's test flights, a letter in which the Colonel admitted these were top secrets, should be copied, and the original returned to him forthwith. Counsel Jenkins had suggested to CBS News earlier the defense might admit to technical violations of security regulations. Jenkins now says he thinks the defense is in a much better position to present arguments regarding the basic and original purposes of Col. Nickerson's behavior which has led to this trial. Jenkins, at the opening of the trial this morning, asked the ten members of the military court their attitude toward such circumstances: Would they give due weight to the high motives of the defendant; to his record of efficient, faithful, loyal service? These questions the prosecution objected, saying they sounded more like the closing arguments of the defense. Looking back now, it seems obvious that Jenkins was setting the pattern, a pattern of appeal for leniency considering the

high purposes which motivated the Colonel. Mr. Jenkins estimates it will take some six or seven days to present evidence; some twelve to fifteen witnesses to be called; and after that will come the sentence.

The opening of a courtmartial is a serious moment, the solemn swearing of the ten-man military court, the trial counsel, the defense counsel, examinations of the members of the court, four of them West Point graduates, and the question would they be thus inclined to more leniency with a fellow-graduate, Col. Nickerson, than with an ordinary soldier. Mrs. Nickerson and her two children sat wide-eyed in the front row of the public seats. Only a dozen there as spectators but some fifty or sixty reporters on hand. By four o'clock this afternoon, the testimony had gotten into the (indistinct) of secret information, as it was bound to sooner or later, and the court adjourned (poor recording) chamber where it can hear those secrets discussed with imunity.

Now, back to Ed Murrow in New York.

EDWARD R. MURROW WITH THE NEWS

Tuesday, June 25, 1957
7:45 - 8:00 P.M.

MURROW: ... The courtmartial of Col. John C. Nickerson, the U.S. Army missiles expert, opened today in Huntsville, Alabama. The proceedings have been compared to those conducted against General Billy Mitchell in 1925. For the story of what happened today, and also for some of the background, we switch now to Bill Shadel in Huntsville, Alabama.

SHADEL: It took only a couple of claps of thunder with the accompanying stabs of lightning to clear the atmosphere at the very opening of the trial by courtmartial of Col. John C. Nickerson; it was as sudden as that. First came the prosecution's withdrawal of charge number two against the Colonel, charges covering espionage and perjury or false swearing. And while we were still blinking from that sudden change of the proceeding, the defense came up with its plea of "guilty" to the other remaining charge, which carrieswith it fifteen specifications on alleged disclosures of classified information to unauthorized persons. Legal officers and reporters were soon scramling about the courtroom to find out what next in the proceedings. At this distance now, the courtmartial would appear to be a sacrifice of Col. Nickerson's immediate military future for the sake of the cause; the cause being nothing less than the far-reaching arguments against transfering the development and control of missiles of intermediate range from the Army to the Air Force. The cause being also Col. Nickerson's firm conviction that development at the Army's Red Stone Missile Center of the Jupiter missile was far superior and far ahead of anything else in the field, despite an order of Secretary of Defense Wilson to the contrary.

In interviews yesterday, the Colonel said he though he had made some progress in getting those orders changed, the orders which threaten the very existence of the Jupiter missile. It would have been

disloyal of him, he said, if he hadn't challenged the Department of Defense - and he was proceeding in the best way he knew how.

Well, now, this afternoon a revealing start to the defense's case for mitigating circumstances. Rocket expert Dr. Ernst Stuhlinger testified openly to the effect that the Jupiter missile was far superior to the Air Force rival Thor and, to a dramatic question from defense counsel Jenkins, the doctor agreed the sooner Col. Nickerson got back on the job "the sooner we will have a completed Jupiter."

But this does not brush aside the remaining serious charges to which the Colonel pleaded guilty this morning, and according to which he will be sentenced with leniency or full penalty depending on the 10-man military court. Under the fifteen specifications remaining, a maximum sentence could be meted out of thirty years in jail. The prosecution will protect its case as presented today after and despite the plea of guilty Exhibits 16 to 19, for instance, classified Top Secret documents, found in the Colonel's home unguarded; a letter to a magazine editor enclosing top secret analysis of the Jupiter missile's test flights, a letter in which the Colonel admitted these were top secrets, should be copied, and the original returned to him forthwith. Counsel Jenkins had suggested to CBS News earlier the defense might admit to technical violations of security regulations. Jenkins now says he thinks the defense is in a much better position to present arguments regarding the basic and original purposes of Col. Nickerson's behavior which has led to this trial. Jenkins, at the opening of the trial this morning, asked the ten members of the military court their attitude toward such circumstances: Would they give due weight to the high motives of the defendant; to his record of efficient, faithful, loyal service? These questions the prosecution objected, saying they sounded more like the closing arguments of the defense. Looking back now, it seems obvious that Jenkins was setting the pattern, a pattern of appeal for leniency considering the

high purposes which motivated the Colonel. Mr. Jenkins estimates it will take some six or seven days to present evidence; some twelve to fifteen witnesses to be called; and after that will come the sentence.

The opening of a courtmartial is a serious moment, the solemn swearing of the ten-man military court, the trial counsel, the defense counsel, examinations of the members of the court, four of them West Point graduates, and the question would they be thus inclined to more leniency with a fellow-graduate, Col. Nickerson, than with an ordinary soldier. Mrs. Nickerson and her two children sat wide-eyed in the front row of the public seats. Only a dozen there as spectators but some fifty or sixty reporters on hand. By four o'clock this afternoon, the testimony had gotten into the (indistinct) of secret information, as it was bound to sooner or later, and the court adjourned (poor recording) chamber where it can hear those secrets discussed with imunity.

Now, back to Ed Murrow in New York.

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

TUESDAY, JUNE 25, 1957
7:45--8:00 P.M., E.D.S.T.

This is the news:

The disarmament talks resumed in London today after a five - day recess. The American delegate, Harold Stassen, proposed that the armed forces of the United States and Russia each be reduced to a million, 700-thousand men. Stassen suggested that this be done in three stages. In the first stage, the armed forces of the two countries would be cut to 2 - million, 500-thousand men. (This part of the proposal is not new. It was advanced by Stassen last week without political conditions.) Today, he suggested two additional stages -- another cut to 2 -million, 100-thousand men and then, in the third stage, to a million , 700-thousand. Stassen told the Soviet delegate, Valerian Zorin, that these last reductions in military manpower would depend on progress made in the settlement of outstanding political problems. Stassen would not define these problems, despite pressure from Zorin for clarification on this point. The Russian also expressed regret that Stassen, so far, had not referred to the Soviet proposal..of June 14th.. for a two or three year moratorium on nuclear weapons tests, backed by ground inspection.

Secretary of State Dulles undertook at his news conference today to clarify the American position. There has been insistence..on the part of the United States..that any agreement to suspend tests would have to include a ban on production of nuclear weapons. Last week, at his news conference, President Eisenhower indicated that this position might have been modified. Mr. Dulles said today that this country still wants any moratorium on tests and prohibition of nuclear arms production tied together in any first -step disarmament agreement. But implementation of the pledge to stop producing nuclear weapons, he said, could come later. Dulles emphasized that..initially

the United States would agree to suspension of tests for only a short period so that if Russia cheated, American scientists working on nuclear wespons development would not be placed at a disadvantage. A reporter asked Dulles about Soviet Foreign Minister Gromyko's suggestion that the United States was using the London disarmament conference as "a screen for a continuation and intensification of the arms race." Gromyko said he was impelled to raise the question because of the recent statement..by General Norstad, supreme commander of NATO..that the West now has the capability to destroy "anything that is of military significance in Russia at the present time." Mr. Dulles said Gromyko was indulging in propaganda. He pointed out that Norstad was speaking in terms of what NATO could do in the event of possible Soviet attack. Dulles said the United States "deplores" the sale of Russian submarines to Egypt. Washington, he said, has not yet considered whether to send compensating arms to Israel, though an imbalance in the military situation may have been created.

President Tito of Yugoslavia today accused Russia of malighing his government. Tito did not refer to Russia by name. He said leaders of "some " Communist countries profess friendship while..at the same time..they issue party directives saying "everything in Yugoslavia bristles with revisionism, anarchism and capitalism." Tito called this "unfriendly and malicious." He said, "We demand that our situation not be distorted and that what is good and positive in our country be stated. Only in such a way," he said, "can good relations be maintained." Tito spoke before a workers congress in Belgrade..attended by delegates from 21 countries, including Red China. Tito noted that other Communist governments are not perfect. "It would be very bad," he said, "if we started counting their mistakes. "

The Senate Foreign Relations Committee today approved a resolution calling for a special session of the United Nations General Assembly to take up the question of Soviet brutality in Hungary. It asks the State Deprtment to press for such action..in the light of the recent United Nations report on that subject. Vice President Nixon said today that the money spent by the United States in economic assistance to uncommitted countries "is an investment in our freedom and indepencence." And anyone who would make a "substantial" cut in the defense budget, he said, is risking America's security. Mr. Nixon spoke before the United States Junior Chamber of Commerce meeting in Milwaukee.

The Labor Department says the cost - of -living went up three -tenths of one percent last month to reach a new all-time high. Living costs have now risen for nine consectuive months, The latest increase is due principally to higher prices for food. Nearly a million workers in the aircraft, metals and meat packing industries..who have so-called escalator clauses written in their contracts..will automatically recieve pay increases ranging from one to three cents an hour. The Labor Department indicated living costs will go still higher in June with a possible leveling off in July.

In Williamsburg, Virginia, the governors conference today took up President Eisenhower's proposal that certain functions of the federal government ..such as disaster relief and slum clearance..be returned to the states. Mr. Eisenhower suggested that a joint federal - state committee be appointed to study the question. And a resolution calling for establishment of such a committee is being drafted. Neither Republican nor Democratic governors are showing enthusiasm for the President's proposal.

The court martial of Colondl John Nickeroon, the U.S. Army missiles expert, opened today in Huntsville, Alabama. The prodeedings have been

compared to those conducted against General Billy Mitchell in 1925. For the story of what happened today...and some of the background..we switch now to Bill Shadel in Huntsville, Alabama.

SHADEL: It took only a couple of claps of thunder with the accompanying stabs of lightning to clear the atmosphere at the very opening of the trial by courtmartial of Colonel John C. Nickerson; it was as sudden as that. First came the prosecution's withdrawal of charge number two against the Colonel, charges covering espionage and perjury or false swearing. And while we were still blinking from that sudden change of the proceeding, the defense came up with its plea of "guilty" to the other remaining charge, which carries with it fifteen specifications on alleged disclosures of clasified informattion to unauthorized persons. Legal officers and reporters were soon scrambling about the courtroom to find out what next in the proceedings. At this distance now, the courtmartial would appear to be a sacrifice of Colonel Nickerson's immediate military future for the sake of the cause; the cause being nothing less than the far - reaching arguments against transfering the development and control of missiles of intermediate range from the Army to the Air Force. The cause being also Colonel Nickerson's firm conviction that development at the Army's Red Stone Missile Center of the Jupiter missile was far superior and far ahead of anything else in the field, despite an order of Secretary of Defense Wilson to the contrary. In interivews yesterday, the Colonel said he thought he had made some progress in getting those orders changed, the orders which threaten the very existence of the Jupiter missile. It would have been disloyal of him, he said, if he hadn't challenged the Department of Defense and he was proceeding in the best way he knew how.

Well, now, this afternoon a revealing start to the defense's case for mitigating circumstances. Rocket expert Dr. Ernst Stuhlinger testified openly to the effect that the Jupiter missile was far superior to the Air

Force rival Thor and, to a dramatic question from defense counsel Jenkins, the doctor agreed the sooner Colonel Nickerson got back on the job "the sooner we will have a completed Jupiter."

But this does not brush aside the remaining serious charges to which the Colonel pleaded guilty this morning, and according to which he will be sentenced with lenciency or full penalty depending on the 10-man military court. Under the fifteen specifications remaining, a maximum sentence could be meted out of thirty years in jail. The prosecution will protect its case as presented today after and despite the plea of guilty. Exhibits 16 to 19, for instance, classified Top Secret documents, found in the Colonel's home unguarded; a letter to a magazine editor enclosing top secret analysis of the Jupiter missile's test flights, a letter in which the Colonel admitted these were top secrets, should be copies, and the original returned to him forthwith. Counsel Jenkins has suggested to CBS News earlier the defense might admit to techincal violations of security regulations. Jenkins now says he thinks the defense is in a much better position to present arguments regarding the basic and original purposes of Colonel Nickerson;a behavior which has led to this trial. Jenkins, at the opening of the trial this morning, asked the ten members of the military court their attitude toward such circumstances: would they give due weight to the high motives of the defendant; to his record of efficient, faithful, loyal service? These questions the prosectuion objected, saying they sounded more like the closing arguments of the defense. Looking back now, it seems obvious that Jenkins was setting the pattern, a pattern of appeal for leniency considering the high purpose which motivated the Colonel. Mr. Jenkins estimates it will take some six or seven days to present evidence; some twelve to fifteen witnesses to be called; and after that will come the sentence.

The opening of a courtmartial is a serious moment, the solemn swearing of the ten - man military court, the trial counsel, the defense counsel, examinations of the members of the court, four of them West Point graduates, and the question would they be thus inclined to more leniency with a fellow-graduate, Colonel Nickerson, than with an ordinary soldier. Mrs. Nickerson and her two children sat wide-eyed in the front row of the public seats. Only a dozen there as spectators but some fifty or sixty reporters on hand. By four o'clock this afternoon, the testimony had gotten into the (indistinct) of secret information as it was bound to sooner or later, and the court adjourned (poor recording) chamber where it can hear those secrets discussed with imunity.

Now back to Ed Murrow in New York.

MURROW: That was my colleague, Bill Shadel, reporting on what happened today at the Colonel Nickerson court martial.

The first hurricane of the season developed today in the Gulf of Mexico. And a hurricane alert has been issued for the Texas and Louisiana coasts. The storm..at last report...was centered 350 miles southeast of Brownsville, Texas, and moving north about five miles an hour. Winds at the center of the storm are estimated at 75 miles an hour.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is Goerge Bryan.

BRYAN:

MURROW: A major element in the Nickerson case is the rivalry between the armed forces. In this instance, the rivalry between the Army and Air Force in developing the intermediate range missile. The Greek poet Hesiod said, "Rivalry is good for mortals." But in the realm of defense, there has to be a delegation of tasks. For as Emerson said, "Concentration is the secret of strength."...Good night and good luck

Edward R. Murrow Wed., June 26, 1957

This is the news:

President Eisenhower said today that the steady rise in living costs is "alarming". The President told his news conference that management and labor should forego higher prices and higher wages when they are not necessary. He ruled out direct government controls on wages and prices. Resorting to such action in time of peace, he said, would be "to abandon the system that has made us great."

Mr. Eisenshower commented on the recent decisions of the Supreme Court...curbing the punitive and investigative powers of the government. He said he has had "very great trouble" understanding some of these decisions. At the same time, he called the Supreme Court "one of the great stabilizing influences in this country, which keeps us from going to one extreme or the other."

Mr. Eisenhower said he has been told...by some scientists...that the United States could have an "absolutely clean" hydrogen bomb, if test explosions were continued another four or five years. These scientists, he said, also told him that uninterrupted tests would enable them get "full value" out of the atom for peacetime use. (The reference here apparently is to three physicists from the University of California who saw the President on Monday, in company with Chairman Straws of the Atomic Energy Commission. They told reporters...on leaving the White House...that the latest American nuclear weapons are about 95 percent "clean," which is to say free of radio-active fallout.) Mr. Eisenhower said today that despite the information given to him by these scientists, the United States will continue to work for an iron-clad agreement for ending nuclear weapons tests. He was reporting this information, he said, to show that the question is "not black and white but one where judgment must be exercised." The President then listed these conditions as indispensable to any agreement for halting nuclear tests: Limited aerial inspection, a cut-off in production of atomic weapons, and possibly an agreement on arms reduction.

Today...in London...the United States made another offer as part of its "first step" disarmament proposal. It suggested a reduction in conventional arms, with the surplus of guns, ships, tanks and planes to be placed in specified depots, subject to international inspection and control. The American delegate, Harold Stassen, said the cuts need not be made on a fixed percentage basis. That is, on such a basis as Russia and the United States each mothballing 10 percent of its long-range bombers. Rather, each country would present a list of arms of equal military significance, which it would be willing to retire. Russia immediately accepted this proposal "in principle". So did the other three powers at the disarmament conference---Britain, Canada and France.

Leaders of the 10 British Commonwealth countries met in London today for the first time since the Suez invasion. A communique says today's session was devoted to "a general discussion of the international situation." And we are told, unofficially, that the discussion included disarmament.

Tonight, Britain promised independence within the Commonwealth to Nigeria, its largest African colony. No fixed date for Nigerian independence, however, has been set.

A British coroner decided today that the body of the "frogman" found recently in Chichester harbor is that of Lieutenant Commander Lionel Crabb. Crabb disappeared last year during the visit to England of three Soviet warships. Russia has charged that Crabb was seen in the water near one of the vessels. The coroner said today that he was unable to determine cause of death.

The Chinese Communist "Peoples Congress" convened today in Peiping, and heard a speech by Chou En-lai, premier of Red China. Chou praised the Soviet Union, denounced the United States...and shed new light on the blood-letting by which Chinese Communist leaders have maintained themselves in power. (I should like to discuss this speech further, in a few minutes).

The Communist government of North Korea called today for an international conference to discuss the withdrawal of all foreign troops from North and South Korea. The request was made at Panmunjom, and was promptly rejected by the United Nations Command.

In Washington, President Eisenhower has created a special cabinet committee, to investigate the importation of crude oil into the United States. The six-man committee...headed by Secretary of Commerce Weeks...will determine whether the oil is being imported "in such quantities as to threaten or impair the national security."

President Eisenhower today nominated Randolph Burgess to be permanent United States representative on the North Atlantic Treaty Council. Burgess is presently serving as under-secretary of the Treasury. Mr. Eisenhower also named John C. Doerfer, a Republican, to succeed George McConnaughey as chairman of the Federal Communications Commission. McConnaughey's term as a member of the commission expires the end of the month. Doerfer has been a member since 1953.

~~The White House announces that the prime minister of Pakistan will visit the United States for ten days, starting July 10th.~~

A federal judge today found Frank Brewster, a vice president of the teamsters union, guilty of contempt of Congress on 31 counts. The charges grew out of Brewster's refusal...last January...to answer questions before the Senate investigations subcommittee. Judge John Sirica (SÄ-RICKA) ruled that the subcommittee, contrary to Brewster's contention, was acting "within the range of its authority, and was seeking facts in an area appropriate for legislative action." Brewster told reporters he will appeal.

A Senate appropriations subcommittee today agreed...tentatively... to restore a billion dollars of the cut voted by the House in the defense budget for the next fiscal year. The House slash amounted to 2-billion, 565-million dollars. President Eisenhower has referred to about half of this cut as a "paper saving", which the armed forces could accept. The other half, he said, would impair the aircraft procurement and missile development programs.

The Air Force tested two large missiles today at Cocoa, Florida. It declined to give any details.

Hurricane "Audrey"...in the Gulf of Mexico...is now reported 300 miles south of Lake Charles, Louisiana. It is moving north at 10 miles an hour.

Edward R. Murrow: June 26, 1957. 7.45 p.m.

China's Premier Chou En-lai, in a long speech to Communist party leaders, lashed out at the United States in language full of venom. He warned that the danger of war still exists, "peace is constantly threatened by the imperialist policy of arms expansion, and war preparations under the leadership of the United States." Chou said the new American colonialism will end up no better than the old colonialism. He employed a typical Communist propaganda device when he said the anti-American demonstrations on Formosa occurred after the United States stationed guided missiles there.

In the course of his speech Chou En-lai admitted that his government had staged a gigantic blood bath. It began in 1949 when the communists took over the mainland. About one in six so-called counter-revolutionaries arrested, were killed. Forty-two percent of those arrested were sentenced to what he called "reform through labor", which means slave labor camps. Thirty-two percent were placed under surveillance; and forty-eight percent were freed after what he called "some re-education". He gave no total figure of the number killed, but a statement attributed previously to Mao Tse Tung, but

never officially confirmed, put the number at ~~XXXX~~ eight hundred thousand.

It would appear that one reason for Chou's speech was a warning to what he called the "remnants of counter-revolutionary forces in China." ~~XXXX~~ He warned the nation's non-communist representatives that they may be classed as "enemies of the people" if they persist in their criticism of the regime. He said the people must exercise their power through "democratic centralism"; that is a Leninist concept which means that after the Party has made a decision, it is binding upon all and no deviation will be tolerated.

One reason for Chou's slashing attack on the United States may be another traditional communist device... - that of diverting attention from domestic difficulties by blaming foreign powers. The Chinese are having severe economic troubles. Chou admitted it today, by saying the country had suffered the worst natural calamities in several decades. ~~XXX~~ He said these were "indeed a severe test." There have been many reports out of China telling of mighty floods on the Yellow ~~XXXXXXX~~ River and the Yangtse, and of widespread famine. He said last year's crop was "not so good," and it would be necessary to slow down the tempo of construction this year. This may indicate a reduced emphasis on the development of heavy industry

in China..

Chou En-lai again denied suggestions that there were any differences in the Communist bloc as a result of the suppression of the revolt in Hungary. He said: "The unity of the camp of socialism was strengthened, not weakened, after the Hungarian incident." According to him the Russians had done everything possible to ease world tensions, and the Americans were to blame for everything.

There would appear to be some contradictions between the recent speech by Mao tse Tung, in which he spoke of possible and permissible differences between the leaders and the people, and the speech by Chou En-lai. It may only be a difference in emphasis, but Chou En-lai has again revealed himself to be a staunch Stalinist.

When this reporter interviewed him in Rangoon last December, it was like listening to a worn and familiar phonograph record. And his speech to the Party leaders was in the same groove.

The full text of the speech is not yet available. But one thing at least is clear: his admission of the slaughter of Chinese prisoners wasn't designed to win friends and influence people abroad. Its only purpose must have been as a warning to those Chinese who might be tempted to

become too critical of the present regime.

~~[illegible]~~

Word for Today

The premier of Red China has reminded us...again...of the cruelty of which men are capable. Charles E. Merriam said, "It was a great day for the human race when the idea dawned that every man is a human being." And some one else has remarked, "We need not worry so much about what Man descends from. It's what he descends to that shames the human race."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NEWS

WEDNESDAY, JUNE 26, 1957
7:45--8:00 P.M., E.S.T.

This is the news:

President Eisenhower said today that the steady rise in living costs is "alarming". The President told his news conference that management and labor should forego higher prices and higher wages when they are not necessary. He ruled out direct government controls on wages and prices. Resorting too such action in time of peace, he said, would be "to abandon the system that has made us great."

Mr. Eisenhower commented on the recent decisions of the Supreme Court... curbing the punitive and investigative powers of the government. He said he has had "very great trouble" understanding some of these decisions. At the same time, he called the Supreme Court "one of the great stabilizing influences in this country, which keeps us from going to one extreme or the other.

Mr. Eisenhower said he has been told..by some scientists..that the United States could have an "absolutely clean" hydrogen bomb, if test explosions were continued another four or five years. These scientists, he said, also told him that uninterrupted tests would enable them to get "full value" out of the atom for peacetime use. (The reference here apparently is to three physcists from the University of California who say the President on Monday, in company with Chiarman Straws of the Atomic Energy Commission. They told reporters... on leaving the White House..that the latest American nuclear weapons are about 95 percent "clean" which is to say free of radio - active fallout. Mr. Eisenhower said today that despite the information given to him by these scientists, the United States will continue to work for an iron - clad agreement for ending nuclear weapons tests. He was reporting this information, he said, to show that the question is "not black and white but one where judgement must

be exercised." The President then listed these conditions as indispensable to any agreement for halting nuclear tests: Limited aerial inspection, a cut-off in production of atomic weapons, and possible an agreement on arms reduction.

Today....in London..the United States made another offer as part of its "first step" disarmament proposal. It suggested a reduction in conventional arms, with the surplus of guns, ships, tanks and planes to be placed in specified depots, subject to international inspection and control. The American delegate, Harold Stassen, said the cuts need not be made on a fixed percentage basis. That is, on such a basis as Russia and the United States each mothballing 10 percent of its long-range bombers. Rather, each country would present a list of arms of equal military significance, which it would be willing to retire. Russia immediately accepted this proposal "in principle." So did the other three powers at the disarmament conference -- Britain, Canada and France.

Leaders of the 10 British Commonwealth countries met in London today for the first time since the Suez invasion. A communique says today's session was devoted to "a general discussion of the International situation." And we are told, unofficially, that the discussion included disarmament.

Tonight, Britain promised independence within the Commonwealth to Nigeria, its largest African colony. No fixed date for Nigerian independence, however has been set.

The Chinese Communist "Peoples Congress" convened today Peiping and heard a speech by Chou En-lai, premier of Red China. Chou praised the Soviet Union denounced the Uni ed States...and shed new light on the blood-letting by which Chinese Communist leaders have maintained themselves in power. (I should like to discuss this speech further in a few minutes.)

The Communist government of North Korea called today for an international conference to discuss the withdrawal of all foreign troops from North and South Korea. The request was made at Panmunjom and was promptly rejected by the United Nations Command.

In Washington, President Eisenhower has created a special cabinet committee to investigate the importation of crude oil into the United States. The six-man committee...headed by Secretary of Commirce Weeks..will determine whether the oil is being imported "in such quantities as to threated or impair the national security."

President Eisenhower today nominated Randolph Burgess to be permanent United States representative on the North Atlantic Treaty Council. Burgess is presently serving as under-secretary of the Treasury. Mr. Eisenhower also named John C. Doerfer, a Republican, to succeed George McConnaughey as chairman of the Federal Communications Commission. McConnaughey's term as a member of the commission expires the end of the month. Doerfer has been a member since 1953.

A federal judge found Frank Brewster, a vice president of the teamsters union, guilty of contempt of Congress on 31 counts. The charges grew out of Brewsers's refusal..last January...to answer questions before the Senate investigations subcommittee. Judge John Sirica ruled that the subcommittee contrary to Brewster's contention, was acting "within the range of its authority and was seeking facts in an area appropriate for legislative action." Brewster told reporters he will appeal.

A Senate appropriations subcommittee today agreed...tentatively..to restore a billion dollars of the cut voted by the House in the defense budget for the next fiscal year. The House slash amounted to 2-billion, 565-million dollars. President Eisenhower has referred to about half of this cut as a "paper saving" which the armed forces could accept. The other half, he said, would impair the aircraft procurement and missile development programs.

The Air Force tested two large missiles today at Cocoa, Florida. It declined to give any details.

Hurricane "Audrey".in the Gulf of Mexico..is now reported 300 miles south of Lake Charles, Louisiana. It is moving north at 10 miles an hour.

China'a Premier Chou En-lai, in a long speech to Communist party leaders, lashed out at the United States in language full of venom. He warned that the danger of war still exists, "peace is constantly threatened by the imperialist policy of arms expansion, and war preparations under the leadership of the United States." Chou said the new American colonialism will end up no better than the old colonialism..He employed a typical Communist propaganda device when he said the anti-American domonstrations on Formosa occurred after the United States stationed guided missiles there.

In the course of his speech Chou En-lai admitted that his government has staged a gigantic blood bath. It began in 1949 when the Communists took over tha mainland. About one in six so-called counter-revolutionaries arrested, were killed. Forty-two percent of those arrested were sentenced to what he called "reform through labor", which means slave labor camps. Thirty-two percent were placed under surveillance; and forty-eight percent were freed after what he called "some re-education". It would appear that one reason for Chou's speech was a warning to what he called the "remannts of counter-revolutionary forces in China." He warned the nation's non-communist representatives that they may be classed as "enemies of the people" if they persist in their criticism of the regime. He said the people must exercise their power through "democratic centralism;"that is a Leninist concept which means that after the Party has made a decision, it is binding upon all and no deviation will be tolerated.

One reason for Chou's slashing attack on the United States may be another traditional Communist device..that of diverting attention from domestic difficulties by blaming foreign powers. The Chinese are having severe economic troubles. Chou admitted it today, by saynng the country had suffered the worst

natural calamities in several decades. He said these were "indeed a severe test." There have been many reports out of China telling of mighty floods on the yellow River and the Yangtse, and of widespread famine. He said last year's crop was "not to good,' and it would be necessary to slow down the tempo of construction this year. This may indicate a reduced emphasis on the development of heavy industry. in China.

Chou En-lai again denied suggestions that there were any differences in the Communist bloc as a result of the suppression of the revolt in Hungary. He said "The unity of the camp of socialism was strengthened, not weakened, after the Hungarian incident." According to him, the Russians had done everything possible to ease world tensions, and the Americans were to blame for everything.

There would appear to be some contradictions between the recent speech by Mao tse Tung, in which he spoke of possible and permissible differences between the leaders and the people, and the speech by Chou En-lai. It may only be a difference in emphasis, but Chou En-lai has again revealed hismelf to be a staunch Stalinist.

When this reporter interviewed him in Rangoon last December, it was like listening to a worn and familiar phonograph record. And his speech to the Party leaders was in the same groove.

The full text of the speech is not yet available. But one thing at least is clear: his admission of the slaughter of Chinese prisoners wasn't designed to win friends and influence people abroad. Its only purpose must have been as a warning to those Chinese who might be tempted to become too critical of the present regime.

This is Ed Murrow I'll be back in a moment with the Word for Today. Now, here id George Bryan.

BRYAN:

MURROW:The premier of Red China has reminded us...again...of the cruelty of which men are capable. Charles E. Merriam said, "It was a great day for the human race when the idea dawned that every man is a human being." And some one else has remarked, "We do not worry so much about what Man descends from. It's what he descends to that shames the human race."

Goodnight and good luck.

Edward R. Murrow Thurs., June 27, 1957

This is the news:

Secretary of Defense Wilson said today that at least 25-thousand U.S. Army troops will be out of Japan by Christmas. /This would leave about 50-thousand American Air Force men in Japan, plus about 20-thousand Navy personnel. /Wilson told his news conference that the withdrawal...agreed on last week by President Eisenhower and Prime Minister Kishi...was "not a sudden decision, but...rather...part of a long-term plan related to the build-up of Japanese security forces." /The United States, he said, also plans to reduce its garrisons in other countries, so far as military streamlining will permit. /These would not be mass withdrawals, as in the case of Japan. /Wilson said there is "no ban on anything" in modernizing the American military establishment in South Korea. He ventured that

2nd Hill
Miss Mulford
ca

a ban on nuclear weapons tests "would just be sort of a nuisance" in the production of those weapons. "What we are trying to do," he said, "is start the beginning of a trend in the right direction." He said, "Real disarmement has got to be based on sufficient proper inspection to inspire mutual confidence that it is going to be carried out." But this, he added, is all something for the President and Secretary of State Dulles to decide.

The retiring member of the Atomic Energy Commission...Thomas Murray... said today that the United States would be "indefensibly reckless", if it stopped testing all nuclear weapons. Murray said...as he has in the past... that he favors an end to the testing of the big hydrogen bombs. But he urged continuation of tests in the smaller, kiloton range. The United States, he said, should expand its production of small atomic weapons so it would have a stockpile "in the tens of thousands" for use, if need be, in a limited war. Murray said the public should be informed that nuclear weapons with no fallout are not available at this time. He did not deny that a "clean" bomb can be produced. But he said any belief that the radiation hazards of nuclear war have been substantially lessened...as of now..."is not supported by the facts."

In London today, delegates to the five-power disarmament conference met for only an hour. / One reason for the short meeting was that the American representative, Harold Stassen, had a private talk in the morning with the delegate from Russia, Valerian Zorin. In the meeting at which all five countries were represented...in the afternoon...Stassen suggested that a committee of experts start work immediately on the specific details of disarmament proposals already advanced. Zorin balked at this. He said he wanted to wait until all issues had been thrashed out in general terms.

Vice President Nixon said today that Russia should accept the United States offer for an exchange of radio and television programs. He also called on Russia...in a speech before the Kiwanis in Atlantic City...to stop jamming Voice of America broadcasts, to stop censoring news stories filed by foreign correspondents, to lift restrictions on travel inside the Soviet Union, and to allow Russians of "all walks of life" to visit the United States under an exchange program. Nixon said Russian acceptance of any of these proposals would be "an evidence of Soviet good faith." / There has been, he said, too much "defeatist talk" about Administration foreign policy. He said, "What we need is a break-through for peace. We must contain Communism without war. But we must go further and try to set in motion changes in the Communist

→

empire which will enable us to have real peace, not just an armed truce."

The United States Court of Appeals in Washington today upheld the right of the State Department to deny passports to persons who refuse to sign non-Communist affidavits. The court ruled in the cases of Dr. Walter Briehl, a Los Angeles psychiatrist, and artist Rockwell Kent. The decision was split 5 to 3. It was the majority opinion that "prohibitions upon traveling abroad have been enforced in periods of stress since time immemorial. It would be idle," the majority said, "if not ridiculous, in view of the absorption of the whole world in the problem of the Communist program for any court to say the present is not a period of stress in international affairs." It was the opinion of Chief Judge Henry Edgerton, one of the three who dissented, that "we have temporized too long with passport practices in the State Department. Iron curtains," he said, "have no place in the free world." Both Kent and Briehl plan to appeal to the Supreme Court.

Also in Washington, U.S. District Judge Charles McLaughlin heard arguments today on a defense motion for acquittal of playwright Arthur Miller on charges of contempt of Congress. Last month, Judge McLaughlin found Miller guilty of the charges...growing out of his refusal to name persons

who attended a Communist-sponsored meeting in 1947. Today, Miller's attorney, Joseph Rauh, asked McLaughlin to reverse himself in the light of the recent Supreme Court decision in the Watkins case. In that case, the Supreme Court threw out the contempt conviction of labor organizer John Watkins on grounds that Congress has no power "to expose for the sake of exposure," but must have a legislative purpose. (Like Miller, Watkins refused to name past associates). Judge McLaughlin heard arguments for two hours and took the defense motion under advisement. He plans to rule on the motion tomorrow.

The Administration is about to announce its position with regard to the Supreme Court decision...of June 3rd...in the so-called Jenck's case. This is the case in which the court ruled that defendants in a criminal trial are entitled to examine the F.B.I. reports of informants who testify against them. In his dissenting opinion, Justice Clark said that if the decision were allowed to stand, government intelligence agencies engaged in law enforcement "might as well close up shop." The White House said today that the Administration view will be presented to the Senate Judiciary Subcommittee tomorrow by Attorney General Brownell. Brownell, it said, will urge legislation to correct "loopholes" created by the Supreme Court decision.

5A

Red China today announced that a secret anti-Communist organization had been smashed after engaging in "counter-revolutionary activities." The announcement by the Peiping radio identified the organization as "the China National Construction Party." My colleague, Guy Searls... who is in Hong Kong...quotes the Peiping broadcast as saying leaders of the underground party have been arrested and have confessed. Peiping indicates the movement was active among Chinese university students.

The Communists admitted publicly today that "contradictions" exist in East Germany. The East German leader, Walter Ulbricht, made the admission in a speech delivered more than a month ago but published only today in the Communist press. Ulbricht complained that "bourgeois ideology" still dominates the East German universities. Too many party workers, he said, are occupying themselves with mistakes of the past.

Russia told West Germany today...in a formal note...that nuclear armament of Germany and German reunification are "irreconcilable". It dismissed last month's Bonn statement that West Germany has no atomic weapons...and has asked for none...as "election campaign propaganda". (West Germany has an election in September).

The House Foreign Affairs Committee today asked President Eisenhower to cancel the agreements the United States has with other countries...which enable American GI's to be tried in foreign courts. The vote for the resolution was 18 to 8.

Colonel John Nickerson testified in his own defense today...in the court-martial in Huntsville, Alabama. Nickerson, who is a missiles expert in the Army, has pleaded guilty to permitting secret defense information to come into the hands of unauthorized persons. He strongly opposed Secretary Wilson's order...of last November...assigning development of the intermediate range missle to the Air Force. Nickerson had been working on the same project for the Army. He said today that if the Army lags in the scientific development of weapons, the United States will have a "second-best poker hand" in any future war. He charged that in curtailing the Army's guided missile program, Wilson had committed "a grave error."

A Senate appropriations subcommittee voted unanimously today to restore nearly 972-million dollars of the two and a half billion dollar cut IN DEFENSE FUNDS approved earlier this year by the House. The measure now goes to the full appropriation committee.

The House Post Office Committee today approved across-the-board pay increases for 500-thousand postal workers. The increases range up to 546 dollars a year...and, altogether in one year, would cost the government something in the neighborhood of 350-million dollars.

U.S. Steel announced tonight that it is raising the price of steel by about 6 dollars a ton. The company said the price increase was necessary because of higher wages and other worker benefits. It goes into effect July first.

A Senate-House conference committee agreed tonight to continue the surplus crop section of the soil bank program through 1958.

The latest advisory on Hurricane Audrey placed the storm 30 miles west of Alexandria, in west-central Louisiana. Its highest winds have dropped to 75 miles an hour. And all hurricane warnings have been ordered down along the Texas-Louisiana coast.

This London talks are moving slowly —

nor ~~Mr. Dulles would put it that way.~~ The President said yesterday that he had hopes for an agreement to end nuclear tests. No doubt this is strictly accurate. For if the Russians would accept our far-reaching inspection and control system, we would be ready to give up testing and nuclear weapons as well. But for the President to say he hopes this will happen is a long way from saying that it is to be expected, or that the tests probably will end quite soon.

Word for Today

The vital role of the United States in world affairs [redacted] is demonstrated by the news that is made each day. It is a responsibility not of our choosing. Nor can it be borne lightly. Woodrow Wilson said...in another time of grave American responsibility: "Men's hearts wait upon us. Men's lives hang in the balance. Men's hopes call upon us to say what we will [redacted] do."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

THURSDAY, JUNE 27, 1957
7:45--8:00 P.M., E.S.T.

This is the news:

Secretary of Defense Wilson said today that at least 25-thousand U.S. Army troops will be out of Japan by Christmas. This would leave about 50-thousand American Air Force men in Japan, plus about 20-thousand Navy personnel. Wilson told his news conference that the withdrawal...agreed on last week by President Eisenhower and Prime Minister Kishi...was "not a sudden decision, but...rather...part of a long-term plan related to the build-up of Japanese security forces." The United States, he said, also plans to reduce its garrisons in other countries so far as military streamlining will permit. These would not be mass withdrawals, as in the case of Japan. Wilson said there is "no ban on anything" in modernizing the American military establishment in South Korea. He ventured that a ban on nuclear weapons tests "would just be sort of a nuisance" in the production of those weapons. "What we are trying to do," he said, "is start the beginning of a trend in the right direction." He said, "Real disarmament has got to be based on sufficient proper inspection to inspire mutual confidence that it is going to be carried out." But this, he added, is all something for the President and Secretary of State Dulles to decide.

The retiring member of the Atomic Energy Commission...Thomas Murray... said today that the United States would be "indefensibly reckless", if it stopped testing all nuclear weapons. Murray said...as he has in the past...that he favors an end to the testing of the big hydrogen bombs. But he urged continuation of tests in the smaller, kiloton range. The United States, he said, should expand its production of small atomic weapons so it would have a stockpile "in the tens of thousands" for use, if need be, in a limited war. Murray said the public should be informed that nuclear weapons with no fallout are not available at this time. He did not deny that a "clean" bomb can be produced. But he

said any belief that the radiation hazards of nuclear war have been substantially lessened..as of now..."is not supported by the facts."

In London today, delegates to the five-power disarmament conference met for only an hour. One reason for the short meeting was that the American representative, Harold Stassen, had a private talk in the morning with the delegate from Russia, Valerian Zorin. In the meeting at which all five countries were represented...in the afternoon..Stassen suggested that a committee of experts start work immediately on the specific details of disarmament proposals. already advanced. Zorin balked at this. He said he wanted to wait until all issues had been thrashed out in general terms.

Vice President Nixon said today that Russia should accept the United States offer for an exchange of radio and television programs. He also called on Russia...in a speech before the Kiwanis in Atlantic City..to stop jamming the Voice of America broadcasts, to stop censoring news stories filed by foreign correspondents, to lift restrictions on travel inside the Soviet Union, and to allow Russians of "all walks of life" to visit the United States under an exchange program. Nixon said Russian acceptance of any of these proposals would be "an evidence of Soviet good faith." There has been, he said, too much "defeatist talk" about the Administration foreign policy He said,"What we need is a break-thourgh for peace. We must contain Communism without going to war. But we must go further and try to set in motion changes in the Communist empire which will enable us to have real peace, not just an armed truce."

The United States Court of Appeals in Washington today upheld the right of the State Department to deny passports to persons who refuse to sign non-Communist affidavits. The court ruled in the cases of Dr. Walter Briehl, a Los Angeles psychiatrist, an artist Rockwell Kent. The decision was split 5 to 3. It was the majority opinion that "prohibitions upon traveling abroad have been enforced inperiods of strest since time immemorial. It would be idle", the

majority said, "if not ridiculous, in view of the absorbtion of the whole world in the problem of the Communist program for any court to say the present is not a period of stress in international affairs." It was the opinion of Chief Judge Henry Edgerton, onee of the three who dissented, that "we have temporized too long with passport practices in the State Department. Iron curtains," he said, "have no place in the free world." Both Kent and Breihl plan to appeal to the Supreme Court.

Also in Washington, U.S. District Judge Charles McLaughlin heard arguments today on a defense motion for acquittal of playwright Arthur Miller on charges of contempt of Congress. Last month, Judge McLaughlin found Miller guilty of charges growing out of this refusal to name persons who attended a Communist - sponsored meeting in 1947. Today Miller's attorney, Joseph Rauh, asked McLaughlin to reverse himself in the light of the recent Supreme Court decision on the Watkins case. In that case, the Supreme Court threw out the contempt conviction of labor organizer John Watkins on grounds that Congress has no power "to expose for the sake of exposure," but must have a legitlative purpose. (Like Miller, Watkins refused to name past associates). Judge McLaughlin heard arguments for two hours and took the defense motion under advisement. He plans to rule on the motion tomorrow.

The Administration is about to announce its position with regard to the Supreme Court decison....of June 3rd..in the so - called Jenck's case. This is the case in which the court ruled that defendants in a criminal trial are entitled to examine the F. B. I. reports of informants who testify against them. In his dissenting opinion, Justice Clark said that if the decision were allowed to stand, government intelligence agencies engaged in law enforcement "might as well close up shop." The White House said today that the Administration view will be presented to the enate Judiciary Subcommittee tomorrow by Attorney General Brownell. Brownell, it said, will urge legislation to correct

"loopholes" created by the Supreme Court decision.

Red China today announced that a secret anti-Communist organization had been smashed after engaging in "counter - revolutionary activities." The announcement by the Peiping radio, identified the organization as "the China National Construction Party." My Colleague, Guy Searls..who is in Hong Kong... quotes the Peiping broadcast as saying leaders of the underground party have been arrested and have confessed. Peiping indicates the movement was active among Chinese university students.

To the Communists admitted publicly today that "contradictions" exist in East Germany. The East German leader, Walter Ulbricht, made the admission in a speech delivered more than a month ago but published only today in the Communist press. Ulbricht complained that "bourgiois ideology" still dominates the East German universities. Too many party workers, he said, are occupying themselves with mistakes of the past.

Russia told West Germany today...in a formal note..that nuclear armament of Germany and German reunification are "irreconcilable." It dismissed last month's Bonn statement that West Germany has no atomic weapons...and has asked for none..as "election campaign propaganda". (West Germany has an election in September.)

The House Foreign Affairs Committee today asked President Eisenhower to cancel the agreements the United States has with other countries..which enable American GI's to be tried in foreign courts. The vote for the resolution was 18 to 8.

Colonel John Nickerson testified in his own defense today..in the court-martial in Huntsville, Alabama. Nickerson, who is a missiles expert in the army, has pleaded guilty to permitting secret defense information to come into the hands of unauthorized persons. He strongly opposed Secrtary Wilson's order..

...of last November...assinning development of the intermediate range missile to the Air Force. Nickerson had been working on the same project for the Army. He said today that if the Army lags in the scientific development of weapons, the United States will have a "second - best poker hand" in any future war. He charged that in curtailing the Army's guided missile program, Wilson had committee "a grave error."

A Senate appropriations subcommittee voted unanimously today to restore nearly 972 - million dollars of the two and a half billion dollar cut in defense funds approved earlier this year by the House. The measure now goes to the full appropriations committee.

The House Post Office Committee today approved across- the - board pay increases for 500-thousand postal workers. The increase range up to 546 dollars a year...and, although in one year, would cost the government something in the neighborhood of 350 million dollrrs.

U. S. Steel anounced tonight that it is raising the price of steel by about 6 dollars a ton. The company said the price increase was necessary because of higher wages and other worker benefits. It goes into effect July first.

A Senate - House conference committee agreed tonight to continue the surplus crop section of the soil bank program through 1958.

The latest advisory on Hurricane Audrey placed the storm 30 miles West of Alexandria, in west-central Louisiana. Its highest winds have dropped to 75 miles an hour. And all hurricane warnings have been ordered down along the Texas-Louisiana coast.

While discussing the London talks on disarmament, the President said yesterday that he had hopes for an agreement to end nuclear tests. No doubt this is strictly accurate. For if the Russians would accept our far- reaching inspection and control system, we would be ready to give up testing and nuclear weapons as well. But for the President to say he hopes this will happen is a long way from saying that it is to be expected, or that the tests probably

will end quite soon.

This is Ed Murrow. I'll be back in a moment with the "Word for Today". Now, here is George Bryan.

BRYAN:

MURROW: The vital role of the United States in world affairs is demonstrated by the news that is made each day. It is a responsibility not of our choosing. Nor can it be borne lightly. Woodrow Wilson said...in another time of grave American responsibility:" Men's hearts wait upon us. Men's lives hang in the balance. Men's hopes call upon us to say that we will do."

Good night and good luck.

Edward R. Murrow Fri., June 28, 1957

This is the news:

Reports from Louisiana show hurricane Audrey in the proportions of a major disaster. The storm struck the Louisiana coast early yesterday; then was followed by a tidal wave...that rolled in over the low ground. Communications have been disrupted. But it now seems certain that the fishing village of Cameron, three miles inland, was hardest hit. Ed Planer (PLAINER), a reporter at W.D.S.U.-T.V., in New Orleans, flew over Cameron. Here is his report, as he telephoned it to us from Lake Charles:

(Tape runs 2:35
Returns on cue: "--the town is virtually isolated."

That was Ed Planer (PLAINER), reporting by telephone from Lake Charles, Louisiana. He was describing how the villiage of Cameron looked this afternoon from

the air.

The White House says full resources of the military establishments in the disaster area have been made available for rescue work. These include seven helicopters released to the Coast Guard by the Fourth Army Headquarters at Fort Houston, Texas. Civil Defense teams...dispatched on instructions from the President...are now on the scene, evaluating damage and casualties. The White House says according to its information...received in Washington... 150 persons were killed in the Cameron area. This is an unofficial estimate.

Gene Goss...at K.W.K.H., Shreeveport...has been piecing together reports of the disaster, as he has been receiving them there. We switch now to Shreeveport and Gene Goss.

(Tape runs 2:15
Returns on cue: "Now back to
Edward R. Murrow.")

That was Gene Goss, reporting from Shreeveport. As he said, the full extent of the disaster may not be known for days.

Secretary of State Dulles said today...in a major policy speech...that it would be "folly" for the United States to recognize Communist China. Communism in China, he said, "as elsewhere," is a passing and not a perpetual phase." Dulles said, "We owe it to ourselves, our allies and the Chinese people to do all that we can to contribute to that passing." He warned that the seating of the Red Chinese in the United Nations would not "be in the interest, either of the United States or of the United Nations." And the United States, he said, will not trade with Red China, which he described as a "hostile" regime. Nowhere in his speech did Mr. Dulles mention the possibility of relaxing the ban on American reporters in Red China.

Mr. Dulles' speech will be HEARD over most of these CBS Radio stations at nine thirty tonight, Eastern time.

The House Foreign Affairs Committee voted today to slash 600-million dollars from the Administration foreign aid program. More than half the reduction is in money sought for military assistance.

President Eisenhower today cut 456-million dollars from his budget request for military construction. The request...as revised...calls for appropriation of a billion, 665-million dollars.

The House today approved and sent to the Senate a bill permitting lower down payments for FHA-insured homes.

And the Senate Appropriations Committee voted to restore nearly a billion dollars cut by the House in funds for the armed forces.

The Senate Finance Committee recommended confirmation of Robert B. Anderson as secretary of the Treasury.

The Republic Steel Corporation said today that it will follow the lead of U.S. Steel and raise its price for steel by roughly 6 dollars a ton. As in the case of U.S. Steel, the increase goes into effect July first. Robert Anderson said today that he "wished" the increases had not taken place. But as to the cause of the increases, he said he was "not a competent witness." U.S. Steel and Republic have blamed their action primarily on increased labor costs.

A Senate committee today voted to restrict the scope of the recent Supreme Court decision in the Jencks case. The court ruled that defendants in a criminal trial are entitled to access to the F.B.I. reports of witnesses who testify against them. The measure approved today would let the trial judge decide what reports the defendant may see, according to whether the information...in the judge's opinion...is pertinent. The committee acted immediately after Attorney General Brownell told it that such legislation is needed to avoid "serious miscarriage of justice." Chairman O'Mahoney said he hopes to bring the measure to the Senate floor within a week.

A federal judge today reaffirmed his conviction of playwright Arthur Miller on charges of contempt of Congress. Miller's attorneys had asked U.S. District Judge Charles McLaughlin to reverse the conviction in the light of the Supreme Court decision in the Watkins case. The decision was that Congress has no power "to expose for the sake of exposure", but that its inquiries must have a legislative purpose...and that, on demand, the pertinency of questions put by an investigating committee must be explained. Today, Judge McLaughlin decided that the Watkins ruling applies to only one of the two counts on which Miller was indicted. He said the pertinency of one

of the questions Miller refused to answer was not challenged. Both counts involved Miller's refusal to name persons attending a Communist-sponsored meeting of writers in 1947.

A team of five scientists has de-activated the nuclear device that failed to go off today at the Nevada proving grounds. The scientists climbed the 500-foot detonating tower and disarmed it after volunteering for the task. It was the third misfire since the nuclear tests were begun in Nevada in 1951. The Atomic Ebergy Commission says: "This morning's non-detonation was apparently caused by a failure of power to reach the device." And it adds: "As yet we do not know why this happened."

The United States today rejected an Arab appeal that American military aid to France be suspended. The request was made by 11 Arab governments because of French action against rebel forces in Algeria.

Next week, this reporter will take leave of this microphone and go on vacation. My good friend and colleague, Charles Collingwood, will take my place. You know him well. While I am gone, I will...in the words of Josh Billings, "search for things that are little, for things that are lonesum...avoiding all torch lite proseshuns, bands of brass and wimmins' rights conventions."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Friday, June 28, 1957
7:45 - 8:00 P.M.

MURROW: This is the news. Reports from Louisiana show Hurricane Audrey in the proportions of a major disaster. The storm struck the Louisiana coast early yesterday, then was followed by a tidal wave that rolled in over the low ground. Communications have been disrupted. But it now seems certain that the fishing village of Cameron, three miles inland, was hardest hit. Ed Plainer, a reporter at WDSU-TV in New Orleans, flew over Cameron. Here is his report as he telephoned it to us from Lake Charles.

PLAINER: The face of death is everywhere as boats of all description are bringing back refugees from Cameron. The latest estimate on the number of dead is 180, a figure supplied by Cameron Sheriff O. T. Carter. The number of missing is still undetermined and probably won't be known until the angry waters that now cover a vast part of this area finally subside. At 200-feet in the air it is almost impossible to pinpoint what's left of Cameron. Houses are scattered in a patchwork fashion; cars are stacked upon top of cars; water covers a great part of what evidently once was the town itself. The scene is one of utter devastation. There are very few signs of life, although boats are patrolling the area looking for those who still have not been rescued. The whole stretch of the gulf coast, beginning with Pecan Island and moving west to Cameron, is virtually blanketed with water. It's hard to tell wherethe gulf leaves off and where the land once began. In some places the tops of cars stick up through the water. Rows of trees are bent into the water as if the hurricane had felled them with one fell swoop of the hand. Houses are shattered. There're no signs of life except for occasional stray herds of cattle. Most of the death in the area, from Pecan Island to Cameron, must have come to those trying to flee in cars. They never made it. It

will be days before the number of those trapped in their cars is known. One family (indistinct) started waving from the rooftop - but they were the only persons we saw on the entire flight. (indistinct) the Rockefeller Wild Life Preserve appears to have been washed away. (indistinct)... came to the ...? appear to be ok, although water is practically up to the roof of the houses. Flying over the area, one can see steps leading up to a house but no house. A school bus lies practically submerged just east of Cameron; and there's no way of knowing how many children, if any, were in the bus. At certain places you can see a road running like ribbon through a stretch of blue and then the water covers the road again. It's as if there had never been any land at all, just water and more water.

At Lake Charles most of the damage has been from the wind, not from water. Broken trees and shrubbery are everywhere; broken glass litters the streets. The City Hall has been transformed into civil defense headquarters. At the airport two hangers were crumpled by the high winds and tossed about like toys. Practically all of the phone lines out of the city are out; the town is virtually isolated.

MURROW: That was Ed Plainer, reporting by telephone, from Lake Charles, La. He was describing how the village of Cameron looked this afternoon from the air.

The White House says the full resources of the military establishment in the disaster area have been made available for rescue work. These include seven helicopters, released to the Coast Guard by the 4th Army headquarters at Fort Houston, Texas. Divil defense teams, dispatched on instructions from the President, are now on the scene evaluating damage and casualties. The White House says according to its information received in Washington, 150 persons were killed in the Cameron area. This is an unofficial estimate.

Gene Goss, at KNXH - Shreveport, has been piecing together reports of the disaster as he has been receiving them there. We

switch to Shreveport and Gene Goss.

GOSS: From here it looks as though the death toll from Hurricane Audrrey will top the 150 figure given the White House as an official estimate. Reports from the deep southwestern corner of Louisiana, where the first tropical storm of the season moored in Thursday, are still scattered. But aeroplanes returning from the flying trips over the scene, have told us some 750 people stranded on housetops and high ground, trying to duck the tidal waves Audrey left behind. The water is just now beginning to recede; and a radio reporter at Lake Charles has told us of huge barges pushed a quarter of a mile inland and now stranded on dry ground as the water goes back. In Cameron, which lies alongside an inlet just a few miles from the gulf, cars were pushed against buildings and collapsed like matchsticks. The death toll in that small city alone is estimated at from 87-to-100, the former figure from the Sheriff's Office, the latter from State Police. The amateur radio network, which for over 24-hours has provided the only communication in southwest Louisiana, quotes official sources as saying Cameron was almost wiped off the map; and that appelation, it is feared, may also apply to Grand Chenier and Creole, two other small gulf communities. In the marsh-like coastlands it may be several days before the full number of casualties are known, for the tides must go completely back down before a thorough search can be made. But theevacuation procedure of those still alive is going forward now. Late today we talked with radio station KPLC at Lake Charles. Eleanor Shirley told us some 2500 persons were still to be evacuated in the Cameron Parish area. She also said that a formal request is being processed for listing of the stricken Louisiana sector as a major disaster area, which would qualify it for emergency Federal aid. But even without the official disaster tag, Federal relief is being rushed in. National Guard, Air Force, Coast Guard troops are on the scene; helicopters have been flown in from second Air Force bases throughout the country and Army engineers are ready to go in with equipment to clean up as soon as the water is down sufficiently for them to go to

work. As of now, the official death estimate is 150. It is feared it will go much, much higher. Now, back to Edward R. Murrow.

MURROW: That was Gene Goss reporting from Shreveport.

Ed. trans. P. O.

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

The storm struck the Louisiana coast early yesterday, then was followed by a tidal wave that rolled in over the low ground. Communications have been disrupted. But it now seems certain that the fishing village of Cameron, three miles inland, was hardest hit. Ed Planer, a reporter at WDSU_TV in New Orleans, flew over Cameron. Here is his report as he telephoned it to us from Lake Charles

PLANER: The face of death is everywhere as boats of all description are bringing back refugees from Cameron. The latest estimate on the number of dead is 180, a figure supplied by Cameron Sheriff, O. T. Carter. The number of missing is still undetermined and probably won't be known until the angry waters that now cover a vast part of this area finally subside. At 200 feet in the air it is almost impossible to pinpoint what's left of Cameron. Houses are scattered in a patchwork fashion; cars are stacked upon top of cars; water covers a great part of what evidently once was the town itself. The scene is one of utter devastation. There are very few signs of life, although boats are patroling the arealooking for those who still have not been rescued. The whole stretch of the gulf coast, beginning with Pecan Island and moving west to Cameron, is virtually blanketed with water. It's hard to tell where the Gulf leaves off and where the land once began. In some places the tops of cars stick up through the water. Rows of trees are bent into the water as if the hurricane had felled them with one fell swoop of the hand. Houses are shattered. There're no signs of life except for occasional stray herds of cattle. Most of the death in the area, from Pecan Island to Cameron, must have come to those trying to flee in cars. They never made it. It

will be days before the number of those trapped in their cars is known. One family (indistinct) started waving from the rooftop - but they were the only persons we saw on the entire flight.(indistinct)..the Rockerfeller Wild Life Preserve appears to have been washed away. (indistinct) ...came to the...? appear to be ok, although water is practically up to the roof of the houses. Flying over the area, one can see steps leading up to a house but no house. A school bus lies practically submerged just east of Cameron; and there's no way of knowing how many children, if any were in the bus. At certain places you can see a road running like a ribbon through a stretch of blue and then the water covers the road again. It's as if there had never been any land at all, just water and more water.

At Lake Charles most of the damage has been from the wind, not from water. Broken trees and shrubbery are everywhere; broken glass litters the streets. The City Hall has been transformed into Civil Defense headquarters. At the airport two hangers were crumpled by the high winds and tossed about like toys. Practicall all of the phone lines out of the city are out; the town is virtaully isolated.

MURROW: That was Ed Planar, reporting by telephone, from Lake Charles, Louisiana. He was describing how the village of Cameron looked this afternoon from the air.

The White House says the full resources of the military establishment in the disaster area have been made available for rescue work. THese include seven helicopters, released to the Coast Guard by the 4th Army headquarters af Fort Houston, Texas. Civil Defense teams, dispatch on instructions from the President, are nowon the scene evaluating damage and casualties. The White House says according to its information received in Washington, 150 persons were killed in the Cameron area. This is an unofficial estimate.

Gene Goss, at KWKH - Shreveport, has been piecing together reports of the disaster as he has been receiving them there. We switch now to Shreveport and Gene Goss.

GOSS: From here it looks as though the death toll drom Hurricane Audrey will top the 150 figure given the White House as an official estimate. Reports from the deep southwestern corner of Louisiana, where the first tropical storm of the season moored in Thursday, are still scattered. But aeroplanes returning from the flying trips over the scene have told us some 750 people stranded on house tops and high ground, trying to duck the tidal waves Audrey left behind. The water is just now beginning to recede; and a radio reporter at Lake Charles has told us of huge barges pushed a quarter of a mile inland and now stranded on dry ground as the water goes back. In Cameron, which lies alongside an inlet just a few miles from the Gulf, cars were pushed against buildings and collapsed like matchsticks. The death toll in that small city alone is estimated at from 87 - to - 100, the former figure from the Sheriff's office, the latter from State Police. The amateur radio network, which for over 24 - hours has provided the only communication in Southwest Louisiana, quoted official sources as saying Cameron was almost wiped off the map; and that appellation, it is feared, may also apply to Grand Chenier and Creole, two other small gulf communities. In the marsh - like coast lands it may be several days before the full number of casualties are known, for the tides must go completely back down before a thorough search can be made. But the evacuation procedure of those still alive is going forward now. Late today we talked with radio station KPLC at Lake Charles. Eleanor Shirley told us some 2500 persons were still to be evacuated in the Cameron Parish area. She also said that a formal request is being processed for listing of the stricken Louisiana sector as a major disaster ares, which would qualify it for emergency Federal aid. But even without the official disaster tag, Federal relief is being rushed nn. National Guard, Air Force, Coast Guard troops are on the scene; helicopters have been flown in from Second Air Force bases throughout the country and Army engineers are ready to go in with equipment to clean up as soon as the water is down sufficiently for them to go to work. As of now, the official death estimate is 150. It is feared it will go much

much higher. Now, back to Edward R. Murrow.

MURROW: That was Gene Goss reporting from Shreveport. As he said, the full extent of the disaster may not be known for days.

Secretary of State Dulles said today..in a major policy speech..that it would be "folly" for the United States to recognize Communist China. Communism in China, he said, "as elsewhere, is a passing andnot a perpetual phase." Dulles said, "We owe it to ourselves, our allies and the Chinese people to do all that we can to contribute to that passing." He warned that the seating of the Red Chinese in the United Nations would not "be in the interest, either of the United States of of the United Nations." And the United States, he said, will not trade with Red China, which he described as a "hostile" regime. Nowhere in his speech did Mr. Dulles mention the possibility of relaxing the ban on American reporters in Red China. Mr. Dulles' speech will be heard over most of these CBS Radio Stations at nine thirty tonight, Eastern time.

The House Foreign Affairs Committee voted today to slash 600-million dollars from the Administration foreign aid program. More than half the reduction is in money sought for military assistance.

President Eisenhower today voluntarily cut 456-million dollrs from his budget request for military construction. The request..as revised..calls for appropriation of a billion, 665 - million dollars.

The House today approved and sent to the Senate a bill permittinglower down payments for FHA insured homes.

And the House today approved and sent to the Senate a bill permitting lower down payments for FHA insured homes.

And the Senate Appropriations Committee voted to restore nearly a billion dollars cut by the House in funds for the armed forces.

The Senate Finacce Committee recommended confirmation of Rovert B. Anderson as Secretary of the Treasury.

The Republic Steel Corporation said today that it will follow the lead of U.S. Steel and raise its price for steel by roughly 6 dollars a ton. As in the case of U.S. Steel, the increase goes into effect July first. Robert Anderson said today that he "wished" the increases had not taken place. But as to the cause of the increases, he said he was "not a competent witness." U. S. Steel and Republic have blamed their action primarily on increased labor costs.

A Senate committee today voted to restrict the scope of therecent Supreme Court decision in the Jencks case. The court ruled that defendants in a criminal trial are entitled to access to the F.B.I. reports of witnesses who testify against them. The measure approved today would let the trial judge decide what reports the defendant may see, according to whether the information ..in the judge's opinion..is pertinent. The committee acted immediately after Attorney General Boownell told it that such legislation is needed to avoid "serious miscarriage of justice." Chaimman O'Mahoney said he hopes to bring the measure to theSenate floor within a week.

A federal judge today reaffirmed his conviction of playwright Arthur Miller on charges of contempt of Congress. Miller's attorneys had asked U.S. District Judge Charles McLaugllin to reverse the conviction in the light of the Supreme Court decision in the Watkins case. The decision was that Congress has no power "to expose for the same of exposure", but that its inquiries must have a legislative purpose..and that..on demand, the pertinency of questions put by an investigating committee must be explained. Today, Judge McLaughlin decided that the Watkins ruling applies to only one of the two counts on which Miller was indicted. He said the pertinency of one of the questions Miller refused to answer was not challenged. Both counts involved Millerss refusal to name persons attending a Communist - sponsored meeting of writers in 1947.

A team of five scientists has de-activated the nuclear advice that failed to go off today at the Nevada proving grounds. The scientists climbed the 500-foot detonating tower and disarmed it after volunteering for the task. It was the third misfire since the nuclear tests were begun in Nevada in 1951. The Atomic Energy Commission says: "this morning's non-detonation was apparently caused by a failure of power to reach the device." And it adds: "As yet we do not know why this happened."

The United States today rejected an Arab appeal that American military aid to France be suspended. The request was made by 11 Arab governments because of French action against rebel forces in Algeria.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

BRYAN:

MURROW: Next week, this reporter will take leave of this microphone and go on vacation. My good friends and colleague, Charles Collingwood, will take my place. You know him well. While I am gone, I will..in the words of Josh Billings," search for things that are little, for things that are lonesum..avoiding all torch lite proseshuns, bands of brass and wimmins' rights conventions."

Goodnight and good luck.

This is the news:

British Prime Minister Macmillan has asked Soviet Premier Bulganin to help break the deadlock on disarmament. Macmillan made his appeal in a letter to Bulganin, published tonight by the British government. He said that...in his view...the Western proposals rejected by Soviet Delegate Zorin last week at the London disarmament conference represent "an important contribution, both practical and imaginative," toward an arms agreement. Macmillan told Bulganin, "I earnestly hope that the proposals will have your favorable consideration. You have but to say the word and real progress is assured." The Macmillan letter also referred to the Middle East. Bulganin had said in a message to Macmillan on July 20th that Russia's Middle East policy is guided solely by a desire to ensure peace in the area. Macmillan said, "I welcome

this declaration, but I must frankly say that the recent actions of the Soviet government have appeared in a somewhat different light."

~~Macmillan said again that German unification must be based on free elections. He agreed with Bulganin that trade is an "important element" in promoting closer relations between Britain and Russia. "But," Macmillan said, "I must ask you to accept the fact that until there has been a considerable easing in international tension there can be no question of withdrawing those restrictions which the British government and their allies feel compelled to impose in the interests of their own security."~~

Harold Stassen is flying back to London to attend the disarmament talks which resume tomorrow. This afternoon, Stassen met for 45 minutes with Secretary of State Dulles. He also conferred with Democratic Senator Humphrey of Minnesota, chairman of a special Senate subcommittee on disarmament. Stassen declined to say whether Dulles had given him new instructions. But he told reporters the Western proposals would now be explained to Russia "to an additional degree." ~~He said, "The mutual interest in avoiding modern war is so large, we feel we should be patient and persistent in these negotiations." In brief, the Western powers~~

→

~~have called for a two-year suspension of nuclear tests, cessation of production of fissionable materials for weapons purposes, and reduction of conventional armaments---all under a far-reaching inspection system.~~

American scientists set off another atomic device today at the Nevada proving grounds. The blast is described as having been of half-nominal size---or equivalent, roughly, to the force of 10-thousand tons of T.N.T. One hundred paratroopers lay face down ~~assembled~~ on the desert floor, less than two and three-fourths miles from Ground Zero. It was the first time troops have been stationed that close, without the protection of trenches, or concrete or steel shelters.

General Partridge, commander of the North American Air Defense Command, says that...in the opinion of scientists....it is possible to build an "anti-missile missile." This would be a missile capable of overtaking and destroying an inter-continental ballistic missile. General Partridge says (in an article in U.S. News and World Report) that this would require long-range radar, to detect the approach of a ballistic missile, capable of traveling 5-thousand miles in a matter of minutes, and a system of radar to dispatch the anti-missile. Partridge says, "We have got to get along with building such a system, and do it as quickly as possible."

The Moscow radio said tonight that the Red Fleet will hold large-scale maneuvers next week in Arctic waters off the coast of Norway. It warned shipping to take note of this.

~~along with building such [illegible] as quickly as possible.~~

The government of Tunisia today protested what it regards as the violation of its frontier yesterday by French troops. The French say Algerian rebels attacked a company of French infantry on Algerian soil, then fled across the border into Tunisia. The French say they pursued the rebels and carried out an action against them on Tunisian territory. Tunisia denies that any rebels crossed the border. It charges that, instead, the French fired on members of the Tunisian armed forces, killing seven.

~~Loy Henderson will fly back to Washington tomorrow to report on the Syrian situation...as he has assessed it from his talks with American ambassadors in the area and with leaders of Turkey, Lebanon, Jordan and Iraq. The United Press says Egypt has complained to the United States that Henderson did not go to Syria itself.~~

The Israeli foreign minister...Mrs. Golda Meir...today expressed Israel's "deepest concern" over the situation in Syria. She referred specifically to shipment of Soviet arms to Syria. ~~"We are worried," she said, "because we know these arms are in the hands of neighbors whose declared policy is to destroy Israel."~~

Prime Minister Nehru of India today described the situation in Syria as "explosive" and said neither Russia nor the West should play power politics in the area. ~~Nehru was speaking before the Indian parliament in the course of a one-day foreign policy debate.~~

The Hindustan Times, a pro-government newspaper in India, said today that Russia has offered India a new 25-million-dollar credit. This would be in addition to the 125-million-dollar Russian credit already announced.

A hundred and sixty-three persons are reported dead in that train wreck on the island of Jamaica, in the British West Indies. It was an excursion train, carrying 15-hundred Catholics on a family outing from Kingston to Montego Bay. (MON-TEE'-GO) The train was returning to Kingston last night when the lead diesel engine (there were two engines) became uncoupled on a grade, and nine of the twelve coaches were detrailed. ~~At least four hundred passengers were hurt.~~ As far as has been determined, there were no American tourists on the train.

In this country, the death toll on the nation's highways for the Labor Day week-end is approaching the predicted 420. (More than 370) persons have died in traffic since the three-day holiday began. ~~Ned Dearborn.~~

Edward R. Murrow: September 2, 1957. 7.45 p.m.

Thanks to Charles Collingwood for setting me for me - Ham

The remainder of this report was to have been rather personal - a short dissertation on the mysteries of muskie fishing in Wisconsin (it merely requires friends who know where they are). It was to be a report on America on wheels, heading West, pursued by house trailers and motor boats... a salute to American and Canadian Customs men on both sides of the border - a word of envy and appreciation for forest ~~wardens~~ Rangers and game wardens - a word of acknowledgement for the improvement in Motels - the proper way to fill a wall-eye ~~XXXXXXX~~ for a shore lunch - the proper approach to a trout in snow blond waters - and a description of the magnificent wind and water sculpture in the bad lands. ~~XX~~ There was to have been a description of the Black Hills and Mount Rushmore; and a note of appreciation for whoever it was who wrote the simple but moving copy, explaining why the side of the mountain was turned into the likeness of the four presidents. Then a tribute to the care and courtesy of all drivers going over the Big Horn. In fact, a pretty detailed description of places like Sleepy Eye, Sheridan, Cody, ~~Kalispell~~ Kalispell Wenatchee, Quilliaute, Quinault, Hoh and Hoko. Then, too, there was to be a report of a sundown conversation with a history-minded son, as to how the first white men must have felt when they first saw Old Faithful. And there was to be the flat assertion that you haven't driven anywhere until you've

driven high and far away on the Going-to-the-Sun Highway in Glacier National Park. And an unequivocal declaration of no firm conclusion regarding the relative pound-for-pound fighting qualities of a muskie and a silver salmon. That will require more research.

Travelling the holiday highways is not exactly the best way to measure the mood and climate of opinion of any country, but it's a good place to listen. I was even prepared to try my hand at a few general conclusions.

The thing that intervened, and prevented this brief travelogue was a book. It was Bernard M. Baruch's own story - the story of how he made his millions, advised Presidents, and entertained the famous - maybe somewhat lacking in suspense and startling revelations. But near the end Mr. Baruch begins to distill his years of observations, knowledge and experience. He views the crucial trial that this country now faces, as in essence a test of our ability to govern ourselves. He believes that what we lack is the ability to control and direct the unprecedented power and the vast productive resources which are ours.

Mr. Baruch contends that this test of our ability to govern ourselves is really three-fold: "First it is a test of values, of what things we will give up in order to make other things secure. Second, it is a test of our

reasoning power, of whether we have the wit to think our problems through to an effective solution. Third, it is a test of self-discipline, of our ability to stand by our values and see our policies through, whatever the personal cost." There is a definition of the problems of self-government, which is certainly concise and would seem to apply equally to problems as widely separated as Civil Rights, inter-continental ballistic missiles and the Middle East.

And Mr. Baruch continues: "The issue of how much should be spent on our national defense provides a fairly good illustration of all three aspects of this trial." Some persons have contended that, "our economy can stand only so much". But during both world wars we demonstrated that our economy could support an infinitely heavier effort than anyone has yet proposed be done in the struggle for peace. The physical resources at the disposal of ourselves and our allies exceed what the Soviets and their satellites can command. Mr. Baruch concludes: "I for one will never conceed that we cannot do as much in defence of our freedoms as any enemy may be doing to destroy those freedoms."

Listening to conversations across the top tier of this country, this reporter felt an undercurrent of bewilderment, a sense that the individual

no longer counts for as much as he once did; the effort to understand and decide is just too great. There were complaints about taxes, about contradictory statements from high sources in Washington; a widespread questioning of our foreign policy - no expressed desire to sacrifice, or to dare greatly in defense of our freedoms. Perhaps it was only the holiday mood - I don't know. Maybe both personal and national and international worries had been left at home. In any event, Mr. Baruch has defined with brevity and clarity the problem that confronts us. You will have noticed that he couches it in personal terms: What things will we give up in order to make other things secure. Whether we have the wit to think our problems through to effective solution. And a test of self-discipline. Our ability to stand by our values, whatever the personal cost. Mr. Baruch is positively old-fashioned, and he still believes that even in this complex, confusing world the individual is important. And so I suspect do those people across the country who were so eager to express their bewilderment and sense of political impotence.

George Bryan

Word for Today

The long Labor Day week-end is drawing to a close. The act making Labor Day a legal holiday was passed by Congress on June 28th, 1894. Grover Cleveland...who was President then....issued no official proclamation. History records, however, that he called the holiday "a truly American sentiment...recognizing the dignity of labor and the fact that honor lies in honest toil."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, SEPTEMBER 2, 1957
7:45 - 8:00 PM EST

British Prime Minister Macmillan has asked Soviet Premier Bulganin to help break the deadlock on disarmament. Macmillan made his appeal in a letter to Bulganin, published tonight by the British government. He said that...in his view...the Western proposals rejected by Soviet Delegate Zorin last week at the London disarmament conference represent "an important contribution, both practical and imaginative," toward an arms agreement. And so I suspect do those people across the country who were so eager to express their bewilderment and sense of political impotence.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan

GEORGE BRYAN: COMMERCIAL

MURROW: The long Labor Day week-end is drawing to a close. The act making Labor Day a legal holiday was passed by Congress on June 28th, 1894.

Grover Cleveland...who was President then...issued no official proclamation. History records, however, that he called the holiday "a truly American sentiment...recognizing the dignity of labor and the fact that honor lies in honest toil."

Good night and Good Luck!

Edward R. Murrow Thurs., Sept. 3, 1957

Tues.

This is the news:

President Eisenhower said today, that it is up to Russia to make the next move toward a disarmament agreement. He told his news conference he saw no new constructive step that the United States could take, at this time. It is not likely, he said, but it is possible, that some small opening...some small action on the part of Russia to break the stalemate...may still occur.

The disarmament talks resumed in London today after a four-day recess. Harold Stassen, and the representives of Canada, Britain and France, demanded to know from Soviet Delegate Zorin, whether his rejection of the Western disarmament proposals last week was final. Zorin refused

to answer. But he did agree to discuss what he called the "basic questions" of disarmament at another meeting tomorrow.

President Eisenhower was asked at his news conference about Russia's claim that it has successfully tested an inter-continental ballistic missile. Mr. Eisenhower said the Soviet announcement had been "most evasive", that a careful reading of it marked it more for what it did not say than for what it did say. And then the President went on to make these points:

Tape runs 1:50
Ends on cue "--is a long ways from actual production."

Mr. Eisenhower disputed the Democratic claim that Congress saved 5 to 6-billion dollars in cutting his budget. He said the actual saving was closer to a billion dollars, and that the rest was mostly a matter of "bookkeeping". He denounced the cut in the mutual security program. And later today, when he signed the foreign aid appropriations bill, he said he would keep "close and continuous" watch on the effects of the cut, which he described as "serious". The President told his news conference he was gratified by the approval of his Middle East resolution and passage of the measure on civil rights. But his earlier expression of disappointment

→

with the record of the 85th Congress still stands. On the debit side, he listed Congress' failure to raise postal rates, give tax relief to small business, provide insurance against floods, or enact legislation for protecting union welfare funds. He did not list the school aid bill, which Congress also failed to pass.

The President said he regards inflation as the nation's major internal problem. He is against compulsory wage and price controls. To do that in peacetime, he believes, would be to change our form of government. He said the Treasury Department and the Federal Reserve Board are exerting every influence to control inflation. And he urged the general public to help by being more selective in what it buys.

Racial integration proceeded today in some public schools in the South. Integration began on a small scale in Greensboro, North Carolina, without incident. Nor was there any trouble in Clinton, Tennessee, when seven Negro students enrolled in the high school there. This was in contrast to the violence which marked the start of school integration in Clinton last year.

Negroes went to mixed classed for the first time today in Sturgis, Kentucky. / A crowd gathered outside the school, and some of the cars bringing the Negro students to the Sturgis High School were stoned. No one was hurt, and police said they would not prosecute, because the stones were thrown by small boys. Integration was scheduled to start today at the central high school in Little Rock, but---last night---Governor Faubus (FAW-BUS) of Arkansas ordered National Guardsmen to surround the school, and none of the nine Negroes who were to attend classes today showed up. Faubus insisted today that the National Guard was called out to prevent violence, and that to maintain peace and order the school will have to remain unintegrated for the time being. He denied that he was trying to prevent intergration, but "doubted" that the National Guard could give protective custody to any Negro student who tried to enter the school. / The local school board told the prospective Negro students not to try to attend classes today---until the situation is clarified. / The high school is under a Federal Court order to admit Negroes. / President Eisenhower told reporters today, that the attorney general's office is taking "a hard look" at the situation at Little Rock. And then Mr. Eisenhower went on to say: Tape runs 50 seconds, ends on cue: "by the lawyers and jurists."

The focus of attention tonight is still on Little Rock. For a direct report on the situation there, we switch now to Bob Schakne in Little Rock.

Tape runs 3:15
Ends on cue: "---now back to Edward R. Murrow in N.Y."

The State Department today turned down a Soviet embassy request that the Russian jet airliner---due in this country tomorrow with delegates to the United Nations General Assembly---be allowed to land at New York's Idlewild Airport. The United States had granted permission for the Russian aircraft to land at McGuire Air Force Base in New Jersey, but the Russians complained that this was too far from United Nations headquarters in New York. (The air base is about 60 miles from New York City). The State Department has informed the Russians, however, that they will be allowed to land their Jet transport at Idlewild if they can get the airport authorities to waive the ban on the handling of jet aircraft.

Cut

George Bryson

Word for Today

The United States faces many problems, not the least of which lies in the changing field of civil rights. This change is not easy. Lyman Beecher said, "No great advance has ever been made without controversy." And Douglas Edmonds wisely observed, "Democracy is never a thing done. It is, and always will be, a goal to be achieved."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS (NON-NEW YORK SPOTS ONLY) 9/3/57
7:45-8:00 PM

ANNOUNCER: The Ford Road Show present Edward R. Murrow and the News. This is George Bryan, speaking for Ford, lowest priced car of the low price three. What makes a Ford hold on to its value, well, there are many things, but if I had to select just one thing to talk about than in fact I do, I'd pick the inner Ford. This is the inner car the part you don't see but you do feel. Ford has an all-new chassis with side rails that let you and your passengers ride in greater comfort within the frame of the car. Ford has a quieter running V-8 too and every one of Ford exclusive is electronically mass-balanced while running under its own power. Ford has more body insullation than any of its low priced competitors and you get this quality in the lowest priced automobile of the low priced three. A car that costs less to run, less to trade too. Let me emphasize, Ford is so solidly built, it's traditionally worth more when you see it too. See your Ford dealer and make your own value test of Ford. Now Edward R. Murrow and the news.

EDWARD R. MURROW: This is the news: The focus of attention tonight is still on Little Rock. For a direct report on the situation there, we switch now to Bob Shackney in Little Rock.

BOB SHACKNEY: The High School integration problem in Little Rock is back in Federal court this evening. The same court whose authority has been challenged by Arkansas Governor, Orval Faubus. Late this afternoon, attorneys for Little Rock School Board petitioned U.S. Judge Ronald Davies for new instructions. Instructions the school board says it now needs in view of the action of the Governor. Tonight, Judge Davies is holding a hearing on the petition in an unprecedented emergency court session. It was Judge Davies who late last week overruled the State court and ordered immediate limited integration to commence of

Little Rock's big and modern Central High School. The school board attorneys in their petition told the judge they could not comply with the integration order because, in effect, Governor Faubus has countermanded it and had brought out the National Guard and State Police to enforce his position. As a result the school board said it had no choice but to tell negroes students to stay out of Central High School when it opened its Fall term today. Now the school board wants to know what to do, and its up to Judge Davies to tell them. The Judge was reportedly in touch by phone with Attorney-General Brownell in Washington and the Department of Justice has discussed the matter with local Federal attorneys here in Little Rock. Judge Davies integration order was actually innovation on a very small scale, involving admission of between 9 and 20 negro boys and girls in a school population of some 2,000. But even this much integration, Governor Faubus said last night, and repeated today was too much. The Governor said he was not concerned with the specific question of integration, just the maintenance of law and order. It is his claim that segregationists feeling is so high here in Little Rock that even a small amount of integration would inevitably lead to violence. And that as Governor he is charged with taking such action as will maintain the peace. That action today was the mobilization of 250 National Guardsmen and 50 State Troopers who blocked off all streets leading to the high school, and stood guard at each entrance to the school, equipped with billy clubs, tear gas and rifles. A crowd of some 500 pro-segregationists whites, some of them parents, some of them school children, a few of them clergymen gathered across the street from the school for three hours prior to the school opening bell. What might have happened if negro students showed up, is problematical. But none appeared, and the crowd, while noisy at times was generally orderly and

peaceful. Governor Faubus wouldn't say so directly, but he indicates that if negro students had appeared the guardsmen would not have let them enter the high school. Its the Governor's contention that 98% of Little Rock's citizens are bitterly opposed to integration, but Little Rock's Ministerial association says this is not so. Its members, many of them leading White Clergymen, support integration as the Christian thing to do, and as the law of the land. And so now the problem is back in court where among other alternatives there is an unlikely outcome that a Governor of a sovereign State might be held in contempt of Federal Court. And now back to Edward R. Murrow in New York.

ANNOUNCER: (F o r d C o m m e r c i a l)

The Ford Road Show has presented Edward R. Murrow and the news. This is George Bryant speaking for Ford, and reminding you that more people are buying Fords than any other car. Listen thoughout the week for the other Ford Road Shows with Bing Crosby, Rosemary Clooney and the Morning World News. Whenever you go, go with CBS Radio Network.

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

TUESDAY, SEPTEMBER 3, 1957
7:45 - 8:00 P.M., E.S.T.

This is the news:

President Eisenhower said today that it is up to Russia to make the next move toward a disarmament agreement. He told his news conference he saw no new constructive step that the United States could take at this time. It is not likely, he said, but it is possible that some small opening...some small action on the part of Russia to break the stalemate...may still occur.

The disarmament talks resumed in London today after a four-day recess. Harold Stassen and the representatives of Canada, Britain and France demanded to know from Soviet Delegate Zorin whether his rejection of the Western disarmament proposals last week was final. Zorin refused to answer. But he did agree to discuss what he called the "basic questions" of disarmament at another meeting tomorrow.

President Eisenhower was asked at his news conference about Russia's claim that it has successfully tested an inter-continental ballistic missle. Mr. Eisenhower said the Soviet announcement has been "most evasive", that a careful reading of it marked it more for what it did <u>not</u> say than for what it did say. And then the President went on to make these points:

"I will tell - I can say a few things about this. First of all, let's remember this: The Russians never made any statement yet except for their own purposes, their own special purposes, and I don't know of any reason for giving it greater credence than many of the statements of the past, where they have been shown to be less than completely reliable.

Now, in this whole field, let us remember there are a number of things. There is a long distance between proving that you can fire one test instrument in a particular direction and achieve one result, and acquiring that instrument in sufficient numbers and sufficient reliability to be worthwhile tactically.

For a long time the long-range missile is not going to provide the best means of delivering an explosive charge, and that is all it is for.

For a long time there will be a change-over as they become perfected.

In our own case, we have spent many, many millions of dollars, as have other nations. We are continuing to do so at a -on what is the highest priority that can possibly be devoted to the capacity of our - of our scientific advancement, and to the capacity of our whole, you might say, arrangements and organization to bring the thing forward; that is, testing, plans, and organization and the development, manufacture, and so on. But the big thing to remember is that a mere tested vehicle is a long ways from actual production."

(Murrow): Mr. Eisenhower disputed the Democratic claim that Congress saved 5 to 6 billion dollars in cutting his budget. He said the actual saving was closer to a billion dollars, and that the rest was mostly a matter of "bookkeeping". He denounced the cut in the mutual security program. And later today, when he signed the foreign aid appropriations bill, he said he would keep "close and continuous" watch on the effects of the cut, which he described as "serious". The President told his news conference he was gratified by the approval of his Middle East resolution and passage of the measure on civil rights. But his earlier expression of disappointment with the record of the 85th Congress still stands. On the debit side, he listed Congress' failure to raise postal rates, give tax relief to small business, provide insurance against floods, or enact legislation for protecting union welfare funds. He did not list the school aid bill, which Congress also failed to pass.

The President said he regards inflation as the nation's major internal problem. He is against compulsory wage and price controls. To do that in peacetime, he believes, would be to change our form of government. He said the Treasury Department and the Federal Reserve Board are exerting every influence to control inflation. And he urged the general public to help by being more selective in what it buys.

(Racial integration proceeded today in some public schools in the South. Integration began on a small scale in Greensboro, North Carolina, without incident.

Nor was there any trouble in Clinton, Tennessee, when seven Negro students enrolled in the high school there. This was in contrast to the violence which marked the start of school integration in Clinton last year. Negroes went to mixed classes for the first time today in Sturgis, Kentucky. A crowd gathered outside the school, and some of the cars bringing the Negro students to the Sturgis High School were stoned. No one was hurt, and police said they would not prosecute because the stones were thrown by small boys. Integration was scheduled to start today at the central high school in Little Rock, but ----last night----Governor Faubus of Arkansas ordered National Guardsmen to surround the school, and none of the nine Negroes who were to attend classes today showed up. Faubus insisted today that the National Guard was called out to prevent violence, and that to maintain peace and order the school will have to remain unintegrated for the time being. He denied that he was trying to prevent integration, but "doubted" that the National Guard could give protective custody to any Negro student who tried to enter the school. The local school board told the prospective Negro students not to try to attend classes today --- until the situation is clarified. The high school is under a Federal Court order to admit Negroes. President Eisenhower told reporters today that the attorney general's office is taking "a hard look" at the situation at Little Rock. And then Mr. Eisenhower went on to say:

(EISENHOWER): Well, first to say what you think about it is very - sort of broad subject that you are giving me. Actually, this particular incident came to my attention the first thing this morning. I have been in contact with the Attorney General's office. They are taking a look at it. They are going to find out exactly what has happened and discuss this with the Federal judge. As of this moment, I cannot say anything further about the particular point, because that is all I know about it.

Now, time and again a number of people-I, among them - have argued that you cannot change people's hearts merely by laws. Laws are presumably-express the conscience of a nation and its determination or will to do something. But the laws here are to be executed gradually, according to the dictum of the Supreme Court, and I understand that the plan worked out by the

understand that the plan worked out by the school board of Little Rock was approved by the district judge. I believe it is a ten-year plan. Now, there seems to have been a road block thrown in the way of that plan, and the next decision will have to be by the lawyers and jurists.

(Murrow): The focus of attention is still on Little Rock. For a direct report on the situation there, we switch now to Bob Schakne in Little Rock.

(Bob Shackney): The high School integration problem in Little Rock is back in Federal court this evening. The same court whose authority has been challenged by Arkansas Governor, Orval Faubus. Late this afternoon, attorneys for Little Rock School Board petitioned U. S. Judge Ronald Davies for new instructions. Instructions the school board says it now needs in view of the action of the Governor. Tonight, Judge Davies is holding a hearing on the petition in an unprecedented emergency court session. It was Judge Davies who late last week overruled the State court and ordered immediate limited integration to commence of Little Rock's big and modern Central High School. The school board attorneys in their petition told the judge they could not comply with the integration order because, in effect, Governor Faubus has countermanded it and had brought out the National Guard and State Police to enforce his position. As a result the school board said it had no choice but to tell negroes students to stay out of Central High School when it opened its Fall term today. Now the school board wants to know what to do, and its up to Judge Davies to tell them. The Judge was reportedly in touch by phone with Attorney-General Brownell in Washington and the Department of Justice has discussed the matter with local Federal attorneys here in Little Rock. Judge Davies integration order was actually innovation on a very small scale, involving admission of between 9 and 20 negro boys and girls in a school population of some 2,000. But even this much integration, Governor Faubus said last night, and repeated today was too much. The Governor said he was not concerned with the specific question of integration, just the maintenance of law and order. It is his claim that segregationalists feeling is so high here in Little Rock that even a small amount of integration would inevitably lead to violence. And that as Governor he is

charged with taking such action as will maintain the peace. That action today was the mobilization of 250 National Guardsmen and 50 State Troopers who blocked off all streets leading to the high school, and stood guard at each entrance to the school, equipped with billy clubs, tear gas and rifles. A crowd of some 500 pro-segregationists whites, some of them parents, some of them school children, a few of them clergymen gathered across the street from the school for three hours prior to the school opening bell. What might have happened if negro students showed up, is problematical. But none appeared, and the crowd, while noisy at times was generally orderly and peaceful. Governor Faubus wouldn't say so directly, but he indicates that if Negro students had appeared the guardsmen would not have let them enter the high school. Its the Governor's contention that 98% of Little Rock's citizens are bitterly opposed to integration, but Little Rock's Ministerial Association says this is not so. Its members, many of them leading White Clergymen, support integration as the Christian thing to do, and as the law of the land. And so now the problem is back in court where among other alternatives there is an unlikely outcome that a Governor of a sovereign State might be held in contempt of Federal Court. And now back to Edward R. Murrow in New York.

(Murrow): The State Department today turned down a Soviet embassy request that the Russian jet airliner--due in this country tomorrow with delegates to the United Nations General Assembly---be allowed to land at New York's Idlewild Airport. The State Department has informed the Russians, that they will be allowed to land their Jet transport at Idlewild if they can get the airport authorities to waive the ban on the handling of jet aircraft.

THIS IS ED MURROW. I'll BE BACK IN A MOMENT WITH THE WORD FOR TODAY. BUT FIRST, HERE IS GEORGE BRYAN.

"Word For Today" - The United States faces many problems, not the least of which lie in the changing field of civil rights. This change is not easy. Lyman Beecher said, "No great advance has ever been made without controversy." And Douglas Edmonds wisely observed, "Democracy is never a thing done. It is, and always will be a goal to be achieved." Goodnight and good luck!

Edward R. Murrow Wed., Sept. 4, 1957

This is the news:

National guardsmen have again barred Negro students from attending the Central High School in Little Rock, Arkansas. The guardsmen acted on orders from Governor Faubus and in defiance of a Federal Court order. For the story of what happened there today, we will switch now to Bob Schakne in Little Rock.

(Tape runs 2:15
Ends on cue: "---to Edward R. Murrow in N.Y."

In Washington today, Attorney General Brownell reported to President Eisenhower by telephone on the situation in Little Rock. White House News Secretary Hagerty said Brownell is "under orders" to keep in

→

close touch with the situation. The attorney general said tonight that the F.B.I. has been assigned the task of collecting the facts "as to the interference with the carrying out of the court's order." Brownell said, "Reports will be made to Judge Davies as the information is collected."

Today...in Charlotte, North Carolina... a 15-year-old Negro girl was hit by a stick and spit upon when she registered at a high school which, until now, had been reserved for whites. Two other previously all-white schools in Charlotte accepted A FEW Negro students today without incident. Charlotte is the second of three North Carolina cities to start LIMITED integration this week. Five Negroes began attending mixed classes yesterday in Greensboro; other Negro students are scheduled to enroll tomorrow in Winston-Salem.

President and Mrs. Eisenhower left Washington today for their Rhode Island vacation. Governor Roberts told the Eisenhowers on their arrival, "All Rhode Island hopes you have a very fine vacation." Mr. Eisenhower said, "I assure you we look forward to the time of our lives."

That Russian jet airliner...bringing Soviet diplomats to the United Nations... has reached Goose Bay, Laborador, on its way to the United States and is due at McGuire Air Force base in New Jersey [redacted] tonight. A second Russian jet airliner is scheduled to make a similar flight in a few days, and may be permitted to land at Idlewild Airport in New York---if this first plane doesn't make too much noise. Idlewild has a rule against the handling of jet aircraft, duo to its location in a highly populated area.

The delegates to the United Nations disarmament conference met for an hour today in London, then adjourned until tomorrow afternoon. Soviet Delegate Zorin reiterated the Russian position that the Western proposals are not acceptable. A Soviet official---not Zorin---told reporters, "It seems to me there is no room for further discussion of these proposals." Zorin himself complained of conditions attached to the Western "package" plan for a first-step disarmament agreement. The American delegate, Harold Stassen, asked Zorin to list the conditions he thought to be unreasonable, or unworkable. Zorin did not reply.

A new Russian note on the Middle East was delivered in Moscow today to the ambassadors of the United States, Britain and France. The contents

of the notes has not been officially announced. So-called "authoritative sources" in Moscow are quoted as saying that the notes accuse the Western powers of waging a war of nerves against Syria. Russia is also said to be renewing its earlier proposal that the Big Four powers seek a joint solution to the Middle East problem.

The State Department trouble-shooter, Loy Henderson, returned to Washington today from his mission to the Middle East. For some of the background to that story, we switch now to my colleague Bill Downs in Washington.

Downs runs 3:45
Returns on cue: "And now back to
Ed Murrow."

Prime Minister Ben Gurion said today that the Arab countries cannot defeat Israel "without the help of a foreign power." But Israel, he said, is ready to stand against "a great power" if such an attack occurs.

Leftist newspapers in Damascus called today for a shake-up in the Syrian cabinet. One paper published a demand for "a merciless purge in all government departments." The present cabinet was appointed

last December, before a pro-Soviet clique seized control of the Army.

Bombs exploded in two movie theaters in Havana today, killing one person and injuring four others. The person fatally hurt was a 19-year-old girl. Two newspaper offices in Pinar del Rio Province---in Western Cuba---were shattered in four other explosions. The bombings marked the 24th anniversary of Batista's seizure of the government.

The United Nations secretary general...Dag Hammarskjold...today published the introduction to his annual report. (The report itself was released last month). Hammarskjold warns in his introduction that "many grave problems of adjustment" exist in Asia and Africa and that these could lead, in turn, "to violent upheavals and to the ultimate disaster of war in this atomic age." The world organization, he says, is admittedly imperfect. "The assembly may recommend, it may investigate, it may pronounce judgment, but it does not have the power to compel compliance." Hammarskjold notes that in the case of Hungary...when compliance was refused by Russia...no delegation formally proposed application of sanctions, or force, to secure the withdrawal of Soviet troops. He says the condemnation of Russia by the assembly was "appropriate". Hammarskjold says the limitations of the world organization are not the fault of its charter. Rather, he says, they stem from the "facts of international life in our age." He does not believe these facts are likely to be by-passed by a different approach, or surmounted by what he calls "attempts at merely constitutional reform."

George Bryan -

Word for Today

For weeks now, the news coming out of the London disarmament talks...from the Western point of view...has been consistently bad. Will Rogers said, "There is always this to look forward to with Russia. Pick up the morning paper and look for Russian news and have fear of reading the worst. You won't be disappointed."

Goodnight and good luck!

EDWARD R MURROW WITH THE NEWS (NON-NEW YORK SPOTS ONLY) 9/4/57
7:45-8:00 PM

ANNOUNCER: The Ford Road Show presents Edward R. Murrow and the news. This is George Bryan speaking for Ford, lowest priced car of the low priced three. If you're one of those people whose eyes are bigger than you wallet and you've always wanted to own a great luxury car, your problem has been solved by the new kind of Ford. Here's the liveliest, loveliest most luxurious car that money can buy, and the proof of Ford's popularity is in Ford's record sales, in fact, this year, Ford is America's best selling car and it's no wonder. Practically the only difference between Ford and the high priced cars is the difference you save. Model for model, right across the board. Ford is the lowest priced of the low priced three, and costs less to run and less to trade. At the same time, Ford is wider than some cars costing hundreds more. Lower than all the medium priced cars, roomier than a car costing twice as much. See your Local Ford dealer for an action test and the worth-more new kind of Ford and satisfy your craving for a truly beautiful luxury car. Now, Edward R. Murrow and the news.

EDWARD R. MURROW: This is the news.

BOB SHACKNEY: The F.B.I. has entered the Arkansas school integration dispute. Federal agents are conducting a full investigation of Arkansas Governor, Orval Faubus's refusal to permit some nine negro boys and girls to enter all-white Central High School. After Federal District Court last night reaffirmed its ruling for immediate integration here in Little Rock nine negroes showed up at the high school this morning. Arkansas National Guardsmen ~~xxx~~ stationed around the school refused to let them enter stating these were the orders of the Governor. And so this afternoon Judge Ronald Davies who issued last night's integration order asked the United States Attorney and the F.B.I. to investigate. Agents took statements this morning from negro students. The investigation is continuing. What the Federal Government can do about the matter is

something else again. From a legal point of view it's questionable whether Federal action can be taken against a State Governor. From a practical stand-point its difficult to see how integration can be affected without the full support of State Police and National Guard forces, and that support can only come if Governor Faubus orders it. Governor Faubus, in a news conference made it plain he has no intentions of changing his orders at this time. He was careful in his comments however, had his personal attorney sitting next to him and advising him as he answered reporters questions. He repeated his contention that violence would erupt if negroes entered the high school. That under such circumstances he could not maintain law and order as he is required to do in his role as Governor. There was no actual violence but there was a threatening situation when the negro children appeared at the high school. Once again, without interference from the National Guard, a pro-segregationist crowd had gathered across the street from the school. When the negro students appeared the crowd pressed forward and seemed to grow. Shouting rebel yells, booing, jeering, hurling epithets, the crowd followed the negro students as they tried several times unsuccessfully to cross the National Guard line to the school. Guardsmen moved in only when the situation appeared very critical, but at no time did they try to disperse the crowd. And now back to Edward R. Murrow in New York.

BILL DOWNS: Before Congress went home last week, leading Democrats and Republicans had the word passed to them often by President Eisenhower himself, that the situation in Syria was much more serious than appeared on the surface. Deputy Under-Secretary of State, Loy Henderson, returned from his trouble shooting tour of the area today, and confirmed this assessment. Henderson reported to Secretary Dulles

immediately when he arrived. We do not know yet what steps the government will take but it is clear that the West will have to move effectively and soon if it is to retain any substantial influence in the oil-rich Middle Eastern area. What has happened is that the Kremlin has moved on to the Middle East's checker board of nationalisms oil well, hatreds and pipe-lines, like the expert chess players most Russians are. By wooing Syria's left wing politicians and army officers the Soviets have jumped over the West's flank protected by Turkey's NATO troops and established at least a political base of operations behind the Western defensive line formed by the Bagdad Pact. As one British Diplomat put it "The Russians have made a political parashoot drop in our rear." And Moscow has followed up the move with deliveries of tanks, jet fighters guns and ammunition. Exactly how much arms is not known, neither do we know exactly how many so-called Soviet technicians and training experts have been sent to teach the Syrians the use of these weapons. The Pipe lines which run through Syria carry about 1/3 of the oil which runs the funnaces and factories of Europe. But as of now, Syria and her alliance with Moscow form only a political base of operations for the Russians but the geographic military potential is obvious if the Kremlin seeks that kind of base also. Lest the present Soviet regime has succeeded in doing what no Kremlin Czar in centuries had achieved, placed a lever on the (indistinct) of Asia, Africa and Europe. How to counter this most dangerous diplomatic gambit before Russo-Syrian prestige and subversion can spread to other Arab Nations comprises the urgency behind the Henderson mission. Under consideration is increasing U.S. military and economic to countries like Jordan, Syria Saudi Arabia. Even Egyptian president Nasser has been cool toward the latest Syrian (indistinct) in Moscow as possibly a threat to his own dream of leading the Arab world. But the Russians here too have a probable diplomatic

weapon by blatently siding with the enemies of Israel. The Russians have timed their Mid-East move well, whether accidentally or not. It is coincident with the impending new session of the U.N. General Assembly where the so-called Afro-Asian bloc of votes is critical. What is not clear to American officials is just how far the Soviets are prepared to commit themselves to a backward, isolated and unstable nation, such as Syria and these experts say watch now the movements of the Kremlin's traveling salesman, Communist boss Khrushchev. For if Khrushchev shows up in Syria then Russia most likely is putting her power and prestige on the line in the Middle East. This new crisis in the Middle East is not the usual ideological struggle against Communism. It is an out and out Soviet attempt to use Arab Nationalism to make a power grab to seize one of the earth's great cross-roads. The question confronting the United States and the West, is, can this grab be stopped by diplomacy alone. When Under-Secretary Henderson said today that the Syrian situation is a threat to the security of the free world, he was not talking through his diplomatic homburg. Now back to Ed Murrow.

ANNOUNCER: (Ford Commercial)

The Ford Road Show has presented Edward R. Murrow and the News. This is George Bryan speaking for Ford and reminding you that more people are buying Fords than any other car. Listen throughout the week for the other Ford Road Shows with Bing Crosby, RoseMary Clooney and the Morning World News. America listens most to the CBS Radio Network.

The delegates to the United Nations disarmament conference met for an hour today in London, then adjourned until tomorrow afternoon. Soviet Delegate Zorin reiterated the Russian position that the Western proposals are not acceptable. A Soviet official---not Zorin---told reporters, "It seems to me there is no room for further discussion of these proposals." Zorin himself complained of conditions attached to the Western "package" plan for a first-step disarmament agreement. The American delegate, Harold Stassen, asked Zorin to list the conditions he thought to be unreasonable, or unworkable. Zorin did not reply.

A new Russian note on the Middle East was delivered in Moscow today to the ambassadors of the United States, Britain and France. The contents of the notes has not been officially announced. So-called "authoritative sources" in Moscow are quoted as saying that the notes accuse the Western powers of waging a war of nerves against Syria. Russia is also said to be renewing its earlier proposal the the Big Four powers seek a joint solution to the Middle East problem.

The State Department trouble-shooter, Loy Henderson, returned to Washington today from his mission to the Middle East. For some of the background to that story, we switch now to my colleague Bill Downs in Washington.

BILL DOWNS: Before Congress went home last week, leading Democrats and Republicans had the word passed to them often by President Eisenhower himself, that the situation in Syria was much more serious than appeared on the surface. Deputy Under-Secretary of State, Loy Henderson, returned from his trouble shooting tour of the area today, and confirmed this assessment. Henderson reported to Secretary Dulles immediately when he arrived.

We do not know yet what steps the government will take but it is clear that the West will have to move effectively and soon if it is to retain substantial influence in the oil-rich Middle Eastern area. What has happened is that the Kremlin has moved on to the Middle East's checker board of nationalisms, oil well, hatreds and pipe-lines, like the expert chess players most Russians are. By wooing Syria's left wing politicians and army officers the Soviets have jumped over the West's

flank protected by Turkey's NATO troops and established at least a political base of operations behind the Western defensive line formed by the Bagdad Pact. As one British Diplomat put it "The Russians have made a political parashoot drop in our rear."

And Moscow has followed up the move with deliveries of tanks, jet fighters, guns and ammunition. Exactly how much arms is not known, neither do we know exactly how many so-called Soviet technicians and training experts have been sent to teach the Syrians the use of these weapons. The pipe lines which run through Syria carry about 1/3 of the oil which runs the furnaces and factories of Europe. But as of now, Syria and her alliance with Moscow form only a political base of operations for the Russians but the geographic military potential is obvious if the Kremlin seeks that kind of base also. Lest the present Soviet regime has succeeded in doing what no Kremlin Czar in centuries has achieved, placed a lever on the (indistinct) of Asia, Africa and Europe. How to counter this most dangerous diplomatic gambit before Russo-Syrian prestige and subversion can spread to other Arab Nations comprises the urgency behind the Henderson mission.

Under consideration is increasing U.S. military and economic to countries like Jordan, Syria, Saudi Arabia. Even Egyptian president Nasser has been cool toward the latest Syrian (indistinct) in Moscow as possibly a threat to his own dreams of leading the Arab world. But the Russians here too have a probable diplomatic weapon by blatently siding with the enemies of Israel. The Russians have timed their Mid-East move well, whether accidentally or not. It is coincident with the impending new session of the U.N. General Assembly where the so-called Afro-Asian bloc of votes is critical.

What is not clear to American officials is just how far the Soviets are prepared to commit themselves to a backward, isolated and unstable nation, such as Syria, and these experts say watch now the movements of the Kremlin's traveling salesman, Communist boss Khrushchev. For if Khrushchev shows up in Syria then Russia most likely is putting her power and prestige on the line in the Middle East.

This new crisis in the Middle East is not the usual ideological struggle against Communism. It is an out and out Soviet attempt to use Arab Nationalism to make a power grab to seize one of the earth's great cross-roads. The question confronting the United States and the West, is, can this grab be stopped by diplomacy alone. When Under-Secretary Henderson said today that the Syrian situation is a threat to the security of the free world, he was not talking through his diplomatic homburg. Now back to Ed Murrow.

MURROW: Prime Minister Ben Gurion said today that the Arab countries cannot defeat Israel "without the help of a foreign power." But Israel, he said, is ready to stand against "a great power" if such an attack occurs.

Leftist newspapers in Damascus called today for a shake-up in the Syrian cabinet. One paper published a demand for "a merciless purge in all government departments." The present cabinet was appointed last December, before a pro-Soviet clique seized control of the Army.

Bombs exploded in two movie theaters in Havana today, killing one person and injuring four others. The person fatally hurt was a 19-year-old girl. Two newspaper offices in Pinar del Rio Province---in Western Cuba---were shattered in four other explosions. The bombings marked the 24th anniversary of Batista's seizure of the government.

The United Nations secretary general...Dag Hammarskjold...today published the introduction to his annual report. (The report itself was released last month). Hammarskjold warns in his introduction that "many grave problems of adjustment" exist in Asia and Africa and that these could lead, in turn, "to violent upheavals and to the ultimate disaster of war in this atomic age." The world organization, he says, is admittedly imperfect. "The assembly may recommend, it may investigate, it may pronounce judgment, but it does not have the power to compel compliance." Hammarskjold notes that in the case of Hungary...when compliance was refused by Russia...no delegation formally proposed application of sanctions, or force, to secure the withdrawal of Soviet troops. He says the condemnationof Russia by the assembly was "appropriate". Hammarskjold says the

limitations of the world organization are not the fault of its charter. Rather, he says, they stem from the "facts of international life in our age." He does not believe these facts are likely to be by-passed by a different approach, or surmounted by what he calls "attempts at merely constitutional reform."

This is Ed Murrow. I'll be back in a minute with the Word for Today, but first, here is George Bryan.

BRYAN: COMMERCIAL

MURROW: For weeks now, the news coming out of the London disarmament talks... from the Western point of view...has been consistently bad. Will Rogers said, "There is always this to look forward to with Russia. Pick up the morning paper and look for Russian news and have fear of reading the worst. You won't be disappointed."

Goodnight and good luck!

Edward R. Murrow Thurs., Sept. 5, 1957

This is the news:

President Eisenhower has asked Governor Faubus of Arkansas to give "full cooperation" to the Federal Court which has ordered the admission of Negro students to the central high school in Little Rock. The President made his request by telegram, in reply to a message the governor sent Mr. Eisenhower last night...asking if it was true that federal authorities planned to take him into custody. The President told Faubus that any report to that effect has "no basis in fact." He said the Department of Justice "is presently collecting facts as to interference with, or failure to comply with," the integration order. "You and other state officials will, I am sure, give full cooperation to the United States District Court." Mr. Eisenhower said, "The Federal Constitution will be upheld by me by every legal means at my command." Today the central high school in Little Rock was again surrounded by national guardsmen who yesterday...under orders from Governor Faubus...refused to allow Negro students to enter. Faubus has insisted that he does not mean to be in contempt of the court order, but wants only to maintain peace and order. None of the nine Negro students showed up at the school today. A national guard officer tried

to stop a reporter...Benjamin Fine of the New York Times...from questioning white students who were in the crowd outside the school. The state adjutant general...Major General Sherman Clinger...served notice that reporters would be arrested if they do "anything that might be inciting a breach of the peace." Late today, the Little Rock school board asked the United States District Court to let it call off the attempted integration of Central High School for an indefinite period. The school board said this would relieve tension. Until now, the board has supported the integration plan.

In Dallas, Texas today, a federal judge ordered the public schools of Dallas to start integration at mid-term, after the Christmas holiday.

Limited integration continued in parts of North Carolina and Kentucky today, without incident. Eight Negro children tried to enroll in white schools in Arlington, Virginia, today...but were told that they could not be admitted under Virginia law.

President Eisenhower will return to Washington on Saturday, from his vacation headquarters, for a series of high-level conferences. (He plans to be in Washington just that one day). The President will confer with Attorney General Brownell on the Little Rock situation and with Secretary of State Dulles and Deputy Under-secretary Loy Henderson on the situation in the Middle East. Official sources in Washington say that the United States alarmed over developments in Syria is going to start air-lifting defensive weapons to Jordan...and step up arms deliveries to Turkey, Lebanon and Iraq. Henderson returned from the Middle East this week. And the State Department says he found "deep concern" there on the part of these countries "lest Syria should become a victim of international Communism and, as such, become a base for further threatening the independence and integrity of the region." The department says Mr. Eisenhower's report will be given further study "in the light of relevant principles of the United Nations Charter and the policies set forth in the joint resolution of March 9, 1957." This is the resolution passed by Congress...offering American military and economic assistance to any Middle East country resisting Communist aggression or subversion---if the country asks for such aid. The State Department says Secretary

Dulles "will report to the President in relation to this matter."

The Cuban government claims to have put down an uprising in Las Villas Province, in south-central Cuba. ~~The fighting centered in the city of Cienfuegos. Reports are fragmentary, due to censorship,~~ SEE-EN-FWAY-GOHS but apparently the Cuban naval forces based there turned against President Batista and joined elements under the command of the rebel leader, Fidel Castro. The insurgent forces seized the police headquarters in a bid to take over the city. Batista sent bomber aircraft to SEE-EN-FWAY-GOS. The police headquarters were bombed and strafed. He also rushed in ground forces (the city is 150 miles from Havana), and heavy street fighting is reported but not confirmed. Casualties are said to have been heavy. Havana itself is described as tense.

Pan is a telephoned report from Ruth McCarthy in Havana

First time military units have participated against Batista

Teamsters union officials appeared before the AFL-CIO ethical practices committee today and denied charges that the union is dominated by corrupt influences. If the committee finds the charges are true, it could lead to expulsion of the union from the AFL-CIO. Both the teamsters president, Dave Beck, and Vice President James Hoffa entered a blanket denial of the charges growing out of disclosures made by the Senate rackets investigating committee. Beck submitted a formal statement...saying that "without attempting to summarize the allegations, it appears that none of them are of such magnitude as to support a belief that the union as an entity is dominated, controlled or substantially influenced in the conduct of its affairs by any corrupt influence." Beck said that when the teamsters union holds its convention the end of this month, it would consider changing its constitution "in conformity with the principles of good trade unionism." As for his own activities, Hoffa denied that he gained power in the union with the help of gangsters and racketeers, as charged by the Senate rackets committee.

Here in New York today, Johnny Dio...~~as associate of Hoffa's~~...was sentenced to two years in prison and fined a thousand dollars on

charges of taking part in a "shake-down." Dio and two co-defendants were convicted last month of conspiring to get 30-thousand dollars from two companies in return for assurance of labor peace. ~~The co-defendants... Samuel Goldstein and Max Chester...also were sentenced to two years in prison and fined one thousand dollars each. All three sentences will be appealed.~~

The State Department announced today that it is relaxing its seven-year ban on travel to Communist Bulgaria. It said that, henceforth, Americans may go to Bulgaria, if their visits are of limited duration and in the national interest. ~~Passports for several Olympic officials... and an Associated Press reporter...already have been validated so that they can go to the International Olympic Committee meeting in Sofia later this month. The State Department said it would "consider" requests from Bulgarian correspondents who want to come to the United States.~~

INSERT:

The London disarmament conference has failed. There will be another meeting tomorrow, to argue about when the talks should be resumed. The Russians want the question referred to the U.N. General Assembly. The Western Powers would like to start talking again next month, here in New York. So, after a hundred and fifty-six meetings, there is not even a small agreement; [redacted]

Edward R. Murrow: September 4, 1957. 7.45 p.m.

The disarmament negotiations are a kind of text-book example of the fact that the balance of power between two nations determines their behavior and their policy. If the balance changes, the behavior and policies will change. We have been ahead of the Soviet Union in the power of our nuclear weapons. Our stockpile is larger, we are doing much better than the Russians in making small nuclear weapons for combat between armed forces. We would like to stabilize this power relationship. So our disarmament proposals have, in the main, been shaped to accomplish this. We have been willing to make concessions, but our program is designed to leave relative strength pretty much as it is.

The Russian strategy in the disarmament talks has been even more obvious. Since our nuclear strength and our nuclear stockpile are larger, the Russians have concentrated on trying to get us to renounce nuclear weapons. They haven't done this simply because it is good propaganda - which it is - they genuinely want us to give up nuclear weapons, for then the Russian preponderance in land forces would give them the balance of power.

The Russian campaign for a halt in nuclear testing has an equally clear motive. The Russians want time to build up their stockpile of nuclear weapons. They have never linked their proposal for a holiday in testing,

with a solid offer not to go on stockpiling weapons. We said we would agree to a two-year testing holiday if the Russians also stopped making nuclear weapons, and did so under strict international control, a condition they rejected.

It is hard to say how much chance there has been to get the Russians to join the West in a first-step toward disarmament. Apparently there was some reason to hope for it. The Russians, like ourselves, are staggering under the cost of the armament race, and they urgently need to spend more of their wealth on raising their standard of living. They adopted co-existence with the West as a motto of the new leadership.

But whatever chance there might have been, it has [redacted] NOW vanished. And this is clearly the result of the success of the Soviet tests of the inter-continental missile, with its promise to change the balance of power. They feel they are within grasp of a power they never had before, the power to destroy vital targets anywhere in the United States at will.

President Eisenhower was at pains [redacted] to play down the importance of the new Russian success. The new weapon <u>is</u> experimental, not operational. We still <u>have</u> the superiority in strength we had before the new missile was tested. As of this moment the balance of power is unchanged. But to

stress this is to stress a time factor. For we do not have the inter-continental missile yet. We do not have a dead-sure anti-missile missile. If Soviet industry can work efficiently, the Russians by being ahead experimentally, can be ahead operationally too, unless we overtake them, and unless we develop a dead-sure anti-missile missile. Since our military budget as just passed by Congress actually reduced expenditure on long-range missiles, it is optimistic indeed to expect that we shall overtake the Russians. And all the talk of an anti-missile missile is so far only talk. This missile has not been made, and nobody can promise that we will have it operationally by the time the Russians have inter-continental missiles operationally.

There really is little comfort in talking about the anti-missile missile, or in repeating that the Russian missile is some time off. If we had been the ones to launch the successful long-range missile we would be elated, for we would know we were holding our power superiority for a long time to come. Now we have no such assurance. A shift in the balance of power not only is possible but quite probable. And it will make it harder to deal with the Russians. Already it has made a disarmament agreement most unlikely. The last sessions of the disarmament conference have been

dramatic and abrupt. A new era has opened in relations with the Soviet Union.

It might be added, also, that a new era has opened in the arms race. The inter-continental missile is being called the ultimate weapon. Obviously there is no such thing as an "ultimate weapon." Beyond nuclear power in warfare lies bacteriological, biological and chemical power, and who can say how catastrophic they can be. One thing is sure, the arms race is not going to end itself conveniently by becoming too horrible to contemplate. If that had been possible the race would have ended long before now. Only wisdom can end it, and modern man has not as yet displayed enough of that, in what might be called the "operational stage."

George Bryan -

Word for Today

The failure of the London disarmament talks to result in even a small agreement, after months of negotiation, recalls a statement once made by Walter Bedell Smith. "We must face the fact," he said, "that we are engaged in a contest of indefinite duration. That we must decide our course and stick to it." There is no other way.

Good night and good luck!

GEORGE BRYAN: COMMERCIAL

MURROW: The failure of the London disarmament talks to result in even a small agreement, after months of negotiation, recalls a statement once made by Walter Bedell Smith. "We must face the fact," he said, "that we are engaged in a contest of indefinite duration. That we must decide our course and stick to it." There is no other way.

Good Night and Good Luck!

This is the news:

The five-power disarmament conference ended today without reaching any kind of agreement. No date for a future meeting was set, due to inability to agree on even that point. The London talks were carried on almost six months by a United Nations disarmament subcommittee. And the question now goes back to the floor of the General Assembly for debate. The British delegate, Allan Noble, said today that the Western powers feel no hesitation in submitting their proposals to world opinion. The Western "package plan" called for a two-year suspension of nuclear tests, cessation of production of fissionable materials for weapons purposes and reduction of conventional armaments---all under a fool-proof inspection system. Russia insisted on a suspension of nuclear tests without conditions. Harold Stassen said he hoped that in the coming days

the Soviet government would thoroughly review its position. Dispatches from London say the conference ended "in a friendly atmosphere."

In Little Rock, Arkansas, national guardsmen have maintained their positions in front of the central high school for the fourth day. / No Negro students tried to enter the school today. / On Wednesday, when they showed up for classes, the guardsmen...in defiance of a federal court integration order...barred the way. / The National Guard was called out by Governor Faubus. Yesterday, President Eisenhower asked Faubus to cooperate with the court. / Mr. Eisenhower said he would uphold the Federal Constitution by every legal means at his command. Today, Faubus sent the President a telegram offering to give the F.B.I. "certain evidence upon which I acted to preserve the peace." / Faubus said he would cooperate "in upholding the constitution of Arkansas and the nation." In Washington, Attorney General Brownell directed the F.B.I. to receive any information Faubus might present...in order, Brownell said, "that we may incorporate it in the report we are making to Federal Judge Davies." United States District Judge Ronald Davies issued the integration order and is seeking to determine the responsibility for non-compliance.

White House News Secretary Hagerty said today that President Eisenhower opposes the use of force in dealing with school integration problems in Little Rock or elsewhere. Hagerty said there was no circumstance under which he could imagine the use of Federal troops.

Tomorrow, Mr. Eisenhower will interrupt his Rhode Island vacation and fly to Washington for a series of high-level talks. He will confer first with Attorney General Brownell regarding the situation in Little Rock and then discuss the Middle East situation with Secretary of State Dulles.

The State Department said today that the United States is expediting delivery of "certain military items" to Jordan and other Middle East countries---at their request. The department spokesman would not identify the "other countries", except to say that they have military assistance agreements with the United States. They are believed to be Turkey, Saudi Arabia, Lebanon and Iraq...countries which, like Jordan, might be exposed to Communist penetration from Syria. The department spokesman said, "The arms shipments are in movement." Jordan is due to get its first shipment...by air...on Monday. There is also a report of a possible military airlift to Iraq. In addition to his meeting with

the President, Secretary of State Dulles will confer in Washington tomorrow with French Foreign Minister Pineau. The State Department says their discussion will include the Algerian problem.

Democratic Senator Mansfield of Montana suggested today that Washington should try...through the United Nations...to have arms shipments to the Middle East made subject to "some degree of international control." Mansfield said the United States should also "weigh the possibility" of a conference with King Saud of Saudi Arabia and President Nasser of Egypt. Such a conference, he said, might "consider additional ways to preserve Arab nationalism from further Soviet aggression."

~~In Moscow, the government newspaper Izvestia said today that Russia~~ and Lebanon should be friends. ~~The paper attacked the~~ Eisenhower Doctrine. Public opinion, it ~~he said, has "objected strongly" to the "violation" of~~ Lebanon's sovereignty ~~by the United States.~~

In Peiping, the 41 Americans visiting Red China today attended a reception given by Communist Premier Chou En-lai. Chou said China's door is "always open to United States citizens" but that it should be on "an equal and mutual basis." The Chinese Communist news agency says

—>

Chou made the statement in reply to a question about the admission of American reporters to Red China.

The manslaughter trial of Army Specialist William Girard was resumed today before a Japanese court. The soldier's commanding officer testified that none of the personnel on the firing range near Maebashi...where Mrs. Sakai was shot...was authorized to fire on scrap collectors. The prosecution introduced statements designed to show that American soldiers frequently chased away metal scavengers by firing empty cartridge casings. The court had intended to adjourn tomorrow to the firing range itself, but this was postponed because of bad weather. A typhoon hit Southern Japan today with 90-mile-an-hour winds.

The Miami Weather Bureau says the third hurricane of the season has been discovered in the South Atlantic. The storm presents no immediate threat to any land area. It is located 23-hundred miles east-southeast of Miami.

Fighting broke out again today in Cienfuegos (SEE-EN-FWAY-GOS), in south-central Cuba. One report calls it a mopping-up action, after the all-day battle there yesterday against government forces. Another report says that the fighting

there today was heavy, with government planes and tanks backing up the Cuban Army in an attack on three buildings still held by rebel forces. Again, late in the day, the Cuban high command reported rebel resistance in the city crushed. Telephone reports from Cienfuegos say as many as 50 were killed or wounded in the new outbreak. The uprising ~~in Cienfuegos~~ has had the support of elements of the Cuban Navy.

~~The president of the United Nations General Assembly, Prince Wan of~~ Thailand

Five times in our history, State Governors have called out the Militia in opposition to orders of the Federal courts. So Governor Faubus has not hit on a new device in dealing with de-segregation in Little Rock. Four times out of the five, the Federal courts ordered the withdrawal of the troops, and the Governors complied.

The one exception was when Governor Olsen of Minnesota called out the Militia in a labor dispute, saying the enforcement of a Federal court ruling would have caused disorder. He had to go into court to establish his case, and the court, on hearing his evidence, agreed he was justified. But a second time, the same Governor Olsen called out the Militia to seize a factory in defiance of a Federal order. This time he tried to show that he acted to protect property and life. But this time he did not convince the Judge, and was told to withdraw the troops, which he did.

Legally speaking there is no question whatever that the Federal courts can enjoin a Governor from using state troops even when he says he is doing so to preserve order. Governor Sterling of Texas tried to nullify the right in 1932. The case involved the flow of oil which the Federal court had ordered, and the Governor was determined to stop. He put state troops around the oil well, saying they were needed to deal "with a state of insurrection, tumult,

riot and a breach of the peace." The Federal court held a hearing and decided that no such emergency existed, and enjoined the Governor from using the troops. The Governor immediately appealed to the Supreme Court, arguing that Federal courts had no right to review his action or re-examine the facts on which he had declared martial law. The Supreme Court unanimously found him wrong, and Chief Justice Hughes set forth that a Federal court can review the facts on which a Governor bases his use of troops, and ruled further that if there is a threat of violence, the Governor's duty is to uphold the Federal decree, and not to oppose it.

The lesson of these cases is one Governor Faubus will have to weigh. If or when Judge Davies decides to deal with Governor Faubus, the Governor would have to come into court and prove his facts. One can imagine that he would have to prove, for one thing, if he could, that he did not order the National Guard to keep negro students from entering the Little Rock high school. Presumably the F.B.I. has been gathering evidence on this point, as well as on the existence and scope of the danger of violence at the school building.

So far Governor Faubus has not challenged the Federal jurisdiction. He did post guardsmen around his office, as though to prevent service of papers

from the Federal court. But his power as opposed to the power of the Federal judiciary is no greater than that of any private citizen, once the Federal jurisdiction is established. Governor Faubus may seem to have power by virtue of his command of the Arkansas National Guard. But the National Guard is in part paid for by the Federal Government, and it belongs to the defense forces of the nation. The President could take it over. There is a law that authorizes the President to call the State Militia into Federal service "wherever the President considers that unlawful obstructions, combinations, assemblages or rebellion against the authority of the United States makes it impracticable to enforce the laws of the United States in any state or territory by the ordinary judicial proceedings."

Another statute gives the President authority to use the armed forces if the situation in a state "so hinders the execution of the laws that any part or class of the people are deprived of right, privilege, immunity or protection named in the Constitution." But it is to be stressed that as yet the executive branch of the Federal Government is not involved in a dispute with the Governor of Arkansas. President Eisenhower's telegram to Governor Faubus was not Federal action; it was a personal warning and the announcement of an intention. Administration officials are praying there won't have to

be a showdown with the Governor of Arkansas. It is prayer that could be answered in two ways. There could be a brief postponement of integration, as asked by the Little Rock School Board. Or Governor Faubus might Re-examine his powers, and decide he really doesn't have the slightest chance to win a one-man nullification campaign.

George Bryan -

Word for Today

In any test between the authority of state and federal courts, the federal jurisdiction...~~inevitably~~...must be supreme. Law is the basic element in our ~~[illegible]~~ democracy. More than fifty years ago, Mr. Justice Holmes said, "The law is the witness and external deposit of our moral life. Its history is the history of the moral development of the race."

Goodnight and good luck!

THIS IS ED MURROW, I'LL BE BACK IN A MOMENT WITH THE WORD FOR TODAY BUT FIRST, HERE IS GEORGE BRYAN.

GEORGE BRYAN: COMMERCIAL

MURROW: WORD FOR TODAY

In any test between the authority of state and federal courts, the federal jurisdiction...must be supreme. Law is the basic element in our democracy. More than 50 years ago, Mr. Justice Holmes said, "The law is the witness, and external deposit, of our moral life. Its history is the history of the moral development of the race."

Goodnight and good luck!

Edward R. Murrow Mon., Sept. 9, 1957

This is the news:

United States District Judge Ronald Davies tonight ordered the Federal Government to file an injunction petition against Governor Faubus of Arkansas, in the Little Rock integration dispute. The injunction would forbid Governor Faubus from interferring with the integration of the central high school in Little Rock, as ordered previously by Judge Davies.

~~This is the news:~~

Governor Faubus agreed today to submit the Little Rock integration question to a bipartisan committee of governors. The proposal for mediation by a governors committee was made by Governor Furcolo of Massachusetts. Faubus said Furcolo talked to him by telephone and suggested that the committee be made up of five governors---two from states where public school integration is a problem, two from states where there is no problem, and the fifth from a border state. Such a committee would have no power except to express an opinion. Faubus said he accepted the proposal because it would allow for "a cooling-off period."

Today, National Guard troops were still posted outside the school, and no Negro student tried to enter.

~~were still posted outside the school, and no Negro student tried to enter.~~

Faubus said again today that he ordered out the guard to avoid violence. He said that if the Federal Government tries to undermine his police powers by force or other means, "then we will have lost our last right of local self-government." ~~He said, "If blood is then shed, my conscience will be clear."~~ Mayor Mann of Little Rock said today that the governor's words "spell sedition." He referred to Faubus' statement yesterday that ~~[illegible]~~ if the National Guard were federalized, he---Faubus--- had "the offer of volunteers from all over the country." Today, Faubus called the mayor "a discredited, repudiated city official."

~~The United States district attorney in Little Rock says he has delivered the final F.B.I. report on the Little Rock situation to Judge Davies. The F.B.I. has been collecting evidence for the purpose of determining responsibility for noncompliance of the integration order.~~

Across the Arkansas River from Little Rock today...in the town of North Little Rock...six Negro boys tried to enter the high school and were driven from the school steps by a group of white students. Police broke up the scuffle and no one was hurt. ~~When the Negro students left by [illegible]~~

~~Superintendent T.B. Wright...tried again to enter the building, they were stopped by a crowd of about 150 whites. Wright then called off the integration effort at North Little Rock for the time being. Unlike central high in Little Rock, North Little Rock is not under order from any court to proceed with integration. Rather, he planned to start integration on a limited, voluntary basis.~~

In Birmingham, Alabama, a Negro integration leader was attacked by a crowd as he drove up in front of an all-white high school with several Negro students. He suffered cuts and bruises before he managed to get back in the car and drive away.

In Dallas today, Federal Judge William Atwell signed an order for integration of the city school system, starting in February. Atwell was following the mandate recently handed down by the United States Fifth Court of Appeals in New Orleans. ~~The Dallas school district has served notice that it will appeal the order.~~

School integration began in Nashville today on a limited scale. Negro students entered seven grammar schools without major incident. All integration in Nashville is at the first-grade level. Some white parents

→

began taking their children out of school...as segregationist John Casper made a tour of the schools, calling for a boycott.

Today...at his Rhode Island vacation headquarters....President Eisenhower signed the civil rights bill. White House News Secretary Hagerty told reporters the President is considering several possible steps the Administration might take in the Little Rock situation.

Jordan received its first air shipment of arms today from the United States. The weapons....brought in by six Globemasters and two "Flying Boxcars"...consisted of recoilless rifles, machine guns, ammunition and jeeps.

Syria today accused the United States of carrying out "provocative irritative operations" against it. A Syrian Army spokesman said five American warships approached the Syrian coast yesterday "in a way that constitutes an open challenge."

President Nasser of Egypt said today the United States made up the Communist threat in Syria in order to destroy Arab unity and help Israel. He said Egypt will support Syria "to the end, unconditionally." The State Department says the Nasser charge is "apparently based on false assumptions."

(I should like to discuss the Middle East question further in a few minutes).

Harold Stassen returned to Washington today from the London disarmament conference and termed the break-up of the talks "a matter of a recess, not a collapse." He expressed conviction that a disarmament agreement will eventually be reached.

The Atomic Energy Commission today announced that Russia has tested another nuclear weapon of "moderate intensity." ~~It said this appeared to be the second of a series of Soviet tests that began on August 22.~~

~~The Air Force tested a guided missile today off the Florida coast. There are no details. Deputy Defense Secretary Quarles said today, "I am confident that we will not be outdistanced in this so-called ballistic missile race. "We make no apology," he said, "for any economies that we can achieve even in these very high priority programs."~~

Russia today used its 81st and 82nd vetoes in the United Nations Security Council in denying United Nations membership to South Korea and South Vietnam. The membership application of Outer Mongolia was defeated by a vote of 5 to 2.

Also in the United Nations, a resolution was submitted...calling on the General Assembly to condemn Russia for depriving Hungary of its political independence. The resolution was submitted by

the United States and 35 other countries. The resolution asks the president of the Assembly...Prince Wan of Thailand...to take whatever steps he deems appropriate to see that previous United Nations resolutions on Hungary are carried out.

The latest advisory on Hurricane Carrie places the storm a thousand miles east of San Juan, Puerto Rico...and moving west-northwest at 10 miles an hour. Highest winds near the center are 160 miles an hour. There is still no immediate threat to any land area.

~~Baseball commissioner Ford Frick today announced that the 1957 World Series will open in the park of the American League pennant winner on Wednesday, October seconds.~~

Edward R. Murrow: September 9, 1957. 7.45 p.m.

The Manchester Guardian complains today that the airlift of American arms to Jordan is over-dramatic. Certainly the publicity given to it has not added to the sense of safety of some of Jordan's neighbors. Indeed the alarm seems to be greater than the amount of shipped arms justifies. We are trying to make our help to Jordan sound as important as we can. Possibly we have made it more important than it is.

But the Middle East crisis of the moment is based on a simple fact: The Soviet Union is pouring more arms into Syria than the country needs, unless it is going to attack or bully somebody. And the Syrian army is now led by its pro-Soviet faction, while Russian military and economic advisers are streaming by hundreds into the country. The balance of power in the Middle East is upset as much, perhaps, as it was when the Soviet Union first delivered arms to Egypt. To ignore the fact would be to serve notice that we are not interested in maintaining our relative strength. Instead, we are answering the Soviet move by one in the same language of arms and aid.

In these broad terms, what we are doing seems unavoidable to the Eisenhower Administration. But that does not mean that it is sure to be successful, or that our experience with Jordan is a very happy one. We are bolstering up King Hussein because his army might fall to the strong pro-

Egyptian and pro-Syrian factions in his country. He saved his Arab Legion from this fate once, and the arms now airlifted to him would be more useful in suppressing an insurrection, than in defending Jordan's borders from open Syrian aggression.

However, Jordan is a curious symbol of American interest in the Middle East. It is an artificial and utterly undemocratic state without claim to survive in its present impoverished condition. But circumstances have made it our special responsibility. We fell heir to it when Britain gave up its role in the Middle East, and it is costing us plenty, as it cost the British plenty.

The virtual revolution in Syria, even though it put the pro-Soviet faction in control of the army, has not as yet made Syria a Soviet satellite, and we are determined that this should not happen. ~~But our intervention~~ is being ~~exploited by the Arab nationalists, as well as by the Soviet Union,~~ to our harm. ~~We are being accused of planning military aggression ourselves,~~ not ~~trying to prevent~~ it.

It is ironical that the chief Arab argument against us should be, that what we are doing is aimed to bolster up Israel against the Arab world. The fact is that the Israeli are as much distressed by our arms shipments to Jordan

as anybody else. They can more easily imagine ~~them~~ those weapons being used against Israel than against Syria. And the Israeli are keenly aware of their inability to buy arms from us. They think that if we are interested in the power of our friends, we would be doing better to help them than Hussein.

The British, from the sidelines, are watching us with a kind of experts' cynicism. They want us to succeed, but they are sure they know more about dealing with Arabs than we do. The London Times points out that both Russia and the United States are confident that they can intervene in the Middle East because, as the Times puts it, they "are innocent of any 'colonialist' history in that area." But their innocence, the Times says, "extends not only to their history, but to their knowledge of the dangers of internal factions and fueds in the Arab states, and they may earn the colonialist label sooner than they know."

So both sides are accusing each other of planning aggression, and in such an atmosphere sweet reasonableness does not thrive. The immediate aim of the State Department is to convince the Syrians that they cannot afford to enter the Soviet satellite system. This should not be impossible. President Nasser keeps claiming that Egypt has not done so. The present show of power, and the agitation it is causing, may be meant as a prelude

to a heart-to-heart talk with the Syrians.

But even if we succeed to this modest extent with the Syrians, the basic problem of the Middle East remains, and so far as the public knows, we are doing nothing, or nothing vigorous, to promote its early solution. That is to bring about a settlement of the Arab-Israeli conflict. It can be settled with a sufficiently generous program to re-settle the Arab refugees, and with a joint approach to the sharing of water power and other economic resources. Granted, this is easier said than done. But what seems to be called for, is that someone find a way to move in this direction, a way that is as prompt and dramatic as the arms lift to Jordan.

This is Ed Murrow. I'll be back in a moment with the W.F.I. George Bryan. But first here is George Bryan.

cor
George Bryan: Commercial
Murrow.

Word for Today

We have a special responsibility in the Middle East to preserve the balance of power. We want Jordan to be able to defend itself. We want to convince Syria that becoming a Russian satellite would be a mistake. And underlying all is the need for an Arab-Israeli settlement. Publilius Syrus said, "In every enterprise, consider where you would come out."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

MONDAY, SEPTEMBER 9, 1957
7:45 - 8:00 P.M., E.S.T.

This is the news:

United States District Judge Ronald Davies tonight ordered the Federal Government to file an injunction petition against Governor Faubus of Arkansas in the Little Rock integration dispute. The injunction would forbid Governor Faubus from interfering with the integration of the central high school in Little Rock, as ordered previously by Judge Davies.

Governor Faubus agreed today to submit the Little Rock integration question to a bipartisan committee of governors. The proposal for mediation by a governors committee was made by Governor Furcolo of Massachusetts. Faubus said Furcolo talked to him by telephone and suggested that the committee be made up of five governors ---two from states where public school integration is a problem, two from states where there is no problem, and the fifth from a border state. Such a committee would have no power except to express an opinion. Faubus said he accepted the proposal because it would allow for "a cooling-off period."

Today, National Guard troops were still posted outside the school, and no Negro student tried to enter. Faubus said again today that he ordered out the guard to avoid violence. He said that if the Federal Government tries to undermine his police powers by force or other means "then we will have lost our last right of local self-government." Mayor Mann of Little Rock said today that the governor's words "spell sedition." He referred to Faubus' statement yesterday, that if the National Guard were federalized, he ---Faubus --- had "the offer of volunteers from all over the country." Today, Faubus called the mayor "a discredited, repudiated city official."

Across the Arkansas River from Little Rock today...in the town of North Little Rock...six Negro boys tried to enter the high school and were driven from the school steps by a group of white students. Police broke up the scuffle and no one was hurt.

In Birmingham, Alabama, a Negro integration leader was attacked by a crowd as he drove up in front of an all-white high school with several Negro students. He suffered cuts and bruises before he managed to get back in the car and drive away.

In Dallas today, Federal Judge William Atwell signed an order for integration of the city school system, starting in February. Atwell was following the mandate recently handed down by the United States Fifth Court of Appeals in New Orleans.

School integration began in Nashville today on a limited scale. Negro students entered seven grammar schools without major incident. All integration in Nashville is at the first-grade level. Some white parents began taking their children out of school...as segregationist John Casper made a tour of the schools, calling for a boycott.

Today...at his Rhode Island vacation headquarters...President Eisenhower signed the civil rights bill. White House News Secretary Hagerty told reporters the President is considering several possible steps the Administration might take in the Little Rock situation.

The Atomic Energy Commission today announced that Russia has tested another nuclear weapon of "moderate intensity."

Russia today used its 81st and 82nd vetoes in the United Nations Security Council in denying United Nations membership to South Korea and South Vietnam. The membership application of Outer Mongolia was defeated by a vote of 5 to 2.

Also in the United Nations, a resolution was submitted...calling on the General Assembly to condemn Russia for depriving Hungary of its political independence. The resolution was submitted by the United States and 35 other countries. The resolution asks the president of the Assembly...Prince Wan of Thailand...to take whatever steps he deems appropriate to see that previous United Nations resolutions on Hungary are carried out.

The latest advisory on Hurricane Carrie places the storm a thousand miles east of San Juan, Puerto Rico...and moving west-northwest at 10 miles an hour. Highest winds near the center are 160 miles an hour. There is still no immediate threat to any land area.

The Manchester Guardian complains today that the airlift of American arms to Jordan is over-dramatic. Certainly the publicity given to it has not added to the sense of safety of some of Jordan's neighbors. Indeed the alarm seems to be greater than the amount of shipped arms justifies. We are trying to make our help to Jordan sound as important as we can. Possibly we have made it more important than it is.

But the Middle East crisis of the moment is based on a simple fact: The Soviet Union is pouring more arms into Syria than the country needs, unless it is going to attack or bully somebody. And the Syrian army is now led by its pro-Soviet faction, while Russian military and economic advisers are streaming by hundreds into the country. The balance of power in the Middle East is upset

as much, perhaps, as it was when the Soviet Union first delivered arms to Egypt. To ignore the fact would be to serve notice that we are not interested in maintaining our relative strength. Instead, we are answering the Soviet move by one in the same language of arms and aid.

In these broad terms, what we are doing seems unavoidable to the Eisenhower Administration. But that does not mean that it is sure to be successful, or that our experience with Jordan is a very happy one. We are bolstering up King Hussein, because his army might fall to the strong pro-Egyptian and pro-Syrian factions in his country. He saved his Arab Legion from this fate once, and the arms now airlifted to him would be more useful in suppressing an insurrection, than in defending Jordan's borders from open Syrian aggression.

However, Jordan is a curious symbol of American interest in the Middle East. It is an artificial and utterly undemocratic state without claim to survive in its present impoverished condition. But circumstances have made it our special responsibility. We fell heir to it when Britain gave up its role in the Middle East, and it is costing us plenty, as it cost the British plenty.

The virtual revolution in Syria, even though it put the pro-Soviet faction in control of the army, has not as yet made Syria a Soviet satellite, and we are determined that this should not happen.

It is ironical that the chief Arab argument against us should be, that what we are doing is aimed to bolster up Israel against the Arab world. The fact is that the Israeli are as much distressed by our arms shipments to Jordan as anybody else. They can more easily imagine those weapons being used against Israel than Syria. And the Israeli are keenly aware of their inability to buy arms from us. They think that if we are interested in the power of our friends, we would be doing better to help <u>them</u> than Hussein.

The British, from the sidelines, are watching us with a kind of experts' cynicism. They want us to succeed, but they are sure they know more about dealing with Arabs than we do. The London Times points out that both Russia and

the United States are confident that they can intervene in the Middle East because, as the Times puts it, they "are innocent of any 'colonialist' history in that area." But their innocence, the Times says, "extends not only to their history, but to their knowledge of the dangers of internal factions and feuds in the Arab states, and they may earn the colonialist label sooner than they know."

So both sides are accusing each other of planning aggression, and in such an atmosphere sweet reasonableness does not thrive. The immediate aim of the State Department is to convince the Syrians that they cannot afford to enter the Soviet satellite system. This should not be impossible. President Nasser keeps claiming that Egypt has not done so. The present show of power, and the agitation it is causing, may be meant as a prelude to a heart-to-heart talk with the Syrians.

But even if we succeed to this modest extent with the Syrians, the basic problem of the Middle East remains, and so far as the public knows, we are doing nothing, or nothing vigorous, to promote its early solution. That is to bring about a settlement of the Arab-Israeli conflict. It can be settled with a sufficiently generous program to re-settle the Arab refugees, and with a joint approach to the sharing of water power and other economic resources. Granted, this is easier said than done. But what seems to be called for, is that someone find a way to move in this direction, a way that is as prompt and dramatic as the arms lift to Jordan.

This is Ed Murrow. I'll be back in a minute with the Word for Today, but first, here is George Bryan.

BRYAN: COMMERCIAL

MURROW: We have a special responsibility in the Middle East to preserve the balance of power. We want Jordan to be able to defend itself. We want to convince Syria that becoming a Russian satellite would be a mistake. And underlying all is the need for an Arab-Israeli settlement. Publilius Syrus said, "In every enterprise, consider where you would come out."

Goodnight and good luck!

Edward R. Murrow Tues., Sept. 10, 1957

This is the news:

The Federal Government today asked United States District Judge Ronald Davies to issue an injunction...restraining Governor Faubus of Arkansas from interfering with the de-segregation of the high school in Little Rock. Less than an hour after the government filed its petition, Judge Davies scheduled a hearing for September 20th. Governor Faubus accepted a subpena to appear at the hearing. But he told a news conference tonight that National Guardsmen will continue to surround the school. And, he said, they still have instructions not to allow Negro students to enter. (I should like to discuss the legal aspects of this further in a few minutes).

Police in Nashville, Tennessee, have banned all segregationist demonstrations following the dynamiting of a grammar school which was attended yesterday by one Negro child. The school was built in 1950 at a cost of half a million dollars. It was almost completely demolished. Five white men have been arrested in connection with the blast. Mayor West of Nashville said, "Every decent citizen abhors violence. The one who encourages and exhorts the fanatic runs the very real risk of endangering his own life." And tonight President Eisenhower called the school bombing "a terrible thing."

The segregationist leader...John Kasper...was arrested in Nashville today and charged with disorderly and offensive conduct. Police based the charges on violent speeches made by Kasper in favor of racial segregation. He was released on 1-thousand dollars' bail.

In Birmingham, Alabama, 18-hundred white students were evacuated from Phillips High School after school authorities received an anonymous tip that a bomb had been placed in the school building. No bomb was found and classes were resumed. It was in front of this school that a Negro minister was severely beaten yesterday, when he tried to enroll four Negro students.

Secretary of State Dulles said today that he has "no doubt" the integration trouble will be used by Russian propagandists to make the United States look bad in the eyes of the world. Dulles told his weekly news conference that he believes the Syrian question can be settled peacefully. "But," he said, "that is partly a belief based upon faith." He noted that there ARE "factors" over which the United States has no control. He said, "Certainly we do not believe...there or anywhere else...in peace at any price." Mr. Dulles said the London disarmament talks should not be judged a failure. He said the progress was "quite monumental", in comparison with previous meetings.

The United Nations General Assembly today met in special session to resume debate on the Hungarian question. Henry Cabot Lodge...speaking for the United States...attacked Russia and the Kádar government for "gross defiance" of United Nations resolutions for the withdrawal of Soviet troops from Hungary and the restoration of political independence. Lodge said, ~~"The people of Hungary are being shot and imprisoned. Their sufferings are actual and acute, and demand to be relieved." To effect relief~~, Lodge urged the Assembly to approve a new resolution...supported by 36 countries...nominating Prince Wan of Thailand as a special United Nations representative on Hungary. Prince Wan's task would be "to pursue the objectives of the General Assembly on the Hungarian question." The resolution again denounces Russia's intervention in Hungary and urges Moscow "to desist from repressive measures against the Hungarian people." Lodge said that, in the end, world opinion may force Russia to comply with the United Nations resolutions. He said, "The greatest danger we face is that we will give in to despair." Russian delegate Sobolev accused Lodge of "raising a hullabaloo about Hungary", to divert attention from the "aggressive acts" of the United States, Britain and France in the Middle East.

Soviet Foreign Minister Gromyko said today that "a threat of armed intervention in the internal affairs of Syria is being created." Gromyko told a news conference in Moscow that Turkish troops are massing on the Syrian frontier in support of what he called "Western aggression". Turkey, he said, should remember that Syria has "reliable friends"...and that World War One and World War Two began as "local adventures." Gromyko blamed the West for the break-down of the London disarmament talks. And he accused Britain of committing aggression in Yemen and Oman.

In Damascus, the Syrian foreign minister said today that his country is prepared "to meet all emergencies and face every aggression. He again complained of "provocative maneuvers" by American warships off the coast of Syria.

Syria today accused Israeli forces of opening fire on two Arab villages and killing a civilian. Israel says Israeli tractors working in the fields came under Syrian fire and that armed guards returned the fire. Israel says the fields were inside the demilitarized zone. Syria had charged that they were "Arab" fields.

The foreign minister of Jordan said today that his country has no intention of interfering in Syria. He called the impression created by the

→

airlift of American arms to Jordan "most unfortunate". He said the United States promised the arms some time ago, and that Jordan has no concern in Syria's internal affairs. Israel, he said, remains the "greatest threat".

The Communist leader of Poland...Wladyslaw Gomulka...arrived in Yugoslavia today for a week's visit. At a banquet tonight, President Tito promised to support Poland in its border dispute with West Germany. Formal talks will start tomorrow.

Secretary of Defense Wilson told reporters in Washington today, "I don't really know for sure" whether the United States is ahead of Russia in the ballistic missiles race. Wilson said he was uncertain on this score before Russia announced it had successfully test-fired an intercontinental ballistic missile, and that the announcement had not changed his attitude. The "big" problem, he said, will be to turn out reliable missiles on a production line basis.

The government reported today that 800-thousand fewer persons held jobs in the United States in August than in July. ~~Employment normally drops in August.~~ Normally there are fewer jobs in August because of a seasonal decline in farm employment, but the drop last month was the sharpest in ten years. The government said this is due partly to "unfavorable weather,"

Edward R. Murrow: September 10, 1957. 7.45 p.m.

Judge Davies, in asking the Federal Government to enter the Little Rock de-segregation conflict as "a friend of the court", has made the United States a leading party in the case. Ordinarily a "friend of the court" has a purely advisory status. But the Supreme Court ruled in 1946 that a Federal Court might invite the entrance of a friend of the court to represent the public interest. Judge Davies exercised that right. He could have allowed the Little Rock case to have remained one between negro parents and the school board. He chose to elevate it to a higher and graver importance. He now is confronting Governor Faubus with the United States Government.

The Justice Department has filed its injunction petition, and the judge has set the date for Governor Faubus and his top Guards officers to show cause why they should not be enjoined from obstructing school integration. There will be a hearing first on the issuance of a temporary injunction, then on whether it should be made permanent. Since the governor has not refused to appear in the Federal Court -- and thus take himself out of the Union -- the hearings will give him ample opportunity to set out why he acted as he did. If he proves his case to the satisfaction of Judge Davies the injunction will not be granted. His contention is that he was right in disobeying Judge

Davies' own order for the integration of negro students, because to have done so would have produced disorder.

The Justice Department is bound to attack this contention. It must try to show that the danger of violence was small or unreal before Governor Faubus called out the National Guard. Judge Davies knows pretty well what the situation was in Little Rock before the militia was called out. He has before him a 400-page report of F.B.I. agents on their investigation. He had it before he asked the Federal Government to intervene.

Now, if Governor Faubus should surprise everybody, and prove his case, either in Judge Davies' court or the higher courts, the South would have the formula for nullifying the Supreme Court ruling on integration. But if he fails to convince Judge Davies, to begin with, a LONG delay is to be expected. He would appeal to the United States Court of Appeals, and if he loses again, to the Supreme Court. In the meantime integration in Little Rock would be suspended, and a breathing space would be provided.

No one will deny that the danger of violence in Little Rock and in other Southern cities at this moment is acute. The South is rocking with explosions both emotional and material. But this is not the issue before Judge Davies. He is not ruling on conditions today. What he must decide is what they were

before Governor Faubus called out the National Guard.

This may not be the most satisfying kind of legal case. It may not be simple to find a yardstick of potential danger. And evidence as to what might have happened if the governor had acted otherwise can hardly be free from some speculation. ~~But the courts overcome such difficulties every day~~ to the nation's utter satisfaction. This is grist ~~in the mill of judicial~~ the process.

It is very much to the point to say that Little Rock, and the other Southern communities that are obstructing integration, are costing the country dearly in world prestige. The United States today was fighting in the United Nations Assembly for its resolution condemning the Soviet subjugation of Hungary. Today, also, we were trying to bolster up opposition in the Middle East to the extension of Communist domination. The Communists could not have asked for more timely and effective anti-American propaganda than our own dispatches about Governor Faubus, the dynamiting of a Nashville school and the use of troops to keep children from entering their school house. The damage is not only in the countries we are exhorting not to submit to Communist tyranny. We are losing the respect of our most dependable friends.

When the civil rights bill passed Congress it could be said that it

would do us more good abroad, perhaps than any measure since the Marshall Plan. But the benefit of the law has been snuffed out like a candle. And that is quite an achievement to attribute to a single person. And it does not lessen its consequences to every American for him to say he was doing what he believed to be right.

Jerry Bryan

Word for Today

The integration dispute is giving Russia a fund of propaganda material, ~~which it will endeavor to spread around the earth.~~ Henry Stimson realized that we are not an island. "No private program," he warned, "and no public policy in any sector of our national life, can escape from the compelling fact that if it is not framed with reference to the world, it is framed with perfect futility."

Goodnight and good luck!

Edward R. Murrow Wed., Sept. 11, 1957

This is the news:

Governor Faubus of Arkansas asked President Eisenhower today for an opportunity to talk to him regarding the Little Rock integration dispute. Mr. Eisenhower agreed to the meeting...saying that he would see the governor in Newport, either Friday afternoon or Saturday morning. Faubus was given the choice of which it will be. In requesting a conference with the President, Faubus said: "Recognizing that we jointly share great responsibility under the Federal Constitution, I feel that it is advisable for us to counsel together in determining my course of action as chief executive of the State of Arkansas, with reference to the responsibility placed upon me by the state and federal constitutions."

—>

Faubus went on to say, "All good citizens must, of course, obey all proper orders of our courts, and it is certainly my duty to comply with the order that has been issued by the District Court in this case consistent with my responsibilities under the constitution of the United States and that of Arkansas." Faubus has contended ~~during the past time~~ it was his duty, under the Arkansas constitution, to prevent violence. He gave that as his reason for posting National Guardsmen around the central high school in Little Rock...with orders to bar Negro students from entering, even though the United States District Court had directed that the school be integrated. The Federal Government has applied for an injunction, and Faubus has accepted a summons to attend a hearing on the application on September 20th. National Guardsmen are still outside the school, under orders not to allow Negro children to enter.

In Nashville, Tennessee, segregationist John Kasper was unable today to raise a 200-dollar fine for his part in the integration disorders there and has been placed in the City Workhouse. The charges brought against Kasper by the city consisted of misdemeanors---vagrancy, loitering, and disorderly and offensive conduct. When these charges are disposed of, he will be turned over to the state on a charge of inciting to riot.

Integration of Nashville grammar schools continued today on a limited scale. Attendance at the schools by white students was slightly improved.

President Eisenhower today signed the emergency immigration bill, while...at the same time...calling it "a disappointment". The measure provides for the admission to the United States of more than 60-thousand "hardship cases", but makes no general revision of basic immigration quotas. It also ignores the Administration proposal that permanent residence be granted some 25-thousand Hungarian refugees now in the United States.

The prime minister of Syria said today that he "wished to thank the Soviet Union for its firm attitude toward American attempts to break Syrian independence." The statement was in reference to Soviet Foreign Minister Gromyko's warning yesterday that the West should keep hands off Syria. (Syria's pro-Soviet commander-in-chief, General Bizry, arrived in Cairo today and went immediately into conference with President Nasser). The State Department in Washington says Secretary Dulles will make a major speech next week before the United Nations General Assembly. Presumably he will touch upon both the Middle East problem and disarmament.

In the General Assembly today, Britain demanded full ~~In the United Nations General Assembly, Britain today demanded full~~ Soviet compliance with the United Nations resolutions on Hungary. The British minister of state, Allan Noble, said the prestige of the world organization cannot survive if the Assembly allows Russia to ignore its edicts. And he expressed "earnest hope" that Prince Wan of Thailand...as special United Nations representative on Hungary...will be able to make the Soviet government "realize its international obligations." Representatives of Australia, Greece, Italy, Peru and the Netherlands also urged Russia "to respond to the judgment of public opinion" and withdraw its troops from Hungary.

The puppet premier of Hungary...Janos Kadar...today scored the United States on the issue of racial segregation. Kadar told a Communist Party meeting, "Those who tolerate that a people should be persecuted because of the color of their skin have no right to preach human liberty and human rights."

My colleague, Earnest Leiser, reports from Bonn that although the West German elections are only four days off, the American integration question is attracting more attention from the German press and radio than

→

all the statements of all the politicians put together. Leiser says that so far West German papers have withheld editorial comment.

The British governor of Cyprus told the Greek Cypriot underground today that the death penalty for carrying firearms is now abolished. The underground suspended its terrorist operations in March, pending new efforts for a peaceful settlement.

The United States Court of Appeals...in New Haven...today reversed the conviction of five Communists charged with conspiring to teach and advocate the violent overthrow of the government. The court ruled...in a 2-to-1 decision...that the Justice Department had introduced "no direct evidence of such advocacy."

The Communications Workers of America have called a nationwide strike of 55-thousand telephone equipment workers for 6 a.m. Monday, local time. Union President Joseph Beirne says the strike for higher pay will be against the Western Electric Company...and that picket lines will be thrown up around telephone exchanges in every state, except Maine, New Hampshire and Vermont. Western Electric is an affiliate of the American Telephone and Telegraph Company. Equipment installers in seven western states already have walked out.

Hurricane Carrie...with its winds reduced to 85 miles an hour...is now reported almost stationary, 18-hundred miles east-southeast of Miami. Forecasters say the storm may veer north, and thus miss the United States coast.

Edward R. Murrow: September 11, 1957. 7.45 p.m.

The meeting between Polish leader Gomulka and President Tito in Belgrade does not promise to produce anything spectacular, but in itself it is an event of uncommon importance to the Soviet Union and all its satellites. Nine years ago Tito walked out of the satellite system. As a result, four to five thousands of his sympathizers in neighboring countries, many of them Poles, were massacred in the purges that followed. Moscow was determined that no secondary system of friendships should grow up within its monolithic empire. If satellite leaders wanted to meet, let them do so in Moscow.

Now they are meeting in Belgrade and without Russian eavesdropping. They are not conspiring against the Soviet Union. But they are doing what Moscow with unbridled ferocity tried to prevent; they are advertising the existence of a secondary system of friendships within the communist world, a system that has no point if it is not somewhat independent of Moscow. Every national in every satellite can see it. If he thinks about it, he knows his world has changed.

This change, to be sure, is not drastic and it may not be final. It is no revolution that will bring Gomulka and Tito into the Western camp. And it may be temporary, for who knows when de-Stalinization will be followed in Moscow by re-Stalinization. The Hungarians certainly believe that that

already has happened in their country. But Gomulka seems some way off from such a disaster, and as for Tito, he is by now the master of his tight-rope.

So here are two men who defied Moscow. Tito defied Stalin, Gomulka defied Khrushchev. And they are openly meeting and openly talking policy, and just by doing it they are reducing the cohesive strength of the Soviet system.

This is happening at a bad time for the Soviet Union. The Russians are on trial at the bar of United Nations opinion for their savage treatment of Hungary. That of itself is satellite trouble enough. But Gomulka and Tito are producing additional anxieties. The effect on Moscow is to set off an eruption of denunciations - not of Tito and Gomulka, but of the United States. Not for years has the Russian press been so wild and frantic about American policy. Quite obviously Soviet readers are being distracted from thinking about what is happening in their own communist world.

There is a further dimension to this trouble that came into view in Gomulka's toast at yesterday's Belgrade festivities, and again in a speech today. It is Communist China. What he said was harmless enough. It was that Poland and Jugoslavia must work together with Russia, China and all

communist countries. But Red China is a touchy subject just now. Mao Tse-tung was one of Gomulka's sponsors, and helped save Poland from the fate of Hungary. He is about to visit Moscow and is expected to go to both Warsaw and Belgrade. This visit might well lead to an expansion of a secondary and independent communist system alongside the Soviet Union. Mao is clearly out for greater power within the communist world, and aspires to be its ideological leader. If he succeeds, Soviet solidarity would be weakened still more. Here are the makings of a communist federation to replace the monolithic Soviet system some day.

However Moscow hopes to sidetrack any such development by organizing a new world communist body to replace the Cominform. It is prompting its satellite stooges to speak out about the need for it. The idea being mooted is an organization for the exchange of ideas, one for inter-communication - a "com-intercom" instead of a cominform. As Moscow conceives such an organization it would be useful in keeping Gomulka on the reservation, and making Tito more orthodox.

Krushchev, when he met Tito in Rumania last month, took along a former secretary of the defunct Cominform. They broached something about a com-intercom. Tito is said to have replied that any new organization must

include Communist China, and had better take in communists from India, Japan and Indonesia, and even some socialist parties as well. The old Cominform had been restricted to Russia, the satellites and French and Italian communists. It really governed all communist affairs.

Moscow might have to take China into the new body to get any kind of organisation at all. But if China is admitted, Mao Tse-tung would be given a chance to balance off Krushchev. That is something Tito, Gomulka, and Mao above all, would vote for. Krushchev can hardly be happy over it.

George Ryan

Word for Today

Two Communist leaders who defied Moscow are meeting openly in Belgrade, and discussing policy. Such a meeting is possible only because of a weakening of the Soviet empire. James Russell Lowell said, "Tyranny is always weakness." And another American...Ben Franklin...observed, "A great empire, like a great cake, is most easily diminished at the edges."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
C.B.S. RADIO NETWORK

WEDNESDAY, SPETEMBER 11, 1957
7:45 - 8:00 P.M., E.S.T.

This is the news:

Governor Faubus of Arkansas asked President Eisenhower today for an opportunity to talk to him regarding the Little Rock integration dispute. Mr. Eisenhower agreed to the meeting...saying that he would see the governor in Newport, either Friday afternoon or Saturday morning. Faubus was given the choice of which it will be. Goodnight and good luck!

This is the news:

The United States today accused Russia of "falsification"...and of trying to intimidate the free world by making "blustering attacks" on American foreign policy. This, in part, is the State Department answer to the charges leveled against the United States earlier this week by Soviet Foreign Minister Gromyko, who accused America of wrecking the London disarmament conference and of threatening Syrian independence. "The United States," the State Department said, "deplores the statement made by the Soviet foreign minister. Its falsifications and its intemperance seem deliberately calculated to break those bridges of understanding which still sustain our hopes for peace." The State Department said that in its total distortion of fact, "Mr. Gromyko's statement follows faithfully the

→

old Molotov line, which the Soviets themselves so recently condemned." And then it added, "We had hoped for better things. But it seems that the Soviet Communists are, in all respects, confirmed reactionaries who can only replay the old wearisome tunes."

Israel appealed to the United States today for a "crystal clear" declaration that it will oppose any aggression from any quarter in the Middle East. The appeal was made by the Israeli ambassador...Abba Eban... in a meeting with Secretary of State Dulles in Washington. The conference lasted an hour and 20 minutes. Eban said afterward that he had asked Dulles for action on Israel's bid for economic aid. He said he did not raise the question of military aid to Israel...but that "a central point" in his presentation is the danger he deems inherent in the situation "due to hostility to Israel on the part of neighboring states." Egypt and Syria, he said, are receiving arms from the Soviet bloc "at a very fast rate." Eban also expressed his country's concern over American arms shipments to Jordan. Sending in arms, he said, is the wrong answer. "The Western powers would be better advised to strengthen the social and economic situation."

Syria's top military officers today concluded a strategy meeting with Egyptian leaders and flew back to Damascus. The leftist Syrian Army commander, General Bizry, said, "Syria will never start an attack on anyone, but we will repel any aggression. Syria," he said, "is not alone." Bizry said the Syrian and Egyptian armies are "one," [redacted]

[redacted]

Lebanon reports ten persons killed today in a skirmish on the Syrian-Lebanese border. The clash was between Lebanese border guards and [redacted] a small armed group which is unidentified. [redacted] or whether they were Lebanese [redacted] as they were [redacted]

Red China made a formal proposal today that American and Chinese reporters be exchanged "on an equal and reciprocal basis." The United States turned the proposal down. It reiterated that if a reporter in Communist China wishes to come to this country, his application will be considered on an individual basis on its merits.

Governor Faubus of Arkansas will meet President Eisenhower Saturday morning to discuss the Little Rock integration dispute. Yesterday, when Faubus requested such a meeting, Mr. Eisenhower gave the governor the choice of tomorrow or Saturday. Today, Faubus informed the White House...through Democratic Representative Hays of Arkansas... that he was planning to fly to Newport early Saturday. (Leter he sent a telegram, confirming the appointment.) News Secretary Hagerty said today that the President took strong exception to radio and television comment that Governor Faubus had...in the opinion of White House aides..."thrown in the sponge" in the school integration dispute. Hagerty said, "We have deliberately refrained from making any such remarks, and any such reports are completely untrue." CBS News Correspondent Charles Von Fremd made this comment in an early morning broadcast. In a later broadcast, Von Fremd said he was standing by his report. He said, "My source was not speaking for direct quotation, and perhaps at the time he spoke with me he did not realize the interpretation I drew from his remarks." In Little Rock, a source close to Governor Faubus said Faubus was going to see the President "to confer, <u>not</u> capitulate." There are indications that Representative Hays may sit in on the talks. President Eisenhower has called Attorney General Brownell

and presidential assistant Sherman Adams to join him in the conference.

In Nashville, Tennessee, Federal Judge William E. Miller has issued a temporary restraining order...forbidding any interference with his previous order for the limited integration of public schools in Nashville. The restraining order specifically mentioned the segregationist, John Kasper...and 11 other individuals...but it applies to all persons. Kasper was released from the city workhouse late today when he posted money for a 600-dollars bond...pending an appeal from misdemeanor charges. But he was immediately re-arrested on charges of inciting to riot---a state offense.

The Russians are making hay out of the integration disorders. A Moscow newspaper said again today that the United States should turn its attention to the racial persecution in its own backyard...and not be so concerned about persecution in Hungary. We thought you might be interested in how three of our allies are reacting to this situation. First, here is Ernest Leiser, reporting from Bonn. LEISER RUNS 1:34, RETURNS ON CUE: "TO ED MURROW IN NY."

Next, for a Report on how the integration story is being treated in Japan, here is Peter Kalisher in Tokyo. KALISHCHER RUNS 1:30, RETURNS ON CUE "TO ED MURROW IN NY."

My colleague, Charles Collingwood, has a somewhat different reaction in Britain. We switch now to London. COLLINGWOOD RUNS 1:40, RETURNS ON CUE: "TO ED MURROW IN NY."

Those are the reactions of three allied countries to the integration situation in the United States. / This is Ed Murrow. I'll be back in a moment with the Word for Today. But, first, here is George Bryah.

Page Insert

Secretary of State Dulles said today that the American people must be willing to sacrifice as they would in wartime "if we are to keep the peace." Dulles made the statement at a ceremony honoring the retiring foreign aid director, John B. Hollister.

The International Cooperation Administration today announced that it is cutting down on aid to government-owned industries overseas. The order applies to industrial enterprises owned by foreign governments. It does not apply to such public projects as highways, hospitals and schools.

Word for Today

It was the English philosopher, Bertrand Russell, who said recently that America has become "the torchbearer for the West." It behooves torchbearers to be seemly in their conduct...to walk uprightly, and with dignity. For as Bernard Baruch has observed, "Almost nothing in this world stands alone." Our actions are for all to see.

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R MURROW WITH THE NEWS (NON-NEW YORK SPOTS ONLY) 9/12/57
7:45-8:00 PM

MURROW: First, here is Ernest Leiser feporting from Bonn.

LEISER: Three days before the most important political event in West Germany in the past four years the chief attention of the German Russian radio tonight is being directed to the United States. The stories in Nashville, Little Rock, Washington and elsewhere have almost eclipsed the story of the West German elections Sunday. The boulevard papers, the tabloids, have played big the pictures of negroes students being turned away from the Little Rock high school in Arkansas. And the responsible papers have also given the story their main attention. But they've been avoiding comment so far. I asked one German editor why, this evening, and he answered we are not in a position to pass moral judgment on persecution. Still a reporter in this country, a country that puts its support of the United States higher than other of our NATO partners, find a sense of deep dismay about the problems of race relations in the U.S. among his southern colleagues. The Germans seem to derive pleasure from the British aggression and humiliation in Suez. Perhaps ~~the~~ the embarrassment in North Africa has not embarrassed Bonn. But the Germans have tied their political tail to our kite and our problems worry them. One newspaper headline today seems to summarize their question. Can the United States government, the headline reads, assert its authority of law over the forces of radical irresponsibility. Now back to Ed Murrow in New York.

MURROW: Next, for a report on how the integration story is being treated in Japan, here is Peter Kalischer in Tokyo.

KALISCHER: School integration problems in the United States are giving Japan's three largest newspapers a field day at America's expense this week. Today's Tokyo Mainichi observes that the United States

Constitution, stipulates that every American citizen is equally protected under the law, this clause is nothing but a dead letter in the south. Hitting the sore point on which Asians most frequently criticize America, the editorialist writes "We cannot imagine why southerners detest negroes to such an extent, it has a shame on the American people to allow such an idea of discrimination to exist." The Tokyo Yomiuri comments generally that southern violence and lynchings give America a stain of dishonor. Regarding the Arkansas National Guard barring negroes from Little Rock Central High School, the newspaper Asahi, with four million circulation, sarcastically declared "It seems as though the civil war is still being fought, even now, half a century since the emancipation of the slaves. In the fields of sports and music, negroes are scoring points for America, but in the south racial discrimination is to be regarded as a beautiful custom." After ticking off examples of it, the Japanese editorial concludes, "If these things are true, the United States cannot talk of a big thing like humanitarian". Now back to Ed Murrow in New York.

MURROW: My colleague, Charles Collingwood has a somewhat different reaction in Britain. We switch now to London.

CHARLES COLLINGWOOD: The British are being very restrained in their comments about the racial disturbances in the south. In the past, the racial problem has always been the final clinching argument which the citizen of another country would put forward whenever he became angry or frustrated or unhappy about something the United States had done. In Britain today, the tone is one of sympathetic understanding, and that's not only true of editorial writers but of ordinary people in conversation. One reason for this moderation is that the British aren't particularly mad at the United States right now. Another is, they have a minor race problem on their own hands these days, as the result of

the influx of tens of thousands of negroes from Jamaica and other islands of the West Indies. But most important is that this whole situation has been fully reported and commented on here, ever since the Supreme Court decision, and people are aware of the complexities, even learned how to pronounce Arkansas. Most of the newspaper editorials dwell on the substantial progress that's already been made in race relations in the south, and the difficulty of changing long establsihed customs by legislation. One paper, indeed, the Conservative Daily Telegraph takes a straight states' right position, and suggests that everything would have been better if the Supreme Court hadn't stirred things up in the first place. But the general attitude over here, was perhaps best stated by the Manchester Guardian, which noted the unheralded places where integration is working and said, there will be more incidents and more noise. But the noise is the slow grind of change, and its a healthy noise. That's what the British think they hear. Now back to Ed Murrow in New York.

ED MURROW: These are the reactions of these allied countries to the integration news from the United States.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, SEPTEMBER 12, 1957
7:45 -- 8:00 P.M. EST

This is the news:

The United States today accused Russia of "falsification"... and of trying to intimidate the free world by making "blustering attacks" on American foreign policy. This, in part, is the State Department answer to the charges leveled against the United States earlier this week by Soviet Foreign Minister Gromyko, who accused America of wrecking the London disarmament conference and of threatening Syrian independence. "The United States," the State Department said, "deplores the statement made by the Soviet foreign minister. Its falsifications and its intemperance seem deliberately calculated to break those bridges of understanding which still sustain our hopes for peace." The State Department said that in its total distortion of fact, "Mr. Gromyko's statement follows faithfully the old Molotov line, which the Soviets themselves so recently condemned." And then it added, "We had hoped for better things. But it seems that the Soviet Communists are, in all respects, confirmed reactionaries, who can only replay the old wearisome tunes."

Israel appealed to the United States today for a "crystal clear" declaration that it will oppose any aggression from any quarter in the Middle East. The appeal was made by the Israeli ambassador....Abba Eban....in a meeting with Secretary of State Dulles in Washington. The conference lasted an hour and 20 minutes. Eban said afterward that he had asked Dulles for action on Israel's bid for economic aid. He said he did not raise the question of military aid to Israel...but that "a central point" in his presentation is the danger he deems inherent in the situation "due to hostility to Israel on the part of neighboring states." Egypt and Syria, he said, are receiving arms from the Soviet bloc "at a very fast rate." Eban also expressed his country's concern over American arms shipments to Jordan. Sending in arms, he said, is the wrong answer. "The Western powers would be better advised to strengthen the social and economic situation."

Syria's top military officers today concluded a strategy meeting with Egyptian leaders and flew back to Damascus. The leftist Syrian Army Commander, General Bizry, said, "Syria will never start an attack on anyone, but we will repel any aggression. Syria," he said, "is not alone." Bizry said the Syrian and Egyptian armies are "one."

Lebanon reports ten persons killed today in a skirmish on the Syrian-Lebanese border. The clash was between Lebanese border guards and a small armed group which is unidentified. Red China made a formal proposal today that American and Chinese reporters be exchanged "on an equal and reciprocal basis." The United States turned the proposal down. It reiterated that if a reporter in Communist China wishes to come to this country, his application will be considered on an individual basis on its merits.

Governor Faubus of Arkansas will meet President Eisenhower Saturday morning to discuss the Little Rock integration dispute. Yesterday, when Faubus requested such a meeting, Mr. Eisenhower gave the governor the choice of tomorrow or Saturday. Today, Faubus informed the White House....through Democratic Representative Hays of Arkansas...that he was planning to fly to Newport early Saturday. Later he sent a telegram, confirming the appointment. News Secretary Hagerty said today that the President took strong exception to radio and television comment that Governor Faubus had...in the opinion of White House aides..."thrown in the sponge" in the school integration dispute. Hagerty said, "We have deliberately refrained from making any such remarks, and any such reports are completely untrue." CBS News Correspondent Charles Von Fremd made this comment in an early morning broadcast. In a later broadcast, Von Fremd said he was standing by his report. He said, "My source was not speaking for direct quotation, and perhaps at the time he spoke with me he did not realize the interpretation I drew from his remarks." In Little Rock, a source close to Governor Faubus said Faubus was going to see the President "to confer, <u>not</u> capitulate."

There are indications that Representative Hays may sit in on the talks, President Eisenhower has called Attorney General Brownell and presidential assistant Sherman Adams to join him in the conference. In Nashville, Tennessee, Federal Judge William E. Miller has issued a temporary restraining order..forbidding any interference with his previous order for the limited integration of public schools in Nashville. The restraining order specifically mentioned the segregationist, John Kasper, and 11 other individuals, but it applies to all persons. Kasper was released from the city workhouse late today when he posted money for a $600 bond..pending an appeal from misdemeanor charges. But he was immediately re-arrested on charges of inciting to riot -- a state offense.

The Russians are making hay out of the integration disorders. A Moscow newspaper said again today that the United States should turn its attention to the racial persecution in its own backyard...and not be so concerned about persecution in Hungary. We thought you might be interested in how three of our allies are reacting to this situation. First, here is Ernest Leiser, reporting from Bonn.

(Ernest Leiser): Three days before the most important political event in West Germany in the past four years the chief attention of the German Russian radio tonight is being directed to the United States. The stories in Nashville, Little Rock, Washington and elsewhere have almost eclipsed the story of the West German elections Sunday. The boulevard papers, the tabloids, have played big the pictures of negroes students being turned away from the Little Rock high school in Arkansas. And the responsible papers have also given the story their main attention. But they've been avoiding comment so far. I asked one German editor why, this evening, and he answered we are not in a position to pass moral judgement on persecution. Still a reporter in this country, a country that puts its support of the United States higher than other of our NATO partners, find a sense of deep dismay about the problems of race relations in the U. S. among his southern colleagues. The Germans seem to derive pleasure from the British aggression and humiliation in Suez. Perhaps the embarrassment in North Africa has not embarrassed Bonn. But the Germans have tied their political tail to our kite and our problems

worry them. One newspaper headline today seems to summarize their question. Can the United States government, the headline reads, assert its authority of law over the forces of radical irresponsibility. Now back to Ed Murrow in New York.

(Murrow): Next, for a report on how the integration story is being treated in Japan, here is Peter Kalisher in Tokyo.

(Kalisher): School integration problems in the United States are giving Japan's three largest newspapers a field day at America's expense this week. Today's Tokyo Mainichi observes that the United States Constitution, stipulates that every American citizen is equally protected under the law, this clause is nothing but a dead letter in the south. That's what the British think they hear. Now back to Ed Murrow in New York.

(Murrow): Those are the reactions of three allied countries to the integration situation in the United States. This is Ed Murrow. I'll be back in a moment with the Word For Today. But first, here is George Bryan.

(Insert): Secretary of State Dulles said today that the American people must be willing to sacrifice as they would in wartime "If we are to keep the peace." Dulles made the statement at a ceremony honoring the retiring foreign aid director, John B. Hollister.

The International Cooperation Administration today announced that it is cutting down on aid to government-owned industries overseas. The order applies to industrial enterprises owned by foreign governments. It does not apply to such public projects as highways, hospitals and schools.

WORD FOR TODAY: It was the English philosopher, Bertrand Russell, who said recently that America has become "the torchbearer for the West." It behooves torchbearers to be seemly in their conduct....to walk uprightly, and with dignity.

For as Bernard Baruch has observed, "Almost nothing in this world stands alone."

Our actions are for all to see.

Goddnight and good luck!

Edward R. Murrow Fri., Sept. 13, 1957

This is the news:

Soviet Premier Bulganin has warned Turkey that military action against Syria could lead to conflict "on a wide scale." Bulganin issued his warning in a letter to the Turkish prime minister, delivered in Ankara two days ago by the Soviet ambassador. Moscow Radio broadcast the text of the letter tonight. Bulganin repeated the charge that Turkish troops are massed on the Syrian frontier. (Turkey insists that there is no massing of forces, that the troops are on routine ~~annual~~ maneuvers). Bulganin said Russia also "views with great concern" the shipment of American arms to Turkey...which, he claimed, "are designed to help Turkey achieve an attack against Syria." He said armed conflict over Syria "would in no manner be limited to that area alone."

The State Department today confirmed that King Saud of Saudi Arabia has sent a message to President Eisenhower on the Syrian situation. But it denied published reports to the effect that King Saud urged the United States to tone down its stand on Syria...and that this caused Secretary Dulles at his last news conference to express a more moderate view of the situation. A State Department spokesman called these reports (that Saud "tempered" the American stand on Syria) "completely unfounded". The last message Mr. Eisenhower received from King Saud was on August 25th. The spokesman declined to reveal its contents. But moderation, he said, "is something that all peace-loving governments desire."

The United States and Russia have agreed to start high-level talks next month on increasing cultural and scientific contacts. The State Department says the Russians are willing...at this meeting...to discuss the possibility of exchanging radio and television programs. They did not, however, say anything about the American proposal for an immediate swap of radio and television experts, as proposed by the United States to pave the way for an exchange of programs.

The United Nations General Assembly has gone into a night session, continuing its debate on the Hungarian question. Today, India and Yugoslavia argued against the resolution...condemning Russia anew for its repression of freedom in Hungary. Such a move, they argued, could only be detrimental to peace. A vote on the resolution is now expected late tonight or tomorrow.

Governor Faubus of Arkansas flew to Providence, Rhode Island, today... to be on hand for his meeting tomorrow morning with President Eisenhower in Newport. Faubus brought with him...to join in the discussion of the Little Rock integration dispute...his executive secretary, Arnold Sikes, and Democratic Representative Brooks Hays of Arkansas. Mr. Eisenhower will be accompanied in the meeting by Attorney General Brownell and presidential assistant Sherman Adams.

In Nashville, Tennessee today, the FBI turned over to local authorities a man who, they said, has information of "possible significance" in the dynamiting earlier this week of a grammer school. No charges were filed.

Secretary of the Treasury Anderson today announced the formation of a top-level strategy board for fighting inflation. The group...which will meet at least once a month with President Eisenhower...will include Chairman Martin of the Federal Reserve Board, Chairman Saulnier of the Council of Economic Advisers, Secretary Anderson, and Dr. Gabriel Hauge, the President's special assistant for economic affairs. A Treasury spokesman says that as far as he can recall this is the first time in recent years that all the officials who will meet with the President have been brought together in a single conference. The group will consider all financial aspects of the economy---credit, interest, tax policy and management of the federal debt.

Secretary of Labor Mitchell today rejected Walter Reuther's suggestion that President Eisenhower call a meeting of representatives of the United Auto Workers Union and leaders of the auto industry. Reuther had said such a meeting could evaluate his proposal for lower car prices, in return for union consideration of this in drawing up its 1958 wage demands. The proposal already has been rejected by General Motors, Chrysler, and Ford. Secretary Mitchell said today...in a letter to Reuther...that Mr. Eisenhower

would not call a meeting of union and industry representatives because that would "interject the government directly into matters which ultimately must be solved by collective bargaining." Mitchell said that Administration policy not to become a party to collective bargaining had been "a significant factor" in fostering industrial peace.

Secretary of Agriculture Benson said today that he has agreed at the request of the President to stay on in the cabinet indefinitely. Benson said he saw the President yesterday...and that they discussed plans for new legislation that would make price supports more flexible and ease production controls. Reporters asked Benson about a telegram the new Democratic senator from Wisconsin...William Proxmire...sent Mr. Eisenhower, suggesting that Benson be made to resign. Proxmire said his election victory last month amounted to "an unmistakable repudiation" of Benson's farm policies. Benson said he doubted that these policies...which the Democrats made a major campaign issue...had any important effect.

On Sunday, the people of West Germany will go to the polls in a parliamentary election. I have asked my colleague, Ernest Leiser, for a first-hand report on the election issues, personalities, and trends. For that story, we switch now to Bonn.

(Leiser tape runs 4:50
Ends on cue: "Now back to ERM
in NY.")

That was my colleague, Ernest Leiser, reporting on the election campaign in West Germany. About 35-million persons are expected to vote.

This is Ed. Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

Word for Today

Chancellor Adenauer hopes to stay in power on the basis of his record. In the election campaign just ending he has promised no new exciting program---only the old Adenauer policy. In promising more of the same, the chancellor would appear to agree with Napoleon, who said: "When firmness is sufficient, rashness is unnecessary."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Friday, September 13, 1957
7:45 - 8:00 P.M.

LEIBER: At just about this moment, Ed, an 81-yr. old German gentleman is settling down in his hillside villa outside of Bonn for his nightly glass of good Rhine wine. Then as is his practice he'll say his prayers and go to bed, supremely confident that day-after-tomorrow the West German electorate will return him to the job that he relishes even more than that good Rhine wine. The eminent party in question, German Chancellor Konrad Adenauer is not alone in confidence of his victory. His Christian Democratic party subordinates are practically bursting with complacence. One of his rivals, Rheinhold Maier, leader of the third-running Free Democrats, has made the amazing pre-election statement at a press conference that if Adenauer doesn't get an absolute majority again this time he'll be mighty close to it. And a member of the Social Democratic Executive, whom I asked today if he thought that his party could beat Adenauer, said gloomily, "Not in this country."

Most people tonight seem to think that Adenauer's a shoein. Only a pretty lonely minority of whom I'm one think it may be a fairly narrow victory if he wins and that the election results will force him to make a coalition with some people who take a dim view of his hard-handed rule, people like the Free Democrats who quit his coalition last time.

If Adenauer does lose ground, it'll be because of an under-current of uneasiness that I've found in the country as I followed the candidates around in the past month. A rather surprising number of people in this country of the so-called "economic miracle" are uneasy that their prodigious boom is ending. They say they're caught in a squeeze of rising prices and they're beginning to cry. A lot of middle-class people are complaining that this is a government of the bankers and the Ruhr barons, the

industrie (indistinct) and that Bonn isn't looking out for the small business and professional man. Some others, less of them, feel uneasily that twelve years of one-man one-party domination of government is not the way to nourish this country's very tender democracy. A considerable number don't like his iron allegiance to Washington. A good number blame Adenauer for the dead end dilemma of Germany's division.

Much of this uneasiness and irritation is submerged. But if it does come to the surface on Sunday when the West German voters go to the polls, Adenauer may have a harder time than he or his opponents think tonight.

At the beginning of this month nearly 90% of the country's 35½-million eligible voters said that they were going to vote. But 22% had said that they hadn't decided how.

If Adenauer does win it will be on one of the most curiously and deliberately negative programs ever proposed to an electorate, ...? - "no experiment" - has been his whole keynote and his party's. He's offered no new program at all, only more of the same in the past eight years in both foreign and domestic policies. More of the same is quite a bit in this thriving country, of course, as the Government Bulletin took pains to point out today. It reported that there had been 3½-million dwellings built on the ruins since 1949, far more than in any other European country. But "more of the same" is not an exciting election program and Adenauer's deliberately betting that he Germans don't want excitement or novelty.

The "old man" has been selling his old program with enthusiasm however and has proven himself again a prodigious campaigner. In this small country he's logged 9,000-campaign miles by car and train and made more than fifty major hour-long speeches. Adenauer has taken some precautions because of his age. He's addressed no open air meetings after

he caught cold at an early outdoor rally. And a doctor travels with him constantly.

His aides have taken other precautions to avoid the irritations of political turmoil. Entry to the Adenauer rallies has been principally by invitation only, so that he has preached mostly to the converted; and so that he hasn't been heckled much. Some aspects of his campaign have been a bit distasteful to an American observer. His only whistle stops have been at lonely sidings at night, where they set up the searchlights and put out the police dogs to keep the unwanted away. But by-and-large his campaign has been distinguished for political showmanship.

If Eric Ollenhauer, Adenauer's chief opponent, wins Sunday, it will not be because of the way that he and his Socialist colleagues have campaigned. They're cursed with colorless leadership, Ollenhauer emphatically included. Their efforts at least should not disturb the old chancellor tonight as he sips at his wine and serenely meditates in the solitude of his villa above the Rhine. Now, back to Edward R. Murrow in New York.

EDWARD R. MURROW WITH THE NEWS

The proposal already has been rejected by General Motors, Chrysler, and Ford. Secretary Mitchell said today...in a letter to Reuther...that Mr. Eisenhower would not call a meeting of union and industry

representatives because that would "interject the government directly into matters which ultimately must be solved by collective bargaining." Mitchell said that Administration policy not to become a party to collective bargaining had been "a significant factor" in fostering industrial peace.

Secretary of Agriculture Benson said today that he has agreed at the request of the President to stay on in the cabinet indefinitely. Benson said he saw the President yesterday...and that they discussed plans for new legislation that would make price supports more flexible and ease production controls. Reporters asked Benson about a telegram the new Democratic senator from Wisconsin...William Proxmire...sent Mr. Eisenhower, suggesting that Benson be made to resign. Proxmire said his election victory last month amounted to "an unmistakable repudiation" of Benson's farm policies. Benson said he doubted that these policies...which the Democrats made a major campaign issue....had any important effect.

On Sunday, the people of West Germany will go to the polls in a parliamentary election. I have asked my colleague, Ernest Leiser, for a first-hand report on the election issues, personnalities, and trends. For that story, we switch now to Bonn. (LEISER):

At just this moment, Ed, and 81-year old German gentleman is settling down in his hillside villa outside of Bonn for his nightly glass of good Rhine wine. Then as is his practice he'll say his prayers and go to bed, supremely confident that day-after-tomorrow the West German electorate will return him to the job that he relishes even more than that good Rhine wine. The ancient party in question, German Chancellor Konrad Adenauer is not alone in confidence of his victory. His Christian Democratic party subordinates are practically bursting with complacence. One of his rivals, Rheinhold Meier, leader of the third-running Free Democrats, has made the amazing pre-election statement at a press conference that if Adenauer doesn't get an absolute majority again this time he'll be mighty close to it. And a member of the social Democratic Executive, whom I asked today if he thought that his party could beat Adenauer, said gloomily, "Not in this country."

Most people tonight seem to think that Adenauer's a shooin. Only a pretty

lonely minority of whom I'm one think it may be a fairly narrow victory if he wins and that the election results will force him to make a coalition with some people who take a dim view of his hard-handed rule, people like the Free Democrats who quit his coalition last time.

If Adenauer does lose ground, it'll be because of an under-current of uneasiness that I've found in the country as I followed the candidates around in the past month. A rather surprising number of people in this country of the so-called "economic miracle" are uneasy that their prodigious boom is ending. They say they're caught in a squeeze of rising prices and they're beginning to cry. A lot of middle-class people are complaining that this is a government of the bankers and the Ruhr barons, the industrie (indistinct) and that Bonn isn't looking out for the small business and professional man. Some others, less of them, feel uneasily that twelve years of one-man one-party domination of government is not the way to nourish this country's very tender democracy. A considerable number don't like his iron allegiance to Washington. A good number blame Adenauer for the dead and dilemma of Germany's division.

Much of this uneasiness and irritation is submerged. But if it does come to the surface on Sunday when the West German voters go to the polls, Adenauer may have a harder time than he or his opponents think tonight.

At the beginning of this month nearly 90% of the country's 35½-million eligible voters said that they were going to vote. But 22% had said that they hadn't decided how.

If Adenauer does win it will be on one of the most curiously and deliberately negative programs ever proposed to an electorate,...? - "no experiment" - has been his whole keynote and his party's. He's offered no new program at all, only more of the same in the past eight years in both foreign and domestic policies. More of the same is quite a bit in this thriving country, of course, as the Government Bulletin took pains to point out today. It reported that there had been 3½-million dwellings built on the ruins since 1949, far more than in any other European country. But "more of the same" is not an exciting election program and Adenauer's

deliberately betting that the Germans don't want excitement or novelty.

The "old man" has been selling his old program with enthusiasm however and has proven himself again a prodigious campaigner. In this small country he's logged 9,000-campaign miles by car and train and made more than fifty major hour-long speeches. Adenauer has taken some precautions because of his age. He's addressed no open air meetings after he caught cold at an early outdoor rally. And a doctor travels with him constantly.

His sides have taken other precautions to avoid the irritations of political turmoil. Entry to the Adenauer rallies has been principally by invitation only, so that he has preached mostly to the converted; and so that he hasn't been heckled much. Some aspects of his campaign have been a bit distasteful to an American observer. His only whistle stops have been at lonely sidings at night, where they set up the searchlights and put out the police dogs to keep the unwanted away. But by-and-large his campaign has been distinguished for political showmanship.

If Eric Ollenhauer, Adenauer's chief opponent, wins Sunday, it will not be because of the way that he and his Socialist colleagues have campaigned. They're cursed with colorless leadership, Ollenhauer emphatically included. Their efforts at least should not disturn the old chancellor tonight as he sips at his wine and serenely meditates in the solitude of hiw villa above the Rhine. Now, back to Edward R. Murrow in New York.

(MURROW): That was my colleague, Ernest Leiser, reporting on the election campaign in West Germany. About 35-million persons are expected to vote.

This is Ed Murrow. I'll be back in a moment with the Word For today. But first, here is George Bryan.

"Word For Today"

Chancellor Adenauer hopes to stay in power on the basis of his record. In the election campaign just ending he has promised no new exciting program---only the old Adenauer policy. In promising more of the same, the chancellor would appear to agree with Napoleon, who said: "When firmness is sufficient, rashness is unnecessary."

Goodnight and good luck!

Edward R. Murrow Mon., Sept. 16, 1957

This is the news:

An Army coup is reported in Thailand. The army radio says military forces led by Field Marshal Sarit (SAH-REET) have taken over "major objectives" in Bangkok, the capital of Thailand. The "objectives" are said to include the post office and telephone office. Tanks surrounded Government House, but Premier Songgram (SONG-KRAHM) is reported to have left the city. The Army broadcast appealed for calm. Sarit is commander in chief of the Thai army. The crisis between Army leaders and the government has been brewing since last month, when Sarit and four other army officers resigned from the cabinet. Their resignation reportedly stemmed from Songgram's refusal to get rid of the head of the Bangkok police force and reorganize the cabinet.

~~This is the news:~~

Polish leader Gomulka returned to Warsaw tonight after a seven-day state visit with President Tito of Yugoslavia. Tito and Gomulka issued a joint communique, declaring ties between Communist parties "should be based on principles of proletarian internationalism and solidarity, equality, friendship, and non-interference in internal affairs." It echoed the Soviet line in calling for an immediate halt to nuclear tests, and in demanding United Nations membership for Red China. The communique (also in accordance with the Moscow line) said the danger of war is growing in the Middle East, that "pressure" is being used against the

→

"independent policy of Syria." It said German unification should proceed on the basis of direct talks between East and West Germany. And the Yugoslav government, it said, "considers the existing frontier on the Oder and Niesse Rivers as the final Polish-German frontier." This frontier...drawn up tentatively at the Potsdam Conference... gives some 40-thousand square miles of pre-war German territory to Poland. The West German government has opposed this settlement. And tonight it summoned its ambassador to Belgrade home for consultations.

President Eisenhower today expressed his "great gratification and pleasure" over Chancellor Adenauer's victory yesterday in the West German parliamentary elections. (Adenauer's Christian Democratic Party won 270 of the 497 seats in the lower house.) The State Department said, "We look forward to working with the new Federal Government which will be formed on the basis of this election in the same spirit of friendship, trust and common purpose which has characterized our relations with Chancellor Adenauer's government in the past." (In a few minutes we will have a direct report from Germany on the Adenauer victory).

Israel charged today that Soviet agents kidnapped an Israeli diplomat and threatened him and his family with bodily harm, unless he agreed to work for the Russian secret service. The Israeli foreign ministry says the diplomat... a 29-year-old attache at the Israeli Embassy in Moscow... was abducted on September 7th and held for 26 hours. (He has since returned to Israel unharmed.) Israel calls the alleged incident "a serious infringement of diplomatic immunity"...and has filed a protest.

British Prime Minister Macmillan today announced the appointment of a new chairman for the Conservative Party. The job went to Viscount Hailsham, minister of education, on whom Macmillan also bestowed the title of "minister without portfolio". This makes him both top cabinet minister and party boss. Lord Hailsham's (former duties as education minister are taken over by Geoffrey Lloyd, (who---in the past---has served as minister of fuel and power.

The Conservative Party has shown weakness in recent by-elections. Lord Hailsham's appointment is believed designed to strengthen the party, in preparation for the next general elections.

National guardsmen were still posted today, outside the central high school in Little Rock. Negro students made no attempt to enter. Governor Faubus said last night that the guardsmen might be removed later this week---but he added that they would be withdrawn "only under a condition of tranquility and general acceptance by the people." Faubus said he would determine when that condition has been met. He made no statement today. On Friday, the governor is due to appear in United States District Court to "show cause" why he should not stop interfering with integration of the school.

White House News Secretary Hagerty today accused the Democratic Party of "trying to play politics" with the Little Rock situation. Hagerty referred to the statement yesterday by A MAJORITY OF the Democratic Advisory Committee, accusing President Eisenhower of "failing in his duty to exercise decisive leadership" in the Little Rock dispute. Hagerty said this would be "funny, if it were not so pathetic."

The Senate Rackets Committee will hold new hearings next week in its investigation of Teamsters Vice President James Hoffa. Chairman McClellan said today...in announcing the hearings...that Hoffa will be "invited" not required to attend. Last week, Hoffa asked the committee not to call him for testimony between September 18th and October 10th. (The teamsters hold their convention in Miami the end of the month, and Hoffa will be busy campaigning for the union presidency). McClellan said he would like to accommodate Hoffa...but that public interest "predominates" over the convenience of any individual. The hearings are tentatively scheduled to start on September 24th. McClellan said they were called to develop new material as well as follow up earlier testimony. He could not say exactly how long the hearings will run---"probably for three or four days."

Telephone installers went on strike today in 44 states in support of their demands for higher pay. The strikers are members of the Communications Workers of America. Technically, they walked out against the Western Electric Company...but they threw up picket lines around telephone exchanges, AND THOUSANDS OF telephone operators also stayed off the job.

In most cities, local telephone service has not been affected because of the automatic dial system. But persons placing long-distance calls encountered delay.

And now, for that direct report on the West German elections, we switch to Ernest Leiser in Bonn.

(Tape runs 4:55
ends on cue "--to Ed Murrow in NY."

That was my Ernest Leiser, reporting the reaction to yesterday's parliamentary election in West Germany.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now here is George Bryan. Speaking For Fond,

Word for Today

In achieving the well-nigh impossible, Chancellor Adenauer has demonstrated a high degree of statesmanship. Edmund Burke said...two hundred years ago..."The great difference between the real statesman and the pretender is that the one sees into the future, while the other regards only the present."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Monday, September 16, 1957
7:45 - 8:00 P.M.

LEISER: When old Konrad Adenauer turned up for work at the Chancellory here in Bonn this morning, the first thing he did was step up on a podium and declare to the assembled cameras "West Germany's foreign policy, based on loyal partnership in NATO under the leadership of the United States, is now secure for the next four years." This was the final punctuation point to the political campaign that has won for Adenauer the most resounding election success any Democratic German politician has ever known, and has assured his position as the pre-eminent statesman of post-war Western Europe.

When Adenauer was first chosen chancellor in 1949, it was by a single vote of the Parliament, his own. And his Christian Democratic party could claim less than a third of the popular vote. After yesterday's election, it is the majority party in the country. And Adenauer's selection for a third term is assured by a margin that seems unassailable for the next four years.

The 81-yr. old chancellor has been an ardent advocate of negotiating from a position of strength. His own position of strength in West Germany today is unchallenged. He won it by the force of his own prodigious personality and by the force of a slogan: "No experiments." No experiments, stability. That was what the Germans demonstrated they wanted yesterday beyond the shadow of any skeptic's doubt.

In foreign policy - the stability that Adenauer offered was the Western alliance and the particular support of America. In any other country in the world today so outspoken a pledge of allegiance to the United States would be apt to ruin a politician. But Adenauer made a point in his campaign propaganda of saying that only America, the strongest power in the world, can protect us from the Soviet grasp. Those were his

exact words. And in Western Germany Adenauer won hands down.

In domestic policy stability meant no tinkering with the economic structure that has made West Germany the most flourishing country with the solidest currency in Europe.

Before the election I had detected an undercurrent of uneasiness about that economy among a lot of Germans. Particularly among small shop owners and professional people. But certainly the election results show that that uneasiness was eclipsed by the greater fear of doing anything that might upset the present balance.

A new political balance was struck in yesterday's election. Erich Ollenhauer, leader of the defeated Social Democrats, called attention to it at a news conference today, a news conference that was otherwise a little like a wake. West Germany, said Ollenhauer, moved a great step farther toward the Anglo-Saxon two-party political system yesterday. Did he like the idea, a reporter inquired. "The voters didn't ask us whether we like it," said Ollenhauer. "They made it a fact." The fact is that there will be only four parties in the new Parliament, and one of them, the German party, is in effect a satellite of Adenauer's Christian Democrats. There are then really only three contending parties in the new Parliament, and the third, the Free Democrats, has fewer than 10% of the seats. The Socialists, as Ollenhauer hastened to point out, actually gained some popular votes and even a few Bundestag seats. But it was the C.D.U. that devoured seven of the eleven chief parties that ran this time. Ollenhaur also expressed fear of the development of authoritarianism in West Germany, with the Christian Democrats in full control needing no coalition support. There's no indication of any tyranny of the majority on the horizon here. However, twelve uninterrupted years of Adenauer could bring with them some domestic dangers for the Germans, including the radicalization of Ollen-

hauer's own party out of sheer frustration. Four more years of the C.D.U. also means that it's the only party really to have borne the responsibility of government since the West German Republic began. And four more years of Adenauer may mean an even greater acceptance of the idea that the old man knows best. An even greater German reluctance to independent political decisions.

But one person who's not worried about the prospective political behavior of the Germans is that ancient gentleman whom they elected. Adenauer was not only unusually jovial today, but more exuberant than I've seen him. At the chancellory he looked it - fresh and rested. And as he gazed at the red-eyed reporters who'd stayed up with the election tally round-the-clock, he said "You gentlemen look tired. Was there anything unusual that happened here last night?" We could honestly inform him that there was. Now, back to Ed Murrow in New York.

last night?" We could honestly inform him that there was. Now, back to Ed Murrow in New York.

MURROW: That was Ernest Leiser, reporting the reaction to yesterday's parliamentary election in West Germany.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But now, here is George Bryan speaking for Ford.

BRYAN: COMMERCIAL

MURROW: In achieving the well-nigh impossible, Chancellor Adenauer has demonstrated a high degree of statesmanship. Edmund Burke said...two hundred years ago..."The great difference between the real statesman and the pretender is that the one sees into the future, while the other regards only the present."

Goodnight and good luck!

Edward R. Murrow Tues., Sept. 17, 1957

This is the news:

Sir Leslie Munro of New Zealand today was elected president of the 12th United Nations General Assembly. The secret vote, as the Assembly convened for its fall meeting, was 77 for Munro and one for Foreign Minister Malik of Lebanon. Three countries abstained. The single vote was cast for Malik, although he already had withdrawn his candidacy. Later...by a unanimous vote... the Assembly admitted Malaya to the United Nations as its 82nd member.

Japan today appealed to the United States to call off the nuclear tests scheduled to be held in the Pacific next year. The Japanese note urged that nuclear experiments be stopped "in consideration of the dangers to the human race." The United States replied that it has "repeatedly stated its willingness to suspend nuclear tests as part of a dependable disarmament agreement."

Britain today announced that it has protested Russia's action closing the Bay of Vladivostok to foreign ships and planes. The United States made a similar protest last month. There has been speculation that Russia sealed off the area for the purpose of conducting missile tests.

The State Department ruled today that "any bona fide athlete", regardless of nationality, may enter the United States to take part in the 1960 winter Olympics. Athletes from Communist countries will not be fingerprinted. But, as in the case of all visitors to the United States, they will be subject to routine health and

security checks.

The Navy today cancelled development of its Triton guided missile project. The Navy says the cancellation resulted "from an over-all review of the Navy's surface-to-surface missile program." The Triton was to have been launched from ships against distant land targets. The United States is developing other missiles in this category.

~~Former Defense Secratary Louis Johnson told the American Legion convention today that the Administration should give the American people the "facts" on how the United States and Russia compare with respect to military strength. Johnson said, "If the facts show that the Soviets are ahead, we should call for a revision of national policies to meet the danger." He said this may mean higher, instead of lower taxes.~~

The former NATO commander...General Gruenther...told the American Legion convention today that if the Russians have successfully tested an intercontinental ballistic missile, it does place the United States in greater danger. But the balance of power between East and West, he said, remains unchanged. "It doesn't prevent us from launching an attack to destroy the Soviet Union."

Former Defense Secretary Louis Johnson told the Legion convention that the Administration should give the American people the "facts" on how the United States and Russia compare with respect to military strength.

Washington officials say they expect no change in the foreign policy of Thailand, as the result of yesterday's coup d'etat, in which the Army chief of staff seized control of the government. Field Marshal Sar-reet'...who led the bloodless revolt...reportedly has promised that Thailand will adhere to all treaty obligations, including participation in the Southeast Asia Treaty Organization.

Premier ~~Pibul Songgram~~ PEE-BUN SONG-KRAM has disappeared. / And Sar-reet's rival... General ~~Phao~~ PAO, head of the state police...has taken off for Switzerland. / Sar-reet has not yet formed a new government. He fell out with the premier last month, when all cabinet officers were ordered to sever their outside business connections. / Rather than do this, Sar-reet' and other members of the cabinet resigned.

~~The king of Thailand today asked government officials to obey Sar-reet's orders.~~

In Paris, the National Assembly today met in emergency session, to take up the Algerian question...and the equally critical problem of inflation. A bill granting the Algerians a larger measure of home rule was sent to a committee which...it was hoped...would amend it in such a way, as to meet with the approval of all cabinet ministers. The Assembly, consequently, is turning first to the problem of the weakened French economy.

In Little Rock, Representative Brooks Hays conferred twice today with Governor Faubus on possible next steps in the school integration dispute. There was no announcement as to what...if anything...was decided. A hearing on Faubus' use of National Guard troops to keep Negro children out of Central High School is scheduled to be held in United States District Court on Friday. Reports from Little Rock say the United States District Attorney there is drawing up a list of some 200 witnesses.

Mayor Mann of Little Rock appealed to Governor Faubus again today to withdraw the National Guardsmen from the school. He told Faubus, "The time for further critical remarks is past. Our joint responsibility as public servants makes it imperative that we steer a course that will place the people of Arkansas once again on the path of compliance with law and order."

Democratic National Chairman Butler said today that President Eisenhower should have ordered Governor Faubus to obey the federal court order to integrate the ~~[illegible]~~ Little Rock high school. Butler made the statement after a two-day meeting with party leaders from nine Southern states. The main purpose of the meeting was to lay strategy for stopping Republican inroads in the South.

In Nashville, Tennessee, today...attendence at the six integrated grammar schools continued to gain. Resumption of classes, after a long week-end (there was no school in Nashville yesterday because of the state fair), was without incident. The segregationist, John Kasper, pleaded innocent to charges of inciting to riot. The state court gave him two months to prepare for trial.

The latest advisory on that tropical storm Esther, in the Gulf of Mexico, places the disturbance 220 miles from the Louisiana coast. The storm is moving north at 8 miles an hour, with winds of up to 50 miles an hour.

My colleague, Daniel Schorr, has just returned to Moscow from a visit to two cities annexed by Russia. One of them formerly belonged to Poland, the other to Latvia. These towns are rarely visited by foreign correspondents, and so we asked Schorr to record a report for us by beep telephone. You will note deletions due to Soviet censorship, as Schorr speaks.

Tape runs 5:40
Ends on cue: "---are the older people with long memories."

That was my colleague Daniel Schorr, reporting a remarkable story from Moscow. This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

The General Assembly meeting that opened today will be marked by a new and bitter debate on disarmament. No one questions the need for agreement. Bernard Baruch told a United Nations meeting in 1946, "We are here to make a choice between the quick and the dead." The choice...in eleven years...has not changed.

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Tuesday, September 17, 1957
7:45-8:00 PM

SCHORR: This is the report, a fragmentary one from the western rim of Russia from which I have just returned. Two weeks ago the Soviets announced the opening to western travelers of four cities in the border lands annexed since 1939. Riga, Latvia, annexed with the other Baltic states in 1940. Lwow, once Lemberg, in the region annexed from Poland in 1939. Chernovky, once Austro-Hungarian Czernovich later Romanian Czernody, annexed after the war, and Uzhgorod annexed from Czechoslovakia after the war now on the Czechoslovak border. Max Stengle of the New York Times and I were the first western correspondents to make the trip. We travelled by air, travel by car was not permitted. We ended up seeing only Riga and Lwow. While in Lwow we were told that Chernovky, although officially opened only two weeks before, is now temporarily closed. Nor could we go to Uzhgorod either. And so we returned to Moscow. To my regret, therefore, this report on the rim of Russia comes only a tale of two cities. But these two cities gave us some sense of the climate in the border lands. Inevitably our presence caused great excitement. Crowds gathered where ever we went, mostly conducive and eager. (Seven words are here deleted). Both Riga and Lwow have seen great population shifts. In Riga, anti-communist governments were removed (words deleted) After the war, those accused of collaboration with the Nazis were removed. Some have been allowed to return. Many Russians have settled there in cities ranging from 20 to 40% of 600,000. Before the war the Russians formed 4% of the population. In Lwow, thousands of Poles have accepted repatriation to Poland under an official treaty. Thousands of Ukrainians have moved in instead. Today, Lwow once a farming and commercial center (indistinct) into an

industrial city. Its population almost tripled to 560,000. And in this once Polish city the Mayor told us the population is now 48% Ukrainian, 35% Russian, the Poles, a small minority. In Riga and Lwow church attendance seems higher than in other parts of the Soviet Union. In Riga, (indistinct) in Catholic churches in good state of repair and well attended. In Lwow, at a Catholic Sunday Mass, I saw more children and young people that I have ever seen at a religious service in the Soviet Union. These relatively new comer cities in the Soviet Union also show other differences from the rest of the country. They have better housing conditions than the other cities. Lwow claims first place in progress towards eliminating its housing shortage. The Mayor told us there will be a dwelling for everyone in three years. For the Soviet lUnion as a whole, the earliest target is twelve years from now. In both cities, food and living costs are lower than in Moscow. Partly because of local resourses, partly also perhaps, efforts are being made to pacity the people. In both Riga and Lwow a sense of national identity runs strong although as far as we could see it does not take the form of any overt opposition to the Soviet regime. Lwow, Ukrainian Bourgeois nationalism as it's called, was stamped out by 1949 and some of these sent away in the process are being allowed now to return. In Riga and Lwow parents can send their children either to schools using the local language, Latvian in one case, Ukrainian in the other, or to a Russian school. Where the local language is chosen, Russian is a compulsory second language. Each city today has one remaining Synagogue, and the religious Jews, all of them aged, are left undisturbed. If these two cities are a sample the assimilation of the western border land into the Soviet system has made great progress. The Soviet pattern has been fixed and those who grumble about it are mainly the older people with long memories.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, SEPTEMBER 17, 1957
7:45 - 8:00 P. M. E.S.T.

This is the news:

Sir Leslie Munro of New Zealand today was elected president of the 12th United Nations General Assembly. The secret vote, as the Assembly convened for its fall meeting, was 77 for Munro and one for Foreign Minister Malik of Lebanon. Three countries abstained. The single vote was cast for Malik, although he already had withdrawn his candidacy. Later...by a unanimous vote...the Assembly admitted Malaya to the United Nations as its 82nd member. Japan today appealed to the United States to call off the nuclear tests scheduled to be held in the Pacific next year. The Japanese note urged that nuclear experiments be stopped "in consideration of the dangers to the human race." The United States replied that it has "repeatedly stated its willingness to suspend nuclear tests as part of a dependable disarmament agreement."

Britain today announced that it has protested Russia's action closing the Bay of Vladivostok to foreign ships and planes. The United States made a similar protest last month. There has been speculation that Russia sealed off the area for the purpose of conducting missile tests.

The State Department ruled today that "any bona fide athlete", regardless of nationality, may enter the United States to take part in the 1960 Olympics. Athletes from Communist countries will not be fingerprinted. But, as in the case of all visitors to the United States, they will be subject to routine health and security checks.

The Navy today cancelled development of its Triton guided missile project. The Navy says the cancellation resulted "from an over-all review of the Navy's surface-to-surface missile program." The Triton was to have been launched from ships against distant land targets. The United States is developing other missiles in this catagory.

The Former NATO commander....General Gruenther....told the American Legion convention today that if the Russians have successfully tested an intercontinental

ballistic missile, it does place the United States in greater danger. But the balance of power between East and West, he said, remains unchanged. "It doesn't prevent us from launching an attack to destroy the Soviet Union."

Former Defense Secretary Louis Johnson told the Legion convention that the Administration should give the American people the "facts" on how the United States and Russia compare with respect to military strength.

Washington officials say they expect no change in the foreign policy of Thailand, as the result of yesterday's coup d'etat, in which the Army chief of staff seized control of the government. Field Marshal Sar-reet'...who led the bloodless revolt....reportedly has promised that Thailand will adhere to all treaty obligations , including participation in the Southeast Asia Treaty Organization. Premier Pee-Bun Song-Kram has disappeared. And Sar-reet's rival... General Pow, head of the state police...has taken off for Switzerland. Sar-reet has not yet formed a new government. He fell out with the premier last month when all cabinet officers were ordered to sever their outside business connections. Rather than do this, Sar-reet' and other members of the cabinet resigned.

In Paris, the National Assembly today met in emergency session to take up the Algerian question...and the equally critical problem of inflation. A bill granting the Algerians a larger measure of home rule was sent to a committee which it was hoped...would amend it in such a way as to meet with the approval of all cabinet ministers. The Assembly, consequently, is turning first to the problem of the weakened French economy. In Little Rock, Representative Brooks Hays conferred twice today with Governor Faubus on possible next steps in the school integration dispute. There was no announcement as to what...if anything....was decided. A hearing on Faubus' use of National Guard troops to keep Negro children out of Central High School is scheduled to be held in United States District Court on Friday. Reports from Little Rock say the United States District Attorney there is drawing up a list of some 200 witnesses.

The latest advisory on that tropical storm Esther, in the Gulf of Mexico, places the disturbance 220 miles from the Louisiana coast. The storm is moving north at 8 miles an hour, with winds of up to 50 miles an hour.

My colleague, Daniel Schorr, has just returned to Moscow from a visit to two cities annexed by Russia. One of them formerly belonged to Poland, the other to Latvia. These towns are rarely visited by foreign correspondents, and so we asked Schorr to record a report for us by beep telephone. You will note deletions due to Soviet censorship, as Schorr speaks.

(SCHORR): This is the report, a fragmentary one from the western rim of Russia from which I have just returned. Two weeks ago the Soviets announced the opening to western travelers of four cities in the border lands annexed since 1939. Riga, Latvia, annexed with the other Baltic states in 1940. Lwow, once Lemberg, in the region annexed from Poland in 1939. Chernovky, once Austro-Hungarian Czernovich later Romanian Czernody, annexed after the war, and Uzhgorod annexed from Czechoslovakia after the war now on the Czechoslovak border. Max Stengle of the New York Times and I were the first western correspondents to make the trip. We traveled by air, travel by car was not permitted. We ended up seeing only Riga and Lwow. While in Lwow we were told that Chernovky, although officially opened only two weeks before, is now temporarily closed. Nor could we go to Uzhgorod either. And so we returned to Moscow. To my regret, therefore, this report on the rim of Russia comes only a tale of two cities. But these two cities gave us some sense of the climate in the border lands. Inevitably our presence caused great excitement. Crowds gathered where ever we went, mostly conducive and eager. (Seven words are here deleted). Both Riga and Lwow have seen great population shifts. In Riga, anti-communist governments were removed (words deleted). After the war, those accused of collaboration with the Nazis were removed. Some have been allowed to return. Many Russians have settled there in cities ranging from 20 to 40% of 600,000. Before the war the Russians formed 4% of the population. In Lwow, thousands of Ukrainians have moved in instead. Today, Lwow once a farming and commercial center (indistinct) into an industrial city. Its population almost tripled to 560,000.

And in this once Polish city the Mayor told us the population is now 48% Ukranian, 35% Russian, the Poles, a small minority. In Riga And Lwow church attendance seems higher than in other parts of the Soviet Union. In Riga, (indistinct) in Catholic churches in good state of repair and well attended. In Low, at a Catholic Sunday Mass, I saw more children and young people that I have ever seen at a relgiious service in the Soviet Union. These relatively new comer cities in the Soviet Union also show other differences from the rest of the country. They have better housing conditions than the other cities. Lwow claims first place in progress towards eliminating its housing shortage. The Mayor told us there will be a dwelling for everyone in three years. For the Soviet Union as a whole, the earliest target is twelve years from now. In both cities, food and living costs are lower than in Moscow. Partly because of local resources, partly also perhaps, efforts are being made to pacity the people. In both Riga and Lwow a sense of national identity runs strong although as far as we could see it does not take the form of any overt opposition to the Soviet regime. Lwow, Ukrainian Bourgeois nationalism as it's called, was stamped out by 1949 and some of these sent away in the process are being allowed now to return. In Riga and Lwow parents can send their children either to schools using the local language, Latvian in one case, Ukrainian in the other, or to a Russian school. Where the local language is chosen, Russian is a compulsory second language. Each city today has one remaining Synagogue, and the religious Jews, all of them aged, are left undisturbed. If these two cities are a sample the assimilation of the western border land into the Soviet system has made great progress. The Soviet pattern has been fixed and those who grumble about it are mainly the older people with long memories.

(MURROW): That was my colleague Daniel Schorr, reporting a remarkable story from Moscow. This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

Edward R. Murrow Wed., Sept. 18, 1957

This is the news:

President Eisenhower today agreed to confer with Representative Adam Clayton Powell of New York on the school integration problem. Powell had sent the President a telegram, requesting that he meet immediately with him and other Negro leaders. Mr. Eisenhower's answer makes no reference to the suggestion that other persons be included in the talks. It says, "I shall arrange a meeting with you, and have directed my staff in Washington to confer with you for this purpose." As for his attitude toward civil rights, Mr. Eisenhower said, "I believe my feelings are sufficiently well known so that I hardly need to reassure any citizen of my earnest devotion to these convictions." So far, no date for a meeting has been set. Although Powell is a Democrat,

he supported Eisenhower in the last presidential campaign.

The school integration situation in Little Rock remains unchanged.

In Alexandria, Virginia, a federal judge today held up his order requiring public schools in Arlington County to start integration on Monday. The judge ordered the delay, pending an appeal by the school board. He emphasized that...in granting the stay...he was not ruling on the merits of the case.

The Air Force announces that its first inter-continental missile squadron will be organized...and equipped with the 5-thousand-mile Snark...by the end of the year. The Snark is a guided, not a ballistic missile. Thus it is essentially a pilotless bomber---slower than the inter-continental ballistic missile which Russia claims to have successfully tested. But like the ballistic missile, it can also deliver a hydrogen bomb. The first Snark squadron (500 officers and men) will be commanded by Lieutenant Colonel Richard W. Beck of the Strategic Air Command.

Secretary of State Dulles expresses the view...in the magazine "Foreign Affairs"...that the policy of "massive retaliation" may be on its way out. Mr. Dulles says, in the article, that "recent tests point to

the possibility of possessing nuclear weapons, the destructiveness and radiation effects of which can be confined substantially to pre-determined targets. This, he says, may make it feasible in the future "to place less reliance upon deterrence of vast retaliatory power. He says the United States "has not been content to rely on a peace which could be preserved only by a capacity to destroy vast segments of the human race." Mr. Dulles repeats that it is "important" to combine any suspension of nuclear tests with other measures that limit armament and the possibility of surprise attack.

Secretary Dulles will make a major foreign policy speech tomorrow before the United Nations General Assembly. Today, in the United Nations, India moved that admittance of Red China to membership in the world organization be made a subject for Assembly consideration.

The State Department announced today that it will seize the passports of the 40-odd Americans who visited Red China in defiance of its ban on travel to that country. The department also said it has made a "final decision" not to renew the passport of William Worthy, who went to Red China last year as a reporter. Worthy's attorney says the case will be appealed to the State Department's board of passport appeals and, if necessary, to the federal courts.

The American Legion today urged President Eisenhower to take the lead in revising the "status of forces" agreement. The Legion called for presidential action in one of more than 60 resolutions adopted at its annual meeting in Atlantic City. It proposed that no member of the armed forces be subjected to trial by any foreign government for any act committed on a United States military post or in line of duty. (The resolution made no direct reference to the trial, in Japan, of Army Specialist William Girard). The Legion also went on record as approving the military ~~planner~~ phase of the Eisenhower Middle East Doctrine, as opposing federal aid to education, and as denouncing some recent Supreme Court decisions as dangerous to national security. ~~It suggested that Congress enact legislation to establish "proper qualifications for all federal judges, so that henceforth only those imbued with the fundamental concepts of our Republic and the basic tenents of our system of jurisprudence may be appointed to the judiciary."~~

The AFL-CIO ethical practices committee today made public its report on alleged corruption in the international teamsters union. The report says in part: "The evidence shows and we have found that President Beck

and Vice President Hoffa used their official union position for personal profit and advantage...frequently to the detriment of the teamsters union membership." The ethical practices committee also found that Hoffa "associated with, sponsored and promoted the interests of notorious labor racketeers." It concluded that the union is dominated by corrupt influences and that, therefore, it fails to meet the standards for labor union practices set forth in the AFL-CIO constitution. The findings now go to the AFL-CIO executive council, which meets here in New York next week. It is up to the council to say whether the union will be expelled from the labor federation.

The Federal Communications Commission today agreed...tentatively... to authorize trial-run demonstrations of "pay as you see" television sometime next year. The commission said it will consider the applications of television stations that want to broadcast pay TV programs on a limited basis for a three-year trial period. The commission says this "does not constitute a commitment" that such programs eventually will be authorized on a regular commercial basis.

Edward R. Murrow: September 18, 1957. 7.45 p.m.

Forty foreign ministers are in New York for the twelfth assembly of the United Nations which opened yesterday. One could prove with little difficulty that the United Nations is weak when it comes to wielding power in a world of power. But it would be hard to prove that a meeting of forty foreign ministers, wherever it took place, was not important.

The importance of the United Nations to the United States has gone through considerable change in the last years. We no longer enjoy a convenient and automatic majority in the Assembly. We still are by far the most influential member, but we have to persuade, and cannot command. And it is not easy to persuade in an organization broken into tight groupings, unless the groups happen to be on our side. We used to be sure of the Latin American votes, and could count on most of the British Commonwealth and the Western European countries, not to mention recipients of our aid to Asia. But the Afro-Asian and Arab blocs have upset our automatic majority. Even our following in Latin America is not as reliable as it used to be. To get things done we have to plan skillfully and work hard. And we have to get used to receiving a certain number of setbacks.

Our big stake in the present Assembly is to preserve our prestige in

the disarmament debate. The debate itself cannot be won, for the most the Assembly can do is to order resumption of the deadlocked negotiations in the disarmament sub-committee. Since both we and the Russians want this, it is sure to be done. But the Assembly also can draft a resolution touching on the issue of continuing the test of nuclear weapons. And here the ground may prove slippery. We insist that if nuclear tests are suspended, the making of nuclear weapons must be suspended as well, and put under adequate international control, something that Moscow has rejected point-blank.

But in bringing our position before the Assembly we are, in a sense, leading with our chin. For we have announced the resumption of Pacific tests of thermo-nuclear weapons. Japan already has taken a lead in asking us to cancel them, and judging by world reactions this past year, world opinion will favor cancellation, simply because of the health hazard. We shall argue that suspending the tests without suspending the making of nuclear weapons is not disarmament at all. But such an argument is more difficult to follow than warnings about Strontium 90 and the dangers of fall-out. We shall try to allay these by stressing that we are testing the so-called clean bomb, also missiles that can intercept missiles, and that we would welcome U.N. representatives at the Pacific tests. Secretary Dulles

is expected to stress these points when he presents the American case tomorrow. But the announcement of the tests is also being publicized as a show of determination on our part, not to stop them so long as the making of nuclear weapons goes. And while this is logical, it will take all of Mr. Dulles's forensic talent to make it popular.

There is a further maneuver in the disarmament struggle. The Soviet Union will propose enlarging the sub-committee which now consists only of the United States, the Soviet Union, Britain, France and Canada. India is supporting the move, and aspires to membership, as do other countries. Our position on this point has not been disclosed.

Perhaps the major issue before the Assembly will be Algeria. The last Assembly admonished France to produce a "peaceful, democratic and just settlement", and the French Government is laying before a special session of its parliament a plan which it hopes will satisfy both the United Nations and this highly critical Assembly. The proposal calls for a division of Algeria into some six semi-autonomous territories, with Moslems and Europeans having equal voting rights, and with France still responsible for diplomacy, defense and currency. The Arab states are sure to reject this solution and demand complete independence for Algeria. Not only is France in for hard

sledding in this debate, we shall be under attack for providing France the arms to fight the Algerians.

All told, the meeting of the Assembly looks like being acrimonious and passionate. There has been no cease-fire in the cold war; on the contrary, it is being conducted with rising intensity. Now the U.N. Assembly becomes its central arena. No doubt all its eighty-two members join in the hope that the world somehow will be safer because a platform is there where all the bitter contention can be aired.

George Bryan

The United Nations...whatever its limitations...is still a place where large issues can be debated, pro and con, and submitted to [redacted] world opinion. Anthony Nutting once observed, after attending a United Nations meeting, "I still believe that jaw is better than war, that it is good to have a place where we can talk and let off steam."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, SEPTEMBER 18, 1957
7:45 - 8:00 PM EST

This is the news:

President Eisenhower today agreed to confer with Representative Adam Clayton Powell of New York on the school integration problem. Powell had sent the President a telegram, requesting that he meet immediately with him and other Negro leaders. Mr. Eisenhower's answer makes no reference to the suggestion that other persons be included in the talks. It says, "I shall arrange a meeting with you, and have directed my staff in Washington to confer with you for this purpose." As for his attitude toward civil rights, Mr. Eisenhower said, "I believe my feelings are sufficiently well known so that I hardly need to reassure any citizen of my earnest devotion to these convictions." So far, no date for a meeting has been set. Although Powell is a Democrat, he supported Eisenhower in the last presidential campaign.

The school integration situation in Little Rock remains unchanged.

All told, the meeting of the Assembly looks like being acrimonious and passionate. There has been no cease-fire in the cold war; on the contrary, it is being conducted with rising intensity. Now the U.N. Assembly becomes its central arena. No doubt all its eighty-two members join in the hope that the world somehow will be safer because a platform is there where all the bitter contention can be aired.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, a word from George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The United Nations...whatever its limitations...is still a place where large issues can be debated, pro and con, and submitted to world opinion. Anthony Nutting once observed, after attending a United Nations meeting, "I still believe that jaw is better than war, that it is good to have a place where we can talk and let off steam." Good night and good luck!

Edward R. Murrow Thurs., Sept. 19, 1957

This is the news:

Secretary of State Dulles today addressed the United Nations General Assembly on the subject of disarmament and Soviet infiltration of the Middle East. Mr. Dulles said the Soviet arms build-up in Syria confronts Turkey with "a growing military danger." Russia, he said, wants control of the Middle East. And he called on the General Assembly for a full discussion of the risks involved. He said that in the course of the debate, the United States may make some "concrete proposals". Dulles appealed to the Assembly to support the Western disarmament proposals. He said, "We cannot believe the sweeping, contemptuous Soviet rejection is final." (I should like to examine Mr. Dulles' speech further in a few minutes).

The United Nations steering committee today turned down India's request for an assembly debate on whether Red China should be admitted to the world organization. The United States and eight other countries voted to shelve the question. Russia, Czechoslovakia, Norway and Ceylon voted for the Indian proposal. Tunisia and Guatamala abstained.

Today...in Damascus... representatives of Russia and Syria opened discussions pertaining to Soviet economic aid. The Syrian government confirmed reports that two Russian warships are about to visit Syria. It said the warships are coming at Syria's invitation.

Governor Faubus of Arkansas demanded today that United States District Judge Davies disqualify himself from presiding at tomorrow's hearing in the Little Rock integration dispute. The hearing concerns Faubus' use of National Guard troops, which...on orders of the governpr...have barred Negro students from central high school. Faubus contends it was necessary to call out the Guard to prevent violence. The Justice Department questions this...and has petitioned for an injunction against Faubus, requiring him not to interfere in the school integration program. Today, Faubus filed a motion in the District Court arguing that Judge Davies

→

should not hear the case because of "personal bias and prejudice." (Davies himself will have to rule on the motion). Faubus also charges that the F.B.I. has given the court "hearsay evidence." Earlier today, the governor refused to honor an affidavit calling for his appearance in another court case. This one concerns a suit brought by ten Negro ministers, who asked that four segregation laws passed by the Arkansas state legislature be set aside. Three judges...including Judge Davies...were hearing the case. Faubus refused to appear on grounds that, as the chief executive of Arkansas, he is not compelled to comply. As it turned out, the hearing was postponed pending the outcome of a similar case in the state courts.

The summer White House said tonight that President Eisenhower is "deeply disappointed" by developments at Little Rock...that "voluntary means have not been found to comply with the court's orders."

The State Department today expressed hope that trumpter Louis Armstrong will sometime make a Government-sponsored trip to Russia as a goodwill ambassador. A department spokesman told reporters the decision is "up to him." Yesterday, Armstrong said he had given up plans to go "because of the way they are treating my people in the South." He accused President

→

Eisenhower of being "two-faced" in his handling of the Little Rock dispute and called Governor Faubus "an uneducated plow-boy." Armstrong said, "Don't get me wrong. The South is full of intelligent white people." It was "bad", he said, the other people "made all the noise." The State Department said the Armstrong trip had been under discussion but that "nothing was final." The department said it "always had been pleased" when Satchmo traveled abroad.

Defense Secretary Wilson today ordered the armed forces cut by an additional 100-thousand men. The reduction is to be effected "as promptly as possible" but in no case later than June 30th, 1958. A 100-thousand-man cut (ordered last July) is to be completed by the end of this year. The two cuts, together, will reduce the armed forces to 2-million, 600-thousand men. Wilson said he believed the Air Force...as a result...would drop in strength from its present 133 wings to "at least" 123 wings. He said he was asking the Army and Navy...as well as the Air Force..."to continue aggressively the search for savings which can be made in defense expenditures" and, at the same time, maintain necessary military capabilities. Wilson said that between 35 and 40-thousand civilians

Grant

will also have to be dropped from the defense payroll.

Today...at the Nevada proving grounds...a small atomic bomb was exploded underground for the first time since the United States began making nuclear tests. The underground "shock waves" proved less forceful than anticipated.

In Atlantic City, John S. Gleason of Chicago was elected national commander of the American Legion. F.B.I. Director Hoover told the Legion convention today that it would be "national suicide" to dismiss lightly the threat of Communist subversion in the United States. ~~There is still, he said, a dangerous hard core of "conspiratorial leaders."~~

Here in New York today, 13 members of the teamsters union filed suit in United States District Court to block the election of new officers at the union's national convention in Miami the end of this month. The petition contends that there can be no proper election unless the court appoints masters to conduct "honest elections at the local level." The local elections are for the purpose of naming delegates to the convention. James Hoffa...who is running for president of the teamsters union...was among the defendants named in the suit.

The general communications strike in Argentina is spreading. The Confederation of Commercial Employes...the biggest union in Argentina... has called a sympathy walkout. And the garment and metal workers have scheduled a series of hit-and-run strikes for tomorrow and Saturday.

The Bank of England today raised its interest rate to 7 percent, a move designed to curb inflation and maintain the value of the pound. The old interest rate was 5 percent.

And in France, the opposition parties have presented a motion of censure against the government in the National Assembly. The motion charges that the austerity measures affecting French farmers are contrary to law.

Wilson said the Russian claim...that they have successfully tested an intercontinental ballistic missile...probably is true. He said the Russian announcement "didn't say much" that it was couched in general terms. And the United States, Wilson said, could have said the same thing months ago.

Edward R. Murrow: September 19, 1957. 7.45 p.m.

Mr. Dulles's policy statement in the United Nations Assembly today fulfilled predictions of what he would say about disarmament. He emphatically re-affirmed the position of the United States and its allies in the deadlocked London negotiations. He urged the Assembly to adopt this position, in the hope that in time the Soviet Union would reverse its rejection. He made it clear, without actually saying so, that we are not prepared to compromise our stand in any basic way. Mr. Dulles did not have his eye on a possible deal with the Russians. He frankly tried to enlist the Assembly against the Soviet position.

Mr. Dulles made ~~It was~~ a hard-hitting speech at the UN. It underscored the acute distrust now existing, and asked the Soviet Union how it intended to dispel it. He himself could think of only two ways. The great powers could demonstrate by their conduct that they live up to their pledges under the charter. But this way, he lamented, "is unhappily lacking" and pointed to Hungary and the U.N. resolution on that tragic country.

The other way was to establish reciprocal inspection. "Then" he said, "we should not have to trust each other's words or intentions. Bad faith would then be so vulnerable to detection that it would not become a profitable

tactic".

Mr. Dulles refused to be on the defensive about the continuation of nuclear tests. He said that we are experimenting to find out how to eliminate hazardous radio-active material, and to make nuclear weapons into discriminating weapons, suitable for use against attacking troops, submarines and bombers, and for interception of inter-continental missiles. He chided the Russians for not seeming to want nuclear weapons to be refined in this way. Could it be, he suggested, because the Soviet Union did not want them made effective defensive weapons against its own preponderance in manpower? Russia "~~It~~ seems to like it" he said, "that nuclear weapons can be stigmatized as 'horror' weapons."

His final word on suspending the tests was put this way: If the Soviet Union rejects inspection against surprise attack, if it rejects a system to end the production of fissionable material for weapons, if it refuses to co-operate to prevent the promiscuous spreading of nuclear weapons throughout the world, and refuses to start a reciprocal reduction of existing stockpiles, then, he said, "we doubt that it is prudent to forego efforts to make nuclear weapons into defensive weapons, substantially free of radio-active fall-out."

This seems to limit our further tests to the development of the so-called clean bomb and making small-sized nuclear weapons. If this is the revelation of a newly formulated policy, more about it may be expected from the Pentagon and the Atomic Energy Commission.

Mr. Dulles had been expected to make a strong attack on the Soviet disarmament policy. But he exceeded expectations by adding another chapter of sharp criticism. This was of the Soviet behavior in the Middle East. He traced the Soviet efforts to gain influence there, which came to a head in 1955. Then, he said, Moscow adopted a formula handed down by Lenin, and "began an intensive propaganda designed to incite the Arab nations to believe that Soviet arms, with Soviet technicians and Soviet political backing, could accomplish extreme nationalistic ambitions." The purpose, as Lenin had foreseen, was to make these countries so dependent on the Soviet Union as to pass under Moscow's complete dominance.

In Syria, he said, "the Soviet-bloc arms were exultantly received, and political power has increasingly been taken over by those who depend on Moscow. True patriots have been driven from positions of power by arrests and intimidation." He went on to explain the effect on Turkey. "Turkey" he said, "now faces growing military danger from the major build-up of Soviet

arms in Syria on its southern border, a build-up concerted with Soviet military power on its northern border." In his original text Mr. Dulles was going to call attention to the possibility of a Soviet pincer movement, but he deleted this phrase. "We believe" he said, "that these Soviet acts, perhaps unwittingly, may lead recipients of Soviet arms into acts of direct aggression. Those who feel an abnormal sense of power" he warned, "are being incited by violent propaganda. This is risky business."

The cold war was renewed with the crushing of Hungary, and by Moscow's refusal to take a first step toward disarmament. / Now it has been transferred to the floor of the Assembly. / Mr. Dulles today was opening the fight there for the Western powers. / He was not vituperative, undiplomatic or even particularly stirring. But the most careful search of his text will not disclose any hidden keys to the doors of compromise.

George Bryan -

Word for Today

Secretary of State Dulles warns that Middle East countries...armed with Soviet weapons...may be tempted to commit aggression. Such action would not arise solely from possession of arms, but also from desires the countries hitherto had not been able to realize. Henry Ward Beecher once said, "Temptations without imply desires within."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, SEPTEMBER 19, 1957
7:45 -- 8:00 P. M., EST

This is the news:

Secretary of State Dulles today addressed the United Nations General Assembly on the subject of disarmament and Soviet infiltration of the Middle East. Mr. Dulles said the Soviet arms build-up in Syria confronts Turkey with "a growing military danger." Russia, he said, wants control of the Middle East. And he called on the General Assembly for a full discussion of the risks involved. He said that in the course of the debate, the United States may make some "concrete proposals". Dulles appealed to the Assembly to support the Western disarmament proposals. He said, "We cannot believe the sweeping, contemptuous Soviet rejection is final." (I should like to examine Mr. Dulles'speech further in a few minutes).

The United Nations steering committee today turned down India's request for an assembly debate on whether Red China should be admitted to the world organization. The United States and eight other countries voted to shelve the question. Russia, Czechoslovakia, Norway and Ceylon voted for the Indian proposal. Tunisia and Guatamala abstained.

Today....in Damascus...represenatatives of Russia and Syria opened discussions pertaining to Soviet economic aid. The Syrian government confirmed reports that two Russian warships are about to visit Syria. It said the warships are coming at Syria's invitation.

Governor Faubus of Arkansas demanded today that United States District Judge Davies disqualify himself from presiding at tomorrow's hearing in the Little Rock integration dispute. The hearing concerns Faubus' use of National Guard troops, which....on orders of the governor...have barred Negro students from central high school. Faubus contends it was necessary to call out the Guard to prevent violence. The Justice Department questions this...and has petitioned for an injunction against Faubus, requiring him not to interfere in the school integration program. Today, Faubus filed a motion in the District Court arguing that Judge Davies

should not hear the case because of "personal bias and prejudice." (Davies himself will have to rule on the motion). Faubus also charges that the F.B.I. has given the court "hearsay evidence." Earlier today, the governor refused to honor an affidavit calling for his appearance in another court case. This one concerns a suit brought by ten Negro ministers, who asked that four segregation laws passed by the Arkansas state legislature be set aside. Three judges...including Judge Davies....were hearing the case. Faubus refused to appear on grounds that, as the chief executive of Arkansas, he is not compelled to comply. As it turned out, the hearing was postponed pending the outcome of a similar case in the state courts.

The summer White House said tonight that President Eisenhower is "deeply disappointed" by developments at Little Rock...that "voluntary means have not been found to comply with the court's orders."

The State Department today expressed hope that trumpter Louis Armstrong will sometime make a Government-sponsored trip to Russia as a goodwill ambassador. A department spokesman told reporters the decision is "up to him." Yesterday, Armstrong said he had given up plans to go "because of the way they are treating my people in the South." He accused President Eisenhower of being "two-faced" in his handling of the Little Rock dispute and called Governor Faubus "an uneducated plowboy." Armstrong said, "Don't get me wrong. The South is full of intelligent white people." It was "bad" he said, the other people "made all the noise." The State Department said the Armstrong trip had been under discussion but that "nothing was final." The Department said it "always had been pleased" when Satchmo traveled abroad.

Defense Secretary Wilson today ordered the armed forces cut by an additional 100-thousand men. The reduction is to be effected "as promptly as possible" but in no case later than June 30th, 1958. A 100-thousand-man cut (ordered last July) is to be completed by the end of this year. The two cuts, together, will reduce the armed forces to 2-million, 600-thousand men. Wilson said he believed the Air Force....as a result....would drop in strength from its present 133 wings to "at least" 123 wings. He said he was asking the Army and Navy....as well as the Air Force...."to

continue aggressively the search for savings which can be made in defense expenditures" and, at the same time, maintain necessary military capabilities. Wilson said that between 35 and 40-thousand civilians will also have to be dropped from the defense payroll.

Today...at the Nevada proving grounds...a small atomic bomb was exploded underground for the first time since the United States began making nuclear tests. The underground "shock waves"proved less forceful than anticipated.

In Atlantic City, John S. Gleason of Chicago was elected national commander of the American Legion. F.B.I. Director Hoover told the Legion convention today that it would be "national suicide" to dismiss lightly the threat of Communist subversion in the United States.

Here in New York today, 13 members of the teamsters union filed suit in United States District Court to block the election of new officers at the union's national convention in Miami the end of this month. In his original text Mr. Dulles was going to call attention to the possibility of a Soviet pincer movement, but he deleted this phrase. "We believe" he said, "that these Soviet acts, perhaps unwittingly, may lead recipients of Soviet arms into acts of direct aggression. Those who feel an abnormal sense of power" he warned, "are being incited by violent propaganda. This is risky business."

The cold war was renewed with the crushing of Hungary, and by Moscow's refusal to take a first step toward disarmament. Now it has been transferred to the floor of the Assembly. Mr. Dulles today was opening the fight there for the Western powers. He was not vituperative, undiplomatic or even particularly stirring. But the most careful search of his text will not disclose any hidden keys to the doors of compromise.

This is Ed Murrow. I'll be back in a moment with the word for today. But first, here is George Bryan.

"Word For Today"

Secretary of State Dulles warns that Middle East countries...armed with Soviet weapons...may be tempted to commit aggression. Such action would not arise solely from possession of arms, but also from desires the countries hitherto had not been able to realize. Henry Ward Beecher once said, "Temptations without imply desires within."

Goodnight and good luck!

Edward R. Murrow Fri., Sept. 20, 1957

This is the news:

United States District Judge Ronald Davies has issued an injunction, ordering Governor Faubus of Arkansas to stop interfering with the integration of the central high school in Little Rock. Judge Davies' order climaxes a day of fast-breaking legal developments. For a direct report, we switch to Jim Miller in Little Rock.

(Miller runs 3:35
Ends on cue: "---to Edw. R. Murrow in N.Y.

President Eisenhower and Attorney General Brownell conferred by telephone today on the Little Rock situation. A White House spokesman declined to give Mr. Eisenhower's reaction to the latest developments.

Soviet Foreign Minister Gromyko told the United Nations General Assembly today that it is the United States---not Russia---which is making a "tinderbox" of the Middle East. Gromyko was answering Secretary Dulles' charge...yesterday...that Soviet Middle East policy is jeopardizing the peace. Dulles said Turkey faces "growing military danger" from the Soviet arms build-up in Syria. Political power, he said, has increasingly been taken over by those who depend on Moscow. Today, Gromyko argued that the situation in the Middle East is indeed dangerous...and that it is Western policy, especially the policy of the United States, which is at fault. The United States, he charged, has been exerting [redacted] "rude political and economic pressure" against Syria, simply because...in his words..."the people of Syria and their government refuse to submit to foreign dictation, or to allow their country to be drawn into aggressive blocs." (Here, Gromyko [redacted] was referring to Syria's opposition to the anti-Communist Baghdad Pact). He went on to say that [redacted] Russia "cannot place itself in the position of an impassive observer while the Near and Middle East...an area close to the frontiers of the Soviet Union...is being turned into a permanent hotbed of military conflicts."

The United Nations, he said, should condemn "resolutely" the policy being pursued in the Middle East by the Western powers. He warned against when he called the "dangerous illusion" that armed conflict in the area would not spread.

On the subject of disarmament, Gromyko said the Western proposals submitted at the London conference "cannot provide a basis for agreement." And then he went on to repeat most of the Soviet proposals, which the West had found unacceptable because of inadequate safe-guards. Gromyko suggested...in the form of a draft resolution...that nuclear tests be suspended for a period of two to three years. He would have the ban go into effect next January first, with an international commission to supervise compliance. Commission control posts would be set up in the United States, Russia and Britain...and in British possessions in the Pacific area, including Australia. Gromyko further proposed that the atomic powers assume a "temporary obligation" not to use nuclear weapons for at least five years. If no general disarmament agreement is reached after five years, the United Nations (according to Gromyko's proposal) would again consider the "obligation" to renounce the use of such weapons. This would appear to be a slight modification of the Russian proposal, submitted in

→

London, for a flat, total ban on the use of nuclear weapons. Gromyko said that until a disarmament agreement is reached, Russia will take "all necessary steps to safeguard its security in close coordination with its allies." In particular, he said, with its allies under the Warsaw Pact.

The Air Force said today that the United States has developed a radar system capable of detecting an inter-continental ballistic missile up to a distance of 3-thousand miles. The disclosure was made by General Thomas D. White, Air Force chief of staff. White said the improved radar will be put into use in the near future to give military and population centers of the United States "instantaneous" warning of missile attack. White called the development part of a ballistic missile defense program on which this country has been working for several years. There have been, he said (without elaboration), "recent break-throughs in the computer, communications, radar and missiles fields."

Another missile was test-fired today in Florida. It is believed to have been the Air Force "Thor," a ballistic missile of intermediate range. Eye-witnesses say the test appeared successful. In that case, it would be the first successful firing of the Thor. But the only official word is that a missile was fired. The test-center gives out no details.

A New Mexico Democrat...Robert McKinney...was sworn in today as United States representative to the international "atoms-for-peace" agency. McKinney will attend the first meeting of the agency's Board of Governors in Vienna on October 1. President Eisenhower announced the appointment yesterday subject to Senate confirmation when Congress reconvenes.

The Finnish composer, Jean Sibelius, died today of a cerebral hemorrhage. He was 91 years old.

In Paris today, Premier Bourges-Maunoury conferred for 12 hours with French party leaders in an effort to agree on an Algerian program. The effort failed, and tomorrow the premier will make another try. Twelve political leaders...representing 370 deputies...attended today's conference. The only leaders excluded from the meeting were those of the Communist and Poujadist Parties. The issue is Bourges-Maunoury's complicated plan for granting Algeria limited self-government. Rightist members of the General Assembly are demanding stronger provisions to guarantee continued French control of Algeria. And other deputies to the left contend that the measure does not go far enough in giving the Moslem population of Algeria a degree of home rule. There is speculation

—>

that the French government may fall in a confidence vote on the issue next week.

In Washington, a federal judge has ordered a hearing for next Friday on the petition filed by a group of "rank and file" teamsters to block the election of national officers at the forthcoming union convention. The petition charges that the election is being "rigged" in favor of union President James Hoffa, who wants to succeed Dave Beck as president. Judge F. Dickinson Letts directed the union leaders to show cause why the election should not be delayed by a temporary injunction.

In Miami Beach today, the teamsters union executive board unanimously approved...and sent to AFL-CIO President Meany... a reply to charges that the teamsters union is dominated by corrupt influences. The charges were upheld by the AFL-CIO ethical practices committee. Union leaders have not made their reply public, so far.

George Bryan

The four-day nationwide strike of telephone equipment installers ended today, when representatives of the union and the Western Electric Company agreed on a new two-year contract. Tonight, there is some question whether the contract terms will be accepted by the rank-and-file.

In Indianapolis, Cleveland and here in New York, union leaders say there is strong discontent over the 13 and a fraction-cent hourly package.

Word for Today

The writer, Langston Hughes, has a Negro character in his new book who is asked whether he wants the right to be wrong. And the character says, "I want every right there is. Then I can pick out the right to be right. A man has to have the right to be wrong in order to have the right to be right, don't he?"

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Friday, September 20, 1957
7:45 - 8:00 P.M.

MURROW: ... United States District Judge Ronald Davies has issued an injunction ordering Governor Faubus of Arkansas to stop interferring with the integration of the Central High School in Little Rock. Judge Davies' order climaxes a day of fast-breaking legal developments. For a direct report we switch to Jim Nore in Little Rock.

NORE: The relentless legal machine of the Federal government apparently brought Arkansas Governor Orval Faubus to his knees at 3:29 this afternoon, following eighteen days during which National Guardsmen have patrolled the grounds of Little Rock Central High School. Five foot, one inch Ronald J. Davies, Federal District Judge in Little Rock, climaxed a day of courtroom surprises by issuing an injunction which forbids Governor Faubus and two National Guard officers from further interference in the racial integration of Central High School. The Guard officers are Maj. General Sherman Klinger, the State's Adjutant General, and Lieut, Col. Marion Johnson, who commanded the troops at the school. Faubus himself was not present in court. Federal attorneys rested their case at 2:55 this afternoon, a case in which they were forced to share the spotlight with no one after Faubus' legal entourage trooped from the courtroom shortly before noon. Two rulings by Judge Davies precipitated the move by Faubus' attorneys, an action that launched a hum of surprised comment in the sardine-close courtroom that was bulgingwith newsmen and spectators when the trial began at ten o'clock this morning. First of all, Davies denied a petition from the Governor's lawyers that the Federal jurist recuse himself because of personal prejudice and bias toward Faubus. Judge Davies ruled the facts did not support the contention. This action consumed forty minutes. Then the Faubus group filed a petition for the dismissal of the hearing, which was called of course to demand that Faubus and the Guard

officers show cause why the troops should not be removed from the high school. This petition was based on the premise that the court had no authority over the chief executive of a sovereign state. It took Judge Davies only a short while to deny this action. When he did so, Tom Harper, head of the governor's legal battery and chairman of the Arkansas State Democratic Committee, stood and announced to the court that the defense was withdrawing because it could not concede that the District Court could act with authority in a matter involving the chief of a sovereign state. Then the trio of Faubus attorneys buttoned their brief cases and stalked through the door. The action was totally unexpected. Thurgood Marshall, chief counsel of the N.A.A.C.P. who is representing the nine negroes who were turned away from Central High, said the move was unprecedented, that he had never seen anything like it before. A similar statement came from Attorney Donald McGinnies, who represented the Department of Justice. He added that he did not think the action would have any effect on an appeal by the governor. After the exodus of Faubus' attorneys, it was a one-sided game, in which the Government attorneys called eight witnesses to the chair, including two of the negroes who'd been stopped from entering the school the morning of September 3rd. The students were 16-yr. old Ernest Greene, and 15-yr. old Elizabeth Ann Ackford. The remainder of the witnesses were school and city officials. The Government sought to establish that there had never been any racial violence in Little Rock, that the officials had carefully planned the move to integrate, and that none had ever asked the Governor for any assistance nor had the Governor ever consulted them prior to moving in the Guard. All nine of the negroes had been subpoenaed as witnesses and sat throughout the trial side-by-side in the witness enclosure. But in the wake of the day-long legal extravaganza, remains an abundance of unanswered questions: What move, if any, does Faubus plan next? What does the future hold in the way of legal recourse? Is this the

end of the battle? The consensus is that the troops will be removed. But they haven't been until yet. It may take another day or week or month in court to resolve the most perplexing problem yet produced by the integration of Southern schools. Now, back to Edward R. Murrow in New York.

will be removed. But they haven't been until yet. It may take another day or week or month in court to resolve the most perplexing problem yet produced by the integration of Southern schools. Now, back to Edward R. Murrow in New York.

MURROW: President Eisenhower and Attorney General Brownell conferred by telephone today on the Little Rock situation. A White House spokesman declined to give Mr. Eisenhower's reaction to the latest developments.

Soviet Foreign Minister Gromyko told the United Nations General Assembly today that it is the United States, not Russia, which is making a "tinderbox" of the Middle East. Gromyko was answering Secretary Dulles' charge...yesterday... that Soviet Middle East policy is jeopardizing the peace. Dulles said Turkey faces "growing military danger" from the Soviet arms build-up in Syria. Political power, he said, has increasingly been taken over by those who depend on Moscow. Today, Gromyko argued that the situation in the Middle East is indeed dangerous...and that it is Western policy, especially the policy of the United States, which is at fault. The United States, he charged, has been exerting "rude political and economic pressure" against Syria, simply because...in his words..."the people of Syria and their government refuse to submit to foreign dictation, or to allow their country to be drawn into aggressive blocs." (Here, Gromyko was referring to Syria's opposition to the anti-Communist Baghdad Pact). He went on to say that Russia "cannot place itself in the position of an impassive observer while the Near and Middle East...an area close to the frontiers of the Soviet Union...is being turned into a permanent hotbed of military conflicts."

The United Nations, he said, should condemn "resolutely" the policy being pursued in the Middle East by the Western powers. He warned against when he called the "dangerous illusion" that armed conflict in the area would not spread.

On the subject of disarmament, Gromyko said the Western proposals submitted at the London conference "cannot provide a basis for agreement." And then he went on to repeat most of the Soviet proposals, which the West had found unacceptable because of inadequate safe-guards. Gromyko suggested...in the form of a draft resolution...that nuclear tests be suspended for a period of two to three years. He would have the ban go into effect next January first with an international commission to supervise compliance. Commission control posts would be set up in the United States, Russia and Britain...and in British possessions in the Pacific area, including Australia. Gromyko further proposed that the atomic powers assume a "temporary obligation" not to use nuclear weapons for at least five years. If no general disarmament agreement is reached after five years, the United Nations (according to Gromyko's proposal) would again consider the "obligation" to renounce the use of such weapons. This would appear to be a slight modification of the Russian proposal, submitted in London, for a flat, total ban on the use of nuclear weapons. Gromyko said that until a disarmament agreement is reached, Russia will take "all necessary steps to safeguard its security in close coordination with its allies." In particular, he said, with its allies under the W rsaw Pact.

The Air Force said today that the United States has developed a radar system capable of detecting an inter-continental ballistic missile up to a distance of 3-thousand miles. The disclosure was made by General Thomas D. White, Air Force chief of staff. White said the improved radar will be put into use in the near future to give military and population centers of the United States "instantaneous" warning of missile attack. White called the development part of a ballistic missile defense program on which this country has been working for several years. There have been, he said (without elaboration), "recent break-throughs in the computer, communications, radar and missiles fields."

Another missile was test-fired today in Florida. It is believed to have been the Air Force "Thor" a ballistic missile of intermediate range. Eye-witnesses say the test appeared successful. In that case, it would be the first successful firing of the Thor. But the only official word is that a missile was fired. The test-center gives out no details.

A New Mexico Democrat...Robert McKinney...was sworn in today as United States representative to the international "atoms-for-peace" agency. McKinney will attend the first meeting of the agency's Board of Governors in Vienna on October 1. President Eisenhower announced the appointment yesterday subject to Senate confirmation when Congress reconvenes.

The Finnish composer, Jan Sibelius, died today of a cerebral hemorrhage. He was 91 years old.

In Paris today, Premier Bourges-Maunoury conferred for 12 hours with French party leaders in an effort to agree on an Algerian program. The effort failed, and tomorrow the premier will make another try. Twelve political leaders... representing 370 deputies...attended today's conference. The only leaders excluded from the meeting wer those of the Communist and Poujadist Parties. The issue is Bourges-Maunoury's complicated plan for granting Algeria limited self-government. Rightist members of the General Assembly are demanding st on er proisions to guarantee continued French control of Algeria. And other deputies to the left contend that the measure does not go far enough in giving the Moslem population of Algeria a degree of home rule. There is speculation that the French government may fall in a confidence vote on the issue next week.

In Washington, a federal judge has ordered a hearing for next Friday on the petition filed by a group of "rank and file" teamsters to block the election of national officers at the forthcoming union convention. The petition charges that the election is being "rigged" in favor of union Vic President James Hoffa, who wants to succeed Dave Beck as president. Judge F.

Dickinson Letts directed the union leaders to show cause why the election should not be delayed by a temporary injunction.

In Miami Beach today, the teamsters union executive board unanimously approved... and sent to AFL-CIO President Meany...a reply to charges that the teamsters union is dominated by corrupt influences. The charges were upheld by the AFL-CIO ethical practices committee. Union leaders have not made their reply public, so far.

The four-day nationwide strike of telephone equipment installers ended today, when represen5atives of the union and the Western Electric Company agreed on a new two-year contract. Tonight, there is some question whether the contract terms will be accepted by the rank-and-file. In Indianapolis, Cleveland and here in New York, union leaders say there is strong discontent over the 13 and a fraction-cent hourly package.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The writer, Langston Hughes, has a Negro character in his new book who is asked whether he wants the right to be wrong. And the character says, "I want every right there is. Then I can pick out the right to be right. A man has to have the right to be <u>wrong</u> in order to have the right to be <u>right</u>, don't he?"

Good Night and Good Luck!

Edward R. Murrow Mon., Sept. 23, 1957

This is the news:

Violence broke out today when eight Negro students entered the central high school in Little Rock. At noon...when the situation threatened to get out of hand...the Negro students were withdrawn from the school and taken home under police escort. At the summer White House...in Newport...President has issued a proclamation, commanding all persons obstructing integration at Little Rock to "cease and desist." Mr. Eisenhower called the outbreak at Little Rock "disgraceful". He said he would use "whatever force may be necessary to prevent any obstruction of the law and to carry out the orders of the Federal Court." For a direct report on the President's statement, we switch to our White House correspondent Charles von Fremd in Newport.

Von Fremd runs 5 MINS.

Ends on cue: "--to Edward R. Murrow in NY."

A dispatch from Washington says that Army Secretary Brucker has just conferred with Attorney General Brownell. The purpose of the visit is not announced. Presumably it concerns possible use of troops.

George Bryan —

For the story of what happened today in Little Rock, here is Paul Niven.

(Niven runs
Ends on cue: "--to Edward R.
Murrow in N.Y."

That was my colleague, Paul Niven, reporting from Little Rock. Here in New York, the executive secretary of the National Association for the Advancement of Colored People...Roy Wilkins...has issued a statement, charging that Governor Faubus "encouraged" the violence. / "This shameful spectacle," Wilkins said, "stems from the governor's repeated insistence, in public statements, and in radio and television pronouncements, that violence was inevitable." / He said Faubus "disrupted" the groundwork for peaceful integration, laid down by the Little Rock board of education."

At the southern governors conference...which he is attending...Governor Faubus told reporters: "What happened today, demonstrated that my original estimate of the situation was correct. I am sure," he said, "that the situation would have been as bad...if not worse...on the first day of school opening." Faubus said he had asked Mayor Mann of Little Rock to provide police protection at the homes of the Negro students who were

→

forced to leave the school. He said President Eisenhower cannot use federal troops in the Little Rock integration crisis unless he (Faubus) requests it.

A Negro member of Congress... Representative Adam Clayton Powell... said tonight that President Eisenhower should call a special session of Congress to prevent what he called the "reign of terror" at Little Rock from spreading to other areas.

President Eisenhower conducted considerable official business today, during his brief four-hour stay in Washington. He attended the regular National Security meeting at the White House, and said the United States now has "the most powerful military establishment in its peacetime history." The President made the statement on the occasion of the 10th anniversary of the passage of the National Security Act...the law under which the Defense Department and the Security Council were created.

Mr. Eisenhower conferred at the White House for half an hour with Crown Prince Faisal of Saudi Arabia. Secretary of State Dulles sat in on the meeting, which News Secretary Hagerty said involved "a general

discussion of mutual problems." Prince Faisal is both prime minister and foreign minister of Saudi Arabia. He told reporters his country is "concerned" over recent developments in Syria---not in the sense of being "worried" but "interested". "Our concern," he said, "is based on the fact that we want to see Syria free, independent and prosperous." He said there is no danger of one Arab country "endangering the security of another Arab country." Tomorrow, Prince Faisal will meet again with Secretary Dullles.

Mr. Eisenhower spoke at a luncheon meeting of his Conference on Small Business...underscoring the importance of the role of small business in the American economy. He also addressed the annual meeting of the World Bank and related agencies. Mr. Eisenhower warned that the "world-wide phenomenon" of inflation must be curbed, if depression is to be avoided. Policies must be strengthened, he said, which foster healthy economic growth. He deplored the decisions of governments to branch out into fields where private industry, he said, is willing and able to do the job.

Today...on the New York stock exchange...heavy selling sent prices down to their lowest average level in nearly two years. All major groups were hit,

with losses ranging from one to five dollars a share. "Paper losses" totaled 4-billion dollars.

At the Nevada proving grounds, the Atomic Energy Commission today fired its 22nd "shot" in the current series of tests. The explosion was set off from a 500-foot tower and had a force estimated at 15-thousand tons of T.N.T.

The United Nations General Assembly was addressed today by John G. Diefenbaker, prime minister of Canada. He said relations between the United States and Canada is an irrefutable answer "to those who contend that the United States seeks territorial advantage and foments war." The development of the inter-continental ballistic missile, he said, makes it imperative that the General Assembly give its first attention to the disarmament problem.

The United States Coast Guard reports that an American freighter has picked up five survivors of the German sailing ship "Pamir", which is is presumed to have sunk in the mid-Atlantic on Saturday. There were 86 persons on the ship, including 51 German Navy cadets.

The new tropical storm Frieda is reported 480 miles east of Palm Beach, with winds up to 50 miles an hour. Small-craft warnings have been posted on the Georgia and Carolina coasts.

The powerful interior committee of the French National Assembly today approved a compromise measure for giving Algeria limited home rule. The committee vote was 27 to 12, with four abstentions. Eleven of the 12 negative votes were cast by Communist deputies. The full assembly will start debate on the measure...on which Premier Bourges-Maunoury has staked the life of his government...on Wednesday.

Word for Today

Carl Sandburg once said, "The one word MORE detestable than any other in the American language is the word 'exclusive'. Exclusive. When you're exclusive," Sandburg said, "you shut out a more or less large range of humanity from your mind and heart...and from your understanding them."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Monday, September 23, 1957
7:45 - 8:00 P.M.

MURROW: ... For a direct report on the President's statement, we switch to our White House correspondent, Charles von Fremd in Newport.

FREMD: The proclamation issued by President Eisenhower early this evening is regarded here as a necessary first step to the use of Federal troops if necessary to end the ugly situation in Little Rock. It is a legal maneuver which formally gives the President authority to use military force is the angry mobs continue to gather about Central High School keeping those nine negro students from classes. White House News Secretary James C. Hagerty emphasizes that the issuance of this proclamation does not inevitably mean that Federal troops will be employed by Mr. Eisenhower. But the implied threat is obvious as the Administration means it to be. The proclamation, identical to those issued by other Chief Executives in early American history, employs the classic "cease and desist" clause, carefully warning any individual or group to disperse from Central High School. The first test will come when the school doors open tomorrow morning. Mr. Eisenhower has no intention of calling out troops tonight. While news secretary Hagerty understandably hedges on whether troops will be called in if today's demonstrations are repeated, there is general agreement here that a now thoroughly aroused President will do just that, if the mobs gather again tomorrow.

The proclamation capped today its swiftly moving events. After Mr. Eisenhower conferred with Attorney General Brownell in Washington earlier today, he flew back to Newport, headed for the golf course. He was interrupted enroute by Hagerty who told him Brownell was urgently attempting to contact him. The President returned to his vacation headquarters here, conferred with Brownell several times then directed Hagerty to

issue a statement promising he would use force if necessary to insure integration in Little Rock. Reporters were stunned by the severity and directness of the statement. Mr. Eisenhower seldom uses such a blunt approach to important controversial matters. Until today he had employed his usual attitude of patience in dealing with Arkansas Governor Faubus and the mobs of extremists in Little Rock. But that patience snapped at the Newport Naval Base this afternoon when he learned of today's dangerous demonstrations and the flouting of the Federal Court's decision. Mr. Eisenhower apparently has now made his momentous decision - either the mobs disperse or Federal troops move in. Now, back to Ed Murrow in N. Y.

MURROW: A dispatch from Washington says that Army Secretary Brucker has just conferred with Attorney General Brownell. The purpose of the visit is not announced. Presumably it concerns possible use of troops.

For the story of what happened today in Little Rock, here is Paul Niven.

NIVEN: Violence came to Little Rock today as Orval Faubus had predicted. Whether it came because of Governor Faubus or in spite of him, is a question that will long be argued. Most people here have a fixed opinion in Faubus' favor and will carry that opinion to their graves. The crowd began assembling some two hours before Central High School was due to open its doors. First out were the roughest and most extreme elements; red-necked, unshaven men who either had no jobs or preferred not to go to them. I saw one of them show another a knife and they talked boldly about various methods of homicide. It was hard to tell whether they meant it. This reporter tried to talk with them, but was advised by them to get away and stay near police who could protect him. The Little Rock police force was stretched along both sides of the building. The long front of the building was barricaded off to traffic and pedestrians. But even the ends, each a hundred feet long, were hard to defend as the crowd grew. State police troopers who'd been held in reserve nearby, joined the Little Rock

force. Finally the shot went up: "Here they come!" And the crowd went off in pursuit of a single Negro who appeared some distance away. He was stoned and kicked in the face. Intentionally or otherwise, this man served as a decoy - for while he was diverting the crowd, the eight negro students walked into Central High School about a hundred and fifty feet away. The crowd was doubly angry at having been tricked. Immediately cries went up of "Let's go in and get them out!" Some of themen tried to do that. And perhaps thirty minutes it was touch and go whether they would succeed. Here's some of that shouting and scuffling. (sound effects) And so it went. One man would cry "Here's one who's willing. Who's with me?" and there'd be a brief hesitant charge toward the police lines. Nobody broke through. There seemed to be little organization; if there had been much the result might have been disastrous. The policemen themselves were revilled, accused of defending the negro students, asked if they wanted their daughters to bear colored babies. Now, the population of Little Rock is very heavily against integration. Presumably these police officers are reasonably representative. So their task today was not an easy one, emotionally or physically. It's reported that one of them tore off his badge and joined the crowd which took up a collection for him. The crowd by this time numbered several hundred. Not all rough-necks now; not all favoring violence. But all opposed to integration at Central High School on this date. It was hard to separate hate in these faces and voices from other strong emotions, fear, shock, hysteria. There were many white mothers crying, wailing that their children were in that school with negroes. Somehow despite the newspapers and despite the radio and television and (indistinct) Faubus's speeches, they had never believed it would really happen. By that time white students were beginning to stream out of the building. By noon it's estimated 500 or more had left, more than a quarter of the student body. Several of them told us they would not go back again

while the colored pupils were there. Some of them told of violence inside the building. There were even rumors of stabbings and acid attacks. But these rumors have not been confirmed and newsmen were barred from the building all day. Meanwhile, older whites had become involved in scuffles with police along both sides of the building. A few of them were taken away by the police. And then shortly afternoon, the police loudspeaker began announcing that the colored group had been removed from the school. Nobody had seen them leave and the angry crowd did not believe this announcement. "Who said so?" they cried, "the N.A.A.C.P.?" Well, finally several prominent segregationists said so at the request of police. And so did the Little Rock chief of detectives. He said the negroes had been taken away in two police cars. Then the crowd slowly and reluctantly dispersed. Many of them pledging to return tomorrow. At this moment, the police radio is dispatching officers to fights in many parts of the city. Cars with more than six people in them are being stopped and shaken down because of reports of white and negro groups driving around with guns. Whatever the course of events in Washington and Newport, it looks like only the beginning here in Little Rock, a very ugly beginning, perhaps with worse to come. Meanwhile, Mrs. Lucy Bates, the Arkansas chairman of the National Association for the Advancement of Colored People, said that the negro students will not return to Central High School until they have assurances from President Eisenhower that they will be protected from the mob. Now, back to Edward R. Murrow in N. Y.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, SEPTEMBER 23, 1957
7:45 - 8:00 PM EST

This is the news:

Violence broke out today when eight Negro students entered the central high school in Little Rock. Meanwhile, Mrs. Lucy Bates, the Arkansas chairman of the National Association for the Advancement of Colored People, said that the negro students will not return to Central High School until they have assurances from President Eisenhower that they will be protected from the mob. Now, back to Edward R. Murrow in New York

That was my colleague, Paul Niven, reporting from Little Rock. Here in New York, the executive secretary of the National Association for the Advancement of Colored People...Roy Wilkins...has issued a statement, charging that Governor Faubus "encouraged" the violence. "This shameful spectacle," Wilkins said, "stems from the governor's repeated insistence, in public statements and in radio and television pronouncements, that violence was inevitable." He said Faubus "disrupted" the groundwork for peaceful integration laid down by the Little Rock board of education."

At the southern governors conference...which he is attending...Governor Faubus told reporters: "What happened today demonstrated that my original estimate of the situation was correct. I am sure," he said, "that the situation would have been as bad...if not worse...on the first day or school opening." Faubus said he had asked Mayor Mann of Little Rock to provide police protection at the homes of the Negro students who were forced to leave the school. He said President Eisenhower cannot use federal troops in the Little Rock integration crisis unless he (Faubus) requests it.

A Negro member of Congress...Representative Adam Clayton Powell...said tonight that President Eisenhower should call a special session of Congress to prevent what he called the "reign of terror" at Little Rock from spreading to other areas.

President Eisenhower conducted considerable official business today, during his brief four-hour stay in Washington. He attended the regular National Security meeting at the White House, and said the United States now has "the most powerful military establishment in its peacetime history." The President made the statement on the occasion of the 10th anniversary of the passage of the National Security Act...the law under which the Defense Department and the Security Council were created.

Mr. Eisenhower conferred at the White House for half an hour with Crown

Prince Faisal of Saudi Arabia. Secretary of State Dulles sat in on the meeting, which News Secretary Hagerty said involved "a general discussion of mutual problems." Prince F isal is both prime minister and foreign minister of Saudi Arabia. He told reporters his country is "concerned" over recent cevelopments in Syria - not in the sense of being "worried" but "interested". "Our concern" he said, "is based on the fact that we want to see Syria free, independent and prosperous." He said there is no danger of one Arab country endangering the security of another Arab country." Tomorrow, Prince Faisal will meet again with Secretary Dulles.

Mr. Eisenhower spoke at a luncheon meeting of his Conference on Small Business"...underscoring the importance of the role of small business in the American economy. He also addressed the annual meeting of the World Bank and related agencies. Mr. Eisenhower warned that the "world-wide phenomenon" of inflation must be curbed, if depression is to be avoided. Policies must be strengthened, he said, which foster healthy economic growth. He deplored the decisions of governments to branch out into fields where private industry, he said, is willing and able to do the job.

Today...on the New York stock exchange...heavy selling sent prices down to their lowest average level in nearly two years. All major groups were hit, with losses ranging from one to five dollars a share. "Paper losses" totaled 4-billion dollars.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Carl Sandburg once said, "The one word more detestable than any other in the American language is the word 'exclusive'. Exclusive. When you're exclusive," Sandburg said, "you shut out a more or less large range of humanity from your mind and heart...and from your understanding them."

Goodnight and good luck!

Edward R. Murrow Tues., Sept. 24, 1957

This is the news:

President Eisenhower today ordered the Arkansas National Guard into federal service, to deal with the school integration crisis in Little Rock. For a report on the President's executive order, we switch to White House Correspondent Charles von Fremd in Washington.

(Von Fremd to run approx 1:30
Returns on cue "--to Ed Murrow
in N.Y."

Next, for a direct report on the situation in Little Rock, we switch to Paul Niven.

(Niven tape runs
Ends on cue "--to Ed Murrow
in N.Y."

That was my colleague, Paul Niven, reporting from Little Rock.

Democratic Senator McClellan of Arkansas said he "believes" President Eisenhower's use of force is "without authority of law." He said the action "may precipitate more trouble than it will prevent." Democratic Senator Morse of Oregon said, "Every American citizen who believes in the supremacy of the American Constitution under a system of government by law should support the President." Adlai Stevenson expressed the view that Mr. Eisenhower, at this point, had no choice. #

The government says the cost of living reached a new all-time high in August for the 12th consecutive month. The August increase was two-tenths of one percent.

The New York stock market rallied today after yesterday's sharp decline.

The United States, Britain and France today accused Russia of insincerity in calling for an easing of tensions in the Middle East. They made the charge in separate notes...answering Russia's proposal for a Big Power declaration, outlawing use of force in the area. The American note said that Soviet arms shipments to Egypt and Syria "set in motion a chain of events leading to the present dangerous situation."

The British foreign secretary...Selwyn Lloyd...told the United Nations General Assembly today that Britain views the situation in Syria "with grave concern." He said Russian arms shipments to that country have been on such a scale as to suggest that their purpose may be "to pre-stock forward bases for the Soviet Union itself." ~~Britain, he said, will work for an arms agreement. But it must be something "practical and definite."~~ The General Assembly today voted to shelve the question of seating Red China for another year.

Britain will draw on its 500-million-dollar credit with the Export-Import Bank as a further means of bolstering the pound. The chancellor of the exchequer, Peter Thorneycroft, made this known today at the annual meeting of the International Monetary Fund in Washington.

The Tunisian government announced formally today that it has accepted a free offer of arms from Egypt.

Here in New York, the executive council of the AFL-CIO has found the United Textile Workers of America to be under corrupt influence and has given the union 30 days in which to clean house.

The Atomic Energy Commission says that Russia has conducted another atomic test... exploding a device [redacted] with a force equivalent to a million tons of T.N.T.

Edward R. Murrow: September 24, 1957. 7.45 p.m.

10 out

A number of alternatives were available to the President to fulfil the implication of yesterday's proclamation. He could call out federal troops. He could authorize the United States Marshal to draft local deputies, to enforce the order of the Federal Court. He could federalize the Arkansas ~~militia~~ National Guard.

When ~~If~~ he called out Federal troops, he resorted to an extremity which he himself said, in his news conference of July 17, he could not imagine he could ever be induced to do. However, the other alternatives could hardly have seemed much more inviting. They both would require local citizens to enforce against local citizens a federal ruling which many of them do not favor. The question is not as to the reliability of the militia or locally recruited deputy marshals. It is whether forcing local citizens to become policemen for the Federal court would not stir up as deep feelings as the use of troops from the outside. [~~But the choice fell on federalizing the National Guard, which at any rate honored the President's preference not to use Federal troops; although the order authorizes the Secretary of Defense to use regular troops if necessary.~~]

As to the President's legal powers, he does have the power to federalize

the militia or call in federal troops without a request from the governor of a state. That limitation was originally in the law that was passed in the presidency of George Washington. But the limitation was taken out under President Lincoln. And it was re-affirmed as the law of the land when the last Congress adopted the revised code.

Last July Congress did vote to repeal a statute of the Reconstruction period which made it a duty of the President to enforce the Fourteenth Amendment with Federal forces. The repeal was part of the campaign to make the Civil Rights Bill acceptable to the South. But the powers of the President as set forth under Washington and broadened under Lincoln, were not changed.

In the language of the present code, whenever the President considers that unlawful obstructions, combinations, or assemblages, or rebellion against the authority of the United States, makes it impracticable to enforce the laws of the United States by ordinary judicial proceedings, he may call into the Federal service the state militia, or use such of the armed forces as he considers necessary to enforce those laws and suppress the rebellion.

The Supreme Court, in 1890, dealt with the rights of the Federal Government in the clearest language. "We hold it to be an incontrovertible

principle" said Justice Miller, "that the government of the United States may, by means of physical force, exercised through its official agents, execute on every foot of American soil the powers and functions that belong to it. This necessarily involves the power to command obedience to laws, and hence the power to keep the peace to that extent."

It is not unfitting to point out that in this crisis the timing has been unfortunate. Take for example last night's speech of Governor Collins of Florida, at the conference of southern governors. He pleaded for courageous law enforcement. "If the South" he said, "wraps itself in a Confederate blanket and consumes itself in racial furor, it would destroy its political and economic future." All but two of the Southern governors supported him with unmistakable enthusiasm. If this speech had been delivered a few days sooner, it would have had a tranquilizing effect throughout the South. But it reached the public after the water was over the dam.

One can wonder, [redacted], about the timing of the President's proclamation. This had not been foreshadowed in any way. The President was accepted by the country as a man of patience, and his patience was believed to be unshakable as a rock. The President had even openly doubted the effectiveness of law to achieve morality. We do not know the inside story of the

negotiations with Governor Faubus and his intermediary, Congressman Brooks Hayes. The President was superlatively courteous to the governor. He tried to make it easy for him to back down. He was even criticized for it. We do not know how Governor Faubus represented himself or the course he expected to follow. It might be well if the whole story could now be told. Maybe it will be when the Pres. speaks tonite, at 9:00 E.D.T. ~~For the public would welcome an explanation of the President's decision yesterday.~~ However right the public thinks he was in what he did, he took everyone by surprise. It is possible to guess that if the President had given some inkling that he ever would take such drastic action, the necessity to take it might have been lessened. He did not signal his impatience in advance. Presumably he expected the events to develop peacefully. Presumably his talk with Governor Faubus led to that belief. But after all we don't know what they said to each other.

George Bryan

Word for Today

Abraham Lincoln said, "There is no grievance that is a fit object of redress by mob law. In any case that arises, one of two positions is necessarily true. That is, the thing is right within itself, and therefore deserves the protection of all law and all good citizens. Or it is wrong, and therefore proper to be prohibited by legal enactments."

Goodnight and good luck!

ANNOUNCER: Ford Commercial

MURROW: We switch to White House Correspondent, Charles Von Fremd.

VON FREMD: Last night President Eisenhower threatened to use force if extremists in Little Rock continue to obstruct integration of Central High. This afternoon, the chief executive dropped the other shoe. Mr. Eisenhower instructed Secretary of Defense Wilson to federalize the Arkansas National Guard. The President also directed Wilson to use any regular army units he thought necessary to enforce integration at Central High. Presidential news secretary Hagerty told us in Newport that Mr. Eisenhower took this move because the mob returned to Central High this morning thrawting the President's threat of last night. This move was painful to Mr. Eisenhower who in the past has attempted to reach solutions to controversial issues throught mediation and conciliation. We arrived here in Washington this afternoon on the second anniversary at-the-second of his (indistinct) heart attack when he arrived to prepare for tonight's address to the nation, Mr. Eisenhower looked drawn and anxious. Secretary Wilson moved quickly to carry out the President's orders. He had officially federalized the Arkansas guards just 2 hours and 3 minutes after the President signed the Executive order. Then Wilson delegated to the Secretary of Army Brucker all his powers over the assignment of guardsmen and regular troops to duty in Little Rock. Brucker in turn confirmed that regular army troops would be dispatched to this integration crisis. Five hundred paratroopers, members of the famed 101st Airborne division flew from Fort Campbell, Kentucky to the Arkansas Capital. After three weeks of uncertainty the federal government in the space of 24 hours had moved quickly and decisively to bring integration to

Little Rock. Now back to Ed Murrow in New York.

MURROW: Next for a direct report of the situation on Little Rock we switch to Paul Niven:

NIVEN: The sight of the famous shoulder pad of the 101st Airborne division is just one more in the series of events that has rocked the city of 150,000 in the Past 24 hours. When I last went to Central high school a couple of hours ago the angry mob of yesterday and the smaller crowd of this morning had dwindled to small handful of idlers sitting along the curb stone of the street no longer barricaded. Tonight the crowd will no doubt return if only to see the troops. They have just been placed under the command of General Edwin Walker a regular army officer commander of the Arkansas military district. The head of the Arkansas NAACP expressed satisfaction this afternoon at President Eisenhower's action, but said Mrs. L. C. Bates the nine negro students ought to be sure of protection before they make their third effort to enter the school. Governor Faubus returning from his southern Governors' conference in Georgia arrived to his home two hours after the President's announcement. He criticised the chief executive's move but did not indicate any open defiance. I feel like Mac Arthur he said, I have been relieved. The people of Little Rock, whatever their feelings on integration, and most of them were still strongly against it, are too stunned to be very articulate tonight. Two days ago few of them would have predicted the ugly violence which occurred here yesterday morning. Yesterday, few whould have foreseen the President's announcement federalizing the national guard. And even then, few of them imagined that battle-trained veterans of the paratroop division would be on Little Rock streets tonight. Many of them critisised the President and some southern congressmen have done already for taking the step which he said a few weeks ago he would not imagine taking. Others would say that he

gave no opportunity for his proclamation of yesterday to be obeyed. However, its reasonable to assume that only the absence of negro students this morning prevented further demonstrations at least at Central high school. Now back to Edward R. Murrow in New York.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, SEPTEMBER 24, 1957
7:45 - 8:00 PM EST

This is the news:

President Eisenhower today ordered the Arkansas National Guard into federal service, to deal with the school integration crisis in Little Rock. For a report on the President's executive order, we switch to White House Correspondent Charles von Fremd in Washington.

VON FREMD: Last night President Eisenhower threatened to use force if extremists in Little Rock continue to obstruct integration of Central High. This afternoon, the chief executive drolped the other show. Mr. Eisenhower instructed Secretary of Defense Wilson to federalize the Arkansas National Guard. The President also directed Wilson to use any regular army units he thought necessary to enforce integration at Central High. Presidential news secretary Hagerty told us in Newport that Mr. Eisenhower took this move because the mob returned to Central High this morning thrwarting the President's threat of last night. This move was painful to Mr. Eisenhower who in the past has attempted to reach solutions to controversial issues through mediation and conciliation. We arrived here in Washington this afternoon on the second anniversary of his (indistinct) heart attack when he arrived to prepare for tonight's address to the nation, Mr. Eisenhower looked drawn and anxious. Secretary Wilson moved quickly to carry out the President's orders. He had officially federalized the Arkansas guards just 2 hours and 3 minutes after the President signed the Executive order. Then Wilson delegated to the Secretary of Army Brucker all his powers over the assignment of guardsmen and regular troops to duty in Little Rock. Brucker in turn confirmed that regular army troops would be dispatched to this integration crisis. Five hundred paratroopers, members of the famed 101st Airborne division flew from Fort Campbell, Kentucky to the Arkansas Capital. After three weeks of

uncerrainty the federal government in the space of 24 hours had moved quickly and decisively to bring integration to Little Rock. Now back to Ed Murrow in New York.

MURROW: Next for a direct report of the situation on Little Rock we switch to Paul Niven:

NIVEN: The sight of the famous shoulder pad of the 101st Airborne division is just one more in the series of events that has rocked the city of 150,000 in the past 24 hours. When I last went to Central high school a couple of hours ago the angry mob of yesterday and the smaller crowd of this morning had dwindled to small handful of idlers sitting along the curb stone of the street no longer barricaded. Tonight the crowd will no doubt return if only to see the troops. They have just been placed under the command of General Edwin Walker a regular army officer commander of the Arkansas military district. The head of the Arkansas NAACP expressed satisfaction this afternoon at President Eisenhower's action, but,said Mrs. L.C. Bates, the nine negro students ought to be sure of protection before they make their third effort to enter the school. Governor Faubus returning from his southern Governors' Conference in Georgia arrived to his home two hours after the President's announcement. He criticized the chief executive's move but did not indicate any open defiance. I feel like MacArthur, he said, I have been relieved. The people of Little Rock, whatever their feelings on integration, and most of them were still strongly against it, are too stunned to be very articulate tonight. Two days ago few of them would have predicted the ugly violence which occured here yesterday morning. Yesterday, few would have foreseen the President's announcement federalizing the national guard. And even then, few of them imagined that battle-trained veterans of the paratroop division would be on Little Rock streets tonight. Many of them criticized the President and some southern congressmen have done already for taking the step which he said a few weeks ago he would not imagine taking. Others would

say that he gave no opportunity for his proclamation of yesterday to be obeyed. However, its reasonable to assume that only the absence of negro students this morning prevented further demonstrations at least at Central high school. Now back to Edward R. Murrow in New York.

MURROW: That was my colleague, Paul Niven, reporting from Little Rock. Democratic Senator McClellan of Arkansas said he "believes" President Eisenhower's use of force is "without authority of law." He said the action "may precipitate more trouble than it will prevent." Democratic Senator Morse of Oregon said, "Every American citizen who believes in the supremacy of the American Constitution under a system of government by law should support the President." Adlai Stevenson expressed the view that Mr. Eisenhower, at this point, had no choice.

The government says the cost of living reached a new all-time high in August for the 12th consecutive month. The August increase was two-tenths of one percent.

The New York stock market rallied today after yesterday's sharp decline.

The United States, Britain and France today accused Russia of insincerity in calling for an easing of tensions in the Middle East. They made the charge in separate notes...answering Russia's proposal for a Big Power declaration, outlawing use of force in the area. The American note said that Soviet arms shipments to Egypt and Syria "set in motion a chain of events leading to the present dangerous situation." The British Foreign Secretary...Selwyn Lloyd... told the United Nations General Assembly today that Britain views the situation in Syria "with grave concern." He said Russian arms shipments to that country have been on such a scale as to suggest that their purpose may be "to pre-stock forward bases for the Soviet Union itself. The General Assembly today voted to shelve the question of seating Red China for another year.

Britain will draw on its 500-million dollar credit with the Export-Import Bank as a further means of bolstering the pound. The chancellor of the exchequer, Peter Thorneycroft, made this known today at the annual meeting of the

International Monetary Fund in Washington.

The Tunisian government announced formally today that it has accepted a free offer of arms from Egypt.

Here in New York, the executive council of the AFL-CIO has found the United Textile Workers of America to be under corrupt influence and has given the union 30 days in which to clean house.

The Atomic Energy Commission says that Russia has conducted another atomic test...exploding a device with a force equivalent to a million tons of T.N.T.

A number of alternatives were available to the President to fulfill the implication of yesterday's proclamation. He could call out federal troops. He could authorize the United States Marshal to draft local deputies to enforce the order of the Federal Court. He could federalize the Arkansas National Guard.

When he called out Federal troops, he resorted to an extremity which he himself said, in his news conference of July 17, he could not imagine he could ever be induced to do. However, the other alternatives could hardly have seemed much more inviting. They both would require local citizens to enforce against local citizens a federal ruling which many of them do not favor. The question is not as to the reliability of the militia or locally recruited deputy marshals. It is whether forcing local citizens to become policemen for the Federal court would not stir up as deep feelings as the use of troops from the outside.

As to the President's legal powers, he does have the power to federalize the militia or call in federal troops without a request from the governor of a state. That limitation was originally in the law that was passed in the presidency of George Washington. But the limitation was taken out under President Lincoln. And it was re-affirmed as the law of the land when the last Congress adopted the revised code.

Last July Congress did vote to repeal a statute of the Reconstruction period which made it a duty of the President to enforce the Fourteenth Amendment with Federal forces. The repeal was part of the campaign to make the Civil Rights Bill acceptable to the South. But the powers of the President as set forth under Wash-

ington and broadened under Lincoln, were not changed.

In the language of the present code, whenever the President considers that unlawful obstructions, combinations, or assemblages, or rebellion against the authority of the United States, makes it impracticable to enforce the laws of the United States by ordinary judicial proceedings, he may call into the Federal service the state militia, or use such of the armed forces as he considers necessary to enforce those laws and suppress the rebellion.

The Supreme Court, in 1890, dealt with the rights of the Federal Government in the clearest language. "We hold it to be an incontrovertible principle" said Justice Miller, "that the government of the United States may, by means of physical force, excercised through its official agents, execute on every foot of American soil the powers and functions that belong to it. This necessarily involves the power to command obedience to laws, and hence the power to keep the peace to that extent."

One can wonder, about the timing of the President's proclamation. This had not been foreshadowed in any way. The President was accepted by the country as a man of patience, and his patience was believed to be unshakable as a rock. The President has even openly doubted the effectiveness of law to achieve morality. We do not know the inside story of the negotiations with Governor Faubus and his intermediary, Congressman Brooks Hayes. The President was superlatively courteous to the governor. He tried to make it easy for him to back down. He was even criticized for it. We do not know how Governor Faubus represented himself or the course he expected to follow. It might be well if the whole story could now be told. (Maybe it will be when the President speaks tonight at 9:00 E.D.T.)

This is Ed Murrow. I'll be back in a moment with the word for today, but first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

Abraham Lincoln said, "There is no grievance that is a fit object of redress by mob law. In any case that arises, one of two positions is necessarily true. That is, the thing is right within itself, and therefore, deserves the protection of all law and all good citizens. Or it is wrong, and therefore proper to be prohibited by legal enactments."

Goodnight and good luck!

Edward R. Murrow Wed., Sept. 25, 1957

1:30 p.

This is the news:

Nine Negro children attended the Little Rock high school today, under the protection of United States troops. For a direct report, we switch to Little Rock and Howard K. Smith.

(Smith tape runs: 4:50
Returns on cue: "to Ed Murrow in N.Y."

That was my colleague, Howard K. Smith, reporting from Little Rock.

At Sea Island, Georgia, the southern governors conference today adopted a resolution setting up a five-man committee to intervene in the Little Rock dispute. President Eisenhower says he will meet with it early next week. The committee is headed by Governor Hodges of North Carolina. And it was formed with the announced purpose of conferring with the President and Governor Faubus...either separately or jointly... to secure the withdrawal of federal troops at the earliest possible time. The resolution was approved by the southern governors by a vote of 11 to 1. Republican Governor Underwood of West Virginia objected on grounds that the governors conference was being made the "tool" of Governor Faubus. He said, "I am tired of participation in a conference which increasingly becomes a grandstand show for one governor." The other two Republican governors at the conference...McKeldin of Maryland and Boggs of Delaware...voted for the resolution. The conference elected Governor Collins of Florida as its leader for the coming year, although the nominating committee had favored Governor Griffin of Georgia. Collins is regarded as a moderate on the question of integration.

The Voice of America is reporting the stern measures taken to preserve law and order in Little Rock in 43 languages. A Voice of America spokesman says, "We are trying to keep the Little Rock story in balance by calling attention to actions taken by the Federal Government and the courts. We are pointing out how integration is working elsewhere in Arkansas and in other parts of the United States." The full text of President Eisenhower's radio and television address is also being distributed abroad, to help counteract reports in the foreign press. ~~Communist newspapers continue~~ to make propaganda hay. A Moscow paper said ~~today that Little Rock~~ shows the "true face of democracy" ~~in the United States.~~

The Air Force test-fired another missile today, off the Florida coast. Unofficial pbservers say that the test involved the Atlas, an intercontinental ballistic missile, and that it exploded at a height of about 5-thousand feet. It could not be learned immediately whether the device was destroyed intentionally, or blew up. The Air Force would say only that a missile had been fired. The Atlas was first tested last June, without success.

The Australian minister of external affairs... R.G. Casey... told the United Nations General Assembly today that international distrust "presumably" is [redacted] the basis for the disarmament problem. [redacted] But, he said, there may be another "more awful" reason... Russia may intend to overwhelm the West by "sudden and colossal violence." "Pray God," he said, "that this is an unjustified thought." On the subject of the Middle East, Casey challenged Russia to explain [redacted] its "vicious broadcast attacks" on Jordan, Lebanon, Iran, and Iraq.

Russia today announced extension of its current Five-Year Plan beyond 1960...to 1965. According to a new official decree, [redacted] the plan is being revised...and expanded... "to catch up, and surpass, the most advanced capitalist country (meaning the United States) in the per capita production of goods in the quickest possible time." The decree says the expansion is made possible by newly discovered sources of [redacted] power and raw materials. In effect, it is a new economic program...replacing the less ambitious plan adopted only last year.

STET

The French National Assembly today began a four-day debate on Algeria. Under discussion is a reform bill giving the Algerians limited home rule. Prime Minister Bourges-Maunoury is expected to demand a vote of confidence on the issue not later than Saturday.

Teamsters Vice President James Hoffa was indicted by a federal grand jury today on five counts of perjury. The jury charges that Hoffa lied to it... in testifying about the alleged wire-tapping of his union headquarters in Detroit. Hoffa and two other persons were indicted last May on charges of conspiring to tap teamster phones. If convicted on today's indictment, Hoffa could be sentenced to five years in prison and fined 2-thousand dollars on each of the five counts.

[redacted]

The Senate Rackets Committee today accused Hoffa of using more than 80-thousand dollars of union money to defend teamster officials, charged with crimes ranging from accepting pay-offs from employers to dynamiting the property of other union members.

Here in New York today, the AFL-CIO executive council ordered the international teamsters union, and the bakery workers, to eliminate the "corrupt influences" in their organizations within 30 days. The executive council accused James Hoffa, and another teamsters vice president, Frank Brewster, of mishandling union funds.

George Bryan

Secretary of Commerce Weeks today told United Auto Workers President Walter Reuther that "spiraling wages and hence costs and prices" threaten the stability of the dollar. Weeks said business leaders are the "best judge" when it comes to setting prices for their products.

The complex issues raised by the Supreme Court decision on school integration is not due to disappear overnight. The great Southern editor, Ralph McGill, once said, "A moral issue---more especially a great one---cannot be run through a UNIVAC machine for a formula or answer. Nor can it be defeated."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R MURROW WITH THE NEWS (NON-NEW YORK SPOTS ONLY)

Wednesday, September 25, 1957
7:45 - 8:00 PM

MURROW: Nine negro children attended the Little Rock high school today under the protection of United States troops. For a direct report we switch to Little Rock and Howard K. Smith.

SMITH: One of America's most famous fighting divisions took on an unpleasant mission here and carried it out with a grim single minded efficiency that was breath taking to those who watched. The job was to integrate nine negro students into the hitherto all-white Central high school here in Little Rock, and to permit no disturbance to the peace in connection with it. After dusk last night 500 men of the 101st Airborne division which won its fame at Bastonge Belgium in the Battle of the Bulge in the last year of World War II, drew a (indistinct) around the school building. This morning, when white ~~school~~ students had entered the (indistinct) and gone inside, General Edwin A. Walker of the 101st, followed them in and made them a speech. "You have nothing to fear from my soldiers, he said, and no one will interfere with your coming and going or your peaceful pursuit of your studies. However, I would be less than honest, he said, if I failed to tell you that I intend to use all the means necessary to prevent any interference with the execution of your school board's plan for integration". A boy who came from within inside told me that silence of the students was such that you could have heard a pin drop during the speech. When it was over the boy said there was a strong outburst of applause from the students. Then the nine negro students were brought to the (indistinct) school building in staff cars of the 101st division. And a platoon of infantrymen marched them inside the building. There was some expectation that many of the white children might walk out as the colored students entered. Two did, then two more, than one on

more, than two more, but altogether it was probably not more than a dozen that left. Meanwhile, for blocks around the school house jeep patrols moved through the streets. Wherever there was a cluster of by-standers, a sargeant ordered them to dispurse. If they did not go he gave them a second warning by loud-speaker. If they did not go then, a platoon, bayonets drawn cleared the streets. At one place a man about 55 years of age grabbed at a soldiers rifle as the soldier advanced. Five or six soldiers closed in on the man and he was taken away with his head bleeding from the swipe of a rifle butt. Later, another man who resisted was cut in the arm by a bayonet. A few others were marched off and handed to the local police. Several other incidents like this took place during the course of the day. But that was all. Nothing like the mobs of 48 hours ago were allowed to begin to germinate in anybody's intentions. I heard one local resident tell a soldier "People around here are going to get mad at you fellows". The soldier said, "Don't get too mad, you might get hurt". That was the end of the conversation. In mid-morning all the students came out in what was called a fire-drill. There were rumors that the real reason was that there had been a telephone threat to blow up the building. The negro students during the drill stood outside with the white students. We asked a negro girl how it had been inside, and she said "Just fine". We asked her if she had found new friends on her first day at the school, and she said "Yes". At 3 o'clock, this afternoon school was out, and the colored students were taken home in staff cars. And that was all there was to Central high's first day of integration. The thought on everybody's mind here is, you can lead the citizens to integration by bayonet but can you make it stick so that the troops can go away. Many here say that you cannot. At the invasion of Little Rock by outside troops will arouse resentments that will not die. I personally would

doubt that, I have heard many complaints; some of them bitter but some of them good-humored. Like the one of the taxi driver who told me "After we get licked we're going to apply for Marshall aid"; "that's what other defeated enemies of the United States always get". However, it's hard to reach any kind of serious judgment. If there should be inter-racial violence outside the school area such as many fear may happen in the dark of tonight, then marshal law might have to be extended over the city and possibly then wounds would be open and it would take a long time for them to heal. At this time, at the first day of integration, in Little Rock it is hard to prophesy; we'll just have to wait and see. It is only safe to say that just about everybody hopes that one officer of the 101st division was wrong. He was asked how long he would be here. He answered "indefinitely".; we stayed in Germany 15 years. This is Howard K. Smith reporting from Little Rock, Arkansas. I return you now to Ed Murrow in New York.

EDWARD R. MURROW WITH THE NEWS

At this time, at the first day of integration, in Little Rock it is hard to prophesy; we'll just have to wait and see. It is only safe to say that just about everybody hopes that one officer of the

101st division was wrong. He was asked how long he would be here. He answered "indefinitely"; we stayed in Germany 15 years. This is Howard K. Smith reporting from Little Rock, Arkansas. I return you now to Ed Murrow in New York.

(ED MURROW) That was my colleague, Howard K. Smith, reporting from Little Rock. At Sea Island, Georgia, the southern governors conference today adopted a resolution setting up a five-man committee to intervene in the Little Rock dispute. President Eisenhower says he will meet with it early next week. The committee is headed by Governor Hodges of North Carolina. And it was formed with the announced purpose of conferring with the President and Governor Faubus....either separately or jointly...to secure the withdrawal of federal troops at the earliest possible time. The resolution was approved by the southern governors by a vote of 11 to 1. Republican Governor Underwood of West Virginia objected on grounds that the governors conference was being made the "tool" of Governor Faubus. He said, "I am tired of participation in a conference which increasingly becomes a grandstand show for one governor." The other two Republican governors at the conference...Mc Keldin of Maryland and Boggs of Delaware...voted for the resolution. The conference elected Governor Collins of Florida as its leader for the coming year, although the nominating committee had favored Governor Griffin of Georgia. Collins is regarded as a moderate on the question of integration.

The Voice of America is reporting the stern measures taken to preserve law and order in Little Rock in 43 languages. A Voice of America spokesman says, "We are trying to keep the Little Rock story in balance by calling attention to actions taken by the Federal Government and the courts. We are pointing out how integration is working elsewhere in Arkansas and in other parts of the United States." The full text of President Eisenhower's radio and television address is also being distributed abroad, to help counteract reports in the foreign press.

The Air Force test-fired another missile today, off the Florida coast. Unofficial observers say that the test involved the Atlas, an intercontinental ballistic missile, and that it exploded at a height of about 5-thousand feet. It could not be

learned immediately whether the device was destroyed intentionally, or blew up. The Air Foree would say only that a missile had been fired. The Atlas was first tested last June, without success.

The Australian minister of external affairs...R. G. Casey...told the United Nations General Assembly today that international distrust "presumably" is the basis for the disarmament problem. But, he said, there may be another "more awful" reason...Russia may intend to overwhelm the West by "sudden and colossal violence." "Pray God," he said, "that this is an unjustified thought." On the subject of the Middle East, Casey challenged Russia to explain its "vicious broadcast attacks" on Jordan, Lebanon, Iran, and Iraq.

Russia today announced extension ot its current Five-Year Plan beyond 1960... to 1965. According to a new official decree, the plan is being revised...and expanded.."to catch up, and surpass, the most advanced capitalist country (meaning the United States) in the per capita production of goods in the quickest possible time." The decree says the expansion is made possibly by newly discovered sources of power and raw materials. In effect, it is a new economic program...replacing the less ambitious plan adopted only last year.

The Krench National Assembly today began a four-day debate on Algeria. Under discussion is a reform bill giving the Algerians limited home rule. Frime Minister Bourges-Manoury is expected to demand a vote of confidence on the issue not later than Saturday.

Teamsters Vice President James Hoffa was indicted by a federal grand jury today on five counts of perjury. The jury charges that Hoffa lied to it...in testifying about the alleged wire-tapping of his union headquarters in Detroit. Hoffa and two other persons were indicted last May on charges of conspiring to tap teamster phones. If convicted on today's indictment, Hoffa could be sentenced to five years in prison and fined 2-thousand dollars on each of the five counts.

The Senate Rackets Committee today accused Hoffa of using more than 80-thousand dollars of union money to defend teamster officials, charged with crimes ranging from accepting pay-offs from employers to dynamiting the property of other

union members.

Here in New York today, the AFL-CIO executive council ordered the international teamsters union and the bakery workers to eliminate the "corrupt influences" in their organizations within 30 days. The executive council accused James Hoffa and another teamsters Vice President, Frank Brewster, of mishandling union funds.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Secretary of Commerce Weeks today told United Auto Workers President Walter Reuther that "spiraling wages and hence costs and prices" threaten the stability of the dollar. Weeks said business leaders are the "best judge" when it comes to setting prices for their products.

The complex issues raised by the Supreme Court decision on school integration is not due to disappear overnight. The great Southern editor, Ralph McGill, once said, "A moral issue---more especially a great one---cannot be run through a UNIVAC machine for a formula or answer. Nor can it be defeated."

Goodnight and good luck!

Edward R. Murrow Thurs., Sept. 26, 1957

me done

This is the news:

Negro students attended the central high school in Little Rock for the second day. / They were protected...inside and outside of the building... by troops of the 101st Airborne Division. / And there was no incident. The nine Negroes...six girls and three boys...came out of the school smiling at the end of the day. / White students reported the atmosphere inside the building today less tense. / School Superintendent Virgil Blossom placed the attendence ~~today~~ at 1-thousand, 350...showing that about 100 more white students showed up today than yesterday.

It was reported this afternoon that "selected" Army units in the South had been placed on special alert, as a precaution against possible new outbreaks of violence. The alert was said to apply "throughout the South."

→

Tonight, Secretary of the Army Brucker confirmed that some such order had been issued. He said, "I learned about this order today after its issuance in a routine fashion. I have ordered that it be revoked immediately."

Governor Faubus of Arkansas tonight will make a nationwide radio and television speech. The text has not yet been released. But sources close to the governor say he will "continue his fight to uphold the rights of the state."

President Eisenhower will meet a committee of five southern governors on Tuesday "to discuss problems of school integration." The meeting will be held in Washington, and News Secretary Hagerty says there is "a chance" the President will end his vacation at that time. The Southern Governors Conference requested the meeting, for the purpose of seeking the withdrawal of federal troops from Little Rock "at the earliest possible moment." Mr. Eisenhower indicated...in a telegram to Governor Collins of Florida... that he would like to broaden the scope of the discussion. (Collins is chairman of the governors conference.) He replied, by telegram, that the five governors...as a committee...are authorized only to seek the withdrawal of federal troops. But as individuals, he said, "each of us will be free to discuss any phase of the integration problem." In addition to Collins, the committee is composed of Governors McKeldin of Maryland, Clement of Tennessee, Griffin of Georgia and Hodges of North Carolina.

There were no developments today regarding a possible meeting between the committee and Governor Faubus. Yesterday, the White House ruled out a suggestion that Faubus also attend the Tuesday conference.

After sending his wire to Governor Collins, President Eisenhower played 18 holes of golf and went for a cruise on the atomic submarine Seawolf.

King Saud, of Saudi Arabia, conferred in Damascus today with the president of Syria and the prime minister of Iraq. It is the first visit the Iraqi premier has made to Syria since his government joined the anti-Communist Baghdad Pact in 1955. / Saud met separately with the Syrian and Iraqi leaders, apparently as part of an effort to restore Arab unity. Iraq as well as Jordan has been alarmed over the Communist arms build-up in Syria and the recent shake-up in the Syrian Army command.

The State Department said today that Secretary Dulles would be "glad" to talk to the foreign minister of Syria, if the foreign minister should ask for an appointment. / The Syrian foreign minister is currently attending the United Nations General Assembly meeting in New York. / He says he is willing to meet Dulles, and that friendly relations are still possible between his country and the United States. No date for such a meeting has been set.

The State Department today confirmed that the United States will help Tunisia fulfill its defense needs. The department spokesman said Tunisia will be supplied with weapons from various western countries and---if necessary---from the United States itself.

The United Nations General Assembly re-elected Secretary General Hammarskjold today for another five-year term. The vote was unanimous.

In Washington, the Air Force has ordered 13 squadrons dropped from the Air National Guard and the Air Force Reserve effective within 90 days. The action...reducing the number of reserve squadrons by ten and guard squadrons by three...involves about 4-thousand officers and men. The Air Force says most of the personnel affected will continue training with other units. No reduction in aircraft is involved.

The Senate Rackets Committee told Teamsters Vice President James Hoffa today that he will not be called to testify until after the teamsters convention next week at Miami Beach. Hoffa is running for president of the teamsters union, and the committee had planned to question him this Saturday about his alleged misuse of union funds. Hoffa's counsel requested that the questioning be postponed. The request was granted.

The principal witness today was Bert Brennan, a friend of Hoffa's who is president of teamsters local 337 in Detroit. Brennan refused to answer questions regarding his financial dealings with Hoffa on grounds of

→

possible self-incrimination. He invoked the Fifth Amendment 74 times.

Today...in the Pacific...a typhoon swept over the island of Okinawa with winds ~~of~~ up to 146 miles an hour. Eleven Okinawans were killed, and damage is estimated in the millions of dollars. Thirty-six American soldiers were hurt, none fatally. Most of them suffered only minor cuts.

Edward R. Murrow: September 26, 1957. 7.45 p.m.

Perhaps the most dramatic achievement of the last Congress was to pass the Civil Rights Bill without tearing the Democratic Party to pieces. The success seemed to assure the Party a golden future, based on Liberal strength in the North and co-operation from a growingly moderate trend in the South. It was the work of many men, but the master craftsman was Senator Lyndon Johnson. His influence on southern senators to accept a Civil Rights Bill, and on Northern senators to write a Bill the southerners could swallow, was outstanding. He won a reputation for persuasiveness with his colleagues not enjoyed by any legislator in recent times, and his exercise of leadership was likened to that of the late Senator Taft. In the eyes of many politicians, Senator Johnson earned the right to lead the Party in the next presidential election.

Today in Arkansas the work of Lyndon Johnson seems to lie in ruins. Even if it is not wrecked, it is seriously damaged. And a dark shadow lies over the [redacted] future of the Democratic Party.

It is, of course, too early to measure the effect of the Arkansas events on the two political parties. The Democrats are sure to be hurt. But the gains of the Republicans will not be automatic. For one thing, the hope of Republicanizing the South has been set back, perhaps indefinitely.

If the South of today were the South of ten, twenty or thirty years ago, a prediction would be easy. The South would snap away from compromise and change, and split with the Northern Liberals. But the South of today is different. Its economic life has changed with the coming of industrialism, and its outlook has broadened.

~~One heard~~ This broadened viewpoint was heard in the address of Governor Collins of Florida at the Southern Governors' Conference. He called for constructiveness, the rule of law, and courage, and was given an overwhelmingly enthusiastic response by his fellow-Governors. This was before the troops were ordered into Arkansas. But that startling fact does not seem to have upset the philosophical balance at Sea Island. Governor Collins' colleagues proceeded to elect him unanimously to be Chairman of the next Conference, and it is not without meaning that of the five Governors who go to the Conference with President Eisenhower, only one, Governor Griffin of Georgia, is an outright segregationist.

Some prophets are already saying that a third Party in the South is sure to come. But it may be just as likely that the Southern Moderates are going to stay moderate and stay in power. No doubt the Civil Rights issue now has become foremost in domestic politics. Northern Democrats probably will

find they must take a strongly liberal stand on Civil Rights to keep the negro vote from swinging to the Republicans. In many districts the negro vote is large enough to decide the outcome.

If Vice President Nixon is the Republican candidate in 1960, he is pretty sure to run as a champion of Civil Rights. For it is hard to imagine him suppressing his Civil Rights record and campaigning as leader of a coalition with Southern conservatives. But that does not necessarily mean that the South, because it can put no trust in a coalition with Northern Republicans, will proceed to split the Democratic Party and make a Republican victory inescapable.

We shall know much more about the prospects after Congress is sitting again. Some Northern Democrats are sure to press for a stronger Civil Rights Bill in the coming session. They will argue that Governor Faubus has demonstrated that the weaker Bill was a mistake. They will do this with an eye on the 1958 election and the need to compete with the Republicans for the negro vote. Then it will be up to Senator Lyndon Johnson to try to duplicate his accomplishment of the last session. This time he may well find it harder to persuade his conservative colleagues and restrain his liberal ones. If that is so, then it is likely that the Arkansas events will help the

Republicans in the Congressional elections. Till now the Republicans appeared to be headed for a hard defeat. But whether the extent of that defeat will only be reduced, or whether it is turned into a victory, is not to be answered at this time.

George Bryan

The school integration issue is bound to affect the future of the Republican and Democratic parties...in a way that is not yet clear. There is even talk of a third party in the South. Thomas Jefferson was of ~~an~~ a very independent mind. "If I could not go to Heaven but with a party," he said, "I would not go there at all."

Goodnight and good luck!

GEORGE BRYAN: COMMERCIAL

MURROW: The school integration issue is bound to affect the future of the Republican and Democratic parties...in a way that is not yet clear. There is even talk of a third party in the South. Thomas Jefferson was of a very independent mind. "If I could not go to Heaven but with a party," he said, "I would not go there at all."

Goodnight and good luck!

Edward R. Murrow Fri., Sept. 27, 1957

This is the news:

A federal judge in Washington has ordered the teamsters union not to elect officers at its national convention next week. The order was issued by Judge F. Dickinson Letts in the form of a temporary injunction. Thirteen rank-and-file teamsters had brought suit...charging that the convention in Miami Beach was being "rigged" to insure the election of James Hoffa as president. They said the union's executive board had "hand picked" 80 percent of the delegates. Counsel for the teamsters union denied the charges, saying they were based on hearsay. Besides ordering the election postponed, Judge Letts barred the union from recognizing the credentials of [redacted] delegates alleged to have been chosen improperly. Union attorneys promptly served notice [redacted] they will appeal the court's

—)

action. Judge Letts ordered the rank-and-file teamsters to post a 50-thousand-dollar bond...covering damages...in case his ruling eventually is reversed. Signing of the formal order against the union was postponed until tomorrow.

Tonight...in Miami...Teamsters President Dave Beck said, "This convention will go on Monday morning at the appointed time. There will be an election, in my opinion."

~~action. Judge Letts ordered the rank-and-file teamsters to post a 50-thousand-dollar bond...covering damages...in case his ruling eventually is reversed. Signing of the formal order against the union was postponed until tomorrow.~~

The Senate Rackets Committee heard more testimony today involving Hoffa. A witness, Robert Scott, testified that...in 1952...Hoffa threatened him with bodily harm, if he resigned as an officer of the Michigan Federation of Labor. He resigned anyway. Scott said that, at another time, he was threatened with death for refusing to help William Hoffa, a brother of James Hoffa, "get into the rackets." He did not attribute this threat to James Hoffa. But only last week, he said, he received anonymous telephone calls, warning him not to testify.

Negro students attended the central high school in Little Rock again today---without incident. The number of troops stationed in front of the school was reduced. And, for the second day, attendance of white students increased. Tomorrow, the Central High School Mothers League will call on Governor Faubus to ask him to close the school. An officer of the league said the appeal will be based on the argument that "federal

dictatorship is not conducive to educational activities" and that the lives of children are being endangered.

F.B.I. Director Hoover today denied Governor Faubus' charge that teen-age girls in Little Rock had been held incommunicado by F.B.I. agents "for hours of questioning." Faubus made the charge last night in his radio and television speech. Hoover said, ""We of course have talked to students." But he called Faubus' accusation of holding students incommunicado "as false as his recent statement that the F.B.I. tapped his telephone."

Secretary of Defense Wilson told reporters today that there is "nothing for anyone to cheer about" in the use of troops at Little Rock, but that...under the circumstances...there was "nothing else to do." He "hopes" the troops will not have to be there long. Wilson said emphatically that he does not expect Regular Army troops to be used elsewhere in the South.

Secretary of the Army Brucker reiterated today that he has revoked an Army order, under which "certain Regular Army units" in the South would have received stepped-up training for riot duty. Brucker would not reveal the text of the order. The matter, he said, is "a closed book." Late today, Democratic Senator Russell of Georgia asked Brucker for a

copy of the canceled order. Russell is chairman of the Senate Armed Services Committee.

President Eisenhower conferred twice today...by telephone...with Attorney General Brownell on the Little Rock situation.

~~In Paris today, the French premier demanded a vote of confidence on his Algerian policy. At issue is a measure that would give Algeria limited home rule. The vote is due on Monday, and indications are the premier will win the vote.~~

The puppet premier of Hungary...Janos Kadar...arrived in Peiping today as head of a parliamentary delegation. Kadar's visit to Red China is described as "unofficial".

The Baghdad Pact anti-subversion committee has ended a four-day meeting in London. The United States is a member of the committee, along with Britain, Turkey, Pakistan, Iran and Iraq...who formally belong to the treaty organization. A communique says the committee "took note of the ever-present danger of subversion (in the Middle East) and approved additions to its continuing program of defensive measures to safeguard the Baghdad Pact countries." The communique does not say what these

"additions" are.

King Saud returned to Saudi Arabia today after conferring in Damascus with leaders of Syria and Iraq. Saud issued a statement endorsing what he called Syria's "independent" policy. "Saudi Arabia," he said, "will be at Syria's side in the event of anti-Syrian aggression."

Turkey told the United Nations General Assembly today that Russia not only is supplying Syria with arms but is conducting "a campaign of propaganda and false rumors" aimed at disrupting Turkish-Syrian relations. Turkey said that in the face of this, it is "duty-bound" to take "such internal measures as are customary" to safeguard its peace and security.

At a news conference at the United Nations today, a Russian spokesman proposed a summit conference on disarmament and the Middle East.

In Haiti, the ruling military junta today declared a state of martial law. Last Sunday, Haiti held a presidential election...which was won by Francois Duvalier. The opposition candidate charges the election was rigged.

More than 60 labor unions ~~called a 24-hour general strike today~~ throughout Argentina, in support of the demand of ~~the communication~~ workers

for higher pay. The strike appears to have been only partially effective. In general, industrial workers backed the strike and white collar workers ignored it.

In Washington, the Public Health Service estimates that Asian flu cases in the United States more than doubled last week. Cases reported so far from state health officers and the armed forces total 222-thousand. The Public Health Service points out that these figures are incomplete.

The United Press reports that three congressional committees are investigating the Post Office Department, to see if it is being run efficiently. The investigations reportedly are being made by the House Appropriations Committee, the House Post Office Committee, and a House government operations subcommittee.

Edward R. Murrow: September 27, 1957. 7.45 p.m.

An outward but not very convincing calm has descended over the Syrian crisis. Secretary Dulles has expressed willingness to meet the Syrian Foreign Minister, who is in this country for the U.N. General Assembly. Most of Syria's Arab neighbors have stepped up to testify that they do not regard Syria's acquisition of Soviet arms to be a menace to them. Syria strongly denies that it is drifting into the Soviet orbit. A mood of amity seems to be reinforced by the visit of the Premier of Iraq, Ali Jawdat, to Damascus. Iraq is a member of the Bagdad Pact, hence a confirmed friend of the West.

But Ali Jawdat is not going back on the Bagdad Pact. He always has represented himself to be a moderate, a believer in Arab solidarity and an opponent of anything that could hurt it. So he does not think this visit brings his loyalty to the Bagdad Pact into question.

But Mr. Dulles's readiness to see the Syrian Foreign Minister also does not mean that all is well again in our relations with Syria. It means, in the first place, that King Saud has told Washington that we are losing more than we gain if we refuse to see the Syrian Minister. Washington took the hint. It was all the more willing to do it because the critical phase of the Syrian episode was over. We had issued our warning, and we had no plans for further open action. The crisis had come to a temporary stop. Now we

have to hope that the warning has been effective, and that it will make the Syrians more careful in their dealings with Moscow. Washington doesn't know that it will. But it does know that Syria's neighbors, no matter what they say in public, are worried by the possibility of the country falling under Moscow's control. They tell us this behind closed doors, even if they say the opposite after leaving the room.

When we issued our warning, we did so with all the fanfare at our command. We shipped airborne arms to Jordan. We even built a grandstand at the airfield where the coming of the arms could be witnessed by Jordan officials and our Embassy staff. We announced that the Eisenhower doctrine would be invoked if Syria's neighbors needed our help.

The warning was made so loud to be sure it was heard in Moscow. It turned out to be too loud to be pleasant in Arab ears. Even Jordan was embarrassed. The Arab states said publicly they would defend Syria against any attack, and they repudiated the suggestion of Washington that the newly acquired arms were a menace to them.

Saudi Arabia joined in this, even though King Saud is at present the busy pacifier in the Middle East, and seems to have been elevated to the position of being our trusted advisor in the area. But he is our advisor

only in matters concerning the Soviet menace. On this subject we find him reliable. We know he would never bring the Arab Federation into the Western camp, but we also know that he would do his utmost to keep any part of it from going into the Soviet camp.

But Soviet policy is only one factor in the peace of the Middle East. Israel is just as important. At present King Saud is trying to hold the Arab federation united, not by its attitude for or against us or the Soviet Union, but by its antagonism to Israel. That is, he is using this antagonism to play the game of keeping Syria in line and the Soviet Union at bay. He has an immediate reason for promoting Arab solidarity just now. Israel and the issue of refugees is due to come up before the General Assembly, and he is determined that the Arab countries should show a united front for this test. No doubt that is how he prevailed on the Iraqi Premier to go to Damascus.

It is clear that King Saud's help to us is not free from very considerable dangers. How long we can use it we cannot know. Nor does he know how long he can use us. But the present calm is only a breathing time. And unless constructive and courageous efforts can solve the basic problems of Arab-Israeli relations, it may be that there can be no solution, either of the growth of Soviet power in this part of the world.

George Burgan

Word for Today

Mistakes have been made in handling the Middle East situation. No one denies this. Goethe said, "If wise men never erred, fools would have to despair." And there is a Chinese proverb which says, "The sages do not consider making no mistakes a blessing. They believe, rather, that the great virtue of man consists in his ability to correct his mistakes."

Goodnight and good luck!

Turkey said that in the face of this, it is "duty-bound" to take "such internal measures as are customary" to safeguard its peace and security.

At a news conference at the United Nations today, a Russian spokesman proposed a summit conference on disarmament and the Middle East.

In Haiti, the ruling military junta today declared a state of martial law. Last Sunday, Haiti held a presidential election...which was won by Francois Duvalier. The opposition candidate charges the election was rigged.

In Washington, the Public Health Service estimates that Asian flu cases in the United States more than doubled last week. Cases reported so far from state health officers and the armed forces total 222-thousand.

An outward but not very convincing calm has descended over the Syrian crisis. Secretary Dulles has expressed willingness to meet the Syrian Foreign Minister, who is in this country for the U.N. General Assembly. Most of Syria's Arab neighbors have stepped up to testify that they do not regard Syria's acquisition of Soviet arms to be a menace to them. Syria strongly denies that it is drifting into the Soviet orbit. A mood of amity seems to be reinforced by the visit of the Premier of Iraq, Ali Jawdat, to Damascus. Iraq is a member of the Bagdad Pact, hence a confirmed friend of the West.

But Ali Jawdat is not going back on the Bagdad Pact. He always has represented himself to be a moderate, a believer in Arab solidarity and an opponent of anything that could hurt it. So he does not think this visit brings his loyalty to the Bagdad Pact into question.

But Mr. Dulles's readiness to see the Syrian Foreign Minister also does not mean that all is well again in our relations with Syria. It means, in the first place, that King Saud has told Washington that we are losing more than we gain if we refuse to see the Syrian Minister. Washington took the hint. It was all the more willing to do it because the critical phase of the Syrian episode was over. We had issued our warning, and we had no plans for further open action. The crisis had come to a temporary stop. Now we have to hope that the warning has been effective, and that it will make the Syrians more careful in their dealings with Moscow. Washington doesn't know that it will. But it does know that Syria's neighbors, no matter what they say in public, are worried by the possibility of the country falling under Moscow's control. They tell us this behind closed doors, even if they say the opposite after leaving the room.

When we issued our warning, we did so with all the fanfare at our command. We shipped airborne arms to Jordan. We even built a grandstand at the airfield where the coming of the arms could be witnessed by Jordan officials and our Embassy staff. We announced that the Eisenhower doctrine would be invoked if Syria's neighbors needed our help.

The warning was made so loud to be sure it was heard in Moscow. It turned out to be too loud to be pleasant in Arab ears. Even Jordan was embarrassed. The Arab states said publicly they would defend Syria against any attack, and they repudiated the suggestion of Washington that the newly acquired arms were a menace to them.

Saudi Arabia joined in this, even though King Saud is at present the busy

pacifier in the Middle East, and seems to have been elevated to the position of being our trusted advisor in the area. But he is our advisor only in matters concerning the Soviet menace. On this subject we find him reliable. We know he would never bring the Arab Federation into the Western camp, but we also know that he would do his utmost to keep any part of it from going to the Soviet camp.

But Soviet policy is only one factor in the Middle East. Israel is just as important. At present King Saud is trying to hold the Arab federation united, not by its attitude for or against us or the Soviet Union, but by its antagonism to Israel. That is, he is using this antagonism to play the game of keeping Syria in line and the Soviet Union at bay. He has an immediate reason for promoting Arab solidarity just now. Israel and the issue of refugees is due to come before the General Assembly, and he is determined that the Arab countries should show a united front for this test. No doubt that is how he prevailed on the Iraqi Premier to go to Damascus.

It is clear that King Saud's help to us is not free from very considerable dangers. How long we can use it we cannot know. Nor does he know how long he can use us. But the present calm is only a breathing time. And unless constructive and courageous efforts can solve the basic problems of Arab-Israeli relations, it may be that there can be no solution, either of the growth of Soviet power in this part of the world.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Mistakes have been made in handling the Middle East situation. No one denies this. Goethe said, "If wise men never erred, fools would have to despair." And there is a Chinese proverb which says, "The sages do not consider making no mistakes a blessing. They believe, rather, that the great virtue of man consists in his ability to correct his mistakes."

Goodnight and good luck!

This is the news:

Premier Bourgés-Maunoury...of France...lost a confidence vote tonight on his plan to give Algeria limited home rule./ The vote in the General Assembly was 253 for the plan, and 279 against. And Bourgés-Maunoury and his ministers are preparing to resign./ There is a chance that President Coty may talk the premier out of resigning, because the opposition did not get a clear majority. Sixty-four deputies did not vote. If Bourgés-Maunoury does not resign, his Algerian reform bill will get another reading.

Chief Justice Warren has agreed to consider the appeal made by 13 rank-and-file teamster members to the Supreme Court. They want him to reinstate the injunction barring the election of national teamster officers this week. They charge the election is "rigged" on behalf of James Hoffa, who wants to succeed Dave Beck as president. Chief Justice Warren may rule on the matter tomorrow. Actual balloting at the union convention is not due until Thursday...although the meeting opened in Miami Beach today.

The Senate Rackets Committee charged tonight that about half the delegates to the teamsters convention were chosen illegally. Chairman McClellan sent the union a telegram...listing 24 teamster locals which, he said, "we have ascertained" did not select delegates in conformity with the union's constitutional requirements. McClellan said his committee has other information..."not fully confirmed"...that 50 percent, or more, of the delegates were not properly selected.

In Miami Beach, one of four candidates opposing Hoffa resigned from the contest. Democratic Congressman Shelley of California, who is a member of the teamsters, quit with the expressed hope than the anti-Hoffa forces will unite and elect what he called "a clean and honest slate."

In the speech opening the convention, Beck said the Senate Rackets Committee was not adverse to "smearing" teamster officials before they had their day in court. He received a standing ovation. So did Hoffa.

President Eisenhower ended his Rhode Island vacation this afternoon and flew back to Washington.

Tomorrow, Mr. Eisenhower has an appointment with a committee of southern governors to discuss the school integration problem. The committee was named at the recent Southern Governors Conference to seek the withdrawal of federal troops from Little Rock "at the earliest possible moment." Today one of the governors on the five-man committee...Griffin of Georgia... served notice that he will not attend tomorrow's White House meeting because of Mr. Eisenhower's plan to discuss school integration in general. Governor Collins of Florida (who is chairman of the committee) expressed disappointment. He said, "These are dangerous and critical times. If we close the barriers to discussion, we only make our position more difficult."

The federal judge most involved in the Little Rock case is going to be relieved in a few days reportedly at his own request. This was announced tonight by Chief Judge Archibald Gardner, of the United States Circuit Court of Appeals. Judge Gardner said the departure of District Judge Ronald Davies from Little Rock is of " no signifisance"...routine procedure. He said Judge Davies...who originally came from North Dakota...will be replaced by Judge Roy W. Harper of St. Louis. Davies has been attacked by Governor Faubus of Arkansas as an "un-imported judge" who did not understand local problems.

The nine Negro students attended the central high school in Little Rock again today, without indident. The number of federal troops assigned to the school area was sharply reduced. bayonets were removed from the rifles and hung....sheathed...from the soldiers belts.

Governor Faubus indicated he still has not made up his mind whether to call the state legislature into special session, to consider closing the school.

The British Labour Party opened its annual conference in Brighton today with a denunciation of the Conservative Government's economic policy. It passed a resolution declaring that the government...by unsound domestic planning and the intervention in Egypt..."directly contributed to inflation and recent speculation against the pound." The keynote speaker, Harold Wilson, accused Prime Minister Macmillan of putting Britain "in pawn" to West Germany and the United States.

~~Israel charged today that a raiding party from Syria killed two United Nations observers and an Israeli army lieutenant. The raid occurred several hours later. The killing reportedly took place at an observation post in Israeli territory.~~

The United States today urged the United Nations Disarmament Commission to approve the idea of a ban on nuclear weapons production, tied in with a two-year suspension of tests. Henry Cabot Lodge said that unless Russia accepts restrictions on production, the United States will have to continue developing nuclear weapons "in the interests of its own security and that of world peace." Lodge...on behalf of Britain, France, Canada and the

→

United States...then repeated the offer made at the recent London meeting for a suspension of nuclear tests, provided Russia agrees to certain other steps. He listed these "other steps"...in addition to stopping production of fissionable material for weapons purposes...an agreement on an effective inspection system, reduction of armed forces, and a start toward outer-space missile control. Lodge said, "We do not insist that all these things be done at once. An agreement that they would be done in acceptable stages is enough to get this program underway." He added that suspension of testing "would be the first thing to happen." Soviet Delegate Sobolev, in reply, blamed the West for the failure to agree in London. He again called for an end to nuclear tests and a ban on the use of atomic and hydrogen weapons. But he made no offer to stop producing...and stockpiling...these weapons.

The election of a national president of a labor union normally attracts as little attention as the choice of a chairman of the board of a big corporation. But the choice of a president to succeed the deposed Dave Beck of the Teamsters' Union is commanding attention as no other union convention in memory. Beck himself is no longer the issue. [redacted] But teamsters' affairs have not cooled any on that account. The water is just as hot for James Hoffa. Not only is he under indictment for perjury, in a wire-tapping case, he now faces eighty-two charges formulated against him by the McClelland committee. And it is a foregone conclusion that his election would bring the ejection of the union from the AFL-CIO.

One spearhead of the fight on Hoffa has been a group of thirteen rank-and-file members, mostly from New York, who last week obtained a temporary injunction against the election. Federal Judge Letts signed a restraining order in Washington Saturday. But the union appealed, and the Court of Appeals, acting with unexpected promptness, set aside the injunction on Saturday afternoon, though with a warning that the election in Miami Beach must conform to the union's constitution. The thirteen today appealed to

the Supreme Court, which lays the case in the lap of Chief Justice Warren, who is the circuit justice for the Washington court of appeals.

The prominent role of the Federal courts has focussed attention for the moment on the legality of the election and whether the convention has been, as charged, "rigged" in Hoffa's interest. But the public is concerned with more than this. A majority of teamsters have been represented as being loyal to Beck and Hoffa for what they have done for them, and not disposed to be critical of their money affairs or their policies.

Public interest in the situation falls under two broad headings. One has to do with the purge of corruption and racketeering from union labor. This is a struggle that has gone on for years. It has made gains, but they were slow until the charges of the McClelland committee electrified the top labor officials and led to swift action against those implicated.

But the public has another broad interest. It is the consequences of a break between the AFL-CIO and the teamsters. If the teamsters' union could be wrecked by the mere act of expulsion, the consequences would not be worrisome. But the teamsters are too numerous and too strong to be ruined in that way. And there are other sizeable unions that do not rotate around the AFL-CIO. Two in particular that are strong and well-organized, the miners and the

longshoremen.

When John L. Lewis took his miners out of the C.I.O., he might have leaped at the chance of merging all the non-affiliated unions into a new labor federation. It would have given him unprecedented power in the American economy. But it is no foregone conclusion that he would like to lead the teamsters and longshoremen. Before doing so he too might want to see them disinfected.

But even if Mr. Lewis is not interested, the teamsters and the longshoremen could make a merger which would have startling possibilities. Between them, they could strangle the American economy as effectively as all the rest of organized labor put together. For they could prevent the delivery of all freight by road and its entry or departure from all ports. Moreover, they would not have to exercise the power to be powerful. The fact that they could do it would give their unions unprecedented influence in labor disputes, whether over union jurisdiction or between management and workers. Mr. Meany of the AFL-CIO, of course knows this. The bakers and textile workers this month also face expulsion for unethical conduct, unless they purge themselves. And the McClellan committee may still bring other unions under attack. A lot of house-cleaning has to be done. If still more unions have to be disciplined

expulsion gets to be an increasingly risky way of cleaning house. But Mr. Meany and his colleagues, with old-fashioned doggedness, are not being deflected by such prospects. They will expel unions that do not purge themselves. They believe this is the only way to insure a healthy and useful labor movement. The prudence of this kind of virtue also is being tested by the events in Miami Beach this week.

George Bryan

One recalls...in connection with the teamsters meeting...a political observation once made by Will Rogers. "More men," he said, "have been elected between sundown and sun-up, than ever were elected between sun-up and sundown." This would appear to be just as true of labor conventions as those other conventions that come about once ever four years.

Goodnight and good luck!

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: One recalls...in connection with the teamsters meeting...a political observation once made by Will Rogers. "More men," he said, "have been elected between sundown and sun-up, than ever were elected between sun-up-and sundown." This could appear to be just as true of labor conventions as those other conventions that come about once every four years."

Good Night and Good Luck!

This is the news:

Agreement was reached today on a procedure for removing federal troops from Little Rock. The plan was agreed on at a White House conference attended by four southern governors---Collins of Florida, Hodges of North Carolina, McKeldin of Maryland and Clement of Tennessee. After the meeting... which lasted more than three hours...the White House said: "Upon a declaration on the part of the governor of Arkansas that he will not obstruct the orders of the federal courts, and will in connection therewith maintain law and order in Little Rock, the President will direct the Secretary of Defense to return command of the Arkansas National Guard to the governor. Thereupon, as soon as practicable," the White House statement continued, "all federal troops

will be withdrawn." It was revealed that Governor Faubus had authorized the southern governors, at the meeting, to say that he was prepared to assume full responsibility for maintaining law and order in Little Rock "and in connection therewith will not obstruct the orders of the federal court." [redacted]

Tonight...in Little Rock...Faubus said he will abide by the provisions set forth in the White House statement.

~~Governor Hodges told reporters that he had talked with Faubus early in the day by telephone, and that Faubus had said he would go along with the President's plan. Such a statement, confirmation of this...by Faubus...is expected momentarily.~~

The paratroops patroling the central high school in Little Rock were supplanted today by the federalized national guard for the first time since the rioting at the school last week. [redacted] However, the troops of the 101st Airborne Division are still standing by.

This is the news

Chief Justice Warren of the Supreme Court has refused to stay the election of officers by the teamsters union. In doing this, he denied the petition of 13 rank-and-file teamsters who charged that the election... scheduled for Thursday...has been "rigged" in favor of James Hoffa, who is running for president. Last week, a federal district judge issued a temporary injunction, barring an election at this time. But the injunction was nullified by the Circuit Court of Appeals on grounds that it went "beyond the necessities of the situation as shown by the record." Today, Chief Justice Warren said, "There appears to be no sufficient

reason for me to interfere with the conclusions of the Court of Appeals. To enjoin the election of officers of an international union during the course of its convention proceedings," he said, "on allegations of conspiracy supported by affidavits, without testimony having been taken, would indeed be drastic action."

In Miami Beach, the teamsters convention greeted news of the ruling with applause.

The retiring president of the teamsters, Dave Beck, said today that he has ordered a further study of the credentials of delegates. Last night, Chairman McClellan of the Senate Rackets Committee charged that half of the delegates may have been improperly chosen. Beck says the credentials of all delegates from locals listed by McClellan are being checked. One of the three candidates opposing Hoffa for the presidency... William Lee of Chicago...said today that the anti-Hoffa forces have gotten together and now have Hoffa "stopped". Hoffa said Lee was "whistling in the dark."

As a delegate to the United Nations General Assembly, President Meany of the AFL-CIO told an Assembly committee today that the American people and their government have "an open and active national policy against race discrimination." Meany called the current controversy over school integration "only one episode in a peaceful revolution which has been going on in recent years." "There is no question of the outcome," he said. "The direction of events is clear."

Japan was elected to the United Nations Security Council today on the first ballot. The General Assembly gave Japan 55 votes...compared to 25 for Czechoslovakia, which had Russia's support. (Fifty-two votes, a two-thirds majority, are necessary to elect). Canada and Panama also were elected to the council, to serve for two years. The three newly elected countries will take the seats now held by Australia, Cuba, and the Philippines.

In France, Premier Bourgès-Maunoury is staying on as head of a caretaker government, while President Coty tries to find a successor. Bourgès-Maunoury lost a confidence vote last night in the National Assembly. The issue was his plan for giving Algeria limited home rule.

A conference of the international "atoms-for-peace" agency opened in Vienna today for the purpose of setting up a permanent organization. The conference will appoint a director-general, choose a headquarters and outline a program for its first year of operation. Representatives of 60 countries are attending the meeting from both sides of the Iron Curtain. President Eisenhower proposed the "atoms-for-peace" agency in a speech before the United Nations in 1953. And today he sent the conference a message expressing "fervent hope" that the agency will help bring about the day "when the fissioned atom will cease to be a symbol of fear." The President's message was read by Chairman Strauss of the United States Atomic Energy Commission. Strauss formally offered the agency 5-thousand kilograms of Uranium-235 to help it develop nuclear energy for peaceful purposes. (Five thousand kilograms is roughly equivalent to 11-thousand pounds). The United States has also offered to match...on a pound-for-pound basis...all contributions of uranium other countries may make up to July, 1960. The Vienna conference will last about three weeks.

Red China celebrated its eighth anniversary today with a three-hour parade in Peiping. In the reviewing stand...with Chief of State

Mao Tse-tung...was Janos Kadar, puppet premier of Hungary. The 41 Americans who went to China from the Moscow Youth Festival in defiance of the State Department also were present. The Chinese defense minister said that plots by "bourgeois rightists" against the Communist Party "have been smashed by the people in all parts of the country." He called on China's military forces to improve themselves "for the liberation of Taiwan, and for the defense of the motherland and world peace." He accused the United States of pursuing "a policy of war and aggression."

King Hussein of Jordan today publicly accused Egypt and Syria of breaking their word. Early this year, Egypt, Syria and Saudi Arabia promised Jordan a subsidy to replace the annual grant formerly received from Britain. So far, only Saudi Arabia has paid up. ~~Hussein told the Jordanian parliament...meeting for the first time in three months... that in failing to keep their part of the bargain, Egypt and Syria had neglected their "sacred duty".~~ (Hussein - ~~And he~~ accused international Communism of trying to use Arab differences "to serve its own ends."

Edward R. Murrow: October 1, 1957. 7.45 p.m.

We are on the eve of that delightful annual autumn madness known as the World Series. It is a time when some millions of citizens will be considerably more interested in the analytical writing of Red Smith than in the profound and illuminating conclusions of Mr. Walter Lippman. Whether Hoffa gets home as president of the Teamsters will to some seem less important than whether Aaron can stretch that triple home. No injunction or court order will bring the runner home from second (not even the National Guard can manage that).

For a brief space of time Mantle's shin splints will be more important than the President's back swing. To further mix metaphors, this will be the first time past the grandstand for the Milwaukee Braves. The teams have never before faced each other in Series competition. This is what Milwaukee has been working for for four long years. A professor at Marquette University says: "The transfer of the Braves from Boston to Milwaukee four years ago did something for Milwaukee psychologically. Until then Milwaukee felt itself the little brother of Chicago." But the arrival of the Braves, he says, meant "the kid brother had come of age and started to shave." The professor does not go on to say what it will mean to Milwaukee psychologically, if the Braves go on to win the Series. Whatever it would

be, it presumably would be something very adult indeed.

So far as the Yankees are concerned, their participation in this contest can only be regarded as a shameful refusal through the years to be spoiled by success. They all seem to think with Tommy Henrich that catching a baseball is fun, but knowing what to do with it is a business. Presumably they will have some help from Casey Stengel, who is sort of like the Supreme Court, permanent. The justices of the court are the permanent princes; they sit there and watch the president, vice president, senators and cabinet members come and go. In baseball it seems that only Stengel goes on.

And speaking of courts, the National League today gave Walter O'Malley another fifteen days in which to wage his war of nerves against New York, Los Angeles and various unnamed citizens. Someone is bound soon to ask for a cease and desist order, or at least to enquire whether he's holding deuces or aces. Surely if the Dodgers go West they can't be called The Los Angeles Dodgers. That would be almost indecent. Los Angeles is Spanish for The Angels, and that prefix would not befit the Bums. Then, too, there is the question of what will happen to the Dodger Symph-phoney that garrulous conglomeration of percussion and brass that has entertained the customers and themselves these many seasons. On the subject of angels and baseball

John Milton suggests in Paradise Lost: "Let the bass of Heaven's deep organ blow, and with your ninefold harmony make up full consort to the angelic symphony." No doubt both Haney and Stengel will be hoping for that kind of ninefold harmony, because as any manager knows, it is a thing beyond price..... at least beyond price until the winning team divides the loot.

Whatever happens to O'Malley's double bluff, the Giants next year will have forsaken Coogan's Bluff and gone West, to one of the most beautiful of all cities, San Francisco. One is tempted to remark that the Giants, after a series of lean years at the Box Office, cannot be blamed for transferring to the only city in this country with a Golden Gate. One is tempted, and one succumbs -- Mark Twain said: "The surest protection against temptation, is cowardice." The phrase "San Francisco Giants" is seemly, and turns well on the tongue.

East is East and West is West, or at least it used to be, and who knows but what scattering a couple of Big League clubs along the West Coast may serve further to unite this generous and capacious land.

The British, as is widely known, are not particularly fond of baseball, they prefer to flail at an oversize ball, with something that resembles a foreshortened oar -- a game called cricket. But the British have a reputation

for shrewdness in diplomacy and negotiation, centuries of practise and experience. This reporter has no sources, peachable or otherwise, inside Buckingham Palace, but it is possible to imagine prolonged and earnest conversations between the Palace and Downing Street, regarding the timing of the visit to this country of the Queen and her consort. Being familiar with the folkways and habits of the natives of this country, the decision must have been inevitable from the outset, namely to postpone the Royal visit until after the dust of the World Series had settled. Extraordinarily clever people, the British.

George Bryan.

Word for Today

Last week, when Hank Aaron hit the home run that gave the Braves the National League pennant, an editorial writer for the Milwaukee Journal turned to the Bible for inspiration. In the Book of Exodus, he found this quotable quote: "For Aaron stretched out his hand with his rod and smote the dust of the earth." And...verily...he may try it again.

Goodnight and good luck!

TUESDAY, OCTOBER 1, 1957
7:45 - 8:00 PM EST

This is the news:

Agreement was reached today on a procedure for removing federal troops from Little Rock. The plan was agreed on at a White House conference attended by four southern governors - - Collins of Florida, Hodges of North Carolina, McKeldin of Maryland and Clement of Tennessee. After the meeting... which lasted more than three hours...the White House said: "Upon a declaration on the part of the governor of Arkansas that he will not obstruct the orders of the federal courts, and will in connection therewith maintain law and order in Little Rock, the President will direct the Secretary of Defense to return command of the Arkansas National Guard to the governor. Thereupon, as soon as practicable," the White House statement continued, "all federal troops will be withdrawn." It was revealed that Governor Faubus had authorized the southern governors, at the meeting, to say that he was prepared to assume full responsibility for maintaining law and order in Little Rock "and in connection therewith will not obstruct the orders of the federal court." Tonight...in Little Rock...Faubus said he will abide by the provisions set forth in the White House statement.

The paratroops patroling the central high school in Little Rock were supplanted today by the federalized national guard for the first time since the rioting at the school last week. However, the troops of the 101st Airborne Division are still standing by.

Chief Justice Warren of the Supreme Court has refused to stay the election of officers by the teamsters union. In doing this, he denied the petition of 13 rand-and-file teamsters who charged that the election...scheduled for Thursday...has been "rigged" in favor of James Hoffa, who is running for president. Last week, a federal district judge issued a temporary injunction,

barring an election at this time. But the injunction was nullified by the Circuit Court of Appeals on grounds that it went "beyond the necessities of the situation as shown by the record." Today, Chief Justice Warren said, "There appears to be no sufficient reason for me to interfere with the conclusions of the Court of Appeals. To enjoin the election of officers of an international union during the course of its convention proceedings," he said, "on allegations of conspiracy supported by affidavits, without testimony having been taken, would indeed be drastic action."

In Miami Beach, the teamsters convention greeted news of the ruling with applause.

The retiring president of the teamsters, Dave Beck, said today that he has ordered a further study of the credentials of delegates. Last night, Chairman McClellan of the Senate Rackets Committee charged that half of the delegates may have been improperly chosen. Beck says the credentials of all delegates from locals listed by McClellan are being checked. One of the three candidates opposing Hoffa for the presidency...William Lee of Chicago...said today that the anti-Hoffa forces have gotten together and now have Hoffa "stopped". Hoffa said Lee was "whistling in the dark."

Japan was elected to the United Nations Security Council today on the first ballot. The General Assembly gave Japan 55 votes...compared to 25 for Czechoslovakia, which had Russia's support. (Fifty-two votes, a two-thirds majority, are necessary to elect). Canada and Panama also were elected to the council, to serve for two years. The three newly elected countries will take the seats now held by Australia, Cuba, and the Philippines.

In France, Premier Bourges-Maunoury is staying on as head of a caretaker government, while President Coty tries to find a successor. Bourges-Maunoury lost a confidence vote last night in the National Assembly. The issue was his plan for giving Algeria limited home rule.

A conference of the international "atoms-for-peace" agency opened in Vienna today for the purpose of setting up a permanent organization. The conference will appoint a director-general, choose a headquarters and outline a program for its first year of operation.

Red China celebrated its eighth anniversary today with a three-hour parade in Peiping. In the reviewing stand...with Chief of State Mao Tse-tung...was Janos Kadar, puppet premier of Hungary. The 41 Americans who went to China from the Moscow Youth Festival in defiance of the State Department also were present. The Chinese defense minister said that plots by "bourgeois rightists" against the Communist Party "have been smashed by the people in all parts of the country." He called on China's military forces to improve themselves "for the liberation of Taiwan, and for the defense of the motherland and world peace." He assused the United States of pursuing "a policy of war and aggression."

King Hussein of Jordan today publicly accused Egypt and Syria of breaking their word. Early this year, Egypt, Syria and Saudi Arabia promised Jordan a subsidy to replace the annual grant formerly received from Britain. So far, only Saudi Arabia has paid up. Hussein accused international Communism of trying to use Arab differences "to serve its own ends."

We are on the eve of that delightful annual autumn madness known as the World Series. It is a time when some millions of citizens will be considerably more interested in the analytical writing of Red Smith than in the profound and illuminating conclusions of Mr. Walter Lippman. Whether Hoffa gets home as President of the Teamsters will to some seem less important than whether Aaron can stretch that triple home. No injunction or court order will bring the runner home from second (not even the National Guard can manage that.)

For a brief space of time Mantle's shin splints will be more important than the President's back swing. To further mix metaphors, this will be the first time past the grandstand for the Milwaukee Braves. The teams have never

before faces each other in Series competition. This is what Milwaukee has been working for for four long years. A professor at Marquetts University says: "The transfer of the Braves from Boston to Milwaukee four years ago did something for Milwaukee psychologically. Until then Milwaukee felt itself the little brother of Chicago." But the arrival of the Braves, he sayd, meant "the kid brother had come of age and started to shave." The professor does not go on to say what it will mean to Milwaukee psychologically, if the Braves go on to win the Series. Whatever it would be, it presumably would be something very adult indeed.

So far as the Yankees are concerned, their participation in this contest can only be regarded as a shameful refusal through the years to be spoiled by success. They all seem to think with Tommy Henrich that catching a baseball is fun, but knowing what to do with it is a business. Presumably they will have some help from Casey Stengel, who is sort of like the Supreme Court, permanent. The justices of the court are the permanent princes; they sit there and watch the president, vice president, senators and cabinet members come and go. In baseball it seems that only Stengel goes on.

And speaking of courts, the National League today gave Walter O'Malley another fifteen days in which to wage his war of nerves against New York, Los Angeles and various unnamed citizens. Someone is bound soon ti ask for a cease and desist order, or at least to inquire whether he's holding deuces or aces. Surely if the Dodgers go West they can't be called The Los Angeles Dodgers. That would be almost indecent. Los Angeles is Spanish for The Angels, and that prefix would not befit the Bums. Then, too, there is the question of what will happen to the Dodger Symph-phoney that garrulous conglomeration of percussion and brass that has entertained the customers and themselves these many seasons. On the subject of angels and baseball John Milton suggests in Paradise Lost: "Let the bass of Heaven's deep organ blow, and with your ninefold harmony make up full consort to the angelic

symphony." No doubt both Haney and Stengel will be hoping for that kind of ninefold harmony, because as any manager knows, it is a thing beyond price... at least beyond price until the winning team divides the loot.

Whatever happens to O'Malley's double bluff, the Giants next year will have forsaken Coogan's Bluff and gone West to one of the most beautiful of all cities, San Francisco. One is tempted to remark that the Giants, after a series of lean years at the Box Office, cannot be blamed for transferring to the only city in this country with a Golden Gate. One is tempted, and one succumbs - Mark Twain said: "The surest protection against temptation is cowardice." The phrase "San Francisco Giants" is seemly and turns well on the tongue.

East is East and West is West, or at least it used to be, and who knows but what scattering a couple of Big League clubs along the West Coast may serve further to unite this generous and capacious land.

The British, as is widely known, are not particularly fond of baseball, they prefer to flail at an oversize ball with something that resembles a foreshortened oar - a game called cricket. But the British have a reputation for shrewdness in diplomacy and negotiation, centuries of practice and experience. This reporter has no sources, peachable or otherwise, inside Buckingham Palace, but it is possible to imagine prolonged and earnest conversations between the Palace and Downing Street regarding the timing of the visit to this country of the Queen and her consort. Being familiar with the folkways and habits of the natives of this country, the decision must have been inevitable from the outset, namely to postpone the Royal visit until after the dust of the World Series had settled. Extraordinarily clever people, the British.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Last week, when Hank Aaron hit the home run that gave the Braves the National League pennant, an editorial writer for the Milwaukee Journal turned to the Bible for inspiration. In the Book of Exodus, he found this quotable quote: "For Aaron stretched out his hand with his rod and smote the dust of the earth." And...verily...he may try it again.

Goodnight and good luck!

Edward R. Murrow Wed., Oct. 2, 1957

This is the news:

Tomorrow morning, President Eisenhower will hold a news conference at which he will answer questions about his ~~impasse~~ deadlock with Governor Faubus over the procedure for removing federal troops from Little Rock. White House News Secretary Hagerty said this afternoon that Faubus' latest statements have made Mr. Eisenhower's ~~[illegible]~~ refusal to withdraw the troops at this time "more apt than ever." For a first-hand report on the governor's "latest statements", we switch to Paul Niven in Little Rock.

(Tape runs 2:50
Ends on cue: "--to Edw. R.
Murrow in N.Y.")

Governor McKeldin of Maryland...one of the four governors who worked out the troop removal plan with President Eisenhower yesterday...today accused Faubus of "double-crossing" them. (I should like to discuss this matter further, in a few minutes).

Secretary of Defense Wilson today held what may be his final news conference as a cabinet officer. Wilson said that in the three-month period...July through September...defense spending ran 300-million dollars above its budget figure. To help pare down this spending, he said, the Air Force is going to adopt a schedule limiting its monthly payments to aircraft manufacturers.

The State Department announces that Secretary of State Dulles and Soviet Foreign Minister Gromyko will confer in Washington on Saturday. The department says there will be a broad exchange of views.

The teamsters convention in Miami Beach today seated roughly half of the 500 delegates whose credentials were questioned by the Senate Rackets Committee. The convention credentials committee says 44 delegates have been denied seats...leaving the seating of about 200 other delegates still in question. James Hoffa predicts he will be elected president tomorrow by a landslide...that his three opponents together will get no more than 200 of the 17 or 18-hundred votes expected to be cast.

Saudi Arabia told the United Nations General Assembly today that the question of Syria "does not fall within the competence of the United Nations." The Saudi Arabian minister of state said the Soviet arms buildup in Syria poses "no danger to any neighbors"...that who is in power in Syria "is the concern of Syria and Syria alone." The Saudi Arabian spokesman called for the elimination of Israel as a state. He said, "A United Nations agency should be established to facilitate the repatriation of Israelis to their former homes."

Britain today announced that gold and dollar reserves in the sterling area...during September...fell by 292-million dollars. Britain's reserves now stand at their lowest point since 1952. It is noted, however, that all the decline took place in the first three weeks of September---before the Bank of England raised its interest rate to 7 percent in a move designed to protect the value of the pound.

The United States and Yugoslavia opened talks in Washington today on a Yugoslav request for more economic aid. The amount of new aid sought by Yugoslavia was not announced.

In Vienna, the first general conference of the international "atoms-for-peace" agency voted today to seat all members of the United Nation and its agencies. A proposal that would have allowed Red China to send observers to the meeting was defeated by a vote of 35 to 13, with one abstention.

In Paris, President Coty continued the search for a new premier to succeed Bourgès-Maunoury, who lost a confidence vote on Monday over his Algerian reform program. There is speculation that Coty may call on

Jacques Soustelle, former resident minister of Algeria, to form a new government. Soustelle is a supporter of General DeGaulle.

Here in New York, the Yankees won the first game of the World Series, defeating Milwaukee, 3 to 1. Whitey Ford went the distance, limiting the Braves to five hits. Warren Spahn was knocked out of the box in the sixth, after allowing THE three Yankee runs. ~~He was replaced by right-hander Ernie Johnson, who gave way to another right-hander, Don McMahon, in the seventh. It was in the seventh inning that Wes Covington scored the lone run for Milwaukee, as Red Schoendienst singled. Yankee Manager Casey Stengel has named Bobby Shantz---like Ford a southpaw---to pitch the second game tomorrow against Milwaukee right-hander Lew Burdette.~~

Edward R. Murrow: October 2, 1957. 7.45 p.m.

It would be more than regrettable if the issue between President Eisenhower and Governor Faubus should appear to be over a choice of words. It is, of course, over facts and principles. The facts are tough ones, and the principles are basic.

The negotiations with Governor Faubus, through the mediation of his four Southern colleagues, broke down because he added two words: "by me". That is, he said that orders of the Federal court would not be obstructed - by him. In the original draft, the governors said that Faubus had authorized them to state "that he is prepared to assume full responsibility for maintaining law and order in Little Rock, and in connection therewith, will not obstruct the orders of the Federal Court."

The difference between the two versions may be obscure, though President Eisenhower obviously didn't think so. However, the public will be led up a by-path if it tries to fathom just what Governor Faubus may have meant, or not meant, by introducing the phrase: "by me." The issues are not over semantics. And they are not over the propriety of the Federal troops having been called in. They are over events in Little Rock which ended in the President's intervention. If the troops are to be withdrawn, and the National Guard is

to be restored to Governor Faubus's command, the repetition of these events must be prevented. Not only that, ~~it~~ they must be prevented by the very authorities who failed to prevent them in the first place.

The local authorities failed in two ways. Governor Faubus ordered the National Guard to keep negro students from entering Central High School. Thereby the state of Arkansas over-ruled the law of the land as laid down by the Federal Court. Whatever else this was, it was direct obstruction. It is this direct obstruction which Governor Faubus has promised not to repeat, in saying "by me".

After he withdrew the Guard, in compliance with an injunction, the mob prevailed, and this the Governor and the law enforcement agencies in Arkansas did not prevent. That was the second failure. Whatever Governor Faubus says about assuming full responsibility for maintaining order, it seems to be little assurance that the mob will not again be able to over-ride the law of the land.

The issues involved in Little Rock were not clearly stated by the President in the broadcast he made about calling out Federal troops. They were not spelled out in simple terms in other statements at the start from the White House. The most succinct sentence used by the President was in his

letter to Senator Russell, in which he said: "that the police powers of the state of Arkansas" have been "utilized... to frustrate the order of the court."

Today White House correspondents were given a summary of the legal points that guided the President in his talks with the governors yesterday. There were four points. ~~It is interesting to note that three of them have to do with the obligations of local communities and the courts, with which the President literally has nothing to do. (Thus plans affecting de-segregation have to be formulated by the local community. The time schedule for de-segregation has to be proposed by local authorities and approved by the courts. The executive branch of the government has no part in the local deliberations or the court proceedings, though if litigation arises the court may ask the Department of Justice to assist it. The point is made clearly that a final order of the Federal Court giving effect to a plan for school integration has to be obeyed by the state authorities.)~~

But Only the fourth point opens the door ~~fro~~ FOR White House intervention. It is set forth that: "Powers of a state governor may not be used to defeat a valid order of a Federal Court. Under pretext of maintaining order, a governor may not interpose military force or permit mob violence to occur and prevent the final order of the Federal Court from being carried out." When

this happens, the President has an inescapable obligation under the Constitution and the laws to use whatever means may be required.

These, then, are the legal principles involved. There is a further factor that plays a big part in the crisis from now on. It is the protection given to negro students in Central High School if the National Guard is de-federalized. Negro students did not feel as safe in the school house while it was under the federalized guard as they did under the paratroopers. Would they be safe if Governor Faubus took command of the guard again? At his news conference today he was asked bluntly to reply yes or no to this question. For this was the nub of the issue. But Governor Faubus would give no concise answer. ~~He said it was like asking a man to say if he had given up beating his wife. This was a most unsatisfactory moment in a generally unsatisfactory act in this drama.~~

George Bryan

Word for Today

The issue between President Eisenhower and Governor Faubus concerns more than a choice of words. But language, at best, is unreliable. The eminent English scholar, Samuel Butler, once said: "We want words to do more than they can. What we should read is not the words...but the man we feel to be behind the words."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS (NON-NEW YORK SPOTS ONLY)

Wednesday, October 2, 1957
7:45 - 8:00 PM

MURROW: For a first-hand report on the Governor's latest statements we switch to Paul Niven in Little Rock.

NIVEN: Governor Faubus strode angrily into a news conference this morning. Said he stood pad on the statement last night an d accused the administration of bad faith in rejecting that statement. We quizzed Faubus for 30 fruitless minutes trying to get from him the undertaking that President Eisenhower apparently wants. A promise that Faubus will enforce the integration order and protect the nine colored students. Faubus parried, evaded, went off on tantrums when one news man asked for a yes of no answer. He ~~she~~ said, "you give me your answer, yes or not answer, you give me a yes or no answer, have you stopped beating your wife?" The nearest thing to a clear answer was a negative one. He said he would not use troops inside the school. He didn't believe in education at bayonet point. Later today, I asked school superintendent Blossom if he would consider the situation safe without troops inside the school. Blossom dismissed that question, he said the answer was obvious; presumably a strong affirmative. So Governor Faubus has told us what the situation would be if the federal troops were taken away and control back to him. The initiative would be handed to the white students at the school. If they chose to drive out the negroes the Governor would not stop them. Nobody can say whether those white students were taking a cue from Faubus in their behavior today. But the situation at the school was more tense; there was more small scale violence since at any time since the federal troops arrived. The nine negro students went in from a different entrance this morning and (indistinct) white students who had gathered on the center steps to jeer at them. The whites pursured the negroes; there was some shuffling. Three whites were suspended. The negroes themselves and a national guard

spokesman minimized the trouble. A mass walk-out of white students was planned for 9 o'clock them tomorrow morrning. School officials said they may suspend those participating, but the white students claim they can't do anything to several hundred of us. Before the walk-out there may be a demonstration or worse when the nggro students arrive. One white boy told me a few minutes ago "We're going to be waiting for them and make so they wemit want to stay". Governor Faubus met this afternoon with Frank Bank, executive secretary of the southern Governors' conference who attended yesterday's meeting in Washington. Neither Faubu or Bane would talk afterwards of even admit that they had discussed the Central high situation. Sources close to the Goveror say he will have nothing further to say this evening. That's the situation here in Little Rock. The federal-state impasse more serious than ever with Faubus apparently less willing to back down and less able to do so with political impunity. And the situation at Central high school very serious. So serious that the nine negro students weu- who have so far borne jeering shoving and kicking in silence without defending themselves, at last begin to weaken, and loose heart. Now back to Edward R. Murrow in New York.

It would be more than regrettable if the issue between President Eisenhower and Governor Faubus should appear to be over a choice of words. It is, of course, over facts and principles. The facts are tough ones, and the principles are basic.

The negotiations with Governor Faubus, through the mediation of his four Southern colleagues, broke down because he added two words: "by me". That is, he said that orders of the Federal court would not be obstructed - by him. In the original draft, the governors said that Faubus had authorized them to state "that he is prepared to assume full responsibility for maintaining law and order in Little Rock, and in connection therewith, will not obstruct the orders of the Federal Court."

The difference between the two versions may be obscure, though

President Eisenhower obviously didn't think so. However, the public will be led up a by-path if it tries to fathom just what Governor Faubus may have meant or not meant by introducing the phrase: "by me." The issues are not over semantics. And they are not over the propriety of the Federal troops having been called in. They are over events in Little Rock which ended in the Presdient's intervention. If the troops are to be withdrawn, and the National Guard is to be restored to Governor Faubus's command, the repeition of these events must be prevented. Not only that, they must be prevented by the very authorities who failed to prevent them in the first place.

The local authorities failed in two ways. Governor Faubus ordered the National Guard to keep negro students from entering Central High School. Thereby the state of Arkansas over-ruled the law of the land as laid down by the Federal Court. Whatever else this was, it was direct obstruction. It is this direct obstruction which Governor Faubus has promised not to repeat, in saying "by me".

After he withdrew the Guard, in compliance with an injunction, the mob prevailed, and this the Governor and the law enforcement agencies in Arkansas did not prevent. That was the second failure. Whatever Governor Faubus says about assuming full responsibility for maintaining order, it seems to be little assurance that the mob will not again be able to over-ride the law of the land.

The issues involved in Little Rock were not clearly stated by the President in the broadcast he made about calling out Federal troops. They were not spelled out in simple terms in other statements at the start from the White House. The most succinct sentence used by the President was in his letter to Senator Russell, in which he said, "that the police powers of the state of Arkansas" have been "utilized...to frustrate the order of the court."

Today White House correspondents were given a summary of the lega points that guided the President in his talks with the governors yesterday. There were four points.

But only the fourth point opens the door for White House intervention. It is set forth that: "Powers of a state governor may not be used to defeat a valid order of a Federal Court. Under pretext of maintaining order, a governor may not inpterpose military force ot permit mob violence to occur and prevent the final order of the Federal Court from being carried out." When this happens, the President has an inescapable obligation under the Constitution and the laws to use whatever means may be required.

These, then, are the legal principles involved. There is a further factor that plays a big part in the crisis from now on. It is the protection given to negro students in Central High School if the National Guard is de-federalized. Negro students did not feel as safe in the school house while it was under the federalized guard as they did under the paratroopers. Would they be safe if Governor Faubus took command of the guard again? At his news conference today he was asked bluntly to reply yes or no to this question. For this was the nub of the issue. But Governor Faubus would give no concise answer.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN:

MURROW: The issue between President Eisenhower and Governor Faubus concerns more than a choice of words. But language, at best, is unreliable. The eminent English scholar, Samuel Butler, once said: "We want words to do more than they can. What we should read is not the words...but the man we feel to be behind the words."

Good Night and Good Luck!

This is the news:

The dispute over integration at the central high school in Little Rock remains deadlocked. The first question put to President Eisenhower at his news conference today was: "What prospects do you see for working out an agreement with Governor Faubus at this time?" Mr. Eisenhower made this reply:

Tape runs 3:20
Ends on cue: "--disservice to his city and to his state."

A reporter asked the President if what he had just said meant that if a similar situation arose in another part of the South, he would feel obligated to send in federal troops. Mr. Eisenhower said:

Tape runs 1:00
Ends on cue: "The courts must be sustained, or it isn't America."

Governor Faubus also held a news conference today. For a report on that, and other developments in Little Rock, we switch now to Paul Niven.

(Tape runs
Returns on cue: "--to Edw. R. Murrow
in N.Y."

The chairman of the governors committee, that met with President Eisenhower, is Governor Hodges of North Carolina. Hodges said today that the committee has no new plan for a settlement to submit at this time. "We've got to have a few days," he said, "to let this thing cool off." ~~Hodges said he "devoutly" hopes the President and Governor Faubus will be able to resolve this issue which, he said, "affects all Americans."~~

Mr. Eisenhower said today that he still views the recent developments in Syria with "real concern". ~~He added that~~ He said the "original alarm" of countries like Lebanon, Jordan and Iraq...and to some extent, Saudi Arabia..."seems to have been quieted. But just exactly what grounds they have for that," he said, "I don't know." Mr. Eisenhower said the United States has tried to be neutral in the dispute between Israel and the Arab states, so that it could be helpful in keeping both sides at peace.

Egypt told the United Nations General Assembly today that Western charges...that Communist arms shipments to Syria were threatening peace in the Middle East..."have exploded and faded into nothingness." Egyptian Foreign Minister Fawzi said that in building up its defenses, Syria has done nothing "to which it is not fully entitled." Egypt, he said, stands by the side of Syria. "It will not tolerate that so much as a hair of Syria be ruffled by any aggressor."

Today...in Washington...the Air Force announced a new economy move. The latest action means the elimination of seven flying units, involving 34-hundred officers and men, who will be reassigned.

Republican Senator Knowland today announced his candidacy for governor of California in 1958. Knowland will oppose Governor Knight for the Republican nomination in the state primary next June. Knight has accused the Senate minority leader of seeking the governorship, merely as a stepping-stone to the presidency. In announcing his candidacy for governor today, Knowland said: "I have made my decision to run for this high office with no purpose other than...if nominated and elected...to devote myself faithfully to the administration of the duties of the office."

In Miami Beach, the election of teamster union officials...scheduled for today...has been postponed for 24 hours. James Hoffa is still predicting that he will be elected president, hands down. / And he told reporters today that, when elected, "We still expect to stay in the AFL-CIO." [redacted] One of the three teamster officials running against Hoffa...Thomas L. Hickey of New York...has quit the race in favor of [redacted] William Lee of Chicago. The other opposition candidate...Thomas Haggerty... is still in the running. / ~~Tonight, Dave Beck agreed to bow out as teamsters president on October 15th. He was due to remain in office until December. / His action apparently is designed to allow Hoffa...if he wins...to take over as head of the union without delay.~~

In Warsaw, police today used tear gas and clubs to break up a student demonstration. About 2-thousand students [redacted] were protesting the shutting down of an outspoken anti-Stalinist paper.

The president of Tunisia said today that it is "not possible" to have friendly relations with France. He announced that the Tunisian ambassador to Paris is being recalled.

France reported today that the three-year [redacted] insurrection in

Algeria has cost the lives of 6-thousand, 945 civilians. Eight hundred and seventy of the civilian dead are listed as Europeans, and 6-thousand and 75 as Moslems. More than 6-thousand farms are reported destroyed.

Milwaukee tied up the World Series today, defeating the New York Yankees, 4 to 2. Both teams have now won a game apiece, and the series moves to Milwaukee, where play will be resumed on Saturday.

George Bryan.

Word for Today

The President told his news conference today that the courts of the United States must be sustained, "or it is not America." All individual rights are secured by statute. Sir Walter Raleigh said...three centuries ago..."No wise man would ever inhabit a country where men have more authority than laws."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS (NON-NEW YORK STATE ONLY)

Thursday, October 3, 1957
7:45 - 8:00 PM

MURROW: The first question put to President Eisenhower at his news conference today was - what prospects do you see for working out an agreement with Governor Faubus at this time?. Mr. Eisenhower made this reply.

EISENHOWER: There are several things that could happen. The southern governor's committee that visited me, unquestionably as they stated on the television, disappointed by what happened, are nevertheless not completely hopeless in our pursuing the purpose for which they were originally appointed by the southern Governors' conference. There are two different situations that justify the withdrawal of federal troops. One, the satisfactory and unequivocal assurances that the orders of the federal courts would not be obstructed and that peace and order will be maintained in connection therewith. The second would be, that the actual, factual developments of peaceful conditions to the extent with the local city police would say there will be no difficulty that we can't control in the carrying out of the courts orders. I think, having answered your specific question its well to remember that we emphasize to ourselves why the troops are there. The problem grew out of the segregation problem, but the troops are not there as a part of the segregation problem. They are there to uphold the court's of the land under laws passed in 1792 because it was early discovered that unless we supported the courts, in whose hands are all our freedoms and our liberty, our protection against autocratic government then the kind of government set up by our forefathers simply would not work. That is why they are there and for no other purpose and it is merely incidental that the problem grew out of the segregation problem. Now the people that visited me, the governors, understand

this responsibility that on the executive, on the President to this connection. ~~There~~ They are aware of it themselves. They themselves oppose ~~the~~ and differed with the decision of the Supreme Court. They don't like it. They are doing their duty as good citizens and responbible officials. They were helpful, cooperative and, I must say, excited my admiration as citizens who wanted to do their duty even when disagreeable.

CARPENTER: Elizabeth Carpenter of the Arkansas Gazette - Do ~~you~~ you feel that Governor Faubus really wants to put an end ~~of~~ to the trouble in Little Rock?

EISENHOWER: Well, I wouldn't like to answer that question specifically, for this reason: I make it a practice never to try to interpret the motives of a person who does something that I believe to be a mistaken action. What his motives are I am not sure. I just believe that he is mistaken in what he is doing, and is doing a disservice to the city and to his state.

MURROW: A reporter asked the President if what he had just said meant that if a similar situation arose in another part of the south he would feel obligated to send in federal troops. Mr. Eisenhower said.

EISENHOWER: I don't want to be imitating the Supreme Court but I don't think it is wise to try to answer hypothetical questions. Each one of these cases is different. The National Guard, or the State Guard at that moment was called out and given orders to do certain things which were a definite direct defiance of a federal court's order. That put the issue squarely up to the Executive part of the Government, and I would not, as I told you once before in this meeting, such as this - I couldn't conceive that anyone would ~~go~~ so forget common sense and our common obligations of loyalty to the Constitution of America that force

of this kind would never have to be used for any purpose. But I just say this: The courts must be sustained or it's not America.

MURROW: Governor Faubus also held a news conference today. For a report on that and other developments in Little Rock we switch now to Paul Niven.

NIVEN: The walk-out of white students from Central high school was by there their own account something of a failure. Less than 100 left the building in comparision with the several hundred that were predicted by segregationist students last night. The school board put the figure at 30 or 40. Some of the boys that did leave their classes crossed the street to a near-by lawn where they hung the straw filled effigy to a tree and set fire to it. Paratroopers of the 101st Division broke up the demonstration and drove the students and on-lookers out of the school area. One man was arrested. One girl student taken to the principal's office. Governor Orval Faubus held a news conference this morning shortly after President Eisenhower's in Washington. The Governor said he had talked tiw- with Florida's Governor Collins by phone and had another session in person with Frank Bane, the Executive Secretary of the Southern Governors' Conference who was here in Little Rock. Faubus would not give details of either conference conversation He said he was still willing to negotiate with the administration but said Faubus, Mr. Eisenhower would not get from him the unconditional surrender he received from the Germans at the end of the war. The Governor today lodged an appeal against the court order which is the basis of his dispute with Washington. That's the order handed down by judge Ronald Davies on September 20th forbidding Faubus to interfere with integration at the school. This district court clerk here said he would normally send an appeal on to an appeals court in St. Louis in about 40 days. Governor Faubus told us that plans are being made to make public the evidence

he claims to have of possible violence at the school. He has always maintained that the possibility of violence rather than integration itself caused him to order out the national guard. After the news conference the Governor flew over to the Arkansas city of Blytheville to witness a cotton picking contest. He does not seem in any great hurry for settlement of the dispute in which he is involved. President Eisenhower indicated this morning that an alternative solution would come through a cooling off of the situation. In the President's words - the development of a peaceful situation - such a development is hard to predict and hard to measure when it developes on behind and partly because of armed paratroopers. Now back to Edward R. Murrow in New York.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, OCTOBER 3, 1957
7:45 - 8:00 PM EST

This is the news:

The dispute over integration at the central high school in Little Rock remains deadlocked. The first question put to President Eisenhower at his news conference today was: 'What prospects do you see for working out an agreement with Governor Faubus at this time?" Mr. Eisenhower made this reply:

EISENHOWER: There are several things that could happen. The southern governor's committee that visited me, unquestionably as they stated on the television, disappointed by what happened, are nevertheless not completely hopeless in our pursuing the purpose for which they were originally appointed by the southern Governors' conference. There are two different situations that justify the withdrawal of federal troops. One, the satisfactory and unequivocal assurances that the orders of the federal courts would not be obstructed and that peace and order will be maintained in connection therewith. The second would be, that the actual, factual developments of peaceful conditions to the extent with the local city policy would say there will be no difficulty that we can't control in the carrhing out of the courts orders. I think, having answered your specific question its well to remember that we emphasize to ourselves why the troops are there. The problem grew out of the segregation problem, but the tooops are not there as a part of the segregation problem. They are there to uphold the courts of the land under laws passed in 1792 because it was early discovered that unless we supported the courts in whose hands are all our freedoms and our liberty, our protection against autocratic government then the kind of government set up by our forefathers simply would not work. That is why they are there and for no other purpose and it is merely incidental that the problem grew out of the segregation problem. Now the people that visited me, the governors, understand this responsibility that on the executive, on the President to this connection. They are

of it themselves. They themselves oppose and differed with the decision of the Supreme Court. They don't like it. They are doing their duty as good citizens and responsible officials. They were helpful, cooperative and, I must say, excited my admiration as citizens who wanted to do their duty even when disagreeable.

CZRPENTER: Elizabeth Carpenter of the Arkansas Gazette - do you feel that Governor Faubus really wants to put an end to the trouble in Little Rock?

EISENHOWER: Well, I wouldn't like to answer that question specifically, for this reason: I make it a practice never to try to interpret the motives of a person who does something that I believe to be a mistaken action. What his motives are I am not sure. I just believe that he is mistaken in what he is doing, and is doing a disservice to the city and to his state.

MURROW: A reporter asked the President if what he had just said meant that if a similar situation arose in another part of the south he would feel obligated to send in federal troops. Mr. Eisenhower said:

EISENHOWER: I don't want to be imitating the Supreme Court, but I don't think it is wise to try to answer hypothetical questions. Each one of these cases is different. The National Guard, or the State Guard at that moment was called out and given orders to do certain things which were a definite direct defiance of a federal court's order. That put the issue squarely up to the Executive part of the Government, and I would not, as I told you once before in this meeting, such as this - I couldn't conceive that anyone would so forget common sense and our common obligations of loyalty to the Constitution of America that force of this kind would never have to be used for any purpose. But I just say this: The courts must be sustained or it's not America.

MURROW: Governor Faubus also held a news conference today. For a report on that and other developments in Little Rock we switch now to Paul Niven.

NIVEN: The walk-out of white students from Central high school was by their own account something of a failure. Less than 100 left the building in

comparison with the several hundred that were predicted by segregationist students last night. The school board put the fiture at 30 or 40. Some of the boys that did leave their classes crossed the street to a near-by lawn where they hung the straw filled effigy to a tree and set fire to it. Paratroopers of the 101st Division broke up the demonstration and drove the students and on-lookers out of the school area. One man was arrested. One girl student taken to the principal's office. Governor Orval Faubus held a news conference this morning shortly after President Eisenhower's in Washington The Governor said he had talked with Florida's Governor Collins by phone and had another session in person with Frank Bane, the Executive Secretary of the Southern Governors' Conference who was here in Little Rock. Faubus would not give details of either conversation. He said he was still willing to negotiate with the administration but said Faubus, Mr. Eisenhower would not get from him the unconditional surrender he received from the Germans at the end of the war. The Governor today lodged an appeal against the court order which is the basis of his dispute with Washington. That's the order handed down by Judge Ronald Davies on September 20th forbidding Faubus to interfere with integration at the school. This district court clerk here said he would normally send an appeal on to an appeals court in St. Louis in about 40 days. Governor Faubus told us that plans are being made to make public the evidence he claims to have of possible violence at the school. He has always maintained that the possibility of violence rather than integration itself caused him to order out the national guard. After the news conference the Governor flew over to the Arkansas city of Blytheville to witness a cotton picking contest. He does not seem in any great hurry for settlement of the dispute in which he is involved. President Eisenhower indicated this morning that an alternative solution would come through a cooling off of the situation. In the President's words - the development of a peaceful situation - such a development is hard to lredict and hard to measure when it develops behind

and partly because of armed paratroopers. Now back to Edward R. Murrow in New York.

MURROW: The chairman of the governors committee that met with President Eisenhower is Governor Hodges of North Carolina. Hodges said today that the committee has no new plan for a settlement to submit at this time. "We've got to have a few days," he said, "to let this thing cool off."

Mr. Eisenhower said today that he still views the recent developments in Syria with "real concern". He said the "original alarm" of countries like Lebanon, Jordan and Iraq...and to some extent, Saudi Arabia..."seems to have been quieted. But just exactly what grounds they have for that," he said, "I don't know." Mr. Eisenhower said the United States has tried to be neutral in the dispute between Israel and the Arab states, so that it could be hlepful in keeping both sides at peace.

Egypt told the United Nations General Assembly today that Western charges.. that Communist arms shipments to Syria were threatening peace in the Middle East..."have exploded and faded into nothingness." Egyptian Foreign Minister Fawzi said that in building up its defenses, Syria has done nothing "to which it is not fully entitled." Egypt, he said, stands by the side of Syria. "It will not tolerate that so much as a hair of Syria be ruffled by any aggressor."

Today...in Washington...the Air Force announced a new economy move. The latest action means the elimination of seven flying units, involving 34-hundred officers and men, who will be reassigned.

Republican Senator Knowland today announced his candidacy for governor of California in 1958. Knowland will oppose Governor Knight for the Republican nomination in the state primary next June. Knight has accused the Senate minority leader of seeking the governorship, merely as a stepping-stone to the presidency. In announcing his candidacy for governor today, Knowland said: "I have made my decision to run for this high office with no purpose

other than...if nominated and elected...to devote myself faithfully to the administration of the duties of the office."

In Miami Beach, the election of teamster union officials...scheduled for today...has been postponed for 24 hours. James Hoffa is still predicting that he will be elected president, hands down. And he told reporters today that, when elected, "We still expect to stay in the AFL-CIO." One of the three teamster officials running against Hoffa...Thomas L. Hickey of New York...has quit the race in favor of William Lee of Chicago. The other opposition candidate...Thomas Haggerty...is still in the running.

In Warsaw, police today used tear gas and clubs to break up a student demonstration. About 2-thousand students were protesting the shutting down of an outspoken anti-Stalinist paper.

The president of Tunisia said today that it is "not possible" to have friendly relations with France. He announced that the Tunisian ambassador to Paris is being recalled.

France reported today that the three-year insurrection in Algeria has cost the lives of 6-thousand, 945 civilians. Eight hundred and seventy of the civilian dead are listed as Europeans, and 6-thousand and 75 as Moslems. More than 6-thousand farms are reported destroyed.

Milwaukee tied up the World Series today, defeating the New York Yankees, 4 to 2. Both teams have now won a game apiece, and the series moves to Milwaukee, where play will be resumed on Saturday.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The President told his news conference today that the courts of the United States must be sustained, "or it is not America." All individual rights are secured by statute. Sir Walter Raleigh said...three centuries ago..."No wise man would ever inhabit a country where men have more authority than laws." Good Night and Good Luck!

Edward R. Murrow Fri., Oct. 4, 1957

This is the news:

Russia announced tonight that it has launched an earth satellite. According to the Soviet News Agency Tass, the satellite is 23 inches in diameter and weighs 83.6 kilograms, or about 180 pounds. It says the artificial moon was launched today and that it is now circling the earth at an estimated height of 560 miles. Tass says the device is equipped with a radio transmitter. The project is part of the research program of the International Geophysical Year. The United States is planning to launch a similar satellite...but, reportedly, the American launching is not due to take place until next spring.

In Miami Beach, the international teamsters union today elected James Hoffa as its new president, succeeding Dave Beck. For a direct report, we switch to Dallas Townsend in Miami.

Tape runs 2:03
Ends on cue: "--to Edw. R.
Murrow in N.Y."

Chairman McClellan of the Senate Rackets Committee calls Hoffa's election "an arrogant defiance of the AFL-CIO and the directive of its executive council to the teamsters union to clean house." The rackets committee has subpoenaed the records of the convention credentials committee and promises to find out if the delegates were chosen legally.

Secretary of Labor Mitchell predicts that the election of Hoffa "will lead to the expulsion of the teamsters from the AFL-CIO and possibly to more repressive labor legislation in the next Congress."

There has been no change in the Little Rock school integration dispute. The nine Negro students attended the central high school today, without incident. President Eisenhower is spending the week-end at his Gettysburg farm. But News Secretary Hagerty pointed out to reporters that Gettysburg is "only a few minutes" flying time from Washington.

There was new violence in Warsaw today, when a crowd marched on the headquarters of the Communist Party. As in the case of the student demonstration yesterday, police...reinforced by units of the workers militia...turned back the marchers, with tear gas and clubs. The students yesterday were protesting the shutting down of their anti-Stalinist paper. Early today, police broke up another protest meeting at the Warsaw Polytechnic School. And then, this afternoon, a crowd of several thousand persons...made up of both students and other citizens... began the march on party headquarters, shouting "Gestapo!" and the name of the paper that was suppressed. When police intervened, some of the demonstrators threw paving stones and bricks. Apparently no shots were fired, and the center of the city was cleared by late tonight, Warsaw time. Thirty students are reported under arrest, as the result of yesterday's clash. Twenty students were treated at the Marie Curie Hospital, one of them for a broken back. The United Press correspondent in Warsaw says perhaps as many as 20-thousand persons were involved in today's rioting...and that an undisclosed number of persons were injured. The United Press says that...for the first time...the cry "Down with Gomulka!" was heard.

The former vice president of Yugoslavia...Milovan Djilas...was tried today in a Yugoslav district court on charges of writing propaganda hostile to the state. The charges stemmed from Djilas' book, The New Class, in which he wrote that Communism had created its own elite social class. Djilas, who was once Tito's comrade-in-arms, already is serving a three-year sentence for previous writings critical of the Communist regime. As the proceedings opened today, Djilas said he stands by what he wrote "from the first to the last word." At that point the public... including foreign correspondents...were ordered to leave the courtroom "to protect the public interest." Tomorrow, the verdict of the five-judge court will be announced.

The Moscow radio says that Soviet Defense Minister Zhukov left for Yugoslavia today on board a Russian cruiser. Zhukov is due to arrive in Yugoslavia on Tuesday, by way of the Black Sea.

Red China's Premier Chou En-lai today joined the puppet premier of Hungary...Janos Kadar...in an attack on American policy in the Middle East. The two Communist leaders signed a communique (in Peiping) accusing "United States imperialist circles" of "openly engineering a series of subversive activities against Syria." It called this part of

a western plan "to further suppress the national liberation movements of the Asian and African countries."

In Paris, the Socialist leader...Guy Mollet...has agreed to try to form a new government. Mollet, who resigned the premiership only four months ago, is not optimistic that he will succeed.

Today, in Tunisia, Moslem workers staged a four-hour general strike against what the government calls the "aggressive activities of French forces." It charges that French troops, based in Algeria, have repeatedly violated the Tunisian frontier.

Representative Sterling Cole of New York has been elected director-general of the new international "atoms-for-peace" agency. Cole is a former chairman of the joint congressional committee on atomic energy. Election---to a four-year term---was by the agency's 23-member Board of Governors, meeting in Vienna.

The Public Health Service says that 200-thousand new cases of Asian flu were reported in the United States last week. The health service points out that the reports are incomplete...and that they include "an uhknown number of cases of other acute respiratory diseases which normally occur at this time of year."

Edward R. Murrow: October 4, 1957. 7.45 p.m.

There are two explanations for the present tough line in Soviet Foreign policy. One is that it was adopted to tide the Russians over the Hungarian crisis in the United Nations, and so is due to be changed. The other is that it reflects grave troubles within the Soviet Union, and so is more or less permanent. Secretary Dulles, who is seeing Foreign Minister Gromyko at his Washington home tomorrow, should get a good line on which explanation is the truer one.

Their meeting follows a suggestion that has been little publicized, a hint from Moscow that the disarmament talks be taken out of the United Nations and the problem settled in two-power talks. This idea was first circulated by the Soviet Ambassador in West Germany, and has been taken up by other senior Soviet diplomats. The idea agitates some of our allies, on the ground that if the two big powers come to an agreement it is bound to be at somebody else's expense. They are fearful, even if they are sure that Mr. Dulles would have to keep the NATO powers informed about the course of any two-power talks on disarmament.

There are other subjects for Mr. Dulles and Mr. Gromyko to discuss, like the Middle East. But it was over disarmament that the tough line made its re-appearance. This was on August 26, after the announcement that Russia

had the inter-continental missile. The next day the West's inspection proposals were rejected with the ugly accusation that the West is preparing a new war. Two days later the whole Western package was thrown out, and on September 1st, Pravda was calling for an end to the talks.

The tough line was followed on other subjects, on September 3rd. The Germans were told that the question of repatriating Germans from Russia was a closed subject. There followed a broadside of notes to the West denouncing its policies in the Middle East. Thereupon came perhaps the most significant step of all, a note on September 8th to the Bonn Government, saying bluntly that the re-unification of Germany had to be achieved through negotiations between the two German governments, and in no other way. Since this meant giving Communists a share of power in the proposed German Federation, it was the same as saying that re-unification was out.

This note, sent a few days before the German Election, obviously was timed for its effect on voters, and paradoxically it was designed to help Adenauer. This is true despite the fact that Soviet propaganda violently attacked him, and West German Communists were publicly ordered to vote Social Democrat, instructions that actually cost the Socialists votes. If Moscow had wanted Adenauer to fall, it would have given the Socialists hope

of uniting Germany under acceptable terms. But Moscow had decided not to let East Germany go.

One factor in this tough policy may be that the Soviet Army has more to say about affairs than at any time since the Revolution. The army had to bail out the Kremlin in Hungary, and presumably exacted as a price the power to make sure there will be no more Hungarys. The army may well believe that the withdrawal of Soviet forces from East Germany would so weaken the satellite empire as to imperil Soviet security.

But conditions other than Hungary may also help account for the tough line. The Soviet Union is suffering from serious inner strains. Industry is being de-centralized, agriculture is being pushed to extreme limits, both under high pressure. There is even worse trouble. The Palace revolt against Khrushchev very nearly succeeded, and it was only with Marshal Zhukov's help that he could banish Molotov, Malenkov, Kaganovich and Shepilov. These were not purges in the death chamber. But the country is shaking nevertheless. And that alone would discourage any tendency to loosen the hold at the top. Dictators are like anybody else in that they often talk toughest when they are most afraid of their own weakness.

Mr. Dulles will have a clearer idea tomorrow just how much weaker the men in the Kremlin really feel.

George Bryan

Word for Today

The writings of Djilas are not of the kind to please the head of any Communist state. For example...on the subject of Communist rule... he says in his book: "Laws and regulations do not have an essential importance. Regardless of laws, everyone knows that the government is in the hands of the party committees and the secret police."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, OCTOBER 4, 1957
7:45 - 8:00 PM EST

This is the news:

Russia announced tonight that it has launched an earth satellite. According to the Soviet News Agency Tass, the satellite is 23 inches in diameter and weighs 83.6 kilograms, or about 180 pounds. It says the artificial moon was l nched today and that it is now circling the earth at an estimated height of 560 miles. Tass says the device is equipped with a radio transmitter. The project is part of the research program of the International Geophysical Year. The United States is planning to launch a similar satellite...but, reportedly, the American launching is not due to take place until next spring.

In Miami Beach, the international teamsters union today elected James Hoffa as its new president, succeeding Dave Beck. For a direct report, we switch to Dallas Townsend in Miami.

TOWNSEND: The teamsters have elected James Hoffa as their next president by the top-heavy majority that every one expected. He will become acting president October 15 when Dave Beck goes on leave of absence. On the same day Hoffa goes on trial in New York on purgery and wire-tapping charges. The 44-year old mid-western teamsters leader won on the first ballot taking 1208 votes to 313 for William A. Lee, president of the Chicago Federation of Labor and 140 for Thomas Hagerty also of Chicago. Hoffa's men put on a wildly enthusiastic demonstration when the three hour roll call was completed before the result was announced. The outcome, of course, had long since been obvious, and the announcement was little more than a formality. The Hoffa steamroller was running full speed long before the convention opened and it never stopped. Hoffa made his acceptance speech in the late afternoon. The union's president elect, devoted the major part of it to the charges that have been made against

him by the McClellan committee and the AFL-CIO ethical practices committee. But this was not so much as self-defense as an aggressive hard bitten angry assault of both groups. Regarding the first, Hoffa said when a congressional committee concentrates on a personal attack or misuses its power it can be a dangerous thing for us all. As for the report of the ethical practices committee Hoffa said the AFL-CIO has accepted unproven charges without full investigation of their merits. He spoke of ambitious men who would betray principle to get a better headline. And as for the AFL-CIO warning of expulsion, Hoffa said we will do everything we can to remain in the united labor movement but if certain forces succeed in driving us out for their own selfish motives and it won't destroy the teamsters we'll go on to live and grow. Hoffa said the teamsters will never fire the first shot in the civil war in the American labor movement. Only anti-labor forces will profit from a split in the house of labor. Hoffa thus makes a new and direct challenge to AFL-CIO President, George Meany, a challenge to make good on his warning or back down. Now back to Edward R. Murrow in New York.

Chairman McClellan of the Senate Rackets Committee calls Hoffa's election "an arrogant defiance of the AFL-CIO and the directive of its executive council to the teamsters union to clean house." The rackets committee has subpoenaed the records of the convention credentials committee and promises to find out if the delegates were chosen legally.

Secretary of Labor Mitchell predicts that the election of Hoffa "will lead to the expulsion of the teamsters from the AFL-CIO and possible to more repressive labor legislation in the next Congress."

There has been no change in the Little Rock school integration dispute. The nine Negro students attended the central high school today, without incident. President Eisenhower is spending the week-end at his Gettysburg farm. But News Secretary Hagerty pointed out to reporters that Gettysburg is "only a few minutes" flying time from Washington.

There was new violence in Warsaw today, when a crowd marched on the headquarters of the Communist Party. As in the case of the student demonstration yesterday, police...reinforced by units of the workers militia...turned back the marchers with tear gas and clubs. The students yesterday were protesting the shutting down of their anti-Stalinist paper. Early today, police broke up another protest meeting at the Warsaw Polytechnic School. The other is that it reflects grave troubles within the Soviet Union, and so is more or less permanent. Secretary Dulles, who is seeing Foreign Minister Gromyko at his Washington home tomorrow, should get a good line on which explanation is the truer one.

Their meeting follows a suggestion that has been little publicized, a hint from Moscow that the disarmament talks be taken out of the United Nations and the problem settled in two-power talks. This idea was first circulated by the Soviet Ambassador in West Germany, and has been taken up by other senior Soviet diplomats. The idea agitates some of our allies, on the ground that

if the two big powers come to an agreement it is bound to be at somebody else's expense.

There are other subjects for Mr. Dulles and Mr. Gromyko to discuss, like the Middle East. But it was over disarmament that the tough line made its re-appearance. This was on August 26, after the announcement that Russia had the inter-continental missile. The next day the West's inspection proposals were rejected with the ugly accusation that the West is preparing a new war. Two days later the whole Western package was thrown out, and on September 1st, Pravda was calling for an end to the talks.

The tough line was followed on other subjects, on September 3rd. The Germans were told that the question of repatriating Germans from Russia was a closed subject. There followed a broadside of notes to the West denouncing its policies in the Middle East. Thereupon came perhaps the most significant step of all, a note on September 8th to the Bonn Government, saying bluntly that the re-unification of Germany had to be achieved through negotiations between the two German governments, and in no other way. Since this meant giving Communists a share of power in the proposed German Federation, it was the same as sahing that re-unification was out.

One factor in this tough policy may be that the Soviet Army has more to say about affairs than at any time since the Revolution. The army had to bail out the Kremlin in Hungary, and presumably exacted as a price the power to make sure there will be no more Hungarys. The army may well believe that the withdrawal of Soviet forces from East Germany would so weaken the satellite empire as to imperil Soviet security.

But conditions other than Hungary may also help account for the tough line. The Soviet Union is suffering from serious inner strains. Industry is being de-centralized, agriculture is being pushed to extreme limits, both under high pressure. There is even worse trouble. The Palace revolt against Khrushchev very nearly succeeded, and it was only with Marshal Zhukov's help

that he could banish Molotov, Malenkov, Kaganovich and Shepilov. These were not purges in the death chamber. But the country is shaking nevertheless. And that alone would discourage any tendency to loosen the hold at the top. Dictators are like anybody else in that they often talk toughest when they are most afraid of their own weakness.

Mr. Dulles will have a clearer idea tomorrow just how much weaker the men in the Kremlin really feel.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The writings of Djilas are not of the kind to please the head of any Communist state. For example...on the subject of Communist rule...he says in his book: "Laws and regulations do not have an essential importance. Regardless of laws, everyone knows that the government is in the hands of the party committees and the secret police."

Goodnight and good luck!

Edward R. Murrow Mon., Oct. 7, 1957

This is the news:

The Moscow radio says that the artificial earth satellite launched by Russia is not traveling alone. Revolving around the world with it...at approximately the same altitude...is the rocket carrier used in the last stage of its propulsion into outer space. Moscow says the distance between the "rocket carrier" and the satellite is about 625 miles...and that as time goes on, the distance between them will increase. The artificial satellite... or "Sputnik", as the Russians call it...has now travelled more than a million miles at a speed of about 18-thousand miles an hour. There were reports yesterday that perhaps---due to the misplacing of a decimal point---the satellite weighs only 18 and four-tenths pounds, instead of the 184 pounds as first announced. However, Soviet scientists...

visiting in Washington...are quoted as confirming that it weighs 184 pounds.

Sightings of the man-made moon have now been reported in Europe, Australia and Alaska. U.S. Navy scientists say their "fix" on the satellite is now accurate enough so that its orbit can be predicted up to a week in the future. American scientists and the Moscow radio have both announced timetables, setting forth when the satellite will pass over a given point.

~~United States astronomers hope to get photographs of the "Sputnik" within eight or nine days. Until then, the satellite will be passing overhe a when it is either too dark or too light. There is also the likelihood that, at that time, it will be visible to the naked eye.~~

~~The British Broadcasting Corporation reported for a time today that the radio signal from the "Sputnik" seemed to be weakening, but it now reports normal reception.~~

In Moscow, a member of the Soviet inter-planetary commission says all data on the satellite will be made available to other countries. He says this proves Russia's peaceful intentions. But the Communist newspaper Pravda says the earth satellite crossing America seven times a day should teach "American ruling circles" the need for a new policy...the necessity for peaceful co-existence and ending the arms race.

The Chinese Communist radio says the successful launching of the satellite "proves" the superiority of the socialist system.

Prime Minister Nehru of India...who is visiting Japan...says that this development "forces people to realize that present-day politics are out of date."

President Eisenhower returned to Washington this afternoon, after a long week-end at his Gettysburg farm. News Secretary Hagerty says the President has been kept informed of developments. But there is no plan, he says, to give Mr. Eisenhower a special briefing until he attends the regular meeting of the National Security Council on Thursday.

Democratic Senator Smathers today joined other members of Congress in demanding an investigation of American failure to keep pace with Russia in the rocket field. Smathers told Chairman Russell of the Senate Armed Services Committee that such an inquiry should be conducted "in an atmosphere shorn of complacency and hysteria, but within the immediate future."

Russia announces...that in addition to the "Sputnik"...it has successfully tested "a powerful hydrogen device of new design." The announcement says, "In the interest of the safety of the population and of those taking part in the test, the explosion was carried out at a great altitude." The test was conducted, it says, "in accordance with the plan of experimental work on the creation and improvement of atom and hydrogen arms in the U.S.S.R."

~~In Washington, the Atomic Energy Commission confirms that yesterday the Russians set off a nuclear explosion of "substantial size". The Russian announcement is unusual in that Moscow generally does not announce a test so soon after it is conducted, if, indeed, it announces it at all.~~

Today...at the Nevada proving grounds...the United States fired the last "shot" in its 1957 series of atomic tests. The nuclear device was detonated from a balloon, suspended 500 feet above the desert floor. That is to say that its force was less than that of 20-thousand tons of T.N.T. Altogether in the 1957 series there were 24 tests.

Republican Representative Cole of New York has resigned from Congress as of December first. This will enable Cole to devote himself...fulltime... to his new duties as director-general of the international "atoms-for-peace" agency. His successor in Congress will be chosen in a special election, probably early next year.

Israel today appealed to the United States and Russia to end what it called the "deadly spiral" of arms shipments to the Arab states. The Israeli foreign minister...Mrs. Golda Meir...asked the United Nations General Assembly to use its influence "not to deepen the abyss of Arab-Israeli misunderstanding, but to bridge it." Syria's foreign minister...Salah Bitar...told the Assembly that his country had bought Soviet arms for self-defense against Israel. He accused the United States of using economic, political and military pressure against Syria, to try to bring it under American domination.

~~In Warsaw, police broke up a street demonstration for the fifth consecutive night. Two or three flowerstands outside the "Palace of Culture" were set on fire. But the disturbance, compared to rioting on previous nights, was on a small scale.~~

Governor Faubus charged today that federal troops in the central high school in Little Rock had followed girl students to their dressing room. He said parents had made complaints to that effect. Faubus made the charge in a letter to Major General Edwin Walker, commander of the Army detail in Little Rock. He addressed the letter to "The

→

Commander of Occupation Forces." Tonight, White House News Secretary Hagerty called the accusation "completely untrue and completely vulgar." He said General Walker had returned the letter unopened.

The United States Supreme Court reconvened today after its summer recess. The first session of the new term was confined to formalities. Forty-nine attorneys were admitted to practice before the high court.

Milwaukee won it today
1-0- Play Resumes in N.Y. Wednesday

Edward R. Murrow: October 7, 1957. 7 .45 p.m.

It is to be hoped that the explosion which flung the Russian satellite into outer space also shattered a myth. That was the belief that scientific achievement is not possible under a despotic form of government. Most of us have been taught to believe that scientists, if they are to be productive, must be free to follow the truth, wherever it may lead them. We failed to recognize that a totalitarian state can establish its priorities, define its objectives, allocate its money, deny its people automobiles, television sets and all kinds of comforting gadgets, in order to achieve a national goal. The Russians have done this with the inter-continental ballistic missile, and now with the earth satellite. Their emphasis has been on the development of weapons rather than the creation of comfort. They have mobilized their scientific skills in the service of the state. And they have won a very considerable technical and psychological victory.

We in this country have been proud of our scientific achievement. our "know how" We have brushed aside the fact that the original work in nuclear physics was done more in British and German laboratories than in our own - that our final success was in considerable measure due to the creative work of scientists

from abroad. The atom bomb wasn't part of the cargo of the Mayflower. It was a co-operative international venture.

We should have learned from the Nazis that an unfree science can be productive. Their scientists came within months of winning the war for them. Had their jet fighters, their V-Is and V-2s been operational six months earlier, the outcome of the war might have been altered. The Germans were consistently ahead of us in the field of rockets and jet propulsion. General Eisenhower wrote in "Crusade for Europe", "It seemed likely that if the German had succeeded in perfecting and using these new weapons six months earlier than he did, our invasion of Europe would have proved exceedingly difficult, perhaps impossible. I feel sure that if he had succeeded in using these weapons over a six months' period, and particularly if he had made the Portsmouth-Southampton area one of the principal targets, 'Overlord' - (the invasion of Europe) might have been written off." So even the late war gave us no reason for complacency as to what a captive science can do. If the Nazis had had their extra six months, or a year, and had won the war, the freedom or lack of freedom of science would have had nothing to do with it.

Now the Russians have carried the rocket and jet propulsion to their logical conclusion. They have made both the A-bomb and the H-bomb. They

have proved that they can turn out as perfect instruments of destruction as our own, and in some cases do it quicker. They are ahead of us in ballistic missiles. They are flying their satellite. The White House, in the person of Mr. Haggerty, may not be surprised or impressed, but the rest of the world certainly is.

I am not suggesting that our freedom is not our strength. We have the freedom, and the power to make ourselves invincible by our conscious effort and by adequate sacrifices. This is surely a better way than the Russian way, wherein a few men at the top can deprive a "herded" nation of freedom, decent living standards and the dignity of the individual, in order that all effort can go into military and industrial power. But in recent years we have put our security and our survival second to our desire for luxuries and gadgets - a sound economy is no substitute for a solid defense. There is no reason to think that we are less capable than the Russians when it comes to making weapons. We cannot and would not bend all of our scientific endeavor to the will of the state and for purposes of defense, unless it be done by persuasion, by leadership which the majority believes to be in the interests of the nation. The contest is not between scientists free and non-free, but rather between political capabilities. ~~XXXX~~ Under our

system, we must be persuaded, our representatives must vote the money, the scientists must be recruited, the objective defined, and criticism must be permitted. The citizen and his representatives must agree to whatever sacrifices are required. (So far we haven't been asked to make very many.) There are men high in the Defense Establishment who contend that we are busily engaged in turning out weapons that will be obsolete, before they are operational. We have failed to effectively pool the scientific talents of our Allies.

But The real question is not the relative capabilities of free and non-free scientists in the matter of making weapons of destruction. It is whether we, as a free people, care more for our own security, than the dictators care for theirs. It rather looks as though the price for that security may be rather higher than has been advertised.

Word for Today

There has been a tendency to believe that because Russia [redacted] is a totalitarian state, it cannot measure up to ~~surpass~~ the scientific achievement of the United States. This is [redacted] dangerous fallacy. St. Paul expressed it well in one of his letters of the New Testament when he said, "Let him that thinketh he standeth take heed lest he fall."

Goodnight and good luck!

Edward R. Murrow Tues., Oct. 8, 1957

This is the news:

Secretary of State Dulles said today that the United States is willing to discuss international control of outer space apart from any general disarmament program. Soviet Party Boss Khrushchev proposed in an interview with James Reston of the New York Times that space satellites and missiles be put under international control, as part of a general agreement between Russia and the United States. Dulles appeared to rule out the idea of a two-power agreement. However, in contrast to what a State Department spokesman told reporters earlier in the day, he said the United States is willing to consider an international satellite and missile agreement separate from the rest of the disarmament package. He said

—)

the American position will be set forth tomorrow at the United Nations. (I should like to discuss the Khrushchev interview further in a few minutes).

Krishna Menon of India told the United Nations today that it should not "throw away" any opportunity to control outer space missiles. He called on the United States, Britain and Russia to announce their willingness to suspend nuclear tests.

The stream of radio signals from Russia's artificial satellite may soon stop. Moscow radio said today...in a special broadcast...that batteries inside the satellite were designed to operate for "only a few days." The broadcast said that after the batteries go dead, "Sputnik" will be tracked visually and by radar. Western monitors have ~~detected a faltering of the satellite signal, as though it were encountering transmission difficulty.~~ Not heard the Satelite Signal For several hours The Moscow broadcast said, "The task posed by the problem of launching an artificial satellite of the earth has been completed." Early today, Russia announced that signals from the man-made moon had revealed "changes in the absolute intensity of the energy of the electro-magnetic pole." It said these changes...apparently involving

the earth's magnetic field...were observed by Russian scientists in the Antarctic. According to the announcement, other countries with expeditions in the south polar region were informed of when the satellite would be overhead. Russia said it did this at the request of scientists of other countries.

The "Sputnik" will make its next pass over the United States late tonight. At 6:30 tomorrow morning, Eastern Daylight Time, it will be making still another pass. And this time the Harvard Observatory will try to get an actual photograph.

President Eisenhower today received a scientific briefing on the Russian satellite and on American plans for a similar launching in outer space. Only yesterday, the White House said Mr. Eisenhower would wait to be briefed until the regular National Security Council meeting on Thursday. The President will hold a news conference tomorrow.

Secretary of Defense Wilson said today that he is "not alarmed" by Russia's break-through in the satellite field. Wilson, who resigns tomorrow, talked to reporters after making a farewell call on the President. He said the Russians had performed "a nice scientific trick" but that he

still believes the United States is ahead of Russia in over-all defense capabilities. He does not think the Russians have an operational inter-continental ballistic missile, despite their recent successful test. A reporter asked whether...as a result of "Sputnik"...the American satellite program will get "a bigger push." Wilson said the program is "getting quite a push now." He conceded more can be done, but he questioned whether American taxpayers would agree to pay the cost.

A Navy officer...Captain H.L. Miller...said today it is "known" that Russia "possesses" the intermediate range ballistic missile. Captain Miller is attached to the office of the chief of naval operations. He said the Russian I.R.B.M. "seriously prejudices" any American base located within 15-hundred miles of Soviet launching sites.

The Senate preparedness subcommittee today began a preliminary investigation of the United States missile program. The subcommittee will decide...on the basis of its findings...whether a full-scale inquiry is warranted. Democratic Senator Symington of Missouri objects. He says the issue is of "such grave importance" that the full armed services committee should investigate at once.

~~Soviet Defense Minister~~ Zhukov ~~arrived in Yugoslavia today for~~ an eight-day visit. ~~He called...on his arrival...for "firm, unfaltering friendship" between the two Communist states.~~ Countries -

Syria told the United Nations today that Turkey is threatening the peace of the Middle East. Syria ~~charge~~ made its complaint in a letter to Secretary-General Hammarskjold...which accused Turkey of massing its troops on the Syrian frontier. The letter also spoke of "repeated provocative acts."

Lebanon told the General Assembly today that Communist penetration of the Middle East has been "serious". The foreign minister of Lebanon, Charles Malik, said that in the struggle against totalitarianism, his country ranges itself "unreservedly" on the side of the free world. But he warned that in any conflict between the Arab world and the West, involving the "legitimate rights" of Arabs, Lebabon will range itself on the side of the Arabs. He appealed to the West to help solve the Arab refugee problem. The Arab-Israeli dispute, he said, is "at the heart" of the trouble in the Middle East.

~~In Little Rock, the Municipal Court has postponed hearings in a number of criminal cases...growing out of the disorders last month at central high~~

school. Municipal Judge Harry Robinson ~~said, "I think~~ it is wise ~~to~~ pass these ~~cases until this~~ thing cools off." The charges ranged from resisting arrest ~~to disturbing the~~ peace. There were no disorders in Little Rock ~~today.~~

[redacted]

Here in New York, the ~~[illegible]~~ confessed Russian spy...Jack Soble...was sentenced today ~~in~~ to seven years in prison.

In baseball, the Brooklyn Dodgers today announced officially that they are moving to Los Angeles. And the Milwaukee Braves named Bob Buhl to pitch tomorrow in the sixth game of the World Series. The Yankee pitcher will be Bob ~~Turkey.~~ Turley. The Braves lead in the series, 3 to 2.

Edward R. Murrow: October 8, 1957. 7.45 p.m.

Two ideas seem to be foremost in the mind of Nikita Krushchev, to judge from his interview with James Reston, the Washington correspondent of the New York Times now in Moscow. One is that the Soviet Union has become as powerful as the United States, and that all bargaining with her henceforth must be as an equal. Insistence on this is an admission that it has only recently become true. Consequently the Soviet leader is saying that a new era has opened in which the past character of negotiations has to change.

The other idea is that anything and everything - including control of earth satellites - can be settled amicably between the Soviet Union and the United States, if they only agree on the question of co-existence. Without actually saying so, Krushchev is promoting the thesis that direct negotiations between the two strongest powers, is what the world needs and the Soviet Union wants.

~~One can put~~ This could be put ~~in~~ another way. Ever since the Korean war led to the formation of the Western Alliance, Soviet policy has aimed at undoing that mistake and breaking up the alliance. Now Krushchev thinks the Soviet Union is strong enough to bring this about.

He did not define what agreement on co-existence includes. He may have more to say about this in the second and third instalments of the interview

still to come. But what he said had a familiar ring. At the close of the war, the Kremlin believed in a peace dictated by the great powers, and in that time co-existence meant mutual recognition of spheres of influence. Churchill at one time fell in with Stalin to divide spheres of influence in part of the Balkans. Washington declined to go along. It saw that the recognition of a Soviet sphere meant abandoning the countries within that sphere to whatever fate the Kremlin dictatorship imposed on them. A two-power settlement based on spheres of influence would shut us off from openly encouraging freedom in all countries. And that may well be just what the Kremlin wants ~~would like to have it do.~~

Khrushchev complained to Mr. Reston that American policy is based on the expectation that domestic revolt may upset the System in the Soviet Union and Red China. We have to agree, he contended, that the Soviet Union exists as a socialist state, and China exists as a socialist state, and others exist as socialist states. (Socialist, as he used the word, means communist). He declared with considerable fire, Mr. Reston records, that it is no good to base a policy on the theory that some internal upheaval is going to destroy those states. He went on to argue that the Soviet Union recognizes that the United States, Britain, France and others, are capitalist states, and is ready

for peaceful competition with them in all fields, if both sides approach each other as equals. This is an odd argument for a Marxist to use after the years in which Marxists have preached the violent overthrow of capitalism, and have organized communist parties within capitalist countries to bring it about. But Khrushchev would not mind sounding odd if he could get a two-power agreement, for he would be sure that a two-power agreement would end the Western alliance.

One feature of the interview is of special interest just now. It is the absence of anything feverish in what Khrushchev said about the earth satellite. He didn't even list it in his written reply to questions about weapons. ~~He didn't go to see it launched. He did talk by telephone with the man in charge of firing it, they congratulated each other and went to bed.~~

Furthermore, Khrushchev did not imply to Mr. Reston that the Soviet Union is ahead in the development of weapons. With unexpected objectivity he said that the Soviet Union might be ahead on one thing today, but the United States would have it tomorrow and vice versa. It is all one and the same science, he added, and called the fact that both sides are in competition harmful to the world. The Soviet Union, he declared, does not want it, it wants peace.

Khrushchev probably was not consciously playing down the satellite. He probably did not realize how much it has affected this country, so much so that it is dividing interest here with a normal monopoly of this moment, the World Series. /But Khrushchev wouldn't know what that meant./ For Mr. Reston asked him about baseball, and if he had any favorite in the Series.

~~And with these words Khrushchev all of a sudden sounded a long way off.~~

He said that he didn't, because he had never heard of the World Series. And with these words Khrushchev all of a sudden sounded a long way off.

George Bryan -

Word for Today

Nikita Khrushchev confesses ignorance of the World Series. Nevertheless, in his satellite program, the Russian would appear (whether he knows it or not) to share the view of John W. Raper, who said: "Hit the ball over the fence, and you can take your time going around the bases." "Sputnik" cannot be dismissed simply as a pop fly.

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, OCTOBER 8, 1957
7:45 - 8:00 PM EST

This is the news:

Secretary of State Dulles said today that the United States is willing to discuss international control of outer space apart from any general disarmament program. Soviet Party Boss Khrushchev proposed in an interview with James Reston of the New York Times that space satellites and missiles be put under international control, as part of a general agreement between Russia and the United States. He said that he didn't, because he had never heard of the World Series. And with these words Khrushchev all of a sudden sounded a long way off.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

BRYAN: Nikita Khrushchev confesses ignorance of the World Series. Nevertheless, in his satellite program, the Russian would appear (whether he knows it or not) to share the view of John W. Raper, who said: "Hit the ball over the fence and you can take your time going around the bases." "Sputnik" cannot be dismissed simply as a pop fly.

Goodnight and good luck!

This is the news:

President Eisenhower told his news conference today that the United States plans to send up the first of several small "test satellites" in December. He said a "fully instrumented" satellite vehicle will then be launched by the United States in March. Mr. Eisenhower said, in a prepared statement, that the American satellite program has never been conducted as a race with other countries but as part of the scientific work of the International Geophysical Year. He said: "I consider our country's satellite program well designed and properly scheduled to achieve the scientific purposes for which it was initiated. We are, therefore, carrying the program forward in keeping with our arrangements with

→

the international scientific community." Rate of progress in the satellite project, he said, cannot be taken as an index of our progress in ballistic missiles. He explained that rocket development for the satellite project was deliberately separated from the ballistic missile program. This was done, he said, for two reasons: To accent the scientific purposes of the satellite and to avoid interference with the top-priority work on missiles. Mr. Eisenhower said that merging of the two programs would have given the United States a space satellite before now "but to the detriment of scientific goals and military progress." He congratulated Russian scientists on their success.

The President said...in answer to reporters' questions...that he is not worried "one iota" about any danger from the Russian satellite now circling the earth. He noted, however, that the fact ~~that~~ the Russians were able to launch ~~[illegible]~~ the satellite shows that they have in their possession rockets with "a very powerful thrust." ~~Mr. Eisenhower said that by being first, Russia may have gained a propaganda advantage. But he doubted that it had achieved any scientific advantage over the United States. He does not think it was a mistake not to give top priority to the satellite program.~~

A reporter wanted to know if missile development had been retarded by inter-service rivalry and duplication. Mr. Eisenhower said he wished more had been accomplished---"but I don't know what we could have done better."

The United States is spending more than 5-billion dollars on missiles, and that, he said, is not "a weak and pusillanimous position."

The President was asked about the charge that the United States last summer rebuffed Soviet efforts to arrange a meeting in Washington between Marshal Zhukov and American leaders. The charge was made by Soviet Party Boss Khrushchev in an interview with James Reston of the New York Times. Russia made the overture after Mr. Eisenhower had told a news conference that such a meeting might be helpful. The President said today that no rebuff was intended. No invitation was extended to Zhukov, he said, on the advice of Secretary of State Dulles. He quoted Dulles as saying: "We have got to beware of bi-lateral talks when you have allies and comrades in very great ventures like NATO." Mr. Eisenhower pointed out that the disarmament conference was going on in London at that time, and that a meeting with Zhukov might have been given "a bad interpretation". On the subject of control of "space weapons",

→

the President said he favors a "study" of the problem...with Russia... "if our associates agree." He appeared to rule out any prospect of direct negotiations between the United States and Russia.

The British Foreign Office today issued a statement supporting this position.

Neil McElroy today succeeded Charles Wilson as secretary of defense. McElroy told reporters after the swearing-in ceremony that a speed-up of the United States missiles program is being seriously considered. He would seek, he said, to eliminate bottlenecks.

Moscow radio says that the Russian satellite is gradually picking up speed---that it is making the swing around the earth in three seconds less time every 24 hours. The radio signal from "Sputnik" (that faded out last night) was heard again today, loud and clear. And American scientists are discounting reports that the satellite has lost altitude by any appreciable amount. The Soviet newspaper Pravda confirms that "Sputnik" has been transmitting information by code. The ~~information concerns conditions in outer space, but Pravda does not repeat what "Sputnik" has to say about [illegible] conditions.~~

In Little Rock today, Governor Faubus told a news conference that continued operation of central high school under military guard is "impracticable, unworkable, and un-American." He said it will take "time and patience" for the people of Little Rock to accept integration. And he suggested that as part of a "cooling-off period", it might be necessary to withdraw Negro students from the school. President Eisenhower said today...at his news conference...that he hopes federal troops can be withdrawn soon. That can be done, he said, when local officials say it is safe to do so.

At Fort Monroe, Virginia, the Continental Army Command tonight announced plans for de-activation of Army reserve units whose strength and standards are below par. All reserve units were ordered to undergo "continual qualitative screening."

And, of course, the world series was tied up today at three games apiece when the New York Yankees defeated the Milwaukee Braves, 3 to 2. Tomorrow's game in Yankee Stadium will decide.

Edward R. Murrow: October 9, 1957. 7.45 p.m.

Judging from the reaction that the Soviet earth satellite is producing in the United States, the Russians have done the country a unique service in launching it. "Sputnik" may be the best alarm clock that ever waked a country up.

President Eisenhower in his news conference today seemed to be administering a tranquilizer, as though the waking up might be too violent or have runaway political consequences. But the tone of most public comment has been sober, not hysterical.

The New York Herald Tribune, one of the leading Administration organs in the East, remarks that this is not the time for panic but to think, and it does not mean to think up excuses. It points out that Congressmen already are hunting the wrong culprits in talking of an investigation as to why we fell behind in missiles. The question to ask, it says, is why we are behind in education. It recalls the warning given last February by Edward Teller, the physicist of the H-bomb, who said: "Within ten years, the Soviets will have the best scientists in the world. I am not saying," he went on, "that this will happen unless we do this or that. I am simply saying it is going to happen. The time has come to talk about the United States re-capturing the world lead in science, not about how to keep that lead."

The Herald-Tribune contends that these are the things we now have to do: Launch a huge program of basic research and development; break down the senseless walls of super-secrecy that keep nothing from the Soviets but prevent our own scientists from duplicating each other's work and cross-fertilizing each other's ideas; end the disgraceful inter-service bickerings over scientific development by creating a Department of Research and Development in the cabinet, and putting a competent scientist at the head of it; and finally, tackle the whole national educational crisis with all our resources, ingenuity and serious attention."

The Louisville Courier-Journal writes: "The lesson of the Red satellite is that the Soviets probably can do anything we can do scientifically, do it faster, and quite possibly do it better. In acknowledging <u>that</u> challenge and meeting it, lies the whole hope of our future."

The Washington Post finds that the United States is trailing behind seriously in the missile race, and realizes that one reason is because the dictatorial Soviet Government can devote immense resources to research and experimentation, whereas we are inflation-conscious and tax-conscious. But it refuses to believe that the American people would deprive their government of whatever funds may be necessary to keep up with, or ahead of, the Russians.

"It would be ironic indeed" it writes, "if the United States, which ordinarily finds so much challenge in new worlds to conquer, should be so preoccupied with routine problems and current prosperity that it should lose leadership in the great conquest for space now opening."

The New Orleans Item puts the situation tersely: "The United States has been beaten in the race to outer space" it says. "The Red A-bomb increased our fears; the Russian satellite hurts our pride. And it may well hurt our pocket-books. It appears likely that Congress and the Administration will take a new look at the United States defense strategy and spending in the light of the Red moon."

The main surprise in this country does not seem to have been that the Russians made an earth satellite first, but that they were able to make it at all. Then it came as a surprise that theirs is so much heavier than the one we plan, for that means that Soviet power to deliver the intercontinental ballistic missile no longer can be questioned. President Eisenhower's prepared statement as to our plans for an earth satellite is convincing enough on the point that we were not in a race with the Soviets to launch a satellite first. But establishing this point has not made "Sputnik" any less formidable as a demonstration of Soviet capabilities in science and production. And it has

not altered its message to the effect that the Soviet Union, as Khrushchev said, no longer is a nation of peasants.

The London Telegraph, however, seized upon this remark of Khrushchev today to make a pertinent observation. "From peasants to spacemen without ever tasting the joys this earth can offer -- that seems to be the Fate of the Russian people. Let us have no patience," the Telegraph continued, "with those who conclude from the Soviet Union's recent successes, that communism is at last proving its merits. Quite the opposite is the truth. For a regime that bases its reason for existence on improving the condition of the working class, a space rocket is a spectacular irrelevance."

Word for Today

In considering American progress in the field of satellites and missiles, one may take comfort in the Seventeenth Century observation of George Herbert, who said: "One of these days is better than none of these days." But the English poet and pamphleteer, Francis Quarles, also remarked in the same period of history, "One today is worth [redacted] two tomorrows."

Goodnight and good luck!

This is the news:

The United States today asked Russia to join other countries in studying the missile problem. The invitation was made by Ambassador Lodge in the United Nations Political Committee. Lodge said, "We seek agreement on ways to control the latest creation of science---the outer space weapon. This device can serve the purpose of peace, or it can blow us to bits." He then made specific proposals, which Soviet Foreign Minister Gromyko...in a speech that followed...largely ignored. (I should like to discuss this debate further in a few minutes).

In Washington. President Eisenhower presided at a meeting of the National Security Council that lasted for two hours and five minutes.

The Atomic Energy Commission in Washington reports that Russia conducted another nuclear test today---this time, north of the Arctic circle. The A.E.C. says it was "a small explosion."

~~Among those present...besides Mr. Eisenhower...were: Dr. Alan T. Waterman, director of the National Science Foundation; William A. Holaday, special assistant to the [redacted] secretary of defense for missiles; Dr. John P. Hagen, director of the Vanguard Project, and Dr. Detlev W. Bronk, president of the National Academy of Sciences. Regular Security Council members were also in attendance, [redacted]~~ The number of persons present was ~~[redacted] thus brought to~~ 25...making it one of the largest groups ever assembled for a National Security Council meeting. ~~[redacted]~~ Details of the meeting were not divulged.

Democratic Senator Jackson, of Washington State, ~~[redacted]~~ today called Russia's success in launching the first earth satellite "a symbol of enormous American complacency and enormous Soviet military and scientific progress." He appealed to President Eisenhower and Neil McElroy, the new defense secretary, to take personal charge of speeding up ~~[redacted]~~ the United States ballistic missile program. The present ceiling on defense spending, he said, ~~[redacted]~~ should be removed. Jackson is a member of the Senate Armed Services Committee.

The Russian satellite continues its orbit, on schedule. The third-stage

rocket...trailing "Sputnik"...has been sighted officially for the first time in the United States. The observation was made by a moonwatch team in New Haven, Connecticut, through a field telescope. Observers said the rocket, crossing the early morning sky, looked like a star.

Residents of Denver today reported seeing "a huge fireball" pass over the city, and disappear in the West. The pilot of a Navy transport plane... flying in the area...said he banked sharply so as not to be hit. Scientists say the fireball "undoubtedly was a meteorite." It is reported to have landed in Utah, near the Colorado state line.

The British defense minister...Duncan Sandys...said today that Britain is making hydrogen bombs, "and ballistic missiles to carry them." The United States and Britain, he said, are "working together intensively" on the problem of defense against the threat posed by Soviet ballistic missiles. He also expressed regret that American law had blocked the exchange of nuclear information between America and Britain, and forced duplication of effort. The defense minister spoke at the Conservative Party conference at Brighton.

The United States today abolished the requirement that Russians visiting this country be fingerprinted.

The New York Stock Market today suffered its worst decline in two years. Losses of one to nine dollars were registered in active trading....with a total "paper loss" for the day, of nearly 5-billion dollars. Prices sank to their lowest average since April, 1955.

President Eisenhower today apologized to the finance minister of Ghana for the treatment accorded him by a Delaware restaurant. The visiting official was refused service by a waitress who said, "Colored people are not allowed to eat here." Today, he had breakfast at the White House at the invitation of the President.

There were no new developments today at Little Rock. Nine Negro students attended the central high school as usual without incident.

The government reports that 700-thousand fewer persons were employed in September than in August. [redacted].

Secretary of Welfare Folsom reported today on the success of the Salk vaccine. In the past two years, he said, paralytic polio in the United States has been reduced by 80 percent. Folsom urged persons under 40...who have received no vaccine...to take the recommended three "shots" within the next year. He said if this is done, it may be possible to give paralytic polio "a knockout blow".

The Public Health Service estimates that a million, 77-thousand Americans have been stricken with influenza since the first outbreak of

→

Asian flu in August. It says 350-thousand new cases were reported last week.

Chairman McClellan of the Senate Rackets Committee says that a preliminary examination of teamster convention records "reveals a shocking situation." McClellan calls the records submitted by the union "so incomplete as to be almost useless." "Nevertheless," he says, "we have found several instances where ~~Dave~~ Mr. Dave Beck instructed the credentials committee to disregard the union ~~convention."~~ constitution." McClellan charges that without this "dictatorial action", James Hoffa could not have been elected president. He says the Senate will continue its investigation but that "this is also a matter for the courts."

In baseball, the Milwaukee Braves won their first World Series, defeating the New York Yankees 5 to nothing, in the seventh and final game. For the Braves' pitcher, Lew Burdette, it was the second shut-out of the Series...a feat unduplicated in 52 years. ~~And it was also his third win.~~ (The Yankees went through five pitchers today). ~~Casey Stengel says,~~ "Burdette held us better for three games than any ~~pitcher I can remember."~~ Milwaukee ~~manager~~ Fred Haney says, "If ~~Lew could cook, I'd marry him!~~"

Edward R. Murrow: October 10, 1957. 7.45 p.m.

The United Nations was given a show-case demonstration today of what it means to the Russians to negotiate from strength. Foreign Minister Gromyko, speaking on disarmament, rang out a clear "NO" to each and all the disarmament proposals presented by the western members of the disarmament committee. He did this following a speech by Ambassador Lodge, which was conciliatory in tone and included a minor concession toward the Russian demand for immediate suspension of nuclear tests. Mr. Lodge offered to start the entire first phase of disarmament, which would include suspension of the tests right away, on the understanding that a control system is to be in effect by the end of the year. Mr. Lodge also offered to separate space missiles and space satellites from the rest of the disarmament problem for a study to commence at once.

But Mr. Gromyko did not refer to these offers. He read a grim speech of ninety minutes duration that listeners found to be the bluntest he has made in recent years. The United States Government, he said, "has no intention of facilitating an agreement on disarmament, and apparently wants to continue to prevent one being reached. It is time" he declared, "to put trickery aside in the talks and to stop making a good face when the game is

lost".

An explanation of his accusations would be hard to find in the records of the western conduct of the disarmament talks. But it is not hard to find in the recent utterances of Khrushchev and other Soviet leaders. The Russians insist on being treated as equals by the United States, and they will only negotiate henceforth from strength. This new status of equality was reached with the inter-continental ballistic missile. As soon as that was launched, the Russians threw out the western proposals. Now the West is having to make a fresh start with a changed contestant.

Mr. Lodge's offer of an immediate study of space missiles took into account both the inter-continental ballistic missile and "Sputnik" and its successors. He called for international control of all space weapons and man-made satellites, through broad negotiations and without waiting for the conclusion of negotiations of other proposals. Washington, he said, is willing to join in this initiative at once, and do so, as he put it, "without political conditions whatever and without demanding that a single political condition be met."

Such a separate study of missiles, however, does not simplify the problem. The Russians have refused to accept open skies inspection over their entire

territory. This kind of inspection would rely, for success, on the identification and photographing of airfields. But launching grounds for missiles would be harder to identify. There is no reason to expect the Russians to allow foreign inspectors a chance to spot them, or to keep them under surveillance. Gromyko seems to have slammed the door shut on any such idea today when he damned the original Eisenhower aerial inspection plan as nothing but espionage.

In place of a twelve or twenty-four month suspension of nuclear tests, Mr. Gromyko demanded unconditional prohibition of atomic and hydrogen weapons of all kinds, including air bombs and rockets of any range fitted with atomic or hydrogen warheads. And he seemed to be warning the West to accept these terms or face the fullest scope of atomic destruction. "The more weapons of mass destruction are at the disposal of the states" he declared, "the greater the danger that a spark might light a conflagration and the greater the amount of weapons which will be thrown into the steaming cauldron of a new war."

The extent of Ambassador Lodge's concession on the immediate suspension of nuclear tests was not great. In London the West had already offered a ten-month suspension. Today it made it twelve months, pending the introduction of an effective control system. That is,if inspection was not

adequate within the year, the tests could be resumed. If it did become operative, the suspension would continue for a second year. But even for the immediate suspension, Mr. Lodge laid down the condition that the Soviet Union must accept inspection in principle. And it would have to do that first.

Apparently the Russians think that to accept such a proposal would be bargaining from weakness. And that, Mr. Gromyko made resoundingly clear, belongs to the past.

James Reston

Word for Today

The threat posed by Man's proficiency in developing more deadly and efficient weapons is no illusion. In the words of Grover Cleveland, "It is a condition that confronts us, not a theory." And it is a condition reason demands must be met. Benjamin Franklin said, "Hear Reason, or she'll make you feel her."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, OCTOBER 10, 1957
7:45 - 8:00 PM EST

This is the news:

The United States today asked Russia to join other countries in studying the missile problem. The invitation was made by Ambassador Lodge in the United Nations Political Committee. Lodge said, "We seek agreement on ways to control the latest creation of science - the outer space weapon. This device can serve the purpose of peace, or it can blow us to bits." He then made specific proposals, which Soviet Foreign Minister Gromyko...in a speech that followed...largely ignored. (I should like to disucss this debate further in a few minutes.).

In Washington, President Eisenhower presided at a meeting of the National Security Council that lasted for two hours and five minutes.

The Atomic Energy Commission in Washington reports that Russia conducted another nuclear test today, this time, north of the Arctic circle. The A.E.C. says it was "a small explosion." The number of persons present was 25...making it one of the largest groups ever assembled for a National Security Council meeting. Details of the meeting were not divulged.

Democratic Senator Jackson, of Washington State, today called Russia's success in launching the first earth satellite "a symbol of enormous American complacency and enormous Soviet military and scientific progress." He appealed to President Eisenhower and Neil McElroy, the new defense secretary, to take personal charge of speeding up the United States ballistic missile program. The present ceiling on defense spending, he said, should be removed. Jackson is a member of the Senate Armed Services Committee.

The Russian satellite continues its orbit, on schedule. The third-stage rocket...trailing "Sputnik"...has been sighted officially for the first time in the United States. The observation was made by a moonwatch team

in New Haven, Connecticut, through a field telescope. Observers said the rocket crossing the early morning sky looked like a star.

Residents of Denver today reported seeing "a huge fireball" pass over the city and disappear in the West. The pilot of a Navy transport plane... flying in the area...said he banked sharply so as not to be hit. Scientists say the fireball "undoubtedly was a meteorite." It is reported to have landed in Utah, near the Colorado state line.

The British defense minister...Duncan Sandys...said today that Britain is making hydrogen bombs "and ballistic missiles to carry them." The United States and Brita in, he said, are "working together intensively" on the problem of defense against the threat posed by Soviet ballistic missiles. The extent of Ambassaodr Lodge's concession on the immediate suspension of nuclear tests was not great. In London the West had already offered a ten-month suspension. Today it made it twelve months, pending the introduction of an effective control system. That is, if inspection was was not adequate within the year, the tests could be resumed. If it did become operative, the suspension would continue for a second year. But even for the immediate suspension, Mr. Lodge laid down the condition that the Soviet Union must accept inspection in principle. And it would have to do that first.

Apparently the Russians think that to accept such a proposal would be bargaining from weakness. And that, Mr. Gromyko made resoundingly clear,

belongs to the past.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The threat posed by Man's proficiency in developing more deadly and efficient weapons is no illusion. In the words of Grover Cleveland, "it is a condition that confronts us, not a theory." And it is a condition reason demands must be met. Benjamin Franklin said, "Hear Reason, or she'll make you feel her."

Good night and good luck!

This is the news:

The United States missile program was discussed today at two White House meetings. President Eisenhower conferred for half an hour with Secretary of Defense McElroy and William Holaday, the Pentagon's director of missile development and research. Then he met for two hours with his cabinet. The White House issued no comment, but it was noted that the cabinet meeting was attended by the Defense Department comptroller, Wilfred J. McNeil. As comptroller, he is involved in the department's spending policy.

The Democratic Advisory Council today called for "an all-out national effort" to regain America's position in the armaments field.

Russia's satellite achievement, it said, is proof that the Administration has been "leading the people to believe that we have a national security which, in fact, we are rapidly losing." The council statement was released by the Democratic National Committee, which said it had the approval of all 20 of the 24 council members who could be reached. Former President Truman and Adlai Stevenson, it said, were among those who approved.

Syria today accused Turkey of "unjustified provocations". It charged...in a formal note...that Turkish troops on the Syrian frontier are too numerous, merely to be engaged in autumn maneuvers, that Turkish planes have violated Syrian air space, and that citizens of Syria have been kidnaped and taken to Turkey.

In Moscow, the army newspaper "Red Star" accused the United States of pushing Turkey along "a dangerous path."

The charge by Soviet Party Boss Khrushchev, that Secretary of State Dulles tried to "incite" Turkey to attack Syria, was ridiculed today by three United States senators. ~~(Khrushchev said, in an interview with James Reston of the New York Times, that the Senate should investigate whether Dulles sent Loy Henderson to Turkey for that purpose.)~~ Democratic Senator Mansfield, and Republican Senators Knowland and Wiley called the Russian charge "completely false". Knowland...who is Republican Senate leader...said, "I don't think the Senate is about to follow any instructions from Mr. Khrushchev."

The director of the United States satellite program...Dr. John Hagen...said today that the 20-inch sphere to be launched into outer space next spring actually is finished---that all it needs is the rocket to put it up there. He said it has been tested under controlled conditions and is ready for flight. He complained in a speech before the National Press Club of Russian bad faith. He said it was understood that anyone launching an earth satellite under the International Geophysical Year program would announce it in advance.

The United States now has an "exact fix" of the orbit of "Sputnik." This was achieved on the basis of information fed into an I.B.M. mechanical brain at the Massachusetts Institute of Technology.

"Sputnik" has now made more than a hundred passes around the earth, and has traveled nearly 3-million miles.

The State Department said today that it "wouldn't be surprised" if the Russians launched another satellite "at any time." The department spokesman declined to elaborate.

A United States ballistic missile...believed to be the Air Force Thor...was tested today [redacted] in Florida. Observers say the test apparently was a success. The Thor has a "programmed" range of 15-hundred miles. ~~But according to unofficial reports, this was exceeded today by several hundred miles.~~

~~The New York Stock Market closed mixed today, after yesterday's worst break in two years. Trading was the heaviest since President Eisenhower's heart attack, with a turn-over of 4-million, 460-thousand shares. Aircrafts and other defense issues gained up to four dollars.~~

A resolution calling on the United Nations to reconvene its subcommittee on disarmament "as soon as feasible" was formally presented today to the General Assembly. The resolution has the support of the United States and 22 other countries. It would have the subcommittee reconsider

the Western proposals on disarmament, including control of weapons of outer space. Russia is a member of the subcommittee. The other four members are the United States, Britain, Canada and France.

~~The Navy today announced plans for the mothballing of an additional 22 ships. This would be done in the first six months of next year. The only large ship included in the program is the heavy cruiser Albany.~~

A group of rank-and-file NEW YORK teamsters today asked for a Federal Court order, barring James Hoffa from taking over the presidency of the teamsters union. The request was made to District Judge F. Dickenson Letts, [redacted] by the same teamsters group that tried to hold up the union election on grounds that it was "rigged". Judge Letts says he will rule on their petition on Monday.

Secretary of the Army Brucker revealed today that it was the Army chief of staff, General Maxwell Taylor, who last month sent out a directive for special training of troops to handle distrubances ~~on the order of~~ such as that which broke out in Little Rock. Brucker made this known in releasing the text of a letter which he had sent to Chairman Russell of the Senate Armed Services Committee. Russell, who is from Georgia, had demanded to

→

know whether...in his words..."the Army has formulated plans for the occupation of the entire South." Brucker told Russell there was no alert directive "as that term is understood in military terminology." There was an order for special training of troops to deal with civil disturbances...and that order, B rucker said, was rescinded immediately "since it might be subject to misinterpretation." It is not true, he said, that Army units were alerted to enforce anti-segregation measures.

In Paris, the ~~conservative leader...Antoine~~ Pinay...has ~~agreed to try~~ to form a new ~~government. Pinay is the third former premier~~ to make the attempt ~~in 11~~ days.

Edward R. Murrow: October 11, 1957. 7.45 p.m.

Russia and the United States are now threatening each other over the Middle East. The language being used by both sides is pretty solemn. Khrushchev claims that we sent Roy Henderson to the Middle East to try to stir up Syria's neighbors to an attack, and failing that to get Turkey to make war on Syria. Khrushchev said if war breaks out "we are near Turkey, and you are not. When the guns begin to fire the rockets can begin flying, and then it will be too late to think about it. Turkey would not last one day in case of war."

Our State Department denies the whole allegation, and agrees with Khrushchev that if hostilities should start in that area they would not remain confined to a particular locality. We also remind the Russians that we are joined with Turkey in the North Atlantic Treaty Organization, and would be obliged to consider an attack upon Turkey as an attack against ourselves. Khrushchev wants Congress to investigate what Dulles told Henderson. We say that the possible consequences of an outbreak in the Middle East should be "prayerfully and constantly contemplated by every responsible official of every country."

There exists at least the possibility that Khrushchev may in fact

believe what he says. To most of us this would appear too fantastic to contemplate, but it must be remembered that the whole history of totalitarian states indicates that their representatives abroad are disposed to send home information that will be both pleasing and useful to their bosses. The official record of despatches to Rome and Berlin before and during the war, is heavy with proof that this is exactly what happened. So it must be regarded, as a possibility at least, that Khrushchev thinks he's telling the truth. Whatever the state of his mind, this is a misunderstanding of monumental proportions.

There has recently been revealed another misunderstanding which need not have occurred. That was over the visit to this country of Marshal Zhukov. President Eisenhower was asked in a news conference if he thought that good might result from the Soviet Marshal conferring with Defense Secretary Wilson. He said he thought it might. Thereupon the Soviet Embassy at once enquired whether this meant that a visit by Zhukov would be welcome; if so, he would come. The State Department, after thinking the matter over, said that the remarks of the President had been a hypothetical answer to a hypothetical question, and had no significance. We were not about to invite Zhukov to pay us a visit. We now know that Secretary Dulles

felt that a visit by the Russian Marshal would look to our Allies AS THOUGH we were bargaining behind their backs, and he so told the President. But he did not explain it this way to the Russians. The Kremlin at that time was deciding whether to take a first step in the disarmament talks. We know now that it concluded we were not interested, and the talks were broken off.

The Russians have been saying, directly and indirectly, for months that the two big powers ought to get together and sort of divide up the world into spheres of influence. We can't go along with that because we are the head of a free world coalition; and a coalition is tougher to keep together and negotiate for than when you are negotiating on behalf of a single unit.

But it is still reasonable to ask why such a long-standing and important matter as the Zhukov visit had to be treated in such a casual fashion in Washington, with the President saying one thing in public, and being advised to do the opposite in private. It is also reasonable to ask why, apparently, nobody thought how this episode would appear to the Russians. We live in an age of rapid communications. Here was something highly important to communicate; but not until Khrushchev told Scotty Reston of

The Times about how Soviet feelings were ruffled, did we realize that our own desire for a disarmament agreement was being misjudged.

In the case of Turkey, the lines of communication appear to be functioning. The Russians threaten Turkey with annihilation. We say to the Russians, in effect: "Think prayerfully about this, for such an act would mean that we are at war."

In historical terms there is nothing new about wars being started, because of one nation's misjudgment or miscalculation of another nation's attitude, response and capabilities. Even in these days of wonder weapons of unlimited power, it may be as important to perfect and use properly our communications, as to perfect our weapons.

George Ryan

Being human, people want to be told what they want to hear. The men who advise Khrushchev are well aware of this, and they may be feeding him the kind of information about this country they think he would like to have. For as Josh Billings observed, "Most men go through life az rivers go tew the sea, bi following the lay ov the ground."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, OCTOBER 11, 1957
7:45 - 8:00 PM EST

This is the news:

The United States missile program was discussed today at two White House meetings. President Eisenhower conferred for half an hour with Secretary of Defense McElroy and William Holoday, the Pentagon's director of missile development and research. Then he met for two hours with his cabinet. The White House issued no comment, but it was noted that the cabinet meeting was attended by the Defense Department comptroller, Wilfred J. McNeil. As comptroller, he is involved in the department's spending policy.

The Democratic Advisory Council today for "an all-out national effort" to regain America's position in the armaments field. Russia's satellite achievement, it said, is proof that the Administration has been "leading the people to believe that we have a national security which, in fact, we are rapidly losing." The council statement was released by the Democratic National Committee, which said it had the approval of all 20 of the 24 council members who could be reached. Former President Truman and Adlai Stevenson, it said, were among those who approved.

Syria today accused Turkey of "unjustified provocation". It charged...in a formal note...that Turkish troops on the Syrian frontier are too numerous merely to be engaged in autumn maneuvers, that Turkish planes have violated Syrian air space, and that citizens of Syria have been kidnaped and taken to Turkey.

In Moscow, the army newspaper "Red Star" accused the United States of pushing Turkey along "a dangerous path."

The charge by Soviet Party Boss Khrushchev that Secretary of State Dulles tried to "incite" Turkey to attack Syria was ridiculed today by three United States senators. Democratic Senator Mansfield and Republican

Senators Knowland and Wiley called the Russian charge "completely false". Knowland...who is Republican Senate leader...said, "I don't think the Senate is about to follow any instructions from Mr. Khrushchev."

The director of the United States satellite program...Dr. John Hagen... said today that the 20-inch sphere to be launched into outer space next spring actually is finished - that all it needs is the rocket to put it up there. He said it has been tested under controlled conditions and is ready for flight. He complained in a speech before the National Press Club of Russian bad faith. He said it was understood that anyone launching an earth satellite under the International Geophysical Year program would announce it in advance.

The United States now has an "exact fix" of the orbit of "Sputnik." This was achieved on the basis of information fed into an I.B.M. mechanical brain at the Massachusetts Institute of Technology.

"Sputnik" has now made more than a hundred passes around the earth, and has traveled nearly 3-million miles.

The State Department said today that it "wouldn't be surprised" if the Russians launched another satellite "at any time." The department spokesman declined to elaborate.

A United States ballistic missile...believed to be the Air Force Thor...was tested today in Florida. Observers say the test apparently was a success. The Thor has a "programmed" range of 15-hundred miles.

A resolution calling on the United Nations to reconvene its subcommittee on disarmament "as soon as feasible" was formally presented today to the General Assembly. The resolution has the support of the United States and 22 other countries. It would have the subcommittee reconsider the Western proposals on disarmament, including control of weapons of outer space. Russia is a member of the subcommittee. The other four members are the United States, Britain, Canada and France.

A group of rank-and-file New York teamsters today asked for a Federal Court order, barring James Hoffa from taking over the presidency of the teamsters union. The request was made to District Judge F. Dickenson Letts, by the same teamsters group that tried to hold up the union election on grounds that it was "rigged". Judge Letts says he will rule on their petition on Monday.

Secretary of the Army Brucker revealed today that it was the Army chief of staff, General Maxwell Taylor, who last month sent out a directive for special training of troops to handle disturbances such as that which broke out in Little Rock. Brucker made this known in releasing the text of a letter which he had sent to Chairman Russell of the Senate Armed Services Committee. Russell, who is from Georgia, had demanded to know whether - in his words - "the Army has formulated plans for the occupation of the entire South." Brucker told Russell there was no alert directive "as that term is understood in military terminology." There was an order for special training of troops to deal with civil disturbances...and that order, Brucker said, was rescinded immediately "since it might be subject to misinterpretation." It is not true, he said, that Army units were alerted to enforce anti-segregation measures.

Russia and the United States are now threatening each other over the Middle East. The language being used by both sides is pretty solemn. Khrushchev claims that we sent Loy Henderson to the Middle East to try to stir up Syria's neighbors to an attack, and failing that to get Turkey to make war on Syria. Khrushchev said if war breaks out "we are near Turkey, and you are not. When the guns begin to fire the rockets can begin flying, and then it will be too late to think about it. Turkey would not last one day in case of war."

Our State Department denies the whole allegation, and agrees with

Khrushchev that if hostilities should start in that area they would not remain confined to a particular locality. We also remind the Russians that we are joined with Turkey in the North Atlantic Treaty Organization, and wofld be obliged to consider an attack upon Turkey as an attack against ourselves. Khrushchev wants Congress to investigate what Dulles told Henderson. We say that the possible consequences of an outbreak in the Middle East should be "prayerfully and constantly contemplated by every responsible official of every country."

There exists at least the possibility that Khrushchev may in fact believe what he says. To most of us this would appear too fantastic to contemplate, but it must be remembered that the whole history of totalitarian states indicates that their representatives abroad are disposed to send home information that will be both pleasing and useful to their bosses. The official record of despatches to Rome and Berlin before and during the war, is heavy with proof that this is exactly what happened. So it must be regarded, as a possibility at least, that Khrushchev thinks he's telling the truth. Whatever the state of his mind, this is a misunderstanding of monumental proportions.

There has recently been revealed another misunderstanding which need not have occurred. That was over the visit to this country of Marshal Zhukov. President Eisenhower was asked in a news conference if he thought that good might result from the Soviet Marshal conferring with Defense Secretary Wilson. He said he thought it might. Thereupon the Soviet Embassy at once inquired whether this meant that a visit by Zhukov would be welcome; if so, he would come. The State Department, after thinking the matter over, said that the remarks of the President had been a hypothetical answer to a hypothetical question, and had no significance. We were not about to invite Zhukov to pay us a visit. We now know that Secretary Dulles felt that a visit by the Russian Marshal would look to our Allies as though

we were bargaining behind their backs, and he so told the President. But he did not explain it this way to the Russians. The Kremlin at that time was deciding whether to take a first step in the disarmament talks. We know now that it concluded we were not interested, and the talks were broken off.

The Russians have been saying, directly and indirectly, for months that the two big powers ought to get together and sort of divide up the world into spheres of influence. We can't go along with that because we are the head of a free world coalition; and a coalition is tougher to keep together and negotiate for than when you are negotiating on behalf of a single unit.

But it is still reasonable to ask why such a long-standing and important matter as the Zhukov visit had to be treated in such a casual fashion in Washington, with the President saying one thing in public, and being advised to do the opposite in private. It is also reasonable to ask why, apparently, nobody thought how this episode would appear to the Russians. We live in an age of rapid communications. Here was something highly important to communicate; but not until Khrushchev told Scotty Reston of The Times about how Soviet feelings were ruffled, did we realize that our own desire for a disarmament agreement was being misjudged.

In the case of Turkey, the lines of communication appear to be functioning. The Russians threaten Turkey with annihilation. We say to the Russians, in effect: "Think prayerfully about this, for such an act would mean that we are at war."

In historical terms there is nothing new about wars being started, because of one nation's misjudgment or miscalculation of another nation's attitude, response, and capabilities. Even in these days of wonder weapons of unlimited power, it may be as important to perfect and use properly our communications, as to perfect our weapons.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Being human, people want to be told what they want to hear. The men who advise Khrushchev are well aware of this, and they may be feeding him the kind of information about this country they think he would like to have. For as Josh Billings observed, "Most men go through life az rivers go tew the sea, bi following the lay ov the ground."

Goodnight and good luck!

This is the news:

President Eisenhower conferred again today with Neil McElroy, the new secretary of defense. /McElroy refused afterward to say whether a speed-up in the United States missile program was discussed.

Tomorrow, Mr. Eisenhower will meet with his Science Advisory Committee, which is a group of 13 prominent scientists...set up to report to the President through the Office of Defense Mobilization. /News Secretary Hagerty says the situation relative to both missiles and satellites is certain to come up... although the meeting was arranged some weeks ago, before the launching of Sputnik.

Democratic Senator Jackson, of Washington State, said today that the congressional atomic energy committee urged President Eisenhower

more than two years ago, to put the intercontinental ballistic missile program "on a war footing." Jackson is a member of the committee, and chairman of its military applications subcommittee. He said that on July 29th, 1955, the full committee submitted a top-secret report on the state of our atomic preparedness. It was proposed...in this report...that Mr. Eisenhower issue a directive "giving the I.C.B.M. supreme and over-riding priority within the entire defense establishment, calling upon all parts of the executive branch to cooperate with this effort, and assigning those responsible for the program all authority needed to achieve fruition with maximum speed." ~~Jackson said that despite assurances that the Defense Department was giving the committee recommendation as a matter "of the highest priority," Jackson said the Jackson~~

Jackson said the committee received assurance that its recommendation was being treated by the Defense Department, as a matter of the "highest priority." But then last August, he said, it was revealed that cutbacks were being made in the missile program "for budgetary reasons."

The Russian "Sputnik" has now made more than 145 trips around the earth. Radio Moscow says the third-stage rocket...which once trailed the satellite by more than 600 miles...is now going around 2-thousand miles ahead of it.

~~An American scientist said today that the Russians have agreed to exchange information obtained by "moon-watch" teams in both countries. Leon Campbell...who is in charge of moon-watch operations in the United States...says he reached the agreement with his Russian counter-part while attending the recent meeting of the International Astro-physical Federation in Spain.~~

A State Department spokesman said today that the United States has known since late last month, that Egypt was sending troops and technicians to Syria. The spokesman declined further comment, except to say, "We are following the matter with interest." President Nasser of Egypt says the troops...estimated at about 1-thousand men...were sent to Syria to promote Arab unity.

The chief of staff of the Syrian army said today that "imperialism should now realize it will be facing all Arabs, in the event of any anti-Syrian aggression." The Turkish defense minister said Turkey will

will fight any aggression "tooth and nail." Israeli officials say they are watching the situation "with an eye to the possible effect on Israel's security."

Britain told the United Nations General Assembly today that there is no time to lose in setting up an international group to study control of outer space missiles.

Secretary of the Army Brucker said today that the number of federal troops stationed in Little Rock will be reduced "in recognition of the generally orderly situation." Brucker said half the one thousand paratroopers will be returned immediately to Fort Campbell, Kentucky. A sharp reduction will also be made in the number of Arkansas national guardsmen retained on federal duty. Henceforth, the 153rd Regiment of the Arkansas national guard is to be the "major operational force" in Little Rock, where integration continued today without incident.

In Washington, the Supreme Court today rejected the appeal of the segregationist, John Casper, from his one-year prison sentence for contempt of court. The conviction grew out of Kasper's activities a year ago in Clinton, Tennessee. He remains free on bail, pending new legal efforts on his behalf. The Supreme Court turned down the

request of Virgil Hawkins...a Negro student who asked the court to order his immediate admission to the University of Florida law school. The court said it was acting "without prejudice" in advising Hawkins to seek relief in a United States District Court.

A federal judge today issued a temporary restraining order...barring James Hoffa from taking office immediately as president of the teamsters union. The order was issued by Judge F. Dickinson Letts, at the request of thirteen rank-and-file teamsters who charged that Hoffa's election was "rigged." A hearing was set for next Monday, at which Hoffa must show cause why he should not be prevented from taking office. The union must also show why the election of other officers elected at the recent teamsters convention should not be declared "null and void."

The Nobel Peace Prize for 1957 has been awarded to Lester Pearson, the former Canadian minister of external affairs. Pearson helped organize the United Nations emergency force in the Middle East.

In Ottawa, Queen Elizabeth today opened the Canadian parliament with a speech in which she called the B ritish Commonwealth "a quiet but pervasive force for good in an unquiet world." It was the first time a session of the Canadian parliament has been opened by a reigning monarch.

~~Queen Elizabeth and her husband, Prince Philip, are due in this country on Wednesday. Today, they telegraphed President Eisenhower their "warm good wishes" on the occasion of Mr. Eisenhower's 67th birthday.~~

President Eisenhower today held the first of a series of conferences on the state of the nation's economy. ~~In attendence...besides Mr. Eisenhower...were Dr. Raymond Saulnier, head of the President's council of economic advisers; William McChesney Martin, chairman of the Federal Reserve Board, and Secretary of the Treasury Anderson.~~ The meeting was private and no details were announced.

Edward R. Murrow: October 14, 1957. 7.45 p.m.

Perhaps the most disconcerting feature of our foreign policy, including the challenge of Soviet long-range missiles, is that we allow ourselves over and over again to be taken by surprise, and then, in our surprise, flounder about trying to decide what to do next. We are now going through such floundering. We have taken a terrible beating in world opinion because we are behind the Russians in launching a space-satellite. Not that the space satellite in itself is a menace, but it is the most sensational advertising of the fact that the Russians could get it up there, which means that their claim to have an inter-continental missile is at least part-way valid. So far as the world knows we haven't got that far. Now the heads of government and the defense experts are huddling feverishly to decide how to get as far as the Russians, or to make the world believe we are that far along.

~~It is ironical to learn that we had adequate advance notice that the Soviet earth satellite was about to be launched. The Central Intelligence Agency supplied the information to the proper authorities, and they were not impressed. They ruled against advancing the date for launching our own satellite.~~ It is also ironical that the government was informed that we could launch the satellite with the firing equipment of the Jupiter rocket,

and the suggestion was turned down, partly because of expense.

It often has been charged that the Eisenhower Administration is dominated by the thinking or techniques of Madison Avenue, an institution supposed to know all about human reactions and public relations. Be that as it may, the key men in Washington had not ~~a flicker of~~ the imagination to understand what it would mean for the Soviet Union to launch its satellite first. To find out they had to be taken by surprise, if not surprise over the missile itself, then over the world reaction to it, and possibly over their own poor judgment.

Dr. Henry A. Kissinger, author of a much discussed book "Nuclear Weapons and Foreign Policy", says the worrisome thing about the satellite is what it shows about how the Russians conduct their military programs. They can cut down their lead-time in a way we are unable to do. In an interview in the New York Herald Tribune he says that the Russians make their decisions about weapons very early. "In our case" he says, "every new weapon is the result of frenzied competition among services, and the main emphasis is on what service will use the weapon, not on how the weapon can best be used." He also finds too much emphasis on fiscal control in the Defense Department. Most assistant secretaries of defense, he remarks, would not keep their jobs if war broke out, and the department at present is organized for internal

management, not to fight a war. "The paradox" he says, "is that the concern for efficiency creates inefficiency."

But all the fault is not in the Department of Defense in Dr. Kissinger's opinion. "What has been lacking in this country" he says, "is a sense of urgency. We've fooled ourselves that the Soviets were disintegrating, that we didn't have to worry, that they could be mastered easily. On the political plane we are pushed back gradually, position by position. Our victories are negative." He advises us to become positive, and stop running from crisis to crisis. For even if both sides put the same money into their military programs, the side on the defensive, he points out, is at a disadvantage. And if things go on as they are, he dolefully predicts that we shall be expelled from Europe and Asia, and he calls that a mathematical certainty.

A clearly defined program to meet the crisis is offered by Dr. Edward Teller, the H-bomb physicist. It is to develop smaller nuclear weapons and to learn how to fight and win limited nuclear wars, and do it anywhere on the globe. The <u>all-out</u> nuclear war, he says in an interview in "This Week", can be averted altogether by preparedness, both in the ability to strike back

and in the organization of civilians to take any terrible attack and still survive.

But that does not eliminate the need for a limited nuclear striking power, he argues. We need a triple-threat air force, an invisible navy, and a small professional army of extraordinary proficiency and morale. "I believe" he says, "that in ten years we should have our outright nuclear submarine navy and our professional army, and the ability to move fighting men to any part of the world in a matter of hours." And only then, he says, can we look forward to the achievement of an international law prohibiting war. That will not come in ten years, he predicts, but could in the lifetime of some of us. But, he warns, "we shall have to live for some time in a dangerous world. We must prepare for war to preserve peace."

George Bryan

Word for Today

It Rather looks as tho—

The United States is going to have to decide how badly it wants supremacy in the missiles field...and right soon. It cannot have one policy one day and another the next. Leon Harrison said, "Lot's wife hesitated, though angels led the way. Naturally she was petrified where she stood, — a monument of vacillation."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, OCTOBER 14, 1957
7:45 - 8:00 PM EST

This is the news:

President Eisenhower conferred again today with Neil McElroy, the new secretary of defense. McElroy refused afterward to say whether a speed-up in the United States missile program was discussed.

Tomorrow, Mr. Eisenhower will meet with his Science Advisory Committee, which is a group of 13 prominent scientists...set up to report to the President through the Office of Defense Mobilization. But, he warns, "we shall have to live for some time in a dangerous world. We must prepare for war to preserve peace."

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: It rather looks as though the United States is going to have to decide how badly it wants supremacy in the missiles field...and right soon. It cannot have one policy one day and another the next. Leon Harrison said, "Lot's wife hesitated, though angels led the way. Naturally she was petrified where she stood, a monument of vacillation."

Good night and good luck!

Edward R. Murrow Tues., Oct. 15, 1957

This is the news:

Vice President Nixon said tonight that the United States could make no greater mistake than to "brush off" Russia's earth satellite as "a scientific stunt." He said that with Sputnik the Russians "demonstrated again what we had known before---that they have developed the capacity to fire a missile a great number of miles." Nixon predicted that Russia will try to use this achievement to communize all of Asia and Africa and he warned that if it succeeds, "the Kremlin will have assured its victory in the battle for the world." The Russian satellite, he said, can serve the cause of freedom "only if we react strongly and intelligently

to its applications." He said, "Let us resolve...once and for all...that the absolute necessity of maintaining our superiority in military strength must always take priority over the understandable desire to reduce our taxes." The vice president spoke in San Francisco, at the International Industrial Development Conference. He proposed a five-year extension of the Reciprocal Trade Act, due to expire in June, 1958. He also said that Congress should enact a tax benefit for American companies doing business abroad "when tax revision becomes feasible."

President Eisenhower conferred for 45 minutes today with his top scientific advisers. Yesterday, News Secretary Hagerty said they "certainly" would discuss the United States missile and satellite programs. Today, neither he nor any of the scientists attending the conference would give any details.

Democratic Senator Mansfield today renewed his demand that all missile and satellite projects be coordinated under a single program. He said Congress this year appropriated "every dime" the Administration requested for research and development in the fiscal year, beginning last July. ~~He said that according to the Air Force, about 850 million dollars was spent on the "Navajo" missile project before it was dropped.~~

The scientist...Dr. Vannevar Bush, writing for Newsweek Magazine...said today that the only way to catch up with the Russians in missile development is to "unify our military planning." "Without it," he said, "you cannot have unified research." ~~Dr. Bush was head of the Office of Scientific Research and Development during World War Two.~~

The Talos anti-aircraft missile was fired publicly for the first time today at the White Sands proving grounds, but the booster unit failed at 4-thousand feet. The firing [redacted]

[redacted] climaxed a ceremony, at which the missile was to have been turned over to Army Ordnance.

British Foreign Secretary Selwyn Lloyd and Secretary of State Dulles conferred for more than three hours today in Washington. Lloyd said afterward that scientific cooperation between the United States and Britain is now more urgent than ever. The Middle East situation was also discussed.

Soviet Leader Khrushchev has sent a series of letters to the Socialist parties of Western Europe, accusing the United States and Turkey of preparing "a military adventure" against Syria. # Khrushchev warned socialists in the Western European countries that...as a result of this...they are in danger of being sucked into war in the Middle East. / He charged American leaders with making "provocative statements". And in Turkey, he said, "certain statesmen nourish adventurous plans, and play with the idea of re-establishing the old Turkish supremacy over the Arabian people." Khrushchev went on to say that "in the Eastern Mediterranean, near the Syrian coast, units of the United States war fleet are gathering." He spoke of "military provocations under preparation" on Syria's southern frontier---an apparent reference to Israel. And he reiterated that if Syria is attacked, Russia cannot stand idly by. Khrushchev called on the Socialist parties to work, with Russia, to preserve peace. / Any proposals they make, he said,

→

will be carefully considered by the central committee of the Communist Party. The Norwegian Socialist Party, and the British Labour Party, already have rejected Khrushchev's invitation.

Russia's first deputy premier Mikoyan tonight called the transfer of Egyptian troops to Syria "a very good thing." It is a development, he said, with which Russia is "pleased". Mikoyan made the statement in the presence of foreign correspondents at a reception in Moscow.

The foreign minister of Lebanon today denied reports that his country is drifting away from the United States in the troubled situation in the Middle East. Foreign Minister Malik said, "Lebanon stands firm in its friendship to and cooperation with the United States." He said Lebanon "certainly intends to remain faithful" to the agreements whereby it receives American economic and military aid. Lebanon has been receiving this aid under the Eisenhower Doctrine.

Yugoslavia today formally announced its recognition of East Germany.

In Washington, the State Department expressed regret over the Yugoslav action. A department spokesman said, "We do not think it will contribute to a settlement of the German problem." He said the American attitude had been conveyed to the Yugoslav ambassador yesterday and to the Yugoslav government "on a number of occasions." When a reporter asked if recognition of the East German regime will affect the program of United States aid to Yugoslavia, he said, "I have no way of forecasting." ~~Yugoslavia is the last Communist country to recognize East Germany, a fact which goes back to President Tito's break with Stalin in 1948. The Yugoslav foreign minister says today's action was taken in the hope of improving international relations.~~

In Houston, Texas, a federal judge today ordered Houston public schools to integrate "with all deliberate speed." No deadline for compliance was set. But the court will watch to see what efforts toward integration are made by the school board.

The White House said today that President Eisenhower will meet five Republican congressmen from the South, in the Little Rock integration dispute. No time for the meeting has been set.

In Little Rock, Governor Faubus said the withdrawal of many of the federal troops assigned to central high school "doesn't change a thing. We're still occupied."

And in New York, teamster president-elect James Hoffa pleaded innocent in federal court to perjury charges...growing out of a wire-tap case. ~~Hoffa's attorney argued that it would be impossible to get a fair trial because of what he called "a concerted effort to destroy Hoffa with unfavorable publicity.~~

Think

Nasser's movement of troops to Syria has to be read in more ways than one. He obviously wants the world to think he is a factor in the conflict of the big powers; that is, he is putting troops in Syria as a warning to Turkey, which has massed troops on the Syrian border.

He wants to be understood as telling Turkey to keep hands off. That is what Moscow has been telling Turkey in the most violent language.

Now Nasser joins in. But he is doing it as an echo of Moscow. He still ~~is~~ claims to be an independent. He is satisfying his own ambitions. For one thing, he is helping give the Eisenhower doctrine a black eye. For another, he is working to be the number one man in the Arab federation. He jumps at the opportunity to keep Arab ranks closed. Ostensibly, they are being closed against Turkey. In fact, they are closed against Israel.

The motives of the Nasser move become clearer when one sees the reaction in Turkey. The Turks are not in the least agitated by appearance of Egyptian troops in Syria. They say it can't be directed against them, as they plan nothing that would involve Egyptian support of Syria. They suggest Nasser is really concerned over Israel, and ask whether at least part of the troops won't be stationed on the Israeli border. There are unconfirmed reports that this ~~conjecture~~ guess is correct.

At this point, the one unmistakable result of the Syrian crisis is that it backfired against the Eisenhower Doctrine. Under that doctrine we offered economic and military aid to any middle eastern state threatened by Communist aggression. We adopted the doctrine by Congressional resolution with all the solemnity we could muster, and thus offered our leadership and protection to the middle east. When the Soviet Union supplied arms to Syria, we naturally invoked the doctrine in our talks

with Syria's neighbors. Washington may quite well have thought this was a break that would establish our dominance in the region. But we could not have been more wrong. The countries we tried to influence swung around to the support of Syria, and did so with the most dramatic fanfare. King Saud -- supposedly our friend -- and the Prime Minister of Iraq -- another friend -- rushed to Damascus, to assure Syria of their support and loyalty. Everybody was at pains to disassociate himself from the Eisenhower doctrine, including the pro-western regime of Lebanon and even hapless King Husein, whom we are keeping on the shaky throne of Jordan.

That is not to say that our reaction to the arming of Syria was a total loss. It produced a lively sense of caution in Syria, which at any rate is not plunging headlong into the Soviet Satellite camp. But in doing so we somehow lost the Eisenhower Doctrine, and now it maybe more of a liability than

an asset. Whatever prestige we won with the Arabs for our intervention in the Suez crisis has evaporated. So the time has come for a fresh start in our middle eastern policy.

The trouble with the Eisenhower Doctrine now can be seen to have been that it evaded the basic issue in the middle east. That was and is Arab-Israeli relations. ~~Secretary Dulles knows this well enough.~~

Art

As far back ~~as June 1, 1953~~, he said that the Arabs were more afraid ~~to~~ OF ~~Zionism than of Communism. And on August~~ 25, 1955, he proposed a constructive ~~policy. Offering to~~ guarantee Arab-Israeli borders, ~~and to make American contributions to~~ Israeli's compensation ~~of Palestine refugees~~ and to the development of the Jordan Valley ~~irrigation project, Israel~~ thereupon offered to make a mutual ~~adjustment of frontiers,~~ give transit rights to the Arabs, and ~~compensate refugees -- with American help -- for~~ settlement in Arab countries. ~~But there~~ was no

carry-through along these lines, and the Suez crisis followed.

Now we know that peace in the area will have to be sought along these lines again. The American offer may have to be considerably more substantial, and Israeli cooperation more flexible. But this was the right road to take two years ago and it is the one to get back to now. Failure to stay on it led to the Suez crisis. It could lead to something even more grave another time.

Surely here is the opening for an American initiative. We are told that our trouble is that we let the Russians lead, and then have to improvise our play accordingly. Here is our chance to lead.

W.J.R.

But to succeed we have to believe that more is to be done in the middle east with plans for refugees and land irrigation than with arms and warnings of retaliation.

George Bryan -

Word for Today

Indications are that more than one plan---the Eisenhower Doctrine---is needed to preserve freedom in the Middle East. Winston Churchill once said, "The best method of acquiring flexibility is to have three or four plans for all the probable contingencies. Then it's much easier to switch from one to the other as and where the cat jumps."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, OCTOBER 15, 1957
7:45 - 8:00 PM EST

This is the news:

Vice President Nixon said tonight, that the United States could make no greater mistake than to "brush off" Russia's earth satellite as a "scientific stunt." He said that with Sputnik the Russians "demonstrated again what we had known before---that they have developed the capacity to fire a missile a great number of miles." Nixon predicted that Russia will try to use this achievement to communize all of Asia and Africa, and he warned that if it succeeds, "the Kremlin will have assured its victory in the battle for the world." The Russian satellite, he said, can serve the cause of freedom "only if we react strongly and intelligently to its applications." He said, "Let us resolve...once and for all...that the absolute necessity of maintaining our superiority in military strength must always take priority over the understandable desire to reduce our taxes." The vice president spoke in San Francisco, at the International Industrial Development Conference. He proposed a five-year extension of the Reciprocal Trade Act, due to expire in June, 1958. He also said that Congress should enact a tax benefit for American companies doing business abroad "when tax revision becomes feasible."

President Eisenhower conferred for 45 minutes today with his top scientific advisers. Yesterday, News Secretary Hagerty said they "certainly" would discuss the United States missile and satellite programs. Today, neither he nor any of the scientists attending the conference would give any details.

Democratic Senator Mansfield today renewed his demand that all missile and satellite projects be coordinated under a single program.

He said Congress this year appropriated "every dime" the Administration requested for research and development in the fiscal year, beginning last July.

The scientist...Dr. Vannevar Bush, writing for Newsweek Magazine... said today that the only way to catch up with the Russians in missile development is to "unify our military planning." "Without it," he said, "you cannot have unified research."

The Talos anti-aircraft missile was fired publicly for the first time today at the White Sands proving grounds, but the booster unit failed at 4-thousand feet. The firing climaxed a ceremony, at which the missile was to have been turned over to Army Ordnance.

British Foreign Secretary Selwyn Lloyd and Secretary of State Dulles conferred for more than three hours today in Washington. Lloyd said afterward, that scientific cooperation between the United States and Britain is now more urgent than ever. The Middle East situation was also discussed.

Soviet Leader Khrushchev has sent a series of letters to the Socialist parties of Western Europe, accusing the United States and Turkey of preparing "a military adventure" against Syria.

Khrushchev warned socialists in the Western European countries that...as a result of this...they are in danger of being sucked into war in the Middle East. He charged American leaders with making "provocative statements". And in Turkey, he said, "certain statesmen nourish adventurous plans and play with the idea of re-establishing the old Turkish supremacy over the Arabian people." Khrushchev went on to say that "in the Eastern Mediterranean, near the Syrian coast, units of the United States war fleet are gathering." He spoke of "military provocations under

preparation" on Syria's southern frontier---an apparent reference to Israel. And he reiterated that if Syria is attacked, Russia cannot stand idly by. Khrushchev called on the Socialist parties to work, with Russia, to preserve peace. Any proposals they make, he said, will be carefully considered by the central committee of the Communist Party. The Norwegian Socialist Party, and the British Labour Party, already have rejected Khrushchev's invitation.

Russia's first deputy premier Mikoyan tonight called the transfer of Egyptian trocps to Syria "a very good thing." It is a development, he said, with which Russia is "pleased." Mikoyan made the statement in the presence of foreign correspondents at a reception in Moscow.

The foreign minister of Lebanon today denied reports that his country is drifting away from the United States in the troubled situation in the Middle East. Foreign Minister Malik said, "Lebanon stands firm in its friendship to, and cooperation with, the United States." He said Lebanon "certainly intends to remain faithful" to the agreements whereby it receives American economic and military aid. Lebanon has been receiving this aid under the Eisenhower Doctrine.

Yugoslavia today formally announced its recognition of East Germany.

In Washington, the State Department expressed regret over the Yugoslav action. A department spokesman said, "We do not think it will contribute to a settlement of the German problem." He said the American attitude had been conveyed to the Yugoslav ambassador yesterday and to the Yugoslav government "on a number of occasions." When a reporter asked if recognition of the East German regime will affect the program of United States aid to Yugoslavia, he said, "I have no way of forecasting."

In Houston, Texas, a federal judge today ordered Houston public schools to integrate "with all deliberate speed." No deadline for comp-

liance was set. But the court will watch to see what efforts toward integration are made by the school board.

The White House said today that President Eisenhower will meet five Republican congressmen from the South, in the Little Rock integration dispute. No time for the meeting has been set.

In Little Rock, Governor Faubus said the withdrawal of many of the federal troops assigned to central high school "doesn't change a thing. We're still occupied."

And in New York, teamster president-elect, James Hoffa, pleaded innocent in federal court to perjury charges...growing out of a wiretap case.

Nasser's movement of troops to Syria has to be read in more ways than one. He obviously wants the world to think he is a factor in the conflict of the big powers; that is, he is putting troops in Syria as a warning to Turkey, which has massed troops on the Syrian border.

He wants to be understood as telling Turkey to keep hands off. That is what Moscow has been telling Turkey in the most violent language.

Now Nasser joins in. But he is doing it as an echo of Moscow. He still claims to be an independent. He is satisfying his own ambitions. Whatever prestige we won with the Arabs for our intervention in the Suez crisis has evaporated. So the time has come for a fresh start in our middle eastern policy.

The trouble with the Eisenhower Doctrine now can be seen to have been that it evaded the basic issue in the middle east. That was, and is,

Arab-Israeli relations. Secretary Dulles knows this well enough.

Surely here is the opening for an American initiative. We are told that our trouble is, that we let the Russians lead, and then have to improvise our play accordingly. Here is our chance to lead.

But to succeed, we have to believe that more is to be done in the middle east, with plans for refugees and land irrigation, than with arms and warnings of retaliation.

This s Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Indications are that more than one plan---the Eisenhower Doctrine---is needed to preserve freedom in the Middle East. Winston Churchill once said, "The best method of acquiring flexibility is to have three or four plans for all the probably contingencies. Then it's much easier to switch from one to the other as and where the cat jumps."

Goodnight and good luck!

Edward R. Murrow Wed., Oct. 16, 1957

This is the news:

Soviet Foreign Minister Gromyko charged today that the Turkish general staff has a plan to attack Syria "immediately after the elections in Turkey on October 27." He said American advisers helped prepare the plan. Gromyko made his charge in a letter to United Nations Secretary General Hammarskjold. He said, "It must be recognized that an armed attack on Syria by Turkey, a member of the North Atlantic bloc, cannot fail to extend the conflict to other countries. The United States of America, NATO's leading member, situated on another continent, some 9-thousand kilometers from Syria," he went on, "already is openly declaring its intention to intervene with its armed forces on the side of Turkey, in the hostilities against Syria, and is prodding Turkey to commit aggression

against Syria." Gromyko said a number of Arab countries have spoken of the necessity of giving assistance to Syria, if aggression is committed. And he added, "Also on the side of Syria, are the peace-loving peoples of other countries, in particular of the Soviet Union which cannot regard impassively the military provocations that are being planned in the immediate proximity of the southern frontier of the U.S.S.R." In this situation, he said, the United Nations "cannot remain passive." He supported Syria's request...made earlier in the day...for a United Nations investigation of alleged threats against its security. Syria said "several" Turkish divisions were massed on its border and called the situation "intolerably dangerous". Gromyko, in his letter to Hammarskjold, placed the Turkish strength at 50-thousand men. And he asked for more than an investigation. "Should Turkey break the peace," he said, "and attack Syria, the member states of the United Nations should immediately

→

render Syria the armed assistance necessary to put a stop to aggression." Gromyko said the Soviet Union is "prepared" to join in such a United Nations action.

An American spokesman at the United Nations said the United States "welcomes" Assembly consideration of the situation in the Middle East. The spokesman said, "A prompt investigation should help to ease tensions as well as clarify who it is that threatens peace in the area."

At his news conference today, Secretary of State Dulles accused Russia of waging a campaign to "dominate" Turkey. The Russian charges, he said, may be a smoke-screen for a Soviet attack on Turkey. He said the United States must be on guard against this possibility, but he does not believe such an attack is likely at this time. Mr. Dulles again assured Turkey that the United States would come to its aid in the event of a Soviet attack. He suggested that the United States might attack Russia itself in retaliation. "Certainly," he said, "it would not mean a purely defensive operation by the United States with the Soviet Union a "privileged sanctuary" from which to attack Turkey."

~~These were developments today in the Middle East.~~

The Damascus radio... which is the Syrian radio... said that Russia by its repeated warnings had prepared world opinion for Soviet intervention against Turkey. Russia, it said, is now "obliged to Syria and world public opinion to prevent Turkey from carrying out any aggressive action in the Middle East." The Syrian broadcast said that, in event of battle, "Arab progressive forces shall find the best excuse to realize their objectives of eliminating the Eisenhower Doctrine, purging other Arab countries of imperialist influence, and forming Arab nations into one unity."

In Amman, the Jordanian government told the ambassadors of Turkey, Britain and the United States that a Turkish attack on Syria will be considered an attack on all Arab states.

And in Lebanon, King Saud of Saudi Arabia conferred with the president of Lebanon, the secretary-general of the Syrian foreign office, and with his ambassadors to Lebanon, Egypt, Syria, Jordan and Iraq. #

The White House announces that Arthur Larson, head of the United States Information Agency, is leaving that job to become a special assistant to the President. News Secretary Hagerty says Larson will handle "special

projects in international affairs, relating to United States informational programs and Soviet propaganda efforts." A reporter asked whether Larson would try to counter-act Russian propaganda regarding such projects as the launching of "Sputnik." Hagerty said it was a fair assumption he would do this "among other things." He did not say what the "other things" were. George V. Allen will succeed Larson as head of the information agency. Allen is presently serving as ambassador to Greece. Just when the change will take place was not announced. But Hagerty said it will be soon.

Secretary Dulles told his news conference today that Russia's launching of an earth satellite was a good thing in that it jarred the complacency of Americans who, he said, automatically assumed that Russia could never outmatch the United States. Dulles said the Eisenhower Administration never shared this complacency. "I feel absolutely confident," he said, "that there is no doubt whatsoever of our ability to move ahead and, I believe, stay ahead in this field." He said the Russians "probably have some advance over us in intercontinental missiles." Dulles contended that this still has not eliminated America's "very marked superiority" in actual military power. He referred to United States strength in heavy

bombers...and predicted that they will remain the most effective means of hitting distant targets "for some years to come." In five or ten years, he said, missiles may be the decisive weapon.

President Eisenhower conferred today with Budget Director Brundage. The United Press ties the conference in with a plea from American scientists for more money for the missiles program.

Dr. Clifford Furnas said today that he urged Secretary of Defense Wilson a year ago to free more money for Project Vanguard, which is charged with providing the rocket power for launching an American earth satellite. Furnas was assistant secretary of defense for research and development from November, 1955, to January of this year. He says Wilson...who retired earlier this month...took a "so what?" attitude.

Queen Elizabeth flew to the United States today from Ottawa for a six-day state visit. The airplane landed at a field near Williamsburg, Virginia, and she received a 21-gun salute. She and husband, Prince Philip, then drove to Jamestown, where they participated in the festival commemorating the 350th anniversary of the first permanent English settlement in the free world. Tomorrow, the royal couple will fly to Washington,

More than a hundred thousand utility workers went on strike in Paris today, depriving most of the city of electricity and gas. It was a 24-hour walkout, and the lights are coming back on in Paris tonight. The workers are demanding higher pay.

Tomorrow, French Communists are scheduled to hold mass street demonstrations demanding peace in Algeria. The demonstrations are being held in defiance of a government ban. It is the first test of strength the Communists have dared to try in France in five years.

Edward R. Murrow: October 16 1957. 7.45 p.m.

There is a new experience today of what it means to deal with a Soviet Union that feels it can conduct a foreign policy from strength. It is the letter Khrushchev sent to all the Socialist parties of NATO countries. This is an open, direct appeal by the top man of a great power to political parties in other countries, going over the heads of government and foreign offices, and even suggesting meetings with the socialist leaders. This is more than flaunting a convention. It violates one of the basic rules of modern civics, which is that negotiations between states must be held through governments.

The letter astonished British Labor Party leaders. Hugh Gaitskell was called up by the Soviet Embassy and asked if he would receive the Khrushchev letter. He said he would. But when the Soviet diplomat brought it, he saw it was addressed to the Labor Party executive, not to him, and declined comment. Then he and Aneurin Bevan hurried to 10 Downing Street to tell Prime Minister MacMillan what had happened. That was a simple way to demonstrate that Khrushchev had not broken down standard procedures in Britian.

In Norway and Belgium the heads of the Socialist Parties are also government premiers. So the appeal to the socialist parties was to break

with foreign policies they themselves had fromulated and adopted. The Norwegian Premier's reply was that the foreign policy of his government had the support of all parties in the Storting. Danish Socialists, through their council, answered that it was the job of the United Nations to follow Middle Eastern developments, and that Danish social democracy was against all aggression, be it in Korea, Suez or Hungary.

In England Mr. Gaitskell was at pains to point out that the Labor Party has no contact with, still less collaboration with, communist parties in any country. He did say that he was critical of the Eisenhower doctrine as being inadequate to deal with Middle Eastern problems as a whole. But if Khrushchev was hoping to pry him loose from NATO, or panic him with cries of war, he was quite unsuccessful.

The Khrushchev letter reads like a document from the worst of the Molotov days. It is an attack on the United States, a warning of imminent war, a reminder that NATO countries would be involved if Turkey fights, and a clear effort to ruin NATO by stirring up political opposition to it from within.

Khrushchev at one point in the letter asks the British Labor Party to believe that the United States is the great colonial aggressor, and in the next to recall the Suez crisis of last year. He is trying to say that

another war would damage British industry and labor even more than Suez. But to remind the British of Suez is to remind them that the United States turned against its own allies in that crisis to uphold the independence of Egypt.

So as anti-American propaganda in Britain the letter is not notably skillful. Nor is it convincing pro-Soviet propaganda. Khrushchev writes that the Soviet Union has no special economic or other interests in the Near and Middle East. "The Soviet people" he says, "are interested only in ensuring a stable peace, enabling the peoples of the Arab countries to organize their life in conformity with their national and historical peculiarities, within the framework of their own sovereign states, free from foreign intervention and threats." ~~An Arab nationalist might accept this assertion without too great skepticism~~. But European socialists know that the supply of Soviet arms to Egypt brought the Middle East cauldron to the boiling point last year, and that it is near the boiling point again because of the supply of Soviet arms to Syria, and ~~a shift in power inside Syria to pro-Soviet factions~~.

The European Socialists ~~also~~ know their history and appreciate that Russia for more than a century has striven for political control of the Middle East.

They know as well as he that the European economy now absolutely depends on Middle Eastern oil, so that control of the region by the Soviet Union, or by puppets of the Soviet Union, would give that country greater power than the Czars ever aspired to.

Even so, Khrushchev gambles on getting socialist support in Western Europe. Obviously he banks on the fact that the European socialists are critics of American policy. Since they don't like us, he thinks he can exploit their prejudices to get what he is after. And what he is after is the breakdown of the Western Alliance. He has never said so more convincingly. **As of tonight the United Staes and the Soviet Unin are threatning each other in a very convincing fashion....**

George Bryan

Khrushchev would like nothing better than to break up the Western alliance. His latest maneuver has been a direct appeal to the Socialist parties of Western Europe. This is diplomacy in a strange form but still diplomacy according to the definition by Dagobert Runes, who called diplomacy "a game of make-believe with malice aforethought."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, OCTOBER 16, 1957
7:45 - 8:00 PM EST

This is the news:

Sovet Foreign Minister Gromyko charged today that the Turkish general staff has a plan to attack Syria "immediately after the elections in Turkey on October 27." He said American advisers helped prepare the plan. Gromyko made his charge in a letter to United Nations Secretary General Hammarskjold. He said, "It must be recognized that an armed attack on Syria by Turkey, a member of the North Atlantic bloc, cannot fail to extend the conflict to other countries. The United States of America, NATO's leading member, situated on another continent some 9-thousand kilometers from Syria," he went on, "already is openly declaring its intention to intervene with its armed forces on the side of Turkey, in the hostilities against Syria, and is prodding Turkey to commit aggression against Syria." Gromyko said a number of Arab countries have spoken of the necessity of giving assistance to Syria, if aggression is committed. And he added, "Also on the side of Syria, are the peace-loving peoples of other countries, in particular of the Soviet Union which cannot regard impassively the military provocations that are being planned in the immediate proximity of the southern frontier of the U.S.S.R." In this situation, he said, the United Nations "cannot remain passive." He supported Syria's request...made earlier in the day...for a United Nations investigation of alleged threats against its security. Syria said "several" Turkish divisions were massed on its border and called the situation "intolgerably dangerous". Gromyko, in his letter to Hammarskjold, placed the Turkish strength at 50-thousand men. And he asked for more than an investigation. "Should Turkey break the peace," he said, "and attack Syria, the member states of the United Nations should

immediately render Syria the armed assistance necessary to put a stop to aggression." Gromyko said the Soviet Union is "prepared" to join in such a United Nations action.

An American spokesman at the United Nations said the United States "welcomes" Assembly consideration of the situation in the Middle East. The spokesman said, "A prompt investigation should help to ease tensions as well as clarify who it is that threatens peace in the area."

At his news conference today, Secretary of State Dulles accused Russia of waging a campaign to "dominate" Turkey. The Russian charges, he said, may be a smoke-screen for a Soviet attack on Turkey. He said the United States must be on guard against this possibility, but he does not believe such an attack is likely at this time. Mr. Dulles again assured Turkey that the United States would come to its aid in the event of a Soviet attack. He suggested that the United States might attack Russia itself in retaliation. "Certainly," he said, "it would not mean a purely defensive operation by the United States with the Soviet Union a 'privileged sanctuary' from which to attack Turkey."

The Damascus radio...which is the Syrian radio...said that Russia by its repeated warnings had prepared world opinion for Soviet intervention against Turkey. Russia, it said, is now "obliged to Syria and world public opinion to prevent Turkey from carrying out any aggressive action in the Middle East." The Syrian broadcast said that, in event of battle, "Aram progressive forces shall find the best excuse to realize their objectives of eliminating the Eisenhower Doctrine, purging other Arab countries of imperialist influence, and forming Arab nations into one unity."

In Amman, the Jordanian government told the ambassadors of Turkey, Britain and the United States that a Turkish attack on Syria will be considered an attack on all Arab states.

And in Lebanon, King Saud of Saudi Arabia conferred with the president of Lebanon, the secretary-general of the Syrian foreign office, and with his ambassadors to Lebanon, Egypt, Syria, Jordan and Iraq.

The White House announces that Arthur Larson, head of the United States Information Agency, is leaving that job to become a special assistant to the President. More than a hundred thousand utility workers went on strike in Paris today, depriving most of the city of electricity and gas. It was a 24-hour walkout, and the lights are coming back on in Paris tonight. The workers are demanding higher pay.

Tomorrow, French Communists are scheduled to hold mass street demonstrations demanding peace in Algeria. The demonstrations are being held in defiance of a government ban. It is the first test of strength the Communists have dared to try in France in five years.

There is a new experience today of what it means to deal with a Soviet Union that feels it can conduct a foreign policy from strength. It is the letter Khrushchev sent to all the Socialist parties of NATO countries. This is an open, direct appeal by the top man of a great

power to political parties in other countries, going over the heads of government and foreign offices, and even suggesting meetings with the socialist leaders. This is more than flaunting a convention. It violates one of the basic rules of modern civics, which is that negotiations between states must be held through governments.

The letter astonished British Labor Party leaders. Hugh Gaitskell was called up by the Soviet Embassy and asked if he would receive the Khrushchev letter. He said he would. But when the Soviet diplomat brought it, he saw it was addressed to the Labor Party executive, not to him, and declined comment. Then he and Aneurin Bevan hurried to 10 Downing Street to tell Prime Minister MacMillan what had happened. That was a simple way to demonstrate that Khrushchev had not broken down standard procedures in Britian.

In Norway and Belgium the heads of the Socialist Parties are also government premiers. So the appeal to the socialist parties was to break with foreign policies they themselves had formulated and adopted. The Norwegian Premier's reply was that the foreign policy of his government had the support of all parties in the Storting. Danish Socialists, through their council, answered that it was the job of the United Nations to follow Middle Eastern developments, and that Danish social democracy was against all aggression, be it in Korea, Suez or Hungary.

In England Mr. Gaitskell was at pains to point out that the Labor Party has no contact with, still less collaboration with, communist parties in any country. He did say that he was critical of the Eisenhower doctrine as being inadequate to deal with Middle Eastern problems as a whole. But if Khrushchev was hoping to pry him loose from NATO, or panic him with cries of war, he was quite unsuccessful.

The Khrushchev letter reads like a document from the worst of the Molotov days. It is an attack on the United States, a warning of imminent war, a reminder that NATO countries would be involved if Turkey fights, and a clear effort to ruin NATO by stirring up political opposition to it from within.

Khrushchev at one point in the letter asks the British Labor Party to believe that the United States is the great colonial aggressor, and in the next to recall the Suez crisis of last year. He is trying to say that another war would damage British industry and labor even more than Suez. But to remind the British of Suez is to remind them that the United States turned against its own allies in that crisis to uphold the independence of Egypt.

So as anti-American propaganda in Britain the letter is not notably skillful. Nor is it convincing pro-Soviet propaganda. Khrushchev writes that the Soviet Union has no special economic or other interests in the Near and Middle East. "The Soviet people" he says, "are interested only in ensuring a stable peace, enabling the peoples of the Arab countries to organize their life in conformity with their national and historical peculiarities, within the framework of their own sovereign states, free from foreign intervention and threats." But European socialists know that the supply of Soviet arms to Egypt brought the Middle East cauldron to the boiling point last year, and that it is near the boiling point again because of the supply of Soviet arms to Syria.

The European Socialists know their history and appreciate that Russia for more than a century has striven for political control of the Middle East. They know as well as he that the European economy now absolutely depends on Middle Eastern oil, so that control of the region by the Soviet Union, or by puppets of the Soviet Union, would give that country

greater power than the Czars ever aspired to.

Even so, Khrushchev gambles on getting socialist support in Western Europe. Obviously he banks on the fact that the European socialists are critics of American policy. Since they don't like us, he thinks he can exploit their prejudices to get what he is after. And what he is after is the breakdown of the Western Alliance. He has never said so more convincingly. As of tonight the United States and the Soviet Union are threatening each other in a very convincing fashion.....

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Khrushchev would like nothing better than to break up the Western alliance. His latest maneuver has been a direct appeal to the Socialist parties of Western Europe. This is diplomacy in a strange form but still diplomacy according to the definition by Dagobert Runes, who called diplomacy "a game of make-believe with malice aforethought."

Goodnight and good luck!

This is the news:

The British prime minister, Harold Macmillan, will fly to Washington next week to confer with President Eisenhower on "world problems of active concern to both Britain and the United States." Mr. Macmillan plans to leave London on Tuesday and return the following Friday. The announcement issued at No. 10 Downing Street said the meeting will be "in the tradition of the many talks which have taken place between our two governments." Authoritative sources in London say a wide range of subjects will be discussed, in addition to the Middle East. In Washington, President Eisenhower said the conference will "provide an opportunity for useful discussions with an old and trusted friend." The visit, Mr. Eisenhower said, "reflects the practice of free countries to consult as

often as circumstances require." British Foreign Secretary Selwyn Lloyd and Secretary of State Dulles will join in the talks. (Lloyd already is in this country.)

Queen Elizabeth arrived in Washington today...from Williamsburg, Virginia...for a four-day state visit as a guest of the President. In greeting the queen at National Airport, Mr. Eisenhower said he regarded her visit as "something of the most tremendous importance, because we thoroughly believe that in the warmer, closer, stronger cooperation between your country and ours lies the best hope for the security and peace of the world." Queen Elizabeth said she brought greetings from "a friendly neighbor and a staunch ally." Washington police estimate that a million persons lined Constitution and Pennsylvania Avenues to see the queen and her husband, Prince Philip, go by on their way to the White House. After luncheon, Queen Elizabeth drove to Arlington National Cemetery and placed wreaths on the Tomb of the Unknown Soldier and at the Canadian Cross. A state dinner is being given at the White House tonight in her honor.

The steering committee of the United Nations General Assembly will meet tomorrow afternoon to take up Syria's charge that it is in danger of "imminent attack" from Turkey. Immediately after the meeting of the

steering committee, the full assembly will be called in special session to consider the committee recommendations. The committee is expected to recommend that Syria's complaint be placed on the agenda for debate. Both the United States and Russia are in favor of discussion of the problem. A United States spokesman said yesterday that "a prompt investigation should help to ease tensions, as well as clarify who it is threatens peace in the Middle East."

The charges by Syria and Russia that Turkey is about to attack Syria were dismissed by the British Foreign Office today as "propaganda". A foreign office spokesman said Russia wants to extend its influence in the Middle East. He said, "We do not believe there is any danger at all of a Turkish aggression on Syria."

A summit conference of Arab leaders will be held in Lebanon on Sunday. The meeting is said to have been arranged by King Saud of Saudi Arabia, who has been conferring this week with the president of Lebanon. Invitations are reported to have gone out to the heads of state of Syria, Jordan and Iraq. Saudi Arabia and Lebanon would also be represented, but President Nasser of Egypt is not believed...thus far...to have been invited to attend.

King Saud is reported to have talked on the telephone today with President Kuwatly of Syria.

Prime Minister Ben Gurion said today that Israel needs defensive weapons. He told the United Press in an interview that he could not understand why America is supplying arms only to Arab states. Ben Gurion said he thought Egyptian troops were sent to Syria primarily to strengthen the military dictatorship in Syria.

Here in New York today, the Stock Market reflected anxiety over the Middle East situation by dropping to its lowest ~~point~~ LEVEL in two and a half years. The decline cut more than 3-billion dollars from the quoted value of all stocks listed on the exchange. Losses ranged up to 5 points.

In France, nationwide demonstrations called by the Communist Party failed to materialize. The ~~[illegible]~~ mass demonstrations...and strikes...were ordered by the Communists in ~~[illegible]~~ defiance of a government ban, but riot police (who expected widespread disorders) had ~~[illegible]~~ LITTLE to do. There were only ~~[illegible]~~ sporadic strikes, and the small demonstrations that did occur...in protest against French policy in Algeria...were easily broken up.

The French writer, Albert Camus, today won the 1957 Nobel Prize for Literature. The author was cited for "his important literary production which with clear-sighted earnestness illuminates the problems of the human conscience in our time." His two best-known works are "The Plague" and "The Fall".

Vice President Nixon has postponed his goodwill trip to Europe until after the next session of Congress. He had planned to visit Europe this fall.

The Public Health Service says at least 360-thousand new cases of flu developed last week. More than a million, 500-thousand cases have been reported since the first outbreak of Asian flu in August.

Edward R. Murrow: October 17, 1957. 7.45 p.m.

In February of 1956, Trevor Gardner resigned as Assistant Secretary of the Air Force in Charge of Research and Development. He said he had an honest difference of opinion with Defense Secretary Wilson. Mr. Gardner is now Chairman of the Board of the Hycon Manufacturing Company, an organization that deals with problems of guided missiles communications, data processing and nuclear electronics. Mr. Gardner has agreed to answer a few questions on the subject of missiles.

1) Was it our lack of money, or lack of organization, that caused the Russians to beat us with Sputnik?

2) Since our satellite XXX will be smaller, and lower than theirs, do you think we should give up the project entirely, and concentrate on something else?

3) Are manned bombers about to become obsolete?

4) Most of us have been told that only free science can produce - that a captive science cannot compete. Does this mean that the Russians have better scientists than we have?

5) What was the basic mistake we made in ballistic missile capacity, and what should be done to correct it?

Trevor Gardner, former Assistant Secretary of the Air Force in Charge of Research and Development.

George Bryan

Word for Today

The Russians are ahead of us in long-range missile development, but the race is continuing and we had best bestir ourselves before it is too late. Alexander Pope said, "The race by vigor not by vaunts is won." Ralph WALDO Emerson had some equally good advice. "Concentration," he said, "is the secret of strength."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Thursday, October 17, 1957

7:45 - 8:00 P.M.

MURROW: Mr. Gardner, we it our lack of money or lack of organization that caused the Russians to beat us with Sputnik?

GARDNER: Mr. Murrow, this is hind-sight as you know, and hind-sight is very easy to come by. Whereas foresight about what might happen to the Russian missile and our own is a little difficult. But let's deal in hind-sight and somewhat ancient history. First of all, the decision to participate in an international geophysical year satellite program was made outside of the defense department, and secretary Quarles then assistant secretary for research and development agreed to a budge t of 20 million dollars to attempt to launch an earth satellite during the international geophysical year. The fact that the Russians beat us to it has been variously estimated, I donsider it a serious, extremely serious matter. The funds were inadequate. Totally inadqquate. The present budget of well in eeeeee excess of 100 million dollars proves that the original estimate was way off base. The timing of the program was simply that we started too late. The program should have been started at least a year before. The program was assigned a low priority. Costs were held down and in general the solutions to the various problems facing the program were arrived at with budget considerations and dollar signs dominating rather than the incentive to buy time. I think everyone participating in the program understood the tremendous psychological and implied military advantage that would be gained by the nation who achieved this break through first. In spite of that, we continued with a no over-time low priority program and to the best of my knowledge that's the way it is this evening.

MURROW: Well, Mr. Gardner, since our satellite will

be smaller and will fly lower than their, should we perhaps give up the project entirely and concentrate on something else?

GARDNER: Well let's assume for a moment Mr. Murrow that we're successful in doing what the President has said we will do, namely to launch an instrumented satellite in March of 1958. And as you say, this will be smaller and will fly lower. And so it seems to me that we come in second best even if, and a poor second best at that, even if the satellite works. Now if perhaps it's radio should not work or if it didn't fly in March, or if in fact, it didn't fly at all during the international geophysical year it seems to me that our national prestige, our international prestige in fields of technology would be even further impaired than it is. Now the facts are that we and the Russians agreed to supply data gathered by such satellites to the other participants in the international geophysical year. If this satellite program is to interfere in any way with our achievement of the earliest capability, the earliest demonstration of an intercontinental ballistic missile, I would say that the program should be cancelled, and as a matter of fact, as I say, even if we succeed, we are a poor second best.

MURROW: Now let's turn to another subject. Are manned bombers about to become obsolete?

GARDNER: This apparently is Mr. Khrushchev's view.

MORROW: Yes.

GARDNER: I don't think it's shared by thinking people in the defense department or thinking scientists in this country who have studied the problem. The facts are, we do not have ballistic missiles at the present time. We do have a strong retaliatory threat in our manned bombers both here, on the drawing boards and in pilot production. It seems to me that for the next 5 to 10 years the costs of ballistic missiles will simply be additive to the costs of providing the necessary

kind of navy and air force and army that we now have planned.

MURROW: Well Mr. Gardner most of us have been told that only a free science can produce that a captive science cannot compete. Does this mean that the Russians have better scientists than we have?

GARDNER: I certainly would not want to down-grade the quality of the Russian scientists as demonstrated by the Sputnik demonstration and by there many other technological achievements of the last 5 years. I think our scientists are equally as good. I don't believe that our scientists, engineers and technologists have lost this race for us. This race has been lost by the administrators in the executive branch of the government, generally by people who are not scientists and were not guided missile experts. By lack of decision, indicision, an assignment of poor priorities and low funds, we've lost this race.

MURROW: Well what was the basic mistake we made in the field of guided missiles and what should be done about it? That's a terrible question to ask with only 30 seconds left.

GARDNER: Well the basic mistake was not establishing a program with the kind of urgency that the Manhattan District - that the A-bomb had and the second basic mistake was setting up a complex cumbersome red tape ridden organization to administer the program and the third mistake was permitting the three services to get into the one of the greatest controversies that has existed since the Pentagon has been in business.

MURROW: Thank you very much indeed, Trevor Gardner. Former assistant secretary of the air force in charge of research and development and now chairman of the board of Hi-Con.

GEORGE BRYAN: COMMERCIAL

MURROW: The Russians are ahead of us in long-range missile development, but the race is continuing and we had best bestir ourselves before it is too late. Alexander Pope said, "The race by vigor not by vaunts is won." Ralph Waldo Emerson had some equally good advice. "Concentration," he said, "is the secret of strength."

Good N ght and good luck!

Edward R. Murrow Fri., Oct. 18, 1957

This is the news:

Defense Secretary McElroy has, in effect, taken personal command of the United States missile program. He sent a memorandum to the secretaries of the Army, Navy and Air Force, ordering them to submit weekly reports on the progress being made. The reports, he said, are to be sent to his missiles expert, William Holaday, together with a copy marked for his own personal attention. McElroy said that present missile schedules appear to represent "the best balance of technical knowledge, trained manpower, and test installations, that we can make at this time." He said that so far as he knew, all requests for permission to use overtime in the missile program had been approved since he took office 10 days ago. "The great importance to our national security of maintaining these programs on

schedule," he said, "is obvious." McElroy instructed the service secretaries to inform his office immediately "of any assistance which any other service...or the Defense Department...or any government agency...can provide which will insure the maintenance of our schedules." He said he wants to be advised immediately of any regulations which could "conceivably impede progress". And he said he should be advised directly if any of the services run into a scientific problem. This should be done, he said, "so that we may obtain the earliest possible help from scientists either within or outside the government."

Secretary of State Dulles and British Foreign Secretary Selwyn Lloyd met for 90 minutes today to lay the groundwork for next week's conference between Prime Minister Macmillan and President Eisenhower. Reports from Washington say that a program for "pooling" the scientific know-how of Britain and the United States will be discussed at the meeting. Last night...in a toast to Queen Elizabeth...the President said, "Our scientists must work together." He also said, "NATO should not be thought of merely as a military alliance. NATO is a way of grouping ability." So it is possible that a plan for pooling scientific knowledge beyond the confines of the United States and Britain may be under consideration.

The United Nations General Assembly voted today to debate Syria's charge that it is in danger of imminent attack from Turkey. The vote, supporting the recommendation of the steering committee, was 66 to nothing. Liberia abstained. The Assembly president, Sir Leslie Munro, said full debate will start "at a convenient date next week."

Through its news agency Tass, Russia today again accused the United States of urging Turkey to attack Syria. Tass repeated the charge that when Loy Henderson was in Turkey last month he helped plan "an aggression". "Turkish troops," it said, "are standing by for the attack."

Turkey today published the text of a note to Syria...rejecting Syria's charge that Turkey is planning aggression. The note says that Syria is subject to "no threat whatsoever". But Syria's behavior, it says, is "ample justification" for Turkey's concern. The note declares that security measures taken by Turkey...such as troop movements within its own territory...are "purely the internal affairs of a state and no interference in this field is admissible." Cairo radio reports that Syria has rejected the Turkish note as "not satisfactory."

A source in the Turkish foreign office predicted today that Syria will not be the cause of World War Three. ~~The foreign office source~~ told CBS News Correspondent Richard Kallsen in Ankara that Moscow is trying to create trouble in order (in the words of the Turkish official) "to make things easier for Russia in the Middle East." No one, the official said, believes Russia has good intentions.

Turkey remains calm. Kallsen reports what he calls "an amazing absorption" with the upcoming national elections. Both the Turkish prime minister and foreign minister, he says, are out of town campaigning. So are the top officials concerned with defense.

The summit meeting of Arab states...scheduled for Sunday...[redacted] has been called off. Cancellation of the meeting was announced in Beirut, the capital of Lebanon. Apparently the invitation extended by Saudi Arabia and Lebanon was not accepted by the other Arab states. These "other states" were identified as Syria, Jordan and Iraq.

The United States guided-missile cruiser Canberra put into a Turkish port today for a courtesy visit.

Reports from Bonn say that West Germany will break off diplomatic relations with Yugoslavia tomorrow. Such a move has been expected, due to Yugoslavia's recognition of East Germany.

In Paris tonight, the Conservative leader...Antoine Pinay...was defeated in his effort to form a government. Communists and Socialists combined in the National Assembly to vote him down. [redacted] And there is speculation that new elections may have to be held to break the deadlock.

Queen Elizabeth's second day in Washington was as busy as her first. She visited the National Art Gallery and Childrens Hospital, had luncheon at the Capitol as the guest of Vice President Nixon, appeared at a reception at the British Embassy, and tonight is attending a dinner at the Pan American Union as guest of Secretary of State Dulles.

~~There has been some criticism in Britain of the monarchy and the role that it plays in present-day society.~~ My colleague, Alexander Kendrick, (who is regularly assigned to London) accompanied Queen Elizabeth to this country and has some observations to make on this subject. For his report, we switch now to Washington.

(Kendrick tape runs 5:15
Ends on cue: "--to Ed Murrow in
New York."

That was my colleague, Alexander Kendrick, reporting on the meaning of the British monarchy. [This is Ed Murrow. (I'll be back in a moment with the Word for Today. Now here is George Bryan.)

Secretary of the Army Brucker said today that personnel at fourteen Army posts in the United States will be reduced by 50-thousand men by the middle of next year. No major Army post, he said, will be inactivated in that period.

Secretary of Commerce Weeks announced today that the inter-state highway system is being expanded by an additional 21-hundred miles. He said this will mean new major routes in the Far West and facilitate motor traffic between the North-Central States and the South Atlantic Seaboard.

Word for Today

Ever since Queen Elizabeth arrived in Washington yesterday morning, she has been hastening from one appointment to another. In view of this, Alex Kendrick tells me, "Please remember what Queen Elizabeth the First once confided to her Parliament."

"To be a king and wear a crown," she said, "is more glorious to them that see it than it is a pleasure to them that bear it."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS (NON-NEW YORK SPOTS ONLY)

Friday, October 18, 1957
7:45 - 8:00 P.M.

MURROW: My colleague Alexander Kendrick who is regularly assigned to London accompanied Queen Elizabeth to this country and he has some observations to make on this subject. For his report we switch now to Washington.

KENDRICK: The tensest moment in the London theatre this season occurs in a new play starring Sir Lawrence Olivier as a second rate vaudville performer. A young Britian has been killed in a Suez invasion, and his brother, in anguish cries out "What was it for, just for the sake of a gloved hand waving from a golden coach?". It is a tense moment. The audience draws a deep breath. Some of them hiss but most of them sit in shocked silence as the play goes on. Criticism of the monarchy has been vividly expressed and this is the m ost popular play in town. The significant things about is that the author, 27 year old John Osborne author also of the play, Look Back in Anger, now on Broadway is a socialist professing to speak for a generation of angry young men in Britain who feel that the second Elizabethian Age contrary to all their expectation offers them neither the challenge nor the causes of previous British history. Their criticism of the Monarchy is only symbblic as the Monarchy itself is. Osborne, in another attack has called the Monarchy the gold filling in a mouthfull of decay. But perhaps even more significant is the fact that even the younger Torries are also critical. Lord Offingam's is not a lone voice in the wilderness. But the Torry criticism is that the Monarchy today is too remote and meaningless a symbol and does not reflect the realities of the British Commonwealth of natiams in the 20th century. And Malcohm Muggerige, who is neither Socialist nor Torry but a kind of philosophical Anarchist, is not alone in England either in calling the Monarchy a Royal soap-opera, and the indignation expressed by the British

Press at that is the indignation of a theatrical agent whose talent has received an adverse review. The present visit of the Royal couple to the United States is in part, apparently designed to counter some of this criticism, and on a ceremonial and non-political level there is no doubt that Elizabeth and Philip are ambassadors of good-will. In Canada, the Queen opened Parliament, thus fulfilling one of the important functions of her role as the head of the British Commonwealth. In America, she is paying a state visit to Britain's closest ally and incidentally, proving that her voice, her ~~personality~~ personality and now even the content of what she says are not quite as negative as some of her critics have made out. But on a working level, neither Anglo-Canadian nor Anglo-American relations can be effected by the Queen's presence in the new world, any more than NATO policies canbe effected by her recent ~~statement~~ state visit to France. Canada's commercial difficulties with Britain and the British yearning for broadened markets to a new European free trade area are problems which will not be increased or diminished by the fact that the Queen opened Parliament. And to discuss the Middle East and Anglo-American cooperation in the field of Missile and satellite developments, the American head of state, President Eisenhower will not sit down with the British head of state, the Queen, but the British Prime Minister, Harold MacMillan. There are some in England who regard the Queen as a sort of super movie star. Others who see her as Britain's number one civil servant. And despite the undoubted personal popularity of the Royal family the position of the Monarchy is anamalous in the day of the welfare state. A century ago, Walter Baggert remarked and the observation still holds good, that the Monarch's three remaining personal rights in government are, first, the right to be consulted by his of her ministers, secondly, the right to encourage, and third, the right to warn. It is doubtful if any of these rights have so far been meaningfully exercised

by Elizabeth the second, as they were, for example, by her grandfather, George VI. But the Queen's behavior on this new world trip, her precedence setting newsmen's receptions, her departurefrom printed texts in her remarks, the injection of some spontaneity into her official personality and the new authenticity of her subject matter, departing from the customary trivial formality of the past, and for all these changes, Prince Philip is entitled to a large share of credit. These are indications that the young Queen is acquireng maturity and authority as she pursues the almost impossible task of being at once, ordinary and extra-ordinary. The so-called tweedy set, the courtiers and palace advisers may have felt fresh winds blowing about them and if they have the recent criticisms on the Monarchy as an institution has served a most useful purpose as criticism usually does. The palace advisers have always believed that the Queen needs no publicity agent and this has made for some difficult times in Britain in obtaining even routine information about Royalty. But if they have now discovered that the Queen needs no publicity agent only because she herself can be her own publicity agent, a new day may have dawned in Buckingham Palace. Five years after the Coronation, the second Elizabethian age now has truly begun. Now back to Ed Murrow in New York.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, OCTOBER 18, 1957
7:45 - 8:00 PM EST

This is the news:

Defense Secretary McElroy has in effect taken personal command of the United States missile program. He sent a memorandum to the secretaries of the Army, Navy and Air Force ordering them to submit weekly reports on the progress being made. The reports, he said, are to be sent to his missiles expert, William Holaday, together with a copy marked for his own personal attention. McElroy said that present missile schedules appear to represent "the best balance of technical knowledge, trained manpower and test installations that we can make at this time." He said that so far as he knew, all requests for permission to use overtime in the missile program had been approved since he took office 10 days ago. "The great importance to our national security of maintaining these programs on schedule," he said, "is obvious." McElroy instructed the service secretaries to inform his office immediately" of any assistance which any other service...or the Defense Department...or any government agency...can provide, "which will insure the maintenance of our schedules." He said he wants to be advised immediately of any regulations which could "conceivably impede progress". And he said he should be advised directly if any of the services run into a scientific problem. This should be done, he said,"so that w4 may obtain the earliest possible help from scientists either within or outside the government."

Secretary of State Dulles and British Foreign Secretary Selwyn Lloyd met for 90 minutes today to lay the groundwork for next week's conference between Prime Minister Macmillan and President Eisenhower. Reports from Washington say that a program for "pooling" the scientific know-how of Britain and the United States will be discussed at the meeting. Last

night...in a toast to Queen Elizabeth...the President said, "Our scientists must work together." He also said, "NATO should not be thought of merely as a military alliance. NATO is a way of grouping ability." So it is possible that a plan for pooling scientific knowledge beyond the confines of the United States and Britain may be under consideration.

The United Nations General Assembly voted today to debate Syria's charge that it is in danger of imminent attack from Turkey. The vote, supporting the recommendation of the steering committee, was 66 to nothing. Liberia abstained. The Assembly president, Sir Leslie Munro, said full debate will start "at a convenient date next week."

Through its news agency Tass, Russia today again accused the United States of urging Turkey to attach Syria. Tass repeated the charge that when Loy Henderson was in Turkey last month he helped plan "an aggression". "Turkish troops," it said, "are standing by for the attack."

Turkey today published the text of a note to Syria...rejecting Syria's charge that Turkey is planning aggression. The note says that Syria is subject to "no threat whatsoever". But Syria's behavior, it says, is "ample justification" for Turkey's concern. The note declares that security measures taken by Turkey...such as troop movements within its own territory...are "purely the internal affairs of a state, and no interference in this field is admissible." Cairo radio reports that Syria has rejected the Turkish note as "not satisfactory."

A source in the Turkish foreign office predicted today that Syria will not be the cause of World War Three.

The summit meeting of Arab states...scheduled for Sunday...has been called off. Cancellation of the meeting was announced in Beirut, the capital of Lebanon. Apparently the invitation extended by Saudi Arabia and Lebanon was not accepted by the other Arab states. These "other states" were identified as Syria, Jordan and Iraq.

The United States guided-missile cruiser Canberra put into a Turkish port today for a courtesy visit.

Reports from Bonn say that West Germany will break off diplomatic relations with Yugoslavia tomorrow. Such a move has been exptected, due to Yugoslavia's recognition of East Germany.

In Paris tonight, the Conservative leader...Antoine Pinay...was defeated in his efforts to form a government. Communists and Socialists combined in the National Assembly to vote him down. And there is sepculation that new elections may have to be held to break the deadlock.

Queen Elizabeth's second day in Washington was as busy as her first. She visited the National Art Gallery and Childrens Hospital, had luncheon at the Capitol as the guest of Vice President Nixon, appeared at a reception at the British Embassy, and tonight is attending a dinner at the Pan American Union as guest of Secretary of State Dulles.

My colleague, Alexander Kendrick, (who is regularly assigned to London) accompanied Queen Elizabeth to this country, and has some observations to make on this subject. For his report, we switch now to Washington.

KENDRICK: The tensest moment in the London theatre this season occurs in a new play starring Sir Lawrence Olivier as a second rate vaudville performer. A young Britian has been killed in a Suez invasion, and his brother, in anguish cries out "What was it for, just for the sake of a gloved hand waving from a colden coach?". It is a tense moment. The audience draws a deep breath. Some of them hiss but most of them sit in shocked silence as the play goes on. Criticism of the monarchy has been vividly expressed and this is the most popular play in town. The significant things about it is that the author, 27 year old John Osborne author also of the play, Look Back in Anger, now on Broadway is a socialist professing to speak for a generation of angry young men in Britain who feel that the second Elizabethian Age contrary to all their

expectations offers them neither the challenge nor the causes of previous British history. Their criticism of the Monarchy is only symbolic as the Monarchy itself is. Osborne, in another attack has called the Monarchy the gold filling in a mothfull of decay. But perhaps even more significant is the fact that even the younger Torries are also critical. Lord Offingam's is not a lone voice in the wilderness. But the Torry criticism is that the Monarchy today is too remote and meaningless a symbol and does not reflect the realities of the British Commonwealth of nations in the 20th century. And Malcolm Muggerige, who is neither Socialist nor Torry but a kind of philosophical Anarchist, is not alone in England either in calling the Monarchy a Royal soap-opera, and the indignation expressed by the British Press at that is the indignation of a theatrical agent whose talent has received an adverse review. The present visit of the Royal couple to the United States is in part apparently designed to counter some of this criticism, and on a ceremonial and non-political level there is no doubt that Elizabeth and Philip are ambassadors of good-will. In Canada, the Queen opened Parliament, thus fulfilling one of the important functions of her role as the head of the British Commonwealth. In America, she is paying a state visit to Britain's closest ally and incidentally, proving that her voice, her personality and now even the content of what she says are not quite as negative as some of her critics have made out. But on a working level, neither Anglo-Canadian nor Anglo-American relations can be effected by the Queen's presence in the new world, any more than NATO policies can be effected by her recent state visit to France. Canada's commercial difficulties with Britain and the British yearning for broadened markets to a new European free trade area are problems which will not be increased or diminished by the fact that the Queen opened Parliament. And to discuss the Middle East and Anglo-

American cooperation in the field of Missile and satellite developments, the American head of state, President Eisenhower will not sit down with the British head of state, the Queen, but the British Prime Minister, Harold MacMillan. There are some in England who regard the Queen as a sort of super movie star. Others who see her as Britain's number one civil servant. And despite the undoubted personal popularity of the Royal family the position of the Monarchy is anamalous in the day of the welfare state. A century ago, Walter Baggert remarked and the observation still holds good, that the Monarch's three remaining personal rights in government are, first, the right to be consulted by his or her ministers, secondly, the right to encourage, and third, the right to warn. It is doubtful if any of these rights have so far been meaningfully exercised by Elizabeth the second, as they were, for example, by her grandfather, George VI. But the Queen's behavior on this new world trip, her precedence setting newsmen's receptions, her departure from printed texts in her remarks, the injection of some spontaneity into her official personality and the new authenticity of her subject matter, departing from the customary trivial formality of the past, and for all these changes, Prince Philip is entitled to a large share of credit. These are indications that the young Queen is acquiring maturity and authority as she pursues the almost impossible task of being at once, ordinary and extra-ordinary. The so-called tweedy set, the courtiers and palace advisors may have felt fresh winds blowing about them and if they have the resent criticisms on the Monarchy as an institution has served a most useful purpose as criticism usually does. The palace advisors have always believed that the Queen needs no publicity agent and this has made for some difficult times in Britain in obtaining even routine information about Royalty. But if they have now discovered that the Queen needs no publicity agent

only because she herself can be her own publicity agent, a new day may have dawned in Buckingham Palace. Five years after the Coronation, the second Elizabethian Age now has truly begun.

Now back to Ed Murrow in New York.

MURROW: That was my colleague, Alexander Kendrick, reporting on the meaning of the British monarchy.

Secretary of the Army Btucker said today that personnel at fourteen Army posts in the United States will be reduced by 50-thousand men by the middle of next year. No major Army post, he said, will be inactivated in that period.

Secretary of Commerce Weeks announced today that the inter-state highway system is being expanded by an additional 21-hundred miles. He said this will mean new major routes in the Far West and facilitate motor traffic between the North-Central States and the South Atlantic Seaboard.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Ever since Queen Elizabeth arrived in Washington yesterday morning, she has been hastening from one appointment to another. In view of this, Alex Kendrick tells me, "Plezse remember that Queen Elizabeth the First once confided to her Parliament." "To be a king and wear a crown," she said, "is more glorious to them that see it than it is a pleasure to them that bear it."

Goodnight and good luck!

Lesueur for Murrow Mon., Oct. 21, 1957

Good evening, everyone. Here's what happened today:

Ed Murrow...like several hundred thousand OTHER Americans...is ill tonight, due to a bronchial condition. He hopes to be back at this microphone in a few days.

Here in New York today, a welcome for Britain's queen. From the moment Queen Elizabeth and her consort, Prince Philip, arrived from Washington by special train at 10 minutes after ten this morning until tonight...when the Queen attends the Commonwealth Ball in the 7th Regiment Armory...the royal couple will have been royally received. Queen Elizabeth's train arrived at Stapleton...on Staten Island...where she was greeted by New York's Governor Harriman. This was done so she could see the famous skyline of Lower Manhattan and the Statue of

Liberty. And as the ferryboat bore her toward the Battery...across the choppy waters of New York Harbor...the cannon of Governor's Island boomed a 21-gun salute, superimposing their thunder on the tooting of small harbor craft. Then the traditional ticker-tape parade up Lower Broadway to City Hall (Theyne just finished sweeping up bits of paper weighing...altogether...two hundred TONS), and then to her suite at the Waldorf-Astoria Hotel. This afternoon, a speech in the great auditorium of the U.N. General Assembly...the Queen counseling the diplomats of 82 nations not to be discouraged in their endeavor for world peace. "The peoples of the world," she said, "expect the United Nation to persevere in its efforts." She told the hushed audience of 2-thousand diplomats and spectators: "This assembly was born of the endeavors of countless men and women from different nations who, over the centuries, have pursued the aim of the preservation of peace between nations...equality of justice for all before the law...and the right of the peoples of the world to live their lives in freedom and security." Only once did the Queen refer...even indirectly...to the Cold War. That was when she said, "When justice and respect for obligations are firmly established,

the United Nations will the more confidently achieve the goal of a world at peace."

Later in the afternoon, the royal couple went...like any tourists..to the top of the Empire State Building, to look down over the great city from a height of 12 hundred and 50 feet. "The view," Elizabeth said quietly, "is tremendous." And then she returned to the Waldorf to prepare for the dinner sponsored by the Pilgrims and the English Speaking Union...and, after that, the ball. From the ball, she will rush to International Airport, Still in ball gown and jewels... for the overnight flight Back to Buckingham Palace and her children.

In London TODAY...Prime Minister Macmillan conferred [redacted] with his top advisers, preparatory to his flight to Washington tomorrow for a conference with President Eisenhower. One of those with whom he conferred on the eve of his trip was: Winston Churchill. Reports from London say Macmillan's cabinet has authorized him to exchange British nuclear and space secrets with the President. The prime minister is bringing with him several of his principal aides on nuclear energy.

There is some confusion tonight...about possible mediation of the crisis involving Turkey and Syria. It began with the announcement by King Saud of Saudi Arabia that he had offered to mediate the dispute. Syria was reported to have accepted that mediation offer. But then...late in the day...the Syrian delegate at the U.N. called this report "not in conformity with fact." Tonight, Turkey said it accepts King Saud's offer. Meantime, the UN General Assembly meets tomorrow afternoon to begin debating Syria's complaint that Turkey threats the Middle East peace.

Prime Minister Ben Gurion said today: "We cannot be optimistic because the target of the Soviet-Syrian alarm is now Turkey and not Israel." Soviet enmity toward Israel," he said, "has not weakened, although

we have done everything in our power to try to improve relations with the Soviet Union." Ben Gurion spoke...in opening the winter session of the Israeli parliament.

Britain announced today that Cyprus will get a new governor, (the first of next December.) Sir John Harding to be replaced by Sir Hugh Foot, presently governor of Jamaica.

The New York Stock Market was hit today by a heavy wave of selling. Losses ranged from 1 to 6 dollars a share. ...adding up to the sharpest drop since President Eisenhower's heart attack in September, 1955. "Paper losses" are estimated at more than 6-billion dollars. American Tel & Tel, one of the "blue chips", was down three and seven-eighths. And volume amounted to 4-million, 670-thousand shares.

The U.S. Supreme Court took action [redacted] today...that may have a far-reaching effect on school integration in the South. The high tribunal refused to review the decision of lower courts, declaring Virginia's Pupil Placement Act [redacted] to be unconstitutional. The Supreme Court gave no reason for not reviewing the case...which had been appealed by the school boards of Newport News and Norfolk, and by the State of Virginia. But the effect, of course, is to let stand the rulings handed down by the lower courts. The placement act is similar to the laws passed by other southern states for circumventing the Supreme Court decision of 1954...banning racial segregation in the public schools. The Virginia law says that pupils shall be assigned to schools which are "most appropriate" [redacted] and that the assigning shall be done by a state board appointed by the governor. It makes no [redacted] reference to assignment on the basis of race or color. However, the United States District Court held that the effect was still segregation...and ruled the act "unconstitutional." Judge Walter Hoffman of the district court said the law provided no adequate remedy for Negroes...because of the "fixed policy" of Virginia school officials against integration. He pointed out that...under the provisions of →

a separate act...state funds are allocated solely to "efficient" elementary and secondary school systems...and that a school system is not "efficient", if any of its schools are racially mixed. Judge Hoffman's decision was later affirmed by the U.S. Circuit Court of Appeals. And now: Today's Supreme Court action allowing the decision to stand. It's too early to say just what the Virginia reaction will be. Governor Stanley declined immediate comment.

The Army announces tonight...in Little Rock...that it has begun releasing 87-hundred of the Arkansas national guardsmen "federalized" in the integration crisis there. The process is expected to be completed by the end of the month. Army paratroopers are still on guard at Central High.

well

Scientific co-operation will be one of the two chief themes of the conference between Prime Minister MacMillan and President Eisenhower this week; the other will be the Middle East. Once more the British are ready to share scientific effort with us if they are allowed to share the practical results.

The British shared with us in the original breakthrough of atomic fission, and British scientists had a vital part in the work of the Manhattan Project during the war. But when it came to sharing the results, circumstances had altered and we froze the British out. The McMahon Act forbade this country to share atomic secrets or materials with anyone, and even under its subsequent revision, certain secrets and certain materials are still held back. The act was originally passed without regard to a little-known agreement that President Roosevelt and Prime Minister Churchill reached at the time they pooled their research on atomic energy. They undertook to pool the results, as well as the research. Their undertaking was as near being a treaty as two individuals ~~could~~ can produce, though naturally it was worthless without ratification. Anyway, it never saw the light of day. Only much later did Mr. Churchill tell associates that he had the original document in his archives.

This private agreement with Britain was broken in the belief that the United States had a monopoly of the A-bomb, and would have it for many years. We saw this as assuring our supremacy in world power. We were confident we would use ~~the~~ THAT power to preserve the peace, but we could not be sure that others with atomic weapons would do likewise.

As it turned out, the McMahon Act was based on an illusion, probably the most spectacular illusion of the century. Our atomic monopoly was a mirage. Not only did the Russians make the ATOM bomb, they came up with the fusion bomb - the H-bomb as soon as we did, and now they have launched the first experimental intercontinental rocket and the first earth satellite.

So now we are all for discussing the pooling of scientific effort again. At the state dinner for Queen Elizabeth last week, President Eisenhower said that NATO should share scientific as well as military effort. Maybe it was ironical that he should be saying this first to the British. But in due course he is expected to say it to Congress, which alone has the power to unfreeze the existing state of atomic secrecy. AND Congress, under the changed circumstances, is expected to bring the Act up to date.

There is another event of the last days - that is, other than Sputnik -

that is making collaboration with British scientists particularly inviting. It is the news that they have made startling progress in attempting to control the explosion of the hydrogen bomb. If this is done, it can ultimately be used in a power reactor.

British hydrogen physicists conferred with our own at Princeton last week, but not enough was disclosed for us to know whether we have matched the British, or whether the British success is a scientific breakthrough. At any rate this is work on [redacted] which collaboration is legal. Controlled fusion of the hydrogen atom would be useful - only for peaceful [redacted] purposes and is not covered by the MacMahon Act. Whether or NOT the British are [redacted] ahead of us, the value of their co-operation is quite clear. And it's [redacted] all the more important since word has come that the Russians are far along with similar experiments.

Deuterium, or heavy hydrogen, costs about $750, thousand dollars [redacted] a ton to produce and can be made from ordinary sea water. That is, the supply is unlimited, — ~~some scientists say it will last a billion years.~~ The energy in a ton of deuterium is equivalent to the energy in ten million tons of coal. Once this energy is controlled — [redacted]d, there will be no more power problems in the world. Atomic power would be universal, and it's [redacted]s been predicted that it would be

so cheap that every home on earth could have electric current from it, without a meter. One of the big tasks of industry ~~would~~ then be to manufacture all the devices that could be ~~to be~~ operated by the current.

But ~~this~~ that is the ultimate possibility. It will take a long time before such hydrogen reactors are perfected. But ten years ago the Hydrogen atom hadn't even been split - it's taming wasn't even thought of. When the history of the atomic age comes to be written, this experiment in Britain's Harwell laboratory, (and others like it), may outshine Sputnik both in historical and scientific importance.

Elizabeth of England was truly New York's Queen for a day..

By the time she boards her plane back to England in the early hours [redacted] tomorrow morning, she will have seen the statue of Liberty and the top of the Empire State, travelled 35 miles thru streets banked [redacted] ten deep with [redacted] well-wishers, shaken hands with more than 3 thousand, talked to ten thousand MORE and warmed the hearts of millions..

[redacted] This is Larry LeSueur...Good Nite..

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, OCTOBER 21, 1957
7:45 - 8:00 PM EST

LESUER FOR MURROW

Good evening, everyone. Here's what happened today:

Ed Murrow...like several hundred thousand OTHER Américans...is ill tonight, due to a bronchial condition. He hopes to be back at this microphone in a few days.

Here in New York today, a welcome for Britain's queen. And its all the more important since word has come that the Russians are far along with similar experiments.

Deuterium, or heavy hydrogen, costs about $750 thousand dollars a ton to produce and can be made from ordinary sea water. That is, the supply is unlimited. The energy in a ton of deuterium is equivalent to the energy in ten million tons of coal. Once this energy is controlled, there will be no more power problems in the world. Atomic power would be universal, and its been predicted that it would be so cheap that every home on earth could have electric current from it without a meter. One of the big tasks of industry then would be to manufacture all the devices that could be operated by the current.

But that is the ultimate possibility. It will take a long time before such hydrogen reactors are perfected. But ten years ago the Hydrogen atom hadn't even been split - it's taming wasn't even thought of. When the history of the atomic age comes to be written, this experiment in Britain's Harwell laboratory, and others like it, may outshine Sputnik both in historical and scientific importance.

Elizabeth of England was truly New York's Queen for a day... By the time she board her plane back to England in the early hours tomorrow morning, she will have seen the statue of Liberty and the top of the Empire State, travelled 35 miles thru streets banked ten deep with well-wishers, shaken hands with more than 3 thousand, talked to ten thousand more and warmed the hearts of millions...

This is Larry LeSueur...Good Nite..

Good evening. Here's what happened today:

The U.N. General Assembly heard strong words from Russia's Andrei Gromyko, as debate opened on the Middle East. Gromyko said the United States and Turkey have worked out a plan "providing for the invasion of Syrian territory along a wide front, from the Mediterranean to the Euphrates." It was envisaged, he said, that Israel, too, "would take part at a certain stage in these operations." And he warned that Israel...by so doing...would be endangering its very existence as a state. Turkey opened the Assembly debate by proposing that discussion be deferred, to give King Saud of Saudi Arabia a chance to mediate the dispute. Syria said any postponement was out of the question...and demanded that the U.N. order the immediate withdrawal of Turkish troops from the Syrian frontier. It

also proposed that a U.N. commission be sent to the border to see that the Turkish forces ARE pulled [redacted] OUT back and report [redacted] BACK within 10 days. Egypt supported [redacted] this Syrian proposal. So did Russia, in the person of Foreign Minister Gromyko, who said: "The Soviet Union is prepared to take part with its armed forces in [redacted] suppressing aggression." And [redacted] He asked the General Assembly to "condemn" the United States and Turkey for "plotting aggression." Otherwise, he said, "we will be faced with frightful events." When the Turkish ambassador joined the debate, it was to deny the charges [redacted] leveled by Russia and Syria and [redacted] to MAKE accusations of his own. The Syrians, he said, are building military airfields "meant for use by others." And although they have no navy, they are building submarine bases." The American ambassador, Henry Cabot Lodge, spoke quietly...urging the Assembly to defer further debate, pending the outcome of mediation efforts. "Let us," he said, "give King Saud's offer a chance." Debate has now been suspended for 3 days.

This afternoon, President Eisenhower flew to New York [redacted]..where he will speak tonight at a dinner for the National Fund for Medical Education. The speech will be heard over most of these CBS Radio stations at [redacted] 10:05 p.m., Eastern time, but the text already has been released. It shows Mr. Eisenhower will make no direct reference to the Russian earth satellite...or to Russia's claim that it has successfully tested an inter-continental ballistic missile. However, the President WILL express [redacted] "unshakable faith" in the capacity of informed, free citizens to solve their problems. He plans to make a [redacted] SERIES of public [redacted] speeches, [redacted] to set forth what he calls "the strength of our domestic economy, and the character and the power of our defense programs." Mr Eisenhower [redacted] will speak in some detail tonight of the need for [redacted] [redacted] expanded health facilities for the American people.

British Prime Minister Macmillan is flying to the United States tonight on the same plane that brought Queen Elizabeth home from this country earlier in the day. Macmillan is expected to arrive in Washington for his talks with President Eisenhower around 9 or 10 o'clock tomorrow morning. But his first meeting with the President may not be until [redacted]

early evening, when he attends an informal White House dinner. The dinner will also be attended by Secretary of State Dulles and the British foreign secretary, Selwyn Lloyd. White House Secretary Hagerty said today that the talks will be kept as informal as possible throughout Mr. Macmillan's three-day stay.

The United States blames the bombings in South Vietnam...that injured thirteen American servicemen...ON Communist agents. Five Vietnamese ALSO were hurt. One time-bomb ripped through the library of the United States Information Agency in Saigon. Another exploded in an Army bus, and still another in an American TROOP hostel. President Diem of Vietnam, a staunch anti-Communist, already has expressed regret over the bombings...which, the State Department says, "remind us that the Communist leopard has not changed its spots." It calls the violence, a crude attempt, by the Communists, to disrupt the Colombo Conference, now in progress in Saigon. The conference seeks to improve the living standards of the Southeast Asia countries, and is supported by the United States.

In Paris, the Socialist leader...Guy Mollet...will try again to form a new government. Mollet agreed to make the attempt, although he has already tried once...unsuccessfully...since the previous government fell three weeks ago. THIS time, his prospects are brighter. President Coty is believed to have persuaded Antoine Pinay, the leader of the Conservatives, that he must support Mollet for the good of France. Coty warned that the French economy requires an end to the crisis without delay.

In West Germany, the Lower House of Parliament has re-elected Konrad Adenauer chancellor for a third term. This was assured, of course, when Adenauer's party won last month's parliamentary election. He's had some trouble, however, forming a cabinet, so its composition probably won't be announced until sometime next week.

~~Francois Duvalier was sworn in today as president of Haiti, taking over from the military junta that has ruled the island republic for the past four months. He called for peace...and promised to be "a president of all the people."~~

The New York Stock Market was lower today, on the average. Of 1-thousand, 258 issues traded, more than half closed lower. Three hundred and fifteen registered gains. The Dow Jones industrial average was off three dollars and 27 cents. Losses were lighter than yesterday... and less frequent... but volume for the day totaled 5-million, 90-thousand shares, making it the most active session since September, 1955.

A federal judge decided today to extend his ban against James Hoffa taking over as president of the Teamsters Union. Judge F. Dickinson Letts, indicated that his new injunction will bar Hoffa from the presidency, until the question of whether he was elected legally has been resolved. A group of rank-and-file teamsters has charged that Hoffa's election at the recent union convention was "rigged". Union attorneys deny this...charging that Chairman McClellan of the Senate Rackets Committee has been out to defeat Hoffa "at all costs".

Start Here

Today, that committee turned from its investigation of labor unions to alleged wrong-doing on the part of employers. A committee member...Senator John Kennedy... charged that both the Continental Baking Company and its subsidiary, the Morton Packing Company, violated the Taft-Hartley Law

by coercing employes engaged in union activities. Senator Kennedy made the charge after hearing witnesses testify that the companies first coerced their workers not to join one union--and then encouraged them to join another that gave them considerably lower pay.

Larry LeSueur: October 22, 1957. 7.45 p.m.

well,

The Syrian-Turkish frontier crisis has waxed and waned...

Now it's taken another grim turn....Just when it appeared that the situation might be mediated by Saudi Arabia..

But nothing has happened that changes the basic facts behind the crisis. A shift of power inside Syria put elements friendly to the Soviet Union in charge of the army and government. That has not changed. The deal by which the Soviet Union sent arms and naval units has not been cancelled. The balance of power in the Middle East, affected by this transaction, has not been righted. The Egyptian forces which moved into Syria ARE STILL there. On the Turkish side, troops are still concentrated or maneuvering close to the Syrian border. Khrushchev has not retracted his vitriolic accusation that the United States is driving Turkey into war against Syria, and the State Department has not subtracted a word or a punctuation mark from Secretary Dulles's insinuation that the Soviet Union is planning to attack Turkey.

Everybody recognizes that Syria is a pawn in the cold war. But news of what actually is happening in Damascus is hard to come by. Even the United States Embassy suffers FROM a black-out, EVER since the Syrian Government ousted three American officials last August, ~~its communications from inside the country have been hurt.~~

But it is a safe generalization that what has happened in Syria is, first, that an infiltration was accomplished which set into motion a counter-infiltration. First the pro-Soviet elements won control of the army and government. This led to the dismissal of many officers from the Syrian army. But from a relatively small army How many is not known, the government announced the removal of a major-general, two brigadiers and seven colonels. Many displaced officers showed up in Turkey. And they went to work across the border to try to regain their influence and place in the Syrian army. They may have been meeting success, for it is reported that the real reason Egypt sent troops into Syria was to stop the spread of this movement and keep the army loyal to the new regime.

This is the counter-infiltration that produced the strident warnings from Khrushchev. The first to hear him sound the alarm was the British Labor leader Aneurin Bevan, who was in Moscow on a visit. Mr. Bevan now tells what Khrushchev said to him. "There are gentlemen from Syria in Istanbul", Mr. Bevan says he was told, By Khrushchev "who are under the protection of the Turkish Government, and are trying to maneuver themselves into office in Syria. These favor the United States. Once they are in office," Khrushchev is quoted as saying, "something will happen - and if it doesn't happen it will be made to happen - of which the Soviet Union, or elements favorable to the

Soviet Union, will be accused. It will be pretended that Syrian independence is in danger, and then this Syrian Government will invite the Turks, whose troops are concentrated on the Syrian frontiers, to enter to protect Syria against Communist domination".

With great pugnacity Khrushchev told Bevan that the Soviet Union would not tolerate this action. He said he had all the evidence to back up what he was saying, and when the time came would produce it. He told James Reston, the New York Times correspondent, much the same story.

The cloak-and-dagger atmosphere of the situation is made more lurid by a report from a correspondent of the Paris newspaper Le Monde, who was in Turkey at the time of the visit of Assistant Secretary Loy Henderson. He says [redacted] that a boat carrying a valise of diplomatic papers disappeared from the Bosphorous and is now in Soviet possession. He suggests that it belonged to Mr. Henderson, and recalls that a Soviet assistant naval attache was expelled from Turkey at the time for unspecified espionage activities. He believes these are the papers that Khrushchev is waiting to produce at the psychological moment.

The theft of diplomatic papers, as well as the planting of forged documents, are both standard techniques of certain secret services. The

State Department today was asked about Mr. Henderson being robbed of papers // it called ~~and said it~~ is a story "for the birds", said ~~and~~ that he had not even carried any written instructions. // But until Khrushchev does produce his alleged documents, it is impossible to assert ~~say~~ that they have been "conveniently fabricated" to support the Soviet case.

Be that as it may, enough facts remain clear in the Syrian crisis. // The rivalry between East and West in that country is intense. // And as of this moment, the pro-Soviet faction in Damascus is sitting tight and the Soviet Union is well ahead.

I'll be back in a moment with a footnote to the NEWS (me) But first George Bryan

Queen Elizabeth is back in London with her children tonite..

And the British are undeniably pleased with the welcome she got from America, especially New York. The Manchester Guardians correspondent Alistair Cooke wrote that Queen Elizabeth came up from Washington by cover of night, slipped into a disused freight yard on staten island, from there boarded a ferry boat, and took the city single-handed..

This is Larry LeSueur--goodnite..

GEORGE BRYAN: COMMERCIAL

LE SUEUR: Queen Elizabeth is back in London with her children tonight... And the British are undeniably pleased with the welcome she got from America.. especially New York... The Manchester Guardians correspondent Alistair Cooke wrote that Queen Elizabeth came up from Washington by cover of night,

slipped into a disused freight yard on Staten Island, from there boarded a ferry boat, and took the city single-handed.

This is Larry LeSueur--goodnight...

Lesueur for Murrow Wed., Oct. 23, 1957

Good evening. Here's what happened today:

The United States "test-fired" the giant first-stage rocket for an earth satellite. It was our first test of this rocket, and the Defense Department says it was a success. The department calls the experiment "part of the planned test program for Project Vanguard--NOT an attempt to launch an earth satellite." It explains that the second and third-stage rockets required for such a launching were not tested... that the primary purpose today was to gather information on the engine that will power the first stage. This first-stage rocket is reported officially to have reached a height of 109 miles. And this s on the heels of the successful test last night of the Army's Jupiter missile, a ballistic weapon designed to have a range of about 15-hundred miles.

Russia's Sputnik, by the way, appears to have passed safely through that shower of meteorites left by the tail of Halley's Comet. It survived the worst of the meteorite bombardment, and continues to circle the earth. Sputnik has now traveled 30 times the distance to the moon.

The U.S. Navy awarded a 62-million-dollar contract [redacted] to the Lockheed Aircraft Corporation today for further development of the Polaris missile--like the Jupiter, a ballistic weapon of intermediate range. The Navy says the contract will give the United States its first ballistic missile to be assigned to specially equipped warships, including submarines. Secretary of Defense McElroy confirmed today that the Navy has perfected an atomic depth charge...which he called "one important answer to the Russian submarine threat." The atomic depth charge, he said, has been nicknamed "Betty".

The New York Stock Market bounced [redacted] today...in one of the biggest recoveries in [redacted] [redacted] went wild, and gains of [redacted] to more than 10 dollars were widespread. I.B.M. was up 17 dollars. Industrials scored their greatest one-day advance since November, 1929. And altogether, the market gained back nearly 7-billion of the 48-billion-dollar

"paper loss" incurred since values began slipping in July. Brokers attribute the recovery to President Eisenhower's expression last night of faith in the free American system, and to the successful launching yesterday of the Jupiter missile. TODAY's test of the Vanguard rocket came too late to have any effect. //

British Prime Minister Macmillan arrived in Washington this morning for three days of talks with President Eisenhower. The two leaders had a "working dinner" at the White House this evening--that is, a dinner at which mutual problems were discussed. ~~[illegible] meeting.~~ These meetings are being attended by Secretary of State Dulles and the British foreign secretary, Selwyn Lloyd. (they're BEING CONDUCTED AS INFORMALLY AS POSSIBLE ~~and are being kept as informal as possible.~~ During the day, Mr. Dulles had two preliminary discussions with the prime minister...to lay the groundwork for the talks. Both Britain and the United States are deeply concerned over Russian progress in the missiles field and with the Russian threat in the Middle East. Macmillan reportedly is proposing an Anglo-American partnership in missile development; certainly increased scientific cooperation between the countries of the Atlantic alliance is being discussed. On his arrival in Washington, the British prime minister

—>

told reporters that he had come to the United States "to improve friendship and cooperation between our two countries in all those fields in which we work together with our friends." And Dulles...who greeted Macmillan at the airport...noted that the talks will involve "not just two nations, not just the United States and the Commonwealth nations, but ALL free nations."

Attorney General Brownell resigned today, to return to private law practice. The White House says he will be succeeded by William P. Rogers, who has been Brownell's deputy in the attorney general's office since the start of the Eisenhower Administration. Brownell has wanted to leave government service for some time. And President Eisenhower accepted his resignation today with "very deep regret".

Federal Judge F. Dickinson Letts ruled today that there are grounds for barring James Hoffa from assuming the presidency of the Teamsters Union, until the legitimacy of his election is finally determined by the courts. A group of rank-and-file teamsters has charged that the election at the recent union convention was rigged...sp that Hoffa could succeed Dave Beck as president. Judge Letts said today...in his findings in the case...that persons running the convention "arranged, or passively tolerated, a common plan, effort or conspiracy to rig...and

to otherwise improperly conduct...said convention." But he refused to place the union in receivership. He said he hopes there can be an early trial on the basic charge--that Hoffa and other teamster leaders handpicked delegates to the convention to insure Hoffa's election as president.

At the Senate Rackets Committee hearing today, an official of the Continental Baking Company charged the committee with airing "slanderous" charges against his firm. There has been testimony...at the committee hearings...that Morton Frozen Foods, a division of the baking company, helped the Bakery Workers Union organize the Morton plant at Webster City, Iowa...and that the company then signed a "soft" contract with the union. George Faunce, vice president of the baking company, said, "The insinuation that Continental has bought union favors is slanderous and unwarranted to the point of being ridiculous." A union organizer testified today that the terms of the contract were (in his phrase)"disgusting" from the workers point of view. And Chairman McClellan said there was "perfectly plain evidence" of collusion between the bakery workers union and Morton.

The State Department said today that the United States is "reappraising" its aid program for Yugoslavia, as a result of Yugoslavia's recognition of East Germany. A department spokesman said that "presently planned shipments" are continuing.

Russia still accuses the United States and Turkey of plotting aggression. The government newspaper Izvestia claims that American military equipment is being "poured" into Turkey "to lubricate the Turkish war machine before it moves against Syria." According to Izvestia, the American equipment includes jet aircraft, capable of delivering hydrogen BOMBS.

In Washington, an Air Force spokesman says we have never had any bombers in Turkey. NOR do we have any stationed there now.

An interesting announcement by Moscow radio that Russia's DEPUTY defense minister, Marshal KONSTANTIN Rokossovsky, has been placed in command of Soviet forces on the Turkish frontier. The announcement gave no reason why Rokossovsky has assumed this command, OR WHY THEY HAVE PUBLIZED IT. In Russia, Rokossovsky is A BIG NAME, OF COURSE, second only to Marshal Zhukov, minister of defense. Rokossovsky not only COMMANDED at Stalingrad, during World War Two, but he led the Red armies in their defense of Moscow...and since the war, of course, was defense minister of Poland. He was forced out of THAT job last year, when Gomulka came to power.

There is no disagreement about the necessity for this country and its allies to get ahead of the Russians in science. But that means more than putting an earth satellite of our own into the sky. It means basic education and better international co-operation. President Eisenhower and Prime Minister MacMillan will be in full accord on this in their Washington talks. But the steps that these two men can take are limited, even if they are two of the most powerful individuals on earth. Getting ahead of the Russians in scientific education is a long-range problem, one that may require an entirely new outlook in this country and in Europe as well.

One gets a glimpse of the problem from a report issued by Senator Jackson, as chairman of a special NATO parliamentary committee on scientific and technical personnel. Mr. Eisenhower has spoken of the need for scientific co-operation within NATO. The Jackson report offers a program to be ~~laid~~ PLACED before the NATO parliamentary conference in Paris next month.

The report says that the NATO States face a genuine crisis due to serious shortages of skilled scientific and technical manpower. The shortages are the result of the scientific revolution through which the world is passing. Atomic power, automation and other scientific discoveries, it says, can raise standards of life throughout the world to new heights. But at the same

time, the NATO community must also be able to defend itself against an entirely new arsenal of weapons.

The report shows that the Soviet Union is graduating scientific manpower at almost twice the rate of the entire NATO community. Russia turns out more scientifically trained people than any western nation, and is accelerating the output at a higher rate than any other nation. And, the report says, the Soviet instruction is of high quality.

"Today" the report laments, "in all NATO countries countless young people with marked ability for scientific and engineering careers end their education with the secondary school." In some cases it's lack of money, in some a lack of incentive, in some, the existence of artificial social barriers. The long-term goal, says the report, is to level all barriers to the development of talent, since talent is the greatest resource of the free world community. But it recognizes that it may take decades, even generations, before that goal is reached, and a whole new public philosophy toward science and technology may be required.

Governments, it says, can do much, but by no means all. "It is the people themselves as parents who must take major responsibility in encouraging gifted young people to follow careers in science and engineering. Over and

above all, it is the people, not their governments, who must create a social climate in which intellectual exploration is recognized as a great odyssey of the human spirit."

Last year, American universities awarded four hundred and fifty Ph.D's in fields of advanced science. The number of comparable degrees granted in Europe was considerably smaller. The Jackson Committee recommends that NATO now set up a program, NATO-sponsored and NATO-financed, to produce at least 200 additional doctorate degree holders in these scientific fields.

It recommends fellowships of from five hundred to twelve hundred dollars a year, of which a majority would go to European students, for use primarily in European universities. They would be selected through NATO-wide competition patterned after the Rhodes scholarship plan. The program would cost about two million dollars a year. It makes a number of other recommendations, including an annual rewards program for teachers and students in secondary schools, and the extension of summer schools to make [redacted] fuller use of the limited number of teachers.

When NATO was first founded it was just a military alliance. But times are changing. Already a military alliance to be effective has to be a scientific alliance, too. The Jackson report is not impressive in terms

of the money it proposes should be spent on extending scientific education. But it does actually see the main problem and does tries to tackle it.

I'll be back in a moment with a footnote to The News - But first George Bryan

11/10/58

FOOTNOTE —

This is the first anniversary of the epic-making Hungarian rebellion...The White House issued this statement:

" A year ago the Hungarian people attempted to establish a free government ~~of their own choice~~.. It was ruthlessly and brutally crushed, by the armed forces of their communist oppressors..

All americans, as well as free people the world over, will remember this historic event, not only with sorrow for the sacrifices of the Hungarian people, but with feelings of deep respect for their out-standing courage..

This is Larry LeSueur---Goodnite.

EDWARD R. MURROW WITH THE NEWS (LESUEUR REPORTING)
CBS RADIO NETWORK

WEDNESDAY, OCTOBER 23, 1957
7:45 - 8:00 PM EST

Good evening. Here's what happened today:

The United States "test-fired" the giant first-stage rocket for an earth satellite. It was our first test of this rocket, and the Defense Department says it was a success. The department calls the experiment "part of the planned test program for Project Vanguard--NOT an attempt to launch an earth satellite." It explains that the second and third-stage rockets required for such a launching were not tested...that the primary purpose today was to gather information on the engine that will power the first stage. This first-stage rocket is reported officially to have reached a height of 109 miles. And this on the heels of the successful test last night of the Army's Jupiter missile, a ballistic weapon designed to have a range of about 15-hundred miles.

Russia's Sputnik, by the way, appears to have apssed safely through that shower of meteorites left by the tail of Halley's comet. It survived the worst of the meteorite bombardment, and continues to circle the earth. Sputnik has now traveled 30 times the distance to the moon.

The U. S. Navy awarded a 62-million-dollar contract to the Lockheed Aircraft Corporation today for further development of the Polaris missile---like the Jupiter, a ballistic weapon of intermediate range. The Navy says the contract will give the United States its first ballistic missile to be assigned to specially equipped warships, including submarines. Secretary of Defense McElroy confirmed today that the Navy has perfected an atomic depth charge...which he called "one important answer to the Russian submarine threat." The atomic depth charge, he said, has been nicknamed "Betty".

The New York Stock Market bounced up today...in one of the biggest recoveries in history. Buyers went wild, and gains of from two to more than 10 dollars were widespread. I.B.M. was up 17 dollars. Industrials scored their greatest one-day advance since November, 1929. And altogether, the market gained back nearly 7-billion of the 48-billion-dollar "paper loss" incurred since values began slipping in July. Brokers attribute the recovery to President Eisenhower's expression last night of faith in the free American system, and to the successful launching yesterday of the Jupiter missile. TODAY's test of the Vanguard rocket came too late to have any effect.

British Prime Minister MacMillan arrived in Washington this morning for three days of talks with President Eisenhower. The two leaders had a "working dinner" at the White House this evening--that is, a dinner at which mutual problems were discussed. These meetings are being attended by Secretary of State Dulles and the British foreign secretary, Selwyn Lloyd, they're being conducted as informally as possible. During the day, Mr. Dulles had two preliminary discussions with the prime minister...to lay the groundwork for the talks. Both Britain and the United States are deeply concerned over Russian progress in the missiles field and with the Russian threat in the Middle East. Macmillian reportedly is proposing an Anglo-American partnership in missile development; certainly increased scientific cooperation between the countries of the Atlantic alliance is being discussed. On his arrival in Washington, the British prime minister told reporters that he had come to the United States "to improve friendship and cooperation between our two countries in all those fields in which we work together with our friends." And Dulles...who greeted Macmillan at the airport... noted that the talks will involve "not just two nations, not just the -

United States and the Commonwealth nations, but ALL free nations."

Attorney General Brownell resigned today, to return to private law practice. The White House says he will be succeeded by William P. Rogers, who has been Brownell's deputy in the attorney general's office since the start of the Eisenhower Administration. Brownell has wanted to leave government service for some time. And President Eisenhower accepted his resignation today with "very deep regret".

Federal Judge F. Dickinson Letts ruled today that there are grounds for barring James Hoffa from assuming the presidency of the Teamsters Union, until the legitimacy of his election is finally determined by the courts. A group of rank-and-file teamsters has charged that the election at the recent union convention was rigged...so that Hoffa could succeed Dave Beck as president. Judge Letts said today...in his findings in the case...that persons running the convention "arranged, or passively tolerated, a common plan, effort or conspiracy to rig... and to otherwise improperly conduct...said convention." But he refused to place the union in receivership. He said he hopes there can be an early trial on the basic charge---that Hoffa and other teamster leaders handpicked delegates to the convention to insure Hoffa's election as president.

At the Senate Rackets Committee hearing today, an official of the Continental Baking Company charged the committee with airing "slanderous" charges against his firm. There has been testimony...at the committee hearings...that Morton Frozen Foods, a division of the baking company, helped the Bakery Workers Union organize the Morton plant at Webster City, Iowa...and that the company then signed a "soft" contract with the union. George Faunce, vice president of the baking company, said, "The insinuation that Continental has bought union favors is slanderous

and unwarranted to the point of being ridiculous." A union organizer testified today that the terms of the contract were (in his phrase) "disgusting" from the workers point of view. And Chairman McClellan said there was "perfectly plain evidence" of collusion between the bakery workers union and Morton.

The State Department said today that the United States is "reappraising" its aid program for Yugoslavia, as a result of Yugoslavia's recognition of East Germany. A department spokesman said that "presently planned shipments" are continuing.

Russia still accuses the United States and Turkey of plotting aggression. The government newspaper Izvestia claims that American military equipment is being "poured" into Turkey "to lubricate the Turkish war machine, before it moves against Syria." According to Izvestia, the American equipment includes jet aircraft, capable of delivering hydrogen bombs.

In Washington, an Air Force spokesman says we have never had any bombers in Turkey...NOR do we have any stationed there now.

An interesting announcement by Moscow radio that Russia's Deputy defense minister, Marshal Konstantin Rokossovsky, has been placed in command of Soviet forces on the Turkish frontier. The announcement gave no reason why Rokossovsky has assumed this command, or why they have publicized it. In Russia, Rokossovsky is a big name, of course, second only to Marshal Zhukov, minister of defense. Rokossovsky not only commanded at Stalingrad, during World War Two, but he led the Red armies in their defense of Moscow...and since the war, of course, was defense minister of Poland. He was forced out of THAT job last year, when Gomulka came to power.

There is no disagreement about the necessity for this country and

its allies to get ahead of the Russians in science. But that means more than putting an earth satellite of our own into the sky. It means basic education and better international co-operation. President Eisenhower and Prime Minister MacMillan will be in full accord on this in their Washington talks. But the steps that these two men can take are limited, even if they are two of the most powerful individuals on earth. Getting ahead of the Russians in scientific education is a long-range problem, one that may require an entirely new outlook in this country and in Europe as well.

One gets a glimpse of the problem from a report issued by Senator Jackson, as chairman of a special NATO parliamentary committee on scientific and technical personnel. Mr. Eisenhower has spoken of the need for scientific co-operation within NATO. The Jackson report offers a program to be placed before the NATO parliamentary conference in Paris next month.

The report says that the NATO States face a genuine crisis due to serious shortages of skilled scientific and technical manpower. The shortages are the result of the scientific revolution through which the world is passing. Atomic power, automation and other scientific discoveries, it says, can raise standard of life throughout the world to new heights. But at the same time, the NATO community must also be able to defend itself against an entirely new arsenal of weapons.

The report shows that the Soviet Union is graduating scientific manpower at almost twice the rate of the entire NATO community. Russia turns out more scientifically trained people than any western nation, and is accelerating the output at a higher rate than any other nation. And, the report says, the Soviet instruction is of high quality.

"Today" the report laments, "in all NATO countries countless young

people with marked ability for scientific and engineering careers end their education with the secondary school." In some cases it's lack of money, in some a lack of incentive, in some, the existence of artifical social barriers. The long-term goal, says the report, is to level all barriers to the development of talent, since talent is the greatest resource of the free world community. But it recognizes that it may take decades, even generations, before that goal is reached, and a whole new public philosophy toward science and technology may be required.

Governments, it says, can do much, but by no means all. "It is the people themselves as parents who must take major responsibility in encouraging gifted young people to follow careers in science and engineering. Over and above all, it is the people, not their governments, who must create a social climate in which intellectual exploration is recognized as a great odyssey of the human spirit."

Last year, American universities awarded four hundred and fifty Ph.D's in fields of advanced science. The number of comparable degrees granted in Europe was considerably smaller. The Jackson Committee recommends that NATO now set up a program, NATO-sponsored and NATO-financed, to produce at least 200 additional doctorate degree holders in these scientific fields.

It recommends fellowships of from five hundred to twelve hundred dollars a year, of which a majority would go to European students, for use primarily in European universities. They would be selected through NATO-wide competition patterned after the Rhodes scholarship plan. The program would cost about two million dollars a year. It makes a number of ther recommendations, including an annual rewards program for teachers and students in secondary schools, and the extension of summer schools to make fuller use of the limited number of teachers.

When NATO was first founded it was just a military alliance. But times are changing. Already a military alliance to be effective has to be a scientific alliance, too. The Jackson report is not impressive in terms of the money it proposes should be spent on extending scientific education. But it does actually see the main problem and does try to to tackle it.

I'll be back in a moment with a footnote to the news---but first George Bryan.

GEORGE BRYAN: COMMERCIAL

LESUEUR: This is the first anniversary of the epic-making Hungarian rebellion...The White House issued this statement:

"A year ago the Hungarian people attempted to establish a free government... It was ruthlessly and brutually crushed, by the armed forces of their communist oppressors...

All Americans, as well as free people the world over, will remember this historic event, not only with sorrow for the sacrifices of the Hungarian people, but with feelings of deep respect for their out-standing courage...

This is Larry LeSueur---Goodnite.

Lesueur for Murrow Thurs., Oct. 24, 1957

Good evening. everyone Here's what happened today:

President Eisenhower and British Prime Minister Harold Macmillan took steps ~~toward "pooling"~~ the scientific resources of their two countries. For a direct report on their Washington conference, here is CBS News White House Correspondent Charles von Fremd.

(Tape runs 3:40
Ends on cue: "---to Larry Lesueur in New York."

The United States is stepping up its rocket tests. The intermediate range ballistic missile "Thor", which is being developed by the Air Force, was launched successfully today at the Florida test center. This is

the SIXTH time the Air Force has test-fired a Thor...and the fourth successful shot. The Air Force announcement says: "The missile flew its prescribed course and landed in the pre-selected impact area."

The missile is reported...unofficially...to have gone more than 15-hundred miles. And this successful test comes, of course, on the heels of yesterday's launching of a first-stage VANGUARD rocket to a height of 109 miles. (This is one of the rockets that will be used [redacted] to send the American earth satellite into outer space). Also, it now appears that TWO...not just one...research rockets were fired [redacted] by the Air Force this week from balloons, suspended 100-thousand feet over the Eniwetok Atoll in the Pacific. There is some doubt as to whether the second test was a success, but the Air Force says [redacted] one rocket went to a height of [redacted] AT LEAST a thousand miles and MAY have gone four times that high. They're still collecting scientific data...trying to figure out just how high it DID go. In still another announcement, the Air Force said today that one of its Bomarc interceptor missiles ferreted out and [redacted] knocked down a drone airplane flying at [redacted] more than 60-thousand feet, a hundred miles out over the Atlantic.

The AFL-CIO executive council today suspended the teamsters union until such time as it "cleans house". The president of the AFL-CIO, George Meany, says the vote for suspension was 25 to 4. He did not say who the four dissenters were. Meany said the union...which is the largest of ALL the unions affiliated with the AFL-CIO...had made no effort to purge itself, despite corruption charges leveled against it by both the executive council and the Senate Rackets Investigating Committee. He made plain that unless president-elect James Hoffa..and other teamster officials accused of corruption...are removed, the AFL-CIO convention in December will be advised that the union should be EXPELLED. The executive committee voted to suspend the union, after Hoffa HAD asked for a year's grace in which to institute reforms. The committee turned a deaf ear to this request, and Hoffa stormed out of the meeting...his face red with anger.

Syria has appealed to King Saud of Saudi Arabia to WITHDRAW his offer to mediate the Turkish-Syrian dispute. The Syrian premier says he is "confident" King Saud will comply. The premier also repeated his charge that aircraft from the United States Sixth Fleet have been

flying over Syrian territory.

Meanwhile...perhaps as part of a war of nerves...the Moscow press says that Soviet troops near the Turkish border are being trained in the use of atomic weapons.

Tomorrow, the U.N. General Assembly resumes its crucial debate of the Middle East question.

The State Department revealed today that France has asked the United States to supply her with ballistic missiles of inter-mediate range. That is, missiles with the 15-hundred-mile range of the Thor. The State Department said the French request is being studied.

France is still without a government, and tomorrow: Another 24-hour protest strike scheduled throughout the country as railroad men and Post Office employes walk-out to back up their demands for higher pay. The Socialist leader...Guy Mollet...as of tonight has not found the political support necessary to form a government. French economists point to an almost empty treasury, and say SOMEONE must succeed soon.

Strikers rioted TODAY at the big Saint Nazaire shipyard, charging a lockout. At least one French worker was killed, and perhaps as many as 300 workers and policemen were injured. Windows in the company's main office building were smashed.

There were more reports today from Washington...all of them unofficial... that the United States will not give NEW military aid to Yugoslavia, in view of Tito's recognition of East Germany. The State Department

said yesterday that America's program of military and economic aid to Yugoslavia is being "reappraised". It's reported in Belgrade, the Yugoslav capital, that Russia has offered to compensate Yugoslavia for any assistance that may not be forthcoming from the United States.

The right of the State Department to deny a passport on the basis of confidential information was upheld today by the United States Court of Appeals. It affirmed a lower court ruling in the case of Weldon Dayton, a cosmic ray scientist who had applied for a passport so that he might study in India. The appeals court held...in a 2-to-1 decision...that denial of the passport was justified under the circumstances. The State Department had charged...on the basis of confidential information...that Dayton had been active in a Communist-front organization, and that he wanted to go abroad, in the department's words, "to engage in activities which would advance the Communist movement." The U.S. District Court supported the State Department, and Dayton appealed.

In Little Rock, the nine Negro students attending Central High [redacted] entered the building for the first time today WITHOUT military escort. [redacted] there were NO disorders.

The first "atoms-for-peace" award...established by the Ford Motor Company...was bestowed in Washington today to Dr. Neils Bohr, the Danish physicist. President Eisenhower spoke at the presentation ceremony...warned that the world "now has a choice between the technology of abundance and the technology of destruction."

The 1957 Nobel Prize for medicine was [redacted] awarded today to the Italian scientist, Dr. Daniel Bovet. Dr. Bovet pioneered in the development of anti-histamines...and in adapting a dangerous poison used by primitive South American Indians to medical use.

Today...in Guatemala...three Army colonels seized power and forced the provisional government into retirement. The three officers formed a military junta, and reports from Guatemala City say the country seems to be in for "an indefinite period of Army rule."

In Washington, the Public Health Service reports a sharp rise in the number of flu cases in the United States in the past week. It estimates a million new cases developed in the one-week period...bringing the total since the first outbreak of Asian flu last June to TWO and a half million. By no means all the new cases are "Asian flu." In compiling its figures, the health service lumps together ALL cases of influenza...as well as those diseases which show flu-like symptoms.

The Weather Bureau says that storm...developing 900 miles east of Miami...appears to offer no threat to the Atlantic coast. The storm, at last report, was developing maximum winds of 60 miles an hour.

Here in New York, the Stock Market ran into profit-taking today... after yesterday's sharp recovery...and prices closed mixed. Steels, motors and utilities showed modest gains, but the Dow Jones industrial

average was off 73 cents.

And a social note... Bing Crosby and actress Kathy Grant were married today in St. Ann's Catholic Church in Las Vegas. Crosby's first wife...the former Dixie Lee...died in 1952.

I'll be back on amount with a footnote to the news - Frank G. Bryan

Today was United Nations Day and India's Prime Minister Nehru commemorated the UN's 12th anniversary with a speech and with an acknowledgement. Told a large New Delhi rally, that India talks big at the UN, but cant solve its own integration problems at home..Nehru was referring to riots last month in caste-ridden India, between "untouchables" and caste Hindus...14 persons were killed..

This is Larry LeSueur ...Good Night.

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS (NON-NEW YORK SPOTS ONLY)

Thursday, October 24, 1957
7:45-8:00 P.M.

LESUEUR: Good evening everyone. Here's what happened today. President Eisenhower and British Prime Minister Harold Macmillan took steps toward pooling the scientific resourses of their two countries. For a direct report on their Washington conference here is CBS News White House correspondent, Charles Van Fremd.

VON FREMD: The second day of talks between President Eisenhower and British Prime Minister Macmillan was one of accomplishment. While no final agreements have been reached in pooling our nuclear and missile programs the big two have appointed high level committees to make recomendations in these two critical fields. Atomic Energy Commission chairman Louis Strauss heads the atomic hydrogen study group along with his British counterpart, Sir Edward Plowden. In the missiles rocket field Deputy Secretary of Defense Donald Quarles and Britain's permanent Secretary of the Defense Administration, Sir Richard Powell will make recommendations. The two groups are working at the White House right now. While the President and Prime Minister confer separately awaiting the committee's reports. Mr. Eisenhower and Mr. Macmillan emphasized in a joint statement issued at the White House that any new partnership arrangement would aim at insuring the security of their two countries but of all the free world as well. They instructed the nuclear and mibile groups to follow the principle that their recommendations must concern only greater service to the entire free world. The decision to pool atomic rocket information is not surprising. Ever since President Eisenhower and Secretary Dulles in their toasts to Elizabeth the Queen last week spoke of the need for combined efforts by the NATO natinns to meet Russia's space break through it had been assumed by observers here

that a scientific pool would be established. That assumption was confirmed at the White House today. But a thorny question remained, and the President and Prime Minister clearly recognized the problem and in their discussions last night and today. For any scientific pool it is almost certainly involve our sharing nuclear secrets with the British and other allies. The McMann Atomic Energy Act forbids our giving military atomic information to any country. Presidential news secretary Hagerty said, both the British and ourselves realize, legislation in this field would be needed and the fact had been fully taken into account. Secretary of State Dulles has already given notice he personally favors revision of certain laws, laws that forbid our giving any secrets involving design and construction of atomic hydrogen weapons to any foreign government. It is also known that the administration has no objection to Britain's purchasing enriched uranium from us but to date has been unable to do so because of present atomic laws. This correspondent learned upon highest authority that the administration has already writing proposed amendments to the McMann Act, amendments that would greatly liberalize our atomic energy laws. Observers here believe that Congress will be more willing than in the past to ease atomic restrictions in the light of the Russian Break through. Almost unnoticed in the excitement surrounding today's developments at the White House was the arrival in Washington of Paul Henri Spaak, Secretary-General of the North Atlantic Treaty Organization. Spaak was called here for allied coordination of scientific research to avoid waste and duplication within the NATO framework. At a noonday speech before the National Press Club Spaak said the western world cannot afford to disperse its scientific efforts any longer. Spaak called the U.S. Atomic Energy Act outdated. It is known that Spaak made these comments to with the President's approval. And so it appears that today's announcement at the White House has triggered a concerted movement

on the part of the western world to pool its resources, mental and physical in a great effort to eclipse Russia's spectacular advances. Now back to Larry Lesueur in New York.

This is Larry LeSueur...Good Night.

Lesueur for Murrow Fri., Oct. 25, 1957

Good evening, everyone. Here's what happened today:

The communique issued at the end of the three-day conference between President Eisenhower and British Prime Minister Macmillan reveals agreement on a new, co-operative effort to defend the free world. The communique states that the progress and safety of the free countries can be achieved only in "genuine partnership", by combining resources and sharing tasks in many fields. The statement of principle calls for a kind of grand alliance... not just among the NATO countries... but also among those countries belonging to the Organization of American States, the Southeast Asia Treaty Organization and the Baghdad Pact. "ALL members of this community," it says, "should possess more knowledge of the

total capabilities of security that are in being and are in prospect. There should also be provided," the JOINT statement continues, "greater opportunity to assure that this power will in fact be available in case of need for their common security. For OUR part, we regard our possession of nuclear weapons power as a trust for the defense of the free world." Specifically, with regard to NATO, President Eisenhower and Prime Minister Macmillan called for a NATO Council meeting in December. At this meeting, the United States and Britain will explain their new proposals. And there is speculation that both the president and prime minister may attend.

The two leaders agreed to urge "an enlarged effort in scientific research" within the framework of NATO. And Mr. Eisenhower [redacted] said he will ask Congress to amend the Atomic Energy Act "to permit the close and fruitful collaboration of scientists of Great B ritain, the United States and other friendly countries." (The law...as [redacted] now written...prohibits the sharing of atomic information of a military nature). The STRONGEST words in the communique are reserved for the Soviet threats against Turkey. These threats by Russia, it says, give "solemn significance" to the NATO commitment to consider an armed attack against any member of the

→

alliance as an armed attack against all.

Equally strong language was employed in the U.N. General Assembly by Ambassador Henry Cabot Lodge. As debate resumed in the Turkish-Syrian dispute, Lodge said: "The United States will not be stopped by threats or defamation from continuing to offer its understanding and support to those nations of the Middle East which are being threatened by the Soviet Union. ...and whose independence the Soviet Union seeks to destroy." Lodge then said sternly: "Let there be no question about our capacity to offer this support." As for the Russian charge that the United States is "prodding" Turkey to attack Syria, he said the Russians themselves do not really believe this. "The United States," he said, "is steadfastly against aggression in any form and from any quarter." Lodge then accused Russia of creating an artificial war scare, in the hope of reducing the Arab countries to the status of "captive states."

An air-raid alert was sounded today in Damascus. There was no sign of hostile aircraft, and CBS News Correspondent Frank Kearns...who is IN the Syrian capital...says the alert was largely ignored. Traffic remained normal, and window-shoppers acted as though nothing had

happened..which was, indeed, the case. Kearns says newspapers in Damascus are playing up a charge that four Turkish planes had "buzzed" Syrian waters outside the harbor of Latakia. But the BIGGEST headlines, he says, are reserved for a story that King Saud, of Saudi Arabia, refuses to give up his effort to mediate the dispute. Syria has wanted King Saud to bow out of the controversy..and let Syria fight its [redacted] case alongside Russia [redacted] in the U.N. Kearns says that according to some circles in Damascus, Syria thus lost her ARAB trump card for The [redacted] General Assembly debate.

Here in New York, a federal court jury has found the [redacted] Russian agent...Rudolph Abel...guilty of espionage. The jury, [redacted] nine men and three women, found Abel guilty under all three counts of the indictment---attempting to acquire [redacted] U.S. atomic secrets, trsnsmitting them, and failing to register as a foreign agent. He faces a possible death penalty, [redacted] sentencing has been set for November 15th.

Also in New York today...two gunmen pumped four bullets into the body of Albert Anastasia, former chief executioner of the old Murder, Incorporated. The assassins...who police say were definitely professional killers... escaped. Curiously, the killing occurred in the same hotel in which [redacted] gambler Albert Rothstein was shot to death more than a quarter of a century ago. = That crime is still unsolved -

The government reports that the cost-of-living reached a new high in September. climbing for the 13th consecutive month. However, the increase was the smallest since last November, amounting to only one-tenth of 1 percent. Government experts say prices probably will be stable for the next three months, with the possibility of a definite over-all decline in January.

The AFL-CIO executive council issued strong warnings today to the bakery and textile workers unions. It said that they...like the teamsters union...will be suspended from the federation unless they get rid of their officials charged with corruption by November 15th.

At the Senate Rackets Committee hearings today, an official for Sears Roebuck & Company said some [redacted] "unnecessary and inexcusable"

activities HAD been undertaken in the past to head off union organization. A vice president of the company...Wallace Tudor...testified, however, that it would never again tolerate the unfair labor practices he said were used in 1953...in an attempt to prevent the organization of [redacted] Sears employes in Boston.

He blamed the [redacted] "pressure and coercion" exerted on the labor relations firm headed by Nathan Shefferman.

There was a new development today in the anti-trust case involving DuPont and General Motors. Last summer, the Supreme Court ruled that Dupont [redacted] illegally controls G.M., through its ownership of 23 percent of G.M.'s stock. Today, the anti-trust division of the Justice Department recommended that the situation be corrected by having the Dupont holdings... amounting to 63-million shares... [redacted] sold to the owners of Dupont common stock. [redacted] Under the Justice Department proposal, this could be done over a period of 10 years.

6A

The Communist Party in Poland is going to be purged. This was confirmed today...with the publication of a speech which Party Leader Gomulka made yesterday before the Central Party Committee. Gomulka denounced Communists who are either lackadaisical, or who place their own selfish interests above the interests of party. These people, he said, must no longer be tolerated as party members. Gomulka said, "We are not concerned with the NUMBER of members, so much as with their [redacted] quality." Because of ideological confusion, he reported, "the unity of action of our party has been considerably impaired." And he announced that the party congress...scheduled for December...will not be held until the elimination of undesirable elements has been achieved. In his speech, Poland's Gomulka struck at both Stalinists and those who...in his opinion...want too much independence from Moscow. Since last October, he said, Poland has gained what he called "far-reaching democratic liberties." But these liberties, he warned, must not serve the enemies of socialism.

Ill be back in a moment with a footnote to the news - But first Sports

Today...in Little Rock...Governor Faubus said he has sent a telegram to President Eisenhower, urging that ALL Arkansas national guardsmen be released from federal service at once. Faubus contended that if the guardsmen are NOT released, the morale of members of the National Guard throughout the country will--in his words--"be jeopardized or destroyed."

Former Senator McKellar of Tennessee died today at a nursing home in Memphis...at the age of 88. McKellar was a former dean of the Senate, having served in that chamber for 36 years.

An Air Force spokesman said today that the test rocket fired last Monday in the Pacific MAY have soared to a height of MORE than 4-thousand miles. But this, he has, has not yet been definitely established. He said it is now "technically possible" to fire a rocket to the moon.

But now...for a special report on the increasingly critical situation in France...we switch to David Schoenbrun in Paris.

Tape runs 4:15

Ends on cue: "--to LL in N.Y.

~~That was my David Schoenbrun~~ and this is all

I'll be back in a moment with a footnote to the news - But first Sang Bay

this country has treaties of mutual defense with more than 50 other nations. But we can't protect them [redacted] single-handed without exhausting ourselves. High sources in Washington say tonight that the BIG two communique really envisaged a free world peace force, in which all these nations pool their power, their brains, and their responsibilities. This doesn't mean we're going to spread nuclear weapons around the world. But it does mean guaranteeing our allies that we would possibly use them, in their defense...

LARRY LESUEUR WITH THE NEWS

Friday, October 25, 1957
7:45 - 8:00 PM

LESUEUR: And now for a special report on the increasingly critical situation in France we switch to David Schoenbrun in Paris.

SCHOENBRUN: This is the 23rd Cabinet crisis of the young fourth Republic of France. As the French are so fond of saying "the more things change the more they stay the same" or do they only seem to stay the same. Are the French only whistling in the dark when they tell themselves that governments come and go but the nation marches on. This reporter thinks they are whistling in the dark and that the whistle is getting schriller., sounding more like a scream. For this crisis is not just another one of those two dozen odd cabinet shake-ups, this time I think French democracy itself is in danger. Those of us who have lived in Paris through the first decade of this Republic can sense the difference in this crisis. Today for the 3rd time in a week there have been nation wide strikes, railways, airlines, shipyards and to add a macabre note garbage collectors and undertakers. These sectors of public affairs have been struck before of course, but there was a unique feature in todays strikes. They were neither political nor professional. The worker's were not asking the government for anything today. Indeed there isn't any government in office to petition. Today the worker's walked out in sheer disgust at the mess. This was a rhumble of anger. A warning to the politicians to listen to the voice of the people before it is to late. Some frenchmen have heard this warning to. Former Premier Rene Plevan said today "the nation has lost confidence in it's institutions, this crisis has finally reached the roots of the country". Antoine Pinet

warned "this crisis is exceptionally grave" and the paper Combat front-paged "today's strikes are an impressive protest against the nothingness ahead of us". One might well ask "why has France lost confidence." Why is this crisis exceptionally grave. Why is France plunging headlong into nothingness. First, it's apparent that each succeeding crisis has left this country weaker, more discredited in the eyes of its own citizens and of the outside world. This is exceptionally grave because of the challenges that France faces today. The Algerian war broke out before France had recovered from the Indo-Chinese war. These colonial conflicts have almost wrecked an other wise sound economy. France today is virtually bankrupt. The State won't be able to pay it's bills next month without borrowing or printing money. Inflation is again threatening to wipe out savings. None of these problems is in itself irremediable. A strong stable government could in a short time put things right, but a strong stable government is exactly what Franed does not have. The reason is not hard to find. It is partisan politics in a divided parliament. There are six major groups in the Assembly here, two af them are bent on wrecking the Republic. The Communists on the extreme Left and the bully-boys af Poujade and other die-hards on the extreme Right. Together the extremes control some 220 votes, that's only about 70 short of [redacted] house, which means the Democratic parties must stand together or the government falls. But the Democrat's of France rarely stand together. Conservatives, Liberals, Catholics and Socialists cannot find a common denominator. There is indeed only one possible common demoninator among such disparate groups and that is the sense of national salvation. Now if ever is the time for all good men to come to the aid of the nation. That is the

in essence the plea of Socialist leader Guy Mollet whose is trying to form a Cabinet tonight. To achieve this unity Mr. Mollet has made a most unusual offer. He will limit his program only to the most urgent reforms. A constitutional amendment to give more authority to the government. Measures to save the franc and a new Liberal statute for Algeria. At the end of four months he will then resign even if successful. His offer to resign is a token of his good faith, for if he can make government stronger and more durable he does not want to be accused of personally profiting from it. The all ies of France can only hope that Mr. Mollet will succeed. For France is a key country in the Atlantic Alliance and that Alliance is more vital thanyever today for all of us as the Soviet Union grows stronger and more menacing. This is David Schoenbrun reporting from Paris, now back to Larry Lesueur in New York.

LESUEUR: Thank you David Schoenbrun.

EDWARD R. MURROW WITH THE NEWS (LESUEUR FOR MURROW)
CBS RADIO NETWORK

FRIDAY, OCTOBER 25, 1957
7:45 - 8:00 PM EST

Good evening, everyfne. Here's what happened today:

The communique issued at the end of the three-day conference between President Eisenhower and British Prime Minister Macmillan reveals agreement on a new,cooperative effort to defend the free world. The communique state that the progress and safety of the free countries can be achieved only in "genuine partnership", by combining resources and sharing tasks in many fields. The statement of principle calls for a kind of grand alliance...not just among the NATO countries...but also among those countries belonging to the Organizatio of American States, the Southeast Asia Treaty Organization and the Baghdad Pact. "All members of this community," it says, "should possess more knowledge of the total capabilities of security that are in being and are in prospect. There should also be provided, the joint statement continues, "greater opportunity to assure that this power will in fact be available in case of need for their common security. For OUR part, we regard our possession of nuclear weapons power as a trust for the defense of the free world." Specifically, with regard to NATO, President Eisenhower and Prime Minister Macmillan called for a NATO Council meeting in December. At this meeting, the United States and Britain will explain their new proposals. And there is speculation that both the president and prime minister may attend. The two leaders agreed to urge "an enlarged effort in scientific research" within the framework of NATO. And Mr. Eisenhower said he will ask Congress to amend the Atomic Energy Act "to permit the close and fruitful collaboration of scientists of Great Britain, the United States and other friendly countries." The law...as its now written...prohibits the sharing of atomic information of a military nature). The STrongest words in the communique are reserved for the Soviet threats against Turkey. These threats by Russia, it says, give "solemn significance" to the NATO commitment to consider an armed attack

against any member of the alliance as an armed attack against all.

Equally strong language was employed in the U.N. General Assembly by Ambassador Henry Cabot Lodge. As debate resumed in the Turkish-Syrian dispute, Lodge said: "The United States will not be stopped by threats or defamation from continuing to offer its understanding and support to those nations of the Middle East which are being threatened by the Soviet Union...and whose independence the Soviet Union seeks to destroy." Lodge then said sternly: "Let there be no question about our capacity to offer this suport." As for the Russian charge that the United States is "prodding" Turkey to attack Syria, he said the Russians themselves do not really believe this. "The United States." he said, "is steadfastly against aggression in any form and from any quarter." Lodge then accused Russia of creating an artificial war scare, in the hope of reducing the Arab countries to the status of "captive states."

An air-raid alert was sounded today in Damascus. There was no sign of hostile aircraft, and CBS News Correspondent Frank Kearns...who is in the Syrian capital...says the alert was largely ignored. Traffic remained normal, and window-shoppers acted as though nothing had happened... which was, indeed, the case.

Here is New York, a federal court jury has found the Russian agent... Rudolph Abel...guilty of espionage. The jury, nine men and three women, found Abel guilty under all three counts of the indictment - attempting to acquire U.S. atomic secrets, transmitting them, and failing to register as a foreign agent. He faces a possible death penalty, sentencing has been set for November 15th.

Also in New York today...two gunmen pumped four bullets into the body of Albert Anastasia, former chief executioner of the old Murder, Inc. The assassins...who police say were definitely professional killers... escaped. Curiously, the killing occurred in the same hotel in which gambler

Albert Rothstein was shot to death more than a quarter of a century ago. That crime is still unsolved.

The government reports that the cost of living reached a new high in September...climbing for the 13th consecutive month. However, the increase was the smallest since last November, amounting to only one-tenth of 1 percent. Government experts say prices probably will be stable for the next three months, with the possibility of a definite over-all decline in January.

The AFL-CIO executive council issued strong warnings today to the bakery and textile workers unions. It said that they...like the teamsters union...will be suspended from the federation unless they get rid of their officials charged with corruption by November 15th.

At the Senate Rackets Committee hearings today, an official for Sears Roebuck & Company said some "unnecessary and inexcusable" activities had been undertaken in the past to head off union organization. A vice president of the company...Wallace Tudor...testified, however, that it would never again tolerate the unfair labor priactices he said were used in 1953... in an attempt to prevent the organization of Sears employees in Boston. He blamed the "pressure and coercion" exerted on the labor relations firm headed by Nathan Shefferman.

There was a new development today in the anti-trust case involving DuPont and General Motors. Last summer, the Supreme Court ruled that Dupont illegally controls G.M., through its ownership of 23 percent of G.M.'s stock. Today, the anti-trust division of the Justice Department recommended that the situation be corrected by having the DuPont holdings...amounting to 63-million shares...sold to the owners of Dupont common stock. Under the Justice Department proposal, this could be done over a period of 10 years.

The Communist Party in Poland is going to be purged. This was confirmed today...with the publication of a speech which Party Leader Gomulka made yesterday before the Central Party Committee. Gomulka denounced

Communists who are either lackadaisical, or who place their own selfish interests above the interests of the party.

Today...in Little Rock...Governor Faubus said he has sent a telegram to President Eisenhower, urging that all Arkansas national guardsmen be released from federal service at once. Faubus contended that if the guardsmen are not released, the morale of members of the National Guard throughout the country will in his words, "be jeopardized or destroyed."

But now, for a special report on the increasingly critical situation in France we switch to David Schoenbrun in Paris.

SCHOENBRUN: This is the 23rd Cabinet crisis of the young fourth Republic of France. As the French are so fond of saying "the more things change the more they stay the same" or do they only seem to stay the same. Are the French only whistling in the dark when they tell themselves that governments come and g but the nation marches on. This reporter thinks they are whistling in the dark and that the whistle is getting schriller., sounding more like a scream. For this crisis is not just another one of those two dozen odd cabinet shake-ups, this time I think French democracy itself is in danger. Those of us who have lived in Paris through the first decade of this Republic can sense the difference in this crisis. The Communists on the extreme Left and the bully-boys of Poujade and other die-hards on the extreme Right. Together the extremes control some 220 votes, that's only about 70 short of half the house which means the Democratic parties must stand together or the government falls. But the Democrat's of France rarely stand together. Conservatives, Liberals, Catholics and Socialists cannot find a common denominator. There is indeed only one possible common denominator among such disparate groups and that is the sense of national salvation. Now if ever is the time for all good men to come to the aid of the nation. That is in essence the plea of Socialist leader Guy Mollet who is trying to form a Cabinet tonight. To achieve this unity Mr. Mollet has made a most unusual offer. He will limit his program only to the most urgent reforms. A constitutional amendment to give more authority to the government. Measures to save the franc and a new Liberal

statute for Algeria. At the end of four months he will then resign even if successful. His offer to resign is a token of his good faith, for if he can make the government stronger and more durable he does not want to be accused of personally profiting from it. The allies of France can only hope that Mr. Mollet will succeed. For France is a key country in the Atlantic Alliance and that Alliance is more vital then ever today for all of us as the Soviet Union grows stronger and more menacing. This is David Schoenbrun reporting from Paris, now back to Larry Lesueur in New York.

LESUEUR: Thank you David Schoenbrun.

I'll be back in a moment with a footnote to the news. But first, George Bryan.

GEORGE BRYAN:

LESUEUR: This country has treaties of mutual defense with more than 50 other nations...but we can't protect them single-handed without exhausting ourselves...High sources in Washington say tonight that the big two communique really envisaged a free world peace force in which all these nations pool their power, their brains, and their responsibilities...This doesn't mean we're going to spread nuclear waapons around the world...but it does mean guaranteeing our allies that we would positively use them in their defense.

This is Larry Lesueur. Good night.

Edward R. Murrow Mon., Oct. 28, 1957

This is the news:

New, far-reaching developments are expected in Russia...following the removal of Marshal Zhukov as Soviet defense minister. ~~There are reports that Zhukov also has been removed from the Presidium of the Soviet Communist Party. These reports are not confirmed. The party newspaper Pravda said today that the armed forces of Russia [redacted] their victories [redacted] to "the leadership of the Communist Party." It also spoke of the "inviolable" unity of the party. The last time Pravda spoke [redacted] was last summer, when Molotov and Malenkov were [redacted] fired from their party posts.~~ This afternoon, I called in my colleague Dan Schorr in Moscow...to tell us what he can of what is happening. Here is his report. ~~[redacted]~~ (TAPE RUNS 5:35, ends on cue: "--to ERM IN N.Y.")

Tonight the loudspeakers started up with gay music on the streets and the public squsres of Moscow and they will play for the next two weeks, one of the early sighns of the approach of Nov.7 th the 40th Ann. of the comm. revolution, planned as one of the biggest holidays in Soviet history. There are other signs too. Thousands have already filed their greeting telegrams for Nov 7th taking advantage of the 50% reduction in rates that is effective till the end of Oct. Eve green trees are being placed on stands around the center of the city. Multi-colored lights are being shown. Decoration of buildings has started. A portrait of the Communist Party Presidium , whoever they may then be,have not yet started going up on the Lenin Library the Moskvah Hotel and the Central Telegraph office . That will come later but on this nite despite the damp and the slight mist on the streets of Moscow there is a pre-holiday atmosphere, at least outwardly. For weeks the buildup for nov. 7th has been in progress stressing the Socilist triumphs, the well being of the people and indissoluble unity

Certainly anything that would mar this effect would be undesirable at such a time. And if the sudden removal of Marshal Zhukov as defense minister were announced in the pre holiday period obviously it is only because it was considered unavoidable. One cn assume that the Soviet leadership will take every necessary action to dispel the cloud of doubt and confusion that has resulted well before Nov 7th. (One sentence is here deleted)

Tonight, here as all over the world, the big question is, Why. Why was Russia's greatest military hero abruptly removed as minister of Defense. Let me say that we western correspondents in Moscow who are standing by tonite for news do not ~~xxxxx~~ yet have the answer any more than the average Russian has. Before that question can be answered, events must run their course. The story is far from finished. The soviet regime does not like to leave the people confused and there will assuredly be some anseer as soon as an

Share

answer is possible. The last change in the leadership , not quite comparable to this one, was the ouster of Malenkov and Company in June. At that time, as soon as the Party Central Committee finished its meeting, the party activists had been briefed . An extensive campaign of public explanation started to present the case to the public. At the proper time and apparently very soon now, there will be a public statement now too, to avoid public disarray. At this hour tonite there are only a few things that can be said, both of them negative in preparation for what is to be announced. Firstly, as far as we can see, the western speculation that Kruschev was responsible for Zhukov's removal, that there was some personal rivalry between because of Zhukov's popularity, is far from the mark. All overt signs are that K and Z have been getting along very well together. Understand each other, respect each other. ~~Only a few weks ago, Kruschev, in his interview with the NY Times, was still pushing the idea of a visit by Zhukov to the United States. and they seemed to be in this together. Second the question now occupying the west of whether Z has been upgraded or downgraded is not the real question. It is not a matter simply concerning Z. When further developments are revealed, it is likely to appear in quite a different light. Third,~~ there is no reason to believe that Z's removal as has also been speculated in the west, was the result of some disagreement over military policy, specifically, over middle east policy. It is always misleading in trying to understand events in Russia to overemphasize the foreign policy factor. Every indication is that the cause of Zhukov's removal, grave tho they are, are basically internal. I fear that this raises more questions than it answers but there is much that cannot be said at this point. It is not only that the answers aren't known. It is our belief that the chain of consultation and action which will provide those answers is not yet complete. Now back to Edward R Murrow in NY.

Obviously Dan Schorr was talking through and around unusually heavy censorship; but he managed, directly and indirectly to get a great deal said. He enumerated most of the theories held abroad about Zhukov's removal, and dismissed them all. He is saying that the removal of Zhukov has nothing whatever to do with Russia's world policy, or with the Middle East. It has only to do with domestic policy. And "domestic policy" in the Soviet Union is a struggle for power between individuals, or between relatively small groups.

Dan Schorr also dismisses the widely held theory that Zhukov is the victim of Khrushchev's own ambitions. It is natural to assume that in a police state where two leaders share power, one will try to eliminate the other. Schorr is saying that this is not the story in Moscow today. When the truth is told, he suggestx, more than Zhukov will be involved. You may have noticed that he opened his report with a rather lengthy reference to preparations for the fortieth anniversary of the Communist Revolution - lights, trees, telegrams and so forth - and then he inserted a sentence saying that a portrait of the Communist Party Presidium ~~xxxxxxx~~ "whoever they may then be" has not yet started going up." That is a clear

way of saying there will be changes other than Zhukov.

Schorr also makes it clear that this crisis was so severe and urgent that there was not sufficient time for even the preliminary preparation of public opinion. But he is convinced that Khrushchev, who was really saved by Marshal Zhukov in the crisis of last June, has not stabbed him in the back to eliminate a rival.

However, recent reports from behind the Iron Curtain have suggested that Zhukov has come near to gaining control of the re-organized secret police set up after the execution of Berria. It may be significant that the Moscow censors permitted an Italian correspondent to file a story suggesting that Zhukov may be charged with an attempt to resurrect the so-called Cult of Personality, that is of aspiring to become another Stalin.

The possibility of conflict between the party and the army is indicated by a story in today's PRAVDA which gives all credit for Russian achievement, including the victories in World War II, to the Communist Party rather than the army. No mention is made of Marshal Zhukov.

Foreign experts and correspondents in Moscow, and presumably the Russian people, are bewildered, uninformed and guessing. Whatever the true story is, it is not to be expected till the end of the current [redacted]

consultations within the Communist Party. Then the Party will move promptly, not to satisfy our curiosity but in an effort to allay suspicion and disquiet inside the Soviet Union.

Dan Schorr says that when the story is told, it will not be what the outside world expects. And he also says that it will be the first, not the last chapter of a running story. One thing at least is clear: the Soviet Government is going into its fortieth anniversary suffering from an internal illness of great gravity, and with quite uncertain consequences.

~~Secretary of State Dulles said today that the answer...as to why Marshal Zhukov was removed as Soviet defense minister...will have to come from Moscow. Mr. Dulles made this comment after a half-hour meeting with the President. He said, the Zhukov question was not discussed.~~

~~When reporters asked White House News Secretary Hagerty about Zhukov's removal, he said: "We have no indication yet of what it means."~~

The NATO commander, General Norstad, conferred with President Eisenhower today at the White House. Norstad told reporters afterward that the question of Zhukov never came up. ~~He said they discussed NATO matters, including the NATO Council meeting to be held in Paris in December. But he would not confirm reports that Mr. Eisenhower... and other heads of state also are planning to attend.~~ He said that if Russia commits aggression against Turkey, the Western allies will respond "forcefully and effectively" to the attack.

Secretary of Defense McElroy today ordered all cuts in appropriations for basic scientific research in his department restored. The restoration will ammunt to at least 170-million dollars.

The Army announced today that it has developed a new anti-aircraft missile, "The Hawk". It said that...unlike the Nike...the Hawk will be able to knock down low-flying aircraft.

~~Syria said today that Turkey might "seize the opportunity" of NATO maneuvers this week to launch an attack. Maneuvers along the Turkish coast are scheduled to start on Thursday. American, British and Turkish forces will take part.~~

The Saudi Arabian government reaffirmed today that the offer of King Saud to mediate the Turkish-Syrian dispute still stands. In the

~~United Nations General Assembly. Britain and Turkey called on the Assembly to disregard Russiais "bullaballoo" about Turkey preparing an attack on Syria.~~

Russia and Syria today signed an economic agreement...providing Syria with the money and machinery for an extensive development program. A joint communique...issued after the signing...said the agreement was reached on the "basis of equality and non-interference in internal affairs."

~~In Teheran, the leaders of Iran and Iraq signed a communique...pledging their continued effort to strengthen the Baghdad Pact.~~

~~The central committee of the Polish Communist Party today approved the procedure by which it plans to purge the party of undesirable elements. Party "control cells" will be set up throughout Poland "to appraise the activity and attitude of every party member."~~

Russia suggested today that the United Nations subcommittee on disarmament be abolished. There are five nations on the subcommittee, including the United States. Russia proposed that the disarmament question be turned over to a permanent commission, on which all 82 members of the world organization would be represented.

The United States and Russia today held the first of a series of conferences...looking toward the setting up of an exchange program. The meetings are being held in Washington, and today the Soviet ambassador ~~[illegible]~~ submitted a Russian plan for 52 ~~[illegible]~~ projects... ranging from air service between New York and Moscow, to an exchange of "non-political" radio and television broadcasts.

Final but unofficial returns in the Turkish parliamentary election show Premier Menderes' party winning 432 of the 610 seats at stake. The opposition party, however, is complaining of irregularities in all the provinces they lost. + Continue next page

George Bryan

The French National Assembly tonight turned down the bid of the Socialist leader, Guy Mollet, to form a new government. ~~This is on the basis of the unofficial vote.~~

Word for Today

Whatever is happening in Russia, one may be sure that it has to do with a struggle for power. Edmund Burke showed an understanding of the nature of power when he observed, "Those who have been once intoxicated with power can never willingly abandon it." As to who will win the struggle, Elbert Hubbard said, "Power flows to the man who knows how."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW AND THE NEWS

Monday, October 28, 1957
7:45 - 8:00 PM

MURROW This afternoon I called in my colleague Dan Schoor in Moscow to tell us what he can of what is happening.

Here is his report.

SCHOOR Tonight the loud speakers started up with gay music on the streets and public squares of Moscow and they will play for the next two weeks, one of the early signs of the approach of November 7th, the 40th anniversary of the Communist Revolution. Planned as one of the biggest holidays in Soviet history. There are other signs to; thousands have already filed their greeting telegrams for November 7th taking advantage of the 50% reduction in rates in effect until the end of October. Evergreen trees are being placed on stands around the center of the city. Multi-colored lights are being strung. The decorations of buildings has started. The portraits of the Communist Party Praesidium, whoever they may be, or have not yet started going up on the Lenin Library, the Moscow hotels or the Central Telegraph office. That will come later. But on this night despite the damp and the slight mist on the street's of Moscow, there is a free holiday atmosphere at least outwardly. For week's the build up for November 7th has been in progress. Stressing Socialist triumphs, the well being of the people and indecidable unity. Certainly anything that would mar this effect would be undesirable at such a time and if the sudden removal of Marshal Zhukov as Defense Minister was announced in the pre-holiday period obviously it is only because it was considered unavoidable and one can assume that the Soviet leadership will take every necessary action to dispel the clouds of doubt and confusion that has resulted well before November 7th. (One sentence is

here deliated.)

Tonight here as all over the world the big question is "why". Why was Russia's greatest military hero abruptly removed as Minister of Defense. Let me say that we Western Correspondents in Moscow who are standing by tonight for news do not yet have the answer anymore then the average Russian has. Before that question can be answered, events must run their course. The story is far from finished.

The Soviet regime does not like to leave the people confused and there will assuredly be an answer as soon as an answer is possible.

The last change in the leadership not quite comporabld to this one was the ouster of Malenkov, Molotov and company in June. At that time, as soon as the Party's Central Committee finished it's meeting and the Party activists had been briefed an extensive campaign of public explanation started to present the case to the public. At the proper time and apparently very soon now there will be a public statement now too to avoid public dissray.

At this hour tonight there are only a few things that can be said, most of them negative in preperation for what is to be announced.

Firstly, as far as we can see, the Western speculation that Khrushchev was responsible for Zhukov's removal, that there was some personal rivalry because of Zhukov's popularity is far from the mark. All overt signs are that Khrushchev and Zhukov had been getting along very well togather, understand each other and respect each other. Only a few weeks ago Khrushchev in

his interview with the New York Times was still pushing the idea of a visit by Zhukov to the United States. And they seem to be in this togather.

Second, the question now occupying the West is whether Zhukov has been up-graded or down-graded is not the real question. This is not a matter simply concerning Zhukov. When further developments are revealed it is likely to appear in quite a different light. Third, there is no reason to believe that Zhukov's removal as has also been speculated in the West was the result of some disagreement over military policy specifically over the Middle-Eastern policy. It's always misleading in trying to understand events in Russia to over emphasize the foreign policy sector. Every indication is that the causes of Zhukov's removal grave though they are, are basically internal. I fear that this raises more questions then it answers, but there is much that cannot be said from here at this point. It is not only that the answers are not known, it is our belief that the chain of consultation and action which will provide the answers is not yet completed.

Now back to Edward R. Murrow in New York.

MURROW Obviously Dann Schoor was talking through and around unusually heavy censorship.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, OCTOBER 28, 1957
7:45 - 8:00 PM EST

This is the news:

New, far-reaching developments are expected in Russia....following the removal of Marshal Zhukov as Soviet defense minister. This afternoon, I called in my colleague Dan Schorr in Moscow...to tell us what he can of what is happening. Here is his report.

SCHORR: Tonight the loud speakers started up with gay music on the streets and public squares of Moscow and they will play for the next two weeks, one of the early signs of the approach of November 7th, the 40th anniversary of the Communist Revolution. Planned as one of the biggest holidays in Soviet history. There are other signs too;thousands have already filed their greeting telegrams for November 7th taking advantage of the 50% reduction in rates in effect until the end of October. Evergreen trees are being placed on stands around the center of the city. Multi-colored lights are being strung. The decorations of buildings has started. The portraits of the Communist Party Presidium, whoever they may be, have not yet started going up on the Lenin Library, the Moscow hotels or the Central Telegraph office. That will come later. But on this night despite the damp and the slight mist on the streets of Moscow, there is a free holiday atmosphere at least outwardly. For weeks the build up for November 7th has been in progress. Stressing Socialist triumphs, the well being of the people and indecidable unity. Certainly anything that would mar this effect would be undesirable at such a time and if the sudden removal of Marshal Zhukov as Defense Minister was announced in the pre-holiday period obviously it is only because it was considered unavoidable and one can assume that the Soviet leadership will take every necessary action to dispel the clouds of doubt and confusion that has resulted well before November 7th. (Sentence deleted)

Tonight here as all over the world the big question is "why". Why was Russia's greatest military hero abruptly removed as Minister of Defense. Let me say that we Western Correspondents in Moscow who are standing by tonight for

news do not yet have the answer anymore than the average Russian has. Before that question can be answered, events must run their course. The story is far from finished.

The Soviet regime does not like to leave the people confused and there will assuredly be an answer as soon as an answer is possible.

The last change in the leadership not quite comparable to this one was the ouster of Malenkov, Molotov and company in June. At that time, as soon as the Party's Central Committee finished its meeting and the Party activists had been briefed an extensive campaign of public explanation started to present the case to the public. At the proper time and apparently very soon now there will be a public statement now too to avoid public disarray.

At this hour tonight there are only a few things that can be said, most of them negative in preparation for what is to be announced.

Firstly, as far as we can see, the Western speculation that Khrushchev was responsible for Zhukov's removal, that there was some personal rivalry because of Zhukov's popularity is far from the mark. All overt signs are that Khrushchev and Zhukov had been getting along very well together, understand each other and respect each other. Only a few weeks ago Khrushchev in his interview with the New York Times was still pushing the idea of a visit by Zhukov to the United States, and they seem to be in this together.

Second, the question now occupying the West is whether Zhukov has been up-graded or down-graded is not the real question. This is not a matter simply concerning Zhukov. When further developments are revealed it is likely to appear in quite a different light. Third, there is no reason to believe that Zhukov's removal as has also been speculated in the West was the result of some disagreement over military policy specifically over the Middle Eastern policy. It's always misleading in trying to understand events in Russia to over-emphasize the foreign policy sector. Every indication is that the causes of Zhukov's removal grave though they are, are basically internal. I fear that this raises more questions than it answers, but there is much that cannot be said from here at this point.

It is not only that the answers are not known, it is our belief that the chain of consultation and action which will provide the answers is not yet completed.

Now back to Edward R. Murrow in New York.

MURROW: Obviously Dan Schorr was talking through and around unusually heavy censorship; but he managed, directly and indirectly, to get a great deal said. He enumerated most of the theories held abroad about Zhukov's removal, and dismissed them all. He is saying that the removal of Zhukov has nothing whatever to do with Russia's world policy, or with the Middle East. It has only to do with domestic policy. And "domestic policy" in the Soviet Union is a struggle for power between individuals, or between relatively small groups.

Dan Schorr also dismisses the widely held theory that Zhukov is the victim of Khrushchev's own ambitions. It is natural to assume that in a police state, where two leaders share power, one will try to eliminate the other. Schorr is saying that this is not the story in Moscow today. When the truth is told, he suggests, more than Zhukov will be involved. You may have noticed that he opened his report with a rather lengthy reference to preparations for the fortieth anniversary of the Communist Revolution - lights, trees, telegrams, and so forth - and then he inserted a sentence saying that a portrait of the Communist Party Presidium "whoever they may then be has not yet started going up." That is a clear way of saying there will be changes other than Zhukov.

Schorr also makes it clear that this crisis was so severe and urgent that there was not sufficient time for even the preliminary preparation of public opinion. But he is convinced that Khrushchev, who was really saved by Marshal Zhukov in the crisis of last June, has not stabbed him in the back to eliminate a rival.

However, recent reports from behind the Iron Curtain have suggested that Zhukov has come near to gaining control of the re-organized secret police, set up after the execution of Beria. It may be significant that the Moscow censors permitted an Italian correspondent to file a story, suggesting that Zhukov may be charged with an attempt to resurrect the so-called Cult of Personality, that is of aspiring to become another Stalin.

The possibility of conflict between the party and the army is indicated by a story in today's PRAVDA which gives all credit for Russian achievement, including the victories in World War II, to the Communist Party rather than the army. No mention is made of Marshal Zhukov.

Foreign experts and correspondents in Moscow, and presumably the Russian people, are bewildered, uninformed and guessing. Whatever the true story is, it is not to be expected till the end of the current consultations within the Communist Party. Then the Party will move promptly, not to satisfy our curiosity, but in an effort to allay suspicion and disquiet inside the Soviet Union.

Dan Schorr says that when the story is told, it will not be what the outside world expects. And he also says that it will be the first, not the last chapter, of a running story. One thing at least is clear: the Soviet Government is going into its fortieth anniversary suffering from an internal illness of great gravity, and with quite uncertain consequences.

The NATO commander, General Norstad, conferred with President Eisenhower today at the White House. Norstad told reporters afterward, that the question of Zhukov never came up. He said that if Russia commits aggression against Turkey, the Western allies will respond "forcefully and effectively" to the attack.

Secretary of Defense McElroy today ordered all cuts in appropriations for basic scientific research in his department, restored. The restoration will amount to at least 170-million dollars.

The Army announced today that it has developed a new anti-aircraft missile, "The Hawk". It said that...unlike the Nike...the Hawk will be able to knock down low-flying aircraft.

Russia and Syria today signed an economic agreement...providing Syria with the money and machinery for an extensive development program. A joint communique... issued after the signing...said the agreement was reached on the "basis of equality and non-interference in internal affairs."

Russia suggested today that the United Nations subcommittee on disarmament be abolished. There are five nations on the subcommittee, including the United States.

Russia proposed that the disarmament question be turned over to a permanent commission, on which all 82 members of the world organization would be represented.

The United States and Russia today held the first of a series of conferences... looking toward the setting up of an exchange program. The meetings are being held in Washington, and today the Soviet ambassador submitted a Russian plan for 52 projects...ranging from air service between New York and Moscow, to an exchange of "non-political" radio and television broadcasts.

Final but unofficial returns in the Turkish parliamentary election show Premier Menderes' party winning 432 of the 610 seats at stake. The opposition party, however, is complaining of irregularities in all the provinces they lost.

The French National Assembly tonight turned down the bid of the Socialist leader, Guy Mollet, to form a new government.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Whatever is happening in Russia, one may be sure that it has to do with a struggle for power. Edmund Burke showed an understanding of the nature of power, when he observed, "Those who have been once intoxicated with power, can never willingly abandon it." As to who will win the struggle, Elbert Hubbard said, "Power flows to the man who knows how."

Goodnight and good luck!

This is the news:

Communist Party Boss Khrushchev said today that Marshal Zhukov will be assigned a new job "in keeping with his experience and qualifications." This is the first official comment from Moscow, since Zhukov's removal four days ago as minister of defense. Khrushchev spoke to correspondents while attending a reception at the Turkish Embassy, in company with Premier Bulganin and other Soviet leaders. He said, "I saw Zhukov today. I spoke to him. He was in good health." Khrushchev said that, so far, it has not been decided what Zhukov's new job will be... although the central committee of the Communist Party reportedly has been meeting for two days. He claimed there was "no difference" between the

→

removal of Zhukov as defense minister and the recent resignation in this country of Charles Wilson as secretary of defense. My colleague, Dan Schorr, attended the reception with the other Western correspondents. He reports by telephone that Khrushchev was gay and affable...obviously trying to make a show of confidence. (A reference to Russia's internal struggle for power). The occasion for the reception was the 34th anniversary of the founding of the Turkish republic. A reporter asked Khrushchev whether his presence at the Turkish Embassy represented a lessening of tension in the Middle East. He said, "Yes, this is a gesture toward peace." He then proposed a toast. "Let him be damned," he said, "who thinks of war." He also drank a toast to Sputnik as "a symbol of peace."

President Tito of Yugoslavia announced today that he will not be able to travel abroad for the next few months because of illness. Tito is suffering from lumbago. He had been expected to attend the celebration of the 40th anniversary of the Russian revolution in Moscow on November 7th. (Schorr reports from Moscow that for the first time in years the portraits of members of the presidium of the Communist Party will not be displayed on the walls of Moscow's central telegraph office during

the anniversary celebration).

Secretary of State Dulles told his news conference today that...as of now...he does not know whether the removal of Marshal Zhukov is good or bad news for the free world. He said the lengthy meeting of the Communist Party central committee suggests that issues of "very considerable importance" are at stake. And, he said, they are probably domestic in nature. He listed as possible domestic problems the recent scrapping of the Five Year Plan and the de-centralization of Soviet industry. Mr. Dulles also spoke of what he called the "tugging and hauling" that goes on between military and party leaders and the secret police. He said there is always a possibility that Russia may seek some new international adventure to divert attention from its internal difficulties. "But," he said, "I don't want to give you the impression that we think there is a war around the corner because we don't think it is." Dulles said there is no certainty that Congress will amend the Atomic Energy Act to permit increased cooperation with our allies in the nuclear-scientific field. Some Congressmen have expressed fear that such a program might result in the loss of secrets to Russia. Dulles said that in

view of Russia's scientific achievements, the failure of freedom-loving countries to share their knowledge would represent a greater risk. He expressed the view that under the new program of inter-dependence the free world should continue to rely primarily on the United States to make nuclear weapons and provide the rockets for delivering them on target. No reduction in American defense spending, he said, seems likely in the year ahead.

Mr. Dulles said that if President Eisenhower is invited to attend the NATO Council meeting in Paris six weeks from now the invitation will be given sympathetic consideration.

The annual meeting of the U.S. Army Association was told today that the United States should change its military strategy. Dr. Henry Kissinger, executive director of Harvard University's international seminar, warned that the West must not rely only on atomic retaliation. There should be a number of steps, he said, between "doing nothing and doing everything" to combat aggression. He said the West must be prepared to fight limited wars, if necessary. General David Sarnoff predicted that...within five years, or sooner... both Russia and the United States

will have perfected the inter-continental ballistic missile. Sarnoff said, "Time for an adequate cold war offensive---not a mere holding action---is running out." Consequently, he called for an intensification in the field of psychological warfare. His term for it was "psychological peace-fare."

In the United Nations General Assembly today, both Russia and Syria renewed their demand for an investigation of the Turkish-Syrian dispute. Soviet Foreign Minister Gromyko accused the United States of not wanting a United Nations commission to make an on-the-scene investigation. But the tone of his speech was milder than the one he made in the Assembly last week. Syria's foreign minister challenged Turkey to bomb Syria's military bases.

Prime Minister Ben Gurion of Israel and four of his ministers were injured today when a bomb exploded in the parliament building in Jerusalem. The bomb was hurled from the public gallery by a 25-year-old youth who the authorities say is mentally deranged. Prime Minister Ben Gurion was only slightly hurt. The foreign minister, Mrs. Golda Meir, also escaped with minor injuries... as did the health minister and the

minister of communications. The minister of social welfare, Moshe Shapira, was injured seriously. He suffered wounds in the head, chest and abdomen, and has undergone surgery. The youth was captured. Police say he tried to burn an Israeli hospital a year ago.

In Washington, the Senate Rackets Committee heard testimony today that Sear, Roebuck and Company paid the expenses of former Teamsters President Dave Beck when Beck attended a funeral in November, 1955. The payment allegedly was made through Nathan Sheffeman, a labor relations consultant. Wallace Tudor, vice president of Sears' in charge of personnel, called the testimony "ridiculous".

The Defense Department said tonight that the ceiling on defense spending...imposed by the Administration...will be exceeded by about 400-million dollars in the last six months of 1957. A department spokesman said, however, that this does <u>not</u> mean the 38-billion-dollar ceiling for the entire fiscal year, ending next June, will be exceeded.

Several months ago when this reporter spent a few days on the Atomic submarine Nautilus..(the boat Admiral Rickover built.)..the boys were saying they wanted to "go to the Pole and back"..under the ice..They almost did it...went within a hundred and eighty miles of the North Pole....This ~~famous~~ voyage has caused some talk at the United Nations...and here is our UN correspondent Larry Leseuer to tell us about it..#

Frank Bryan

The atomic submarine Nautilus...and her crew...have performed a memorable feat of navigation under the Arctic ice. The achievement points up a remark which Admiral Carney once made. "The Nautilus," he said, "is a symbol of man's dreaming---his bright dreams, certainly. And, if man is not wise, his nightmares, too."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Tuesday, October 29, 1957
7:45 - 8:00 P.M.

MURROW: ... Several months ago, when this reporter spent a few days on the atomic submarine Nautilus, the boat Admiral Rickover built, the boys were saying they wanted to go to the Pole and back under the ice. They almost did it; went within 180-miles of the North Pole. This voyage has caused some talk at the United Nations. And here's our UN correspondent, Larry Lesueur, to tell us about it.

LESUEUR: Allied military observers at the UN today predicted that the United States may be on the verge of checkmating the Soviet Union's reputed superiority in long range ballistic missiles. They point to today's U.S. Navy announcement that the atomic submarine Nautilus has succeeded in penetrating under the Arctic ice cap within 180-miles of the North Pole. Today's announcement doesn't say when this feat was accomplished, although it's been rumored for some weeks past. But these UN military observers say that it brings the United States very close to the realization of a long held military dream, that is - the exposure of Russia's back-door to possible blockade, bombardment and observation. A glance at the top of the globe shows that by proceeding northward under the Arctic ice cap, United States atomic submarines could finally surface all along Russia's previously unattainable Arctic coast, from the White Sea in the great port of Archangel, to the East Siberian Sea, thus exposing the entire Russian northern hinterland. This, of course, was a physical impossibility heretofore, because of the previous necessity for submarines to surface and recharge their batteries. This is no obstacle to an atomic submarine of course, since they can cruise submerged for weeks at a time, thus making a cruise under the North Pole to Russia's back-door, a physical possibility if not an actuality. Although the Navy has not released any other information except to say the Nautilus has

gone half-way across the top of the world, almost to the North Pole, these UN military experts say it appears that some previously held obstacles to further penetrations have apparently been overcome. They say the Nautilus has apparently proved that the Arctic ice cap is neither too deep to be passed under submerged nor do previous problems of a submarine's buoyancy remain unsolved. It was a long-held theory that the varying salt content of thesea water under the ice cap would present a serious obstacle to submarines, since the melting of the fresh water ice cap made the water's salinity under the ice cap an unknown quantity. But today's unembellished Navy announcement indicates to Allied military men that these Arctic explorations of the atomic-powered Nautilus have either solved these problems or proved them to be non-existent. They say that today's indication that Soviet Russia's Siberian hinterland is now exposed to American atomic submarines has deep significance, for it is a situation which is not likely to boomerang against us; for if Soviet submarines were to penetrate the other way, under the Arctic ice cap toward the North American continent, few of our population centers would be exposed, with the exception of Alaska and the extreme north of Canada. Since the North American Hemisphere is protected by a mass of frozen and completely uninhabited islands from Baffin Bay to the Beaufort Sea. But American submarines off the Russian Arctic coast would place Moscow itself within 1500-mi. atomic rocket range and Leningrad, of course, much less distant. Apart from this potential American submarine threat to Russia's principal centers of population, these UN military observers point to the tremendous defensive possibilities inherent in the cruise of the Nautilus to the North Pole. They say that by submerging all the way under the ice cap and surfacing on the high seas, off the Soviet eastern Siberian coast, American atomic submarines could maintain a radar picket line of inestimable defensive value in peacetime. These Allied military men point out that super-powerful radar of the type now being developed in the United States,

could, if placed on Arctic submarines, extend the range of the present distant early warning line, the Dew Line now in the Canadian far north, to a point relatively few miles off the Russian coast itself. Thus, it's believed, these preliminary explorations by the Nautilus may place the United States in a position to gain the additional time necessary for defense against surprise attack, by making it possible to probe out Russia's secrets by radar from points just 12-miles off the Soviet Union's hitherto inaccessible Siberian coast. For this Navy announcement of the Nautilus's North Pole cruise brings the dreams of Jules Verne and Sir Hubert Wilkins very close to reality. This is Larry Lesueur at the UN. Now, over to Ed Murrow.

LARRY LESEUER: Allied military observers at the UN today predicted that the United States may be on the verge of checkmating the Soviet Union's reputed superiority in Long-range ballistic missiles..

They point to today's U. S. navy announcement, that the atomic submarine Nautilus has succeeded in penetrating under the arctic ice-cap, within 180 miles of the North Pole...

Today's announcement doesn't say when this feat was accomplished, although its been rumored from some weeks past, but these UN military observers say that it brings the United States very close to the realization of a long-held military dream, that is, the exposure of Russia's back-door to possible blockade, bombardment and observation. A glance at the top of the globe shows that by proceeding northward under the Arctic ice cap, United States atomic submarines could finally surface all along Russia's previously unattainable Arctic coast, from the White Sea in the great port of Archangel, to the East Siberian Sea, thus exposing the entire Russian northern hinterland. This, of course, was a physical impossibility heretofore, because of the previous necessity for submarines to surface and recharge their batteries. This is no obstacle to an atomic submarine of course, since they can cruise submerged for weeks at a time, thus making a cruise under the North Pole to Russia's back-door, a physical possibility if not an actuality. Although the Navy has not released any other information except to say the Nautilus has gone half-way across the top of the world, almost to the North Pole, these UN military experts say it appears that some previously held obstacles to further penetrations have apparently been overcome. They say the Nautilus has apparently proved that the Arctic ice cap is neither too deep to be passed under submerged nor do previous problems of a submarine's buoyancy remain unsolved. It was a long-held theory that the varying salt content of the sea water under the ice cap would present a serious obstacle to submarines, since the melting of the fresh water ice cap made the water's salinity under the ice cap an unknown quantity. But today's unembellished Navy announcement indicates to Allied military men that these Arctic explorations of the atomic-powered Nautilus have either solved these problems or proved them to be non-existent. They say that today's indication that Russia's Siberian hinterland is now exposed to American atomic submarines has deep significance, for it is a situation which is not likely to boomerang against us; for if Soviet submarines were to penetrate the other way, under the Arctic ice cap toward the North American continent, few of our population centers would be exposed, with the exception of Alaska and the extreme north of Canada. Since the North

American Hemisphere is protected by a mass of frozen and completely uninhabited islands from Baffin Bay to the Beaufort Sea. But American submarines off the Russian Arctic coast would place Moscow itself within 1500-mi. atomic range and Leningrad, of course, much less distant. Apart from this potential American submarine threat to Russia's principal centers of population, these UN military observers point to the tremendous defensive possibilities inherent in the cruise of the Nautilus to the North Pole. They say that by submerging all the way under the ice cap and surfacing on the high seas, off the Soviet eastern Siberian coast, American atomic submarines could maintain a radar picket line of inestimable defensive value in peace time. These allied military men point out that super-powerful radar of the type now being developed in the United States, could if placed on Arctic submarines, extend the range of the present distant early warning line, the Dew Line now in the Canadian far north, to a point relatively few miles off the Russian coast itself. Thus, it's believed, these preliminary explorations by the Nautilus may place the United States in a position to gain the additional time necessary for defense against surprise attack, by making it possible to probe out Russia's secrets by radar from points just 12-miles off the Soviet Union's hitherto inaccessible Siberian coast. For this Navy announcement of the Nautilus' North Pole cruise brings the dreams of Jules Verne and Sir Hubert Wilkins very close to reality. This is Larry Lesueur at the UN. Now, over to Ed Murrow.

MURROW: This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The atomic submarine Nautilus...and her crew...have performed a memorable feat of navigation under the Arctic ice. The achievement points up a remark which Admirable Carney once made. "The Nautilus," he said, "is a symbol of man's dreaming --his bright dreams, certainly. And, if man is not wise, his nightmares, too."

Goodnight and good luck!

This is the news:

President Eisenhower will attend the NATO meeting in Paris on December 16th in order to promote "the NATO concept of collective security and defense." Mr. Eisenhower told a news conference today that he would attend the meeting, provided the majority of heads of government within the Atlantic Alliance also attend. NATO headquarters indicated today that all fifteen member countries will be represented by their heads of government. These include Prime Minister Macmillan of Britain, whose recent conference with the President laid the groundwork for the NATO talks. The NATO meeting will be held as a step toward pooling the scientific knowledge of the free world, and Mr. Eisenhower said that...before he goes...he will confer with congressional leaders of

both parties. "We are getting to the point," he said, "where we know that a great many of our secrets are known to the enemy but are still secret from our friends." (I should like to discuss this subject further in a few minutes).

Mr. Eisenhower told reporters there is "nothing sacrosanct" about holding United States defense spending down to 38-billion dollars in the next fiscal year. The ceiling, he said, probably will be exceeded by more than 400-million dollars.

Regarding the national economy, Mr. Eisenhower said there is no question the economy is "taking a breather". But this "breather", he said, is taking place after "an almost miraculous upsurge in productivity and prosperity." He rejected the idea that the country is in danger of a depression. Still, the government is watching the situation very closely.

On the question of school integration, he expressed hope that all federal troops can be removed from Little Rock soon. He said the situation there seems to improve every day. "I hope," he said, "that all future steps will be accomplished in a spirit of conciliation." Mr. Eisenhower

said he is having trouble finding the right people for the Civil Rights Commission, authorized by Congress. He explained that most people of national reputation whose findings would command respect already are tied up in other activities.

Mr. Eisenhower said he does not know why Marshal Zhukov was removed as Soviet minister of defense. He referred to the statement last night... by Communist Party Boss Khrushchev...that there was "no difference" in Zhukov's removal and the recent resignation of Charles Wilson as secretary of defense. "My only comment on that," the President said, "is that I hope Marshal Zhukov's resignation was as completely voluntary and personal as was Charlie Wilson's." And at this the reporters laughed.

Two resolutions were submitted to the United Nations General Assembly today in connection with the Turkish-Syrian dispute. A draft resolution... introduced by Syria...urged the Assembly to appoint a fact-finding commission, which would investigate the situation at first hand and report back within two weeks. The other resolution...introduced by Japan... does not call for an investigation. It simply expresses confidence that Secretary General Hammarskjold would be available to discuss the situation

with Syria and Turkey..."and could proceed, if necessary, to the countries concerned." It would also hold the door open for any mediation effort by King Saud, of Saudi Arabia. This resolution has the support of the United States.

Russia told the United Nations political committee today that the latest Western disarmament proposals do not constitute a basis for agreement. It accused the United States of using the launching of Sputnik "as an excuse for stepping up the armaments race."

In Paris, Félix Gaillard agreed tonight to try to form a new government. Gaillard was finance minister in the government of Bourges-Maunoury that fell a month ago. He is only 37. [redacted]

The leaders of the Algerian revolt said tonight that they will not negotiate with France until France recognizes Algeria's independence. They said they will make "a solemn appeal" to the United Nations to bring the two-year-old war to an end.

The Army announced today...in Washington...that spy charges have been filed against Master Sergeant Roy Rhodes. Rhodes was a government witness at the espionage trial of the Russian agent, Rudolph Abel. He testified

that while assigned to the United States Embassy in Moscow, he (Rhodes) sold military information to the Russians. Conviction carries a maximum sentence of life imprisonment.

The Agriculture Department reports that prices received by farmers dropped 2 percent in the month ending October 15th. The cost of farm production remained unchanged.

California's attorney general, Pat Brown, today announced his candidacy for the Democratic nomination for governor. Senator Knowland and Governor Knight already have announced their candidacy for the Republican nomination. Brown predicts that his opponent will be Knowland...that pressure will be put on Knight to drop out of the race.

Edward R. Murrow: October 30, 1957. 7.45 p.m.

When the heads of ~~state~~ government of the NATO countries meet in Paris in December, it will be the biggest meeting of its kind since the U.N. Charter was adopted in San Francisco in 1945. It will be a recognition that the North Atlantic Treaty Organization requires basic revision and expansion. Mr. Dulles said yesterday that we are "entering a new era of inter-dependence". More inter-dependence means some ~~XXXXXX~~ sacrifice of sovereignty by all the nations concerned, and that isn't going to be easy to achieve. Mr. Dulles also indicated that there must be a new division of duties as between the member nations; that the United States - capable of making ultra-modern and expensive weapons - will supply these weapons to our allies, but that we can afford to do this only if the allies supply more of the manpower. We don't plan to withdraw our token forces from Europe, but we can't budget for a big weapons program - become the modern arsenal of the free world, and at the same time maintain so many men overseas. Our allies will not want to increase their forces while we decrease ours. That ~~will~~ would look as though we were doing the manufacturing for war while ~~XXXXXXXX~~ our allies are expected to produce the bodies. There will be another difficulty, too - one having to do with personalities. At a meeting of this kind, the real

arguing and agreeing is not done by the presidents and prime ministers. It is done by foreign ministers, and military and economic experts. This means that most of the negotiating on our behalf will be done by Mr. Dulles. And so far as our principal allies are concerned, it is not ~~XXXXXXXX~~ inaccurate to say that Mr. Dulles is either the most distrusted or the most misunderstood Secretary of State in our recent history. In either case he will be handicapped.

It is also probable that some of our NATO allies may want some clear-cut statement of policy on the Middle East, particularly regarding Israel, for they have made no secret of the fact that they do not regard the Eisenhower Doctrine as a policy at all.

The North Atlantic Treaty Organization will not be reconstructed overnight. The obstacles are formidable, but they were very great indeed in the first place. In order to join NATO the United States limited its sovereignty more than at any time in its history. We guaranteed full and automatic American participation in the future defense of Europe. That was unprecedented, and it represented a revolution by consent in our foreign policy - a policy adopted after full and prolonged national debate. NATO was born out of one crisis, and reached great strength because of another.

It came into existence as a response to the Russian coup in Czechoslovakia and the Berlin blockade; then Communist aggression in Korea caused its members to increase their strength without delay. In both cases the free world responded to an overt communist challenge. The West demonstrated its willingness to fight if necessary. It put forces in Middle Europe as a kind of show window. The Russians could have broken the window, but to do so would have meant war, and the world breathed more easily for a time. But today the forces in the show window are out of date. For the Russians now have the power not only to smash the window, but to blow up the whole building. The Russians are pulling even, and in some cases are ahead of the West in nuclear power, which is the military power of the future.

The North Atlantic Treaty Organization must stay ahead in terms of total striking power, or it will be cowed into submission, or we in this country must face the prospect that some of our allies will move towards neutralism. This means a bigger total effort than has been made in the past. It is not an effort that the United States alone can supply. Every nation in the alliance must have a share in it. If the alliance is not to come unstuck, the United States must continue to carry most of the load because we have most of the power.

It remains to be seen whether the present crisis, of which there was ample warning, is dramatic enough to pull the NATO countries together for a vastly increased effort and closer co-operation. That is what the heads of state at the NATO meeting will try to discover.

Mr. Dulles does not think that our existing military political machinisms are adequate at this time. Almost every correspondent familiar with European affairs would agree with him on that. The mechanisms are woefully and dangerously inadequate.

The creation of a military-political mechanism that can control, direct, finance and co-ordinate fifteen governments is probably the most difficult task those nations have faced since the end of the war

George Bryan

Word for Today

Mr. Dulles says we are entering "an era of inter-dependence." The phrase recalls something Theodore Roosevelt said, not long after the turn of the century. "The United States," he said, "has not the option as to whether it will not play a great part in the world. It must play a great part. All that it can decide is whether it will play that part badly or well."

Goodnight and good luck!

The creation of a military-political mechanism that can control, direct, finance and co-ordinate fifteen governments is probably the most difficult task those nations have faced since the end of the war.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Mr. Dulles says we are entering "an era of inter-dependence." The phrase recalls something Theodore Roosevelt said, not long after the turn of the century. "The United States," he said, "has not the option as to whether it will not play a great part in the world. It must play a great part. All that it can decide is whether it will play that part badly or well."

Good night and good luck!

Edward R. Murrow Thurs., Oct. 31, 1957

This is the news:

President Eisenhower today presided at an extraordinary session of the National Security Council. /Eighteen government officials were summoned to the meeting, in addition to the five regular members. #

These members...besides the President...are Vice President Nixon, Secretary of State Dulles, Secretary of Defense McElroy, and the director of the Office of Defense Mobilization, Gordon Gray. /Among the other officials who sat in on the meeting were Secretary of the Treasury Anderson, Chairman Straws of the Atomic Energy Commission, and General Twining, chairman of the Joint Chiefs of Staff. Also, the heads of all the armed services.

The meeting, as usual, was highly secret. / Presumably it involved financial aspects of the defense program. / Mr. Eisenhower told his news conference yesterday that defense spending in the next fiscal year would exceed the 38-billion-dollar ceiling by "something more than 400-million dollars." (~~Mr. Nixon did not attend the meeting because of a virus infection.~~)

Former Governor Dewey of New York conferred with the President for more than an hour today. / Dewey refused to tell reporters afterward whether he had been asked to serve on the new Civil Rights Commission. He said that...in his opinion...Vice President Nixon would make a "superb" candidate for President in 1960. / When asked whether the same goes for Harold Stassen and Senator Knowland, he said, "I think so, although I haven't seen them campaigning." / Dewey said there is not "a scintilla of a possibility" of his running for president again in 1960. Nor, he said, is there anything to speculation that he might be appointed "czar" to coordinate the United States missile program. ~~the guided missile program~~

~~The Air Force announced today that its air-to-ground missile, the Rascal, is operational...and is immediately being assigned to the Strategic Air Command. The Defense Department confirms that an intermediate range~~

The Air Force announced tonight that an inter-continental GUIDED missile, the Snark, was fired successfully today at the Florida test center. In previous tests, the Snark traveled as far as 3-thousand miles.

The Air Force announced earlier that its air-to-ground missile, the Rascal, is operational...and is immediately being assigned to the Strategic Air Command. The Defense Department confirms that an intermediate range ballistic missile...tested last night...had to be destroyed in flight, "due to a malfunction". This was a modified version of the Army Jupiter, called the Jupiter-A.

ballistic missile...tested last night...had to be destroyed in flight, "due to a malfunction." The missile was a modified version of the Army Jupiter, called the Jupiter-A.

Stories from Moscow...passed by the Russian censor...say the fate of Marshal Zhukov probably will be announced within the next 24 hours. So-called "usually reliable sources" in Yugoslavia say that Zhukov was removed as defense minister because he allegedly was trying to make the Red Army independent of the Communist Party.

The newspaper put out by the Soviet Defense Ministry...Red Star... said today, "The strength of the Army and Navy lies in unity with the people and in the leadership of the party." And this may be significant.

Yugoslavia said today that it is sending a high-level delegation to Moscow to represent President Tito at the celebration marking the 40th anniversary of the Russian revolution. The delegation will include Yugoslavia's two vice presidents. Tito has said he cannot attend himself because of poor health.

The United States today opened new economic talks with Poland. Last June, a 95-million-dollar agreement was signed...under which Poland

got mining machinery and surplus cotton and wheat. ~~The new talks are expected to continue for several weeks.~~

At United Nations headquarters, Syria and Turkey are reported to have reached a compromise agreement. Syria would give up the demand for an on-the-spot investigation of its complaint that Turkey is threatening Syria's security. /Instead, Secretary General Hammarskjold would merely use his powers under the U.N. Charter to ease tension between the two countries. So far, there is no confirmation of this report.

The Senate Rackets Committee heard conflicting testimony today in its investigation of labor practices involving the Mennen Company. David Nagle, a former personnel manager, said he had kept a card index of the union sentiment among company employes...and that the firm had advocated getting rid of some workers who favored a union. /He said he had discussed the system with Henry Oldenburg, manager of the Mennen plant at Morristown, New Jersey. /Oldenburg had testified earlier in the day that he had never seen any of the cards. George Mennen, vice president of the company, said he did not believe there were any cards. He denied that the company had ever indulged in "union-busting" activities.

The executive board of the Teamsters Union voted unanimously today to appeal the union's suspension from the AFL-CIO to the federation's convention in December. Dave Beck said the union has no intention of "purging" president-elect James Hoffa, as demanded by the AFL-CIO executive council.

In the Soviet Union there seem to be only two ways for a leader to be separated from power -- by death or by denunciation. During the days of Stalin they used both methods. Leaders were killed and denounced at the same time. Since Stalin, death has been more sparingly used. There have even been a number of efforts to rehabilitate the character and memory of some who had been killed. So far as we know, only one execution of a leader has ~~xxxxxx~~ taken place since Stalin died, and that was Beria, the head of the Secret Police. But the use of denunciation has not been moderated. And in a tight society like Soviet totalitarianism, denunciation by the Communist Party is as destructive, if not as final as death.

The other day Khrushchev likened the demotion of Zhukov to the resignation of Defense Secretary Wilson. Apparently to the Russian mind it is inconceivable that a man would freely give up the power of a Charles Wilson because he would be happier without it. Having power in a democracy is a great burden, but it is also a privilege and frequently a duty. But it can be and usually is laid down with honor. In Russia, to lose power is a dishonor, and also involves severe economic and social penalties. Even if a man is spared the firing squad, he is smothered with disgrace.

This difference in attitude towards power also applies to exchange of

information. Conversations are now underway in Washington between the Russians and ourselves about exchanging information and people. Forty years ago, the Soviet Union began as a state with built-in barriers against normal communications with the outside world. Russia has changed a great deal since then, but it has not changed this characteristic. Our State Department is now trying to persuade the Russians to exchange ideas -- to discuss through the mass media the major issues in world affairs. The Russians want to use quite different methods. They want the exchange between the two countries to be limited to groups and individuals. They want a kind of formal visiting back and forth, done by carefully chosen representatives. As they see it, their specialists would talk with our specialists. The groups would deal with trade, science, industry, agriculture and the arts. The musicians would make music, the dancers dance, and the athletes compete. Scientists would exchange views on scientific questions; but there would be no room for nation-wide discussion of vital political problems. This is easy to understand. For forty years the Soviet Government has had the monopoly in telling the Russian people what the United States is like, what it does and why it does it. Moscow is not about to surrender this monopoly. We are not to be given a chance to

talk freely to the Russians. The present Soviet system cannot give up its monopoly, cannot tolerate free discussion, just as a free democracy cannot tolerate the denial of it. And if the time ever comes when the Russians permit the kind of information exchange we advocate, it will mean that the basic nature of the Russian regime is changing.

It is reasonable to suggest that we may have to do some changing in this continuing competition with the Russians. Freedom to discuss is a very important thing, but knowledge also is important. There is massive evidence that the Russians are well on the way to out-producing us in the field of well-trained scientists. Today Nicholas DeWitt, director of the Russian Research Center at Harvard, and an expert on Russian education, said: "The Russians are not playing hide-and-seek. They are in dead earnest in their ultimate objective that if not today or tomorrow, then in a decade or a generation or two hence, their absolute technical, economic and military supremacy will triumph." And then Mr. DeWitt said something that ought to jar us as much as Sputnik. He said the one-and-a-half million who were graduated from Russian secondary schools this year had, roughly speaking, five times more hours in scientific subjects than the minimum stipulated for entrance to a school the caliber of Massachusetts Institute of Technology.

And that is one of the best and toughest institutions in the country. The Russians, willingly or not, are paying the price of sacrifice to achieve scientific leadership. We are not. If we are prepared to pay only for a second-rate educational system, that is the kind we will get and deserve.

We talk much of the need to aid and assist so-called backward countries - one of the principal battlegrounds between Communism and freedom. They need scientific and technical assistance. We aren't producing enough to meet our own needs. The Russians will soon be in a position to export skilled scientists who also know the language of the country in which they will be working. The scientific and political consequences of this could well be disastrous.

Maybe in addition to exchanging information with the Russians we ought to start discussing vigorously among ourselves whether we in this country haven't got our priorities wrong, and have come to place luxury ahead of learning. It is this reporter's ~~opinion~~ ~~Conclusion~~ that we have.

Conclusion.

Word for Today

The Russian system cannot tolerate free discussion. But it can, and does, press ahead in the training of scientists. In an interview with H.G. Wells...23 years ago...Stalin said, "Education is a weapon whose effect depends on who holds it in his hand---and who is struck by it." Today, education is still a weapon. And one we can ill afford to neglect.

Good night and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, OCTOBER 31, 1957
7:45 - 8:00 PM EST

This is the news:

President Eisenhower today presided at an extraordinary session of the National Security Council. Eighteen government officials were summoned to the meeting, in addition to the five regular members. These members...besides the President...are Vice President Nixon, Secretary of State Dulles, Secretary of Defense McElroy, and the director of the Office of Defense Mobilization, Gordon Gray. Among the other officials who sat in on the meeting, were Secretary of the Treasury Anderson, Chairman Straws of the Atomic Energy Commission, and General Twining, Chairman of the Joint Chiefs of Staff. Also, the heads of all the armed services. The meeting, as usual, was highly secret. Presumably it involved financial aspects of the defense program. Mr. Eisenhower told his news conference yesterday that defense spending in the next fiscal year would exceed the 38-billion dollar ceiling by "something more than 400-million dollars."

Former Governor Dewey of New York conferred with the President for more than an hour today. Dewey refused to tell reporters afterward whether he had been asked to serve on the new Civil Rights Commission. He said that...in his opinion ...Vice President Nixon would make a "superb" candidate for President in 1960. When asked whether the same goes for Harold Stassen and Senator Knowland, he said "I think so, although I haven't seen them campaigning." Dewey said there is not "a scintilla of a possibility" of his running for president again in 1960. Nor, he said, is there anything to speculation that he might be appointed "czar" to coordinate the United States missile program.

The Air Force announced tonight that an inter-continental guided missile, the Snark, was fired successfully today at the Florida test center. In previous tests, the Snark traveled as far as 3-thousand miles.

The Air Force announced earlier that its air-to-ground missile, the Rascal, is operational...and is immediately being assigned to the Strategic Air Command. The Defense Department confirms that an intermediate range ballistic missile...

tested last night...had to be destroyed in flight, "due to a malfunction". This was a modified version of the Army Jupiter, called the Jupiter-A.

Stories from Moscow...passed by the Russian censor...say the fate of Marshal Zhukov probably will be announced within the next 24 hours. So-called "usually reliable sources" in Yugoslavia say that Zhukov was removed as defense minister, because he allegedly was trying to make the Red Army independent of the Communist Party.

The newspaper put out by the Soviet Defense Ministry...Red Star...said today, "The strength of the Army and Navy lies in unity with the people, and in the leadership of the party."

Yugoslavia said today that it is sending a high-level delegation to Moscow, to represent President Tito at the celebration marking the 40th anniversary of the Russian revolution. The delegation will include Yugoslavia's two vice presidents. Tito has said he cannot attend himself because of poor health.

At United Nations headquarters, Syria and Turkey are reported to have reached a compromise agreement. Syria would give up the demand for an on-the-spot investigation of its complaint that Turkey is threatening Syria's security. Instead, Secretary General Hammarskjold would merely use hispowers under the U.N. Charter, to ease tension between the two countries. So far, there is no confirmation of this report.

The Senate Rackets Committee heard conflicting testimony today in its investigation of labor practices involving the Mennen Company. David Nagle, a former personnel manager, said he had kept a card index of the union sentiment among company employees...and that the frrm had advocated getting rid of some workers who favored a union. He said he had discussed the system with Henry Oldenburg, manager of the Mennen plant at Morristown, New Jersey. Oldenburg had testified earlier in the day that he had never seen any of the cards. George Mennen, vice president of the company, said he did not believe there <u>were</u> any cards. He denied that the company had ever indulged in "union-busting" activities.

The executive board of the Teamsters Union voted unanimously today to appeal

the union's suspension from the AFL-CIO to the federation's convention in December. Dave Beck said the union has no intention of "purging" president-elect James Hoffa, as demanded by the AFL-CIO executive council.

In the Soviet Union there seem to be only two ways for a leader to be separated from power - by death or by denunciation. During the days of Stalin they used both methods. Leaders were killed and denounced at the same time. Since Stalin, death has been more sparingly used. There have even been a number of efforts to rehabilitate the character and memory of some who had been killed. So far as we know, only one execution of a leader has taken place since Stalin died, and that was Beria, the head of the Secret Police. But the use of denunciation has not been moderated. And in a tight society like Soviet totalitarianism, denunciation by the Communist Party is as destructive, if not as final as death.

The other day Khrushchev likened the demotion of Zhukov to the resignation of Defense Secretary Wilson. Apparently, to the Russian mind it is inconceivable that a man would freely give up the power of a Charles Wilson because he would be happier without it. Having power in a democracy is a great burden, but it is also a privilege, and frequently a duty. But it can be, and usually is, laid down with honor. In Russia, to lose power is a dishonor, and also involves severe economic and social penalties. Even if a man is spared the firing squad, he is smothered with disgrace.

This difference in attitude towards power also applies to exchange of information. Conversations are now underway in Washington between the Russians and ourselves about exchanging information and people. Forty years ago, the Soviet Union began as a state with built-in barriers against normal communications with the outside world. Russia has changed a great deal since then, but it has not changed this characteristic. Our State Department is now trying to persuade the Russians to exchange ideas - to discuss through the mass media the major issues in world affairs. The Russians want to use quite different methods. They want the exchange between the two countries to be limited to groups and

individuals. They want a kind of formal visiting back and forth, done by carefully chosen representatives. As they see it, their specialists would talk with our specialists. The groups would deal with trade, science, industry, agriculture and the arts. The musicians would make music, the dancers dance, and the athletes compete. Scientists would exchange views on scientific questions; but there would be no room for nation-wide discussion of vital political problems. This is easy to understand. For forty years the Soviet Government has had the monopoly in telling the Russian people what the United States is like, what it does and why it does it. Moscow is not about to surrender this monopoly. We are not to be given a chance to talk freely to the Russians. The present Soviet system cannot give up its monopoly, cannot tolerate the denial of it. And if the time ever comes when the Russians permit the kind of information exchange we advocate, it will mean that the basic nature of the Russian regime is changing.

It is reasonable to suggest taat we may have to do some changing in this continuing competition with the Russians. Freedom to discuss is a very important thing, but knowledge also is important. There is massive evidence that the Russians are well on the way to out-producing us in the field of well-trained scientists. Today Nicholas DeWitt, director of the Russian Research Center at Harvard, and an expert on Russian education, said: "The Russians are not playing hide-and-seek. They are in dead earnest in their ultimate objective that if not today or tomorrow, then in a decade or a generation or two hence, their absolute technical, economic and military supremacy will triumph." And then Mr. DeWitt said something that ought to jar us as much as Sputnik. He said the one-and-a-half million who were graduated from Russian secondary schools this year had, roughly speaking, five times more hours in scientific subjects, than the minimum stipulated for entrance to a school the caliber of Massachusetts Institute of Technology. And that is one of the best and toughest institutions in the country. The Russians, willingly or not, are paying the price of sacrifice to achieve scientfic leadership. We are not. If we are prepared to pay

only for a second-rate educational system, that is the kind we will get, and deserve.

We talk much of the need to aid and assist so-called backward countries - one of the principal battlegrounds between Communism and freedon. They need scientific and technical assistance. We aren't producing enough to meet our needs. The Russians will soon be in a position to export skilled scientists, who also know the language of the country in which they will be working. The scientific and political consequences of this could well be disastrous.

Maybe in addition to exchanging information with the Russians, we ought to start discussing vigorously among ourselves, whether we in this country, haven't got our priorities wrong, and have come to place luxury ahead of learning. It is this reporter's conclusion that we have.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The Russian system cannot tolerate free discussion. But it can, and does, press ahead in the training of scientists. In an interview with H.G. Wells. ...23 years ago...Stalin said, "Education is a weapon whose effect depends on who holds it in his hand---and who is struck by it." Today, education is <u>still</u> a weapon, and one we can ill afford to neglect.

Goodnight and good luck!

Edward R. Murrow Fri., Nov. 1, 1957

This is the news:

President Eisenhower today announced that he will make the first in a series of Reports to the American people on November 13th. The speech will be delivered in Oklahoma City...in connection with Oklahoma's semi-centennial celebration...and will be carried by all major radio and television networks. He will speak on the subject, "Science and Security".

This morning, Mr. Eisenhower met for nearly two hours with his cabinet...and then flew to West Point for a reunion with members of his Class of 1915. Tomorrow, he will see the Army-Colgate game.

The President's Committee on Scientists and Engineers today released a report saying that Russia now has a million, 500-thousand scientists

in all fields, compared to a million, 300-thousand in the United States. The report was prepared by Dr. Herbert Scoville, assistant director of the Central Intelligence Agency. It describes the Russians in the military technological field as moving forward "by leaps and bounds." It refers to Sputnik...and then says, "In view of the dynamic drive of their entire scientific program, we must expect further revolutionary developments." The report notes that in September Russia conducted two atomic test series simultaneously a great distance apart...which, it says, "means that they have enough people and equipment to handle two tests at once."

There is still no official word on the fate of Marshal Zhukov, who was removed almost a week ago as Soviet minister of defense. Unconfirmed reports...reaching Belgrade...say Zhukov has also been dropped from the presidium of the Communist Party and from the Central Committee.

A Reuters dispatch...passed by the Moscow censor...says that "several hundred ~~[illegible]~~ senior Army officers" attended an eight-hour meeting today in the Kremlin." ~~[illegible]~~ The dispatch adds that the future of Marshal Zhukov may have been discussed.

The Soviet press today continued its attack on alleged efforts to build up a one-man command of the Army and Navy at the expense of the Communist Party. Support for this position came from Red China. An editorial in the Peiping Peoples Daily said the army in a Communist state has to be "completely" under the leadership of the party. "Any weakening of party leadership over the army," it said, "is dangerous." None of these articles, however, mentioned Zhukov by name.

The United Nations General Assembly today ended its debate on the Turkish-Syrian dispute. And the question was tabled...without a vote on either of two resolutions introduced in the Assembly yesterday. One of those resolutions...introduced by Syria...called for an on-the-spot investigation. The other...sponsored by seven other countries and supported by the United States...would have had Secretary General Hammarskjold use his good offices to reduce tension. Under the present "gentlemen's agreement" Hammarskjold may still intervene, if necessary. King Saud, of Saudi Arabia, also remains free to continue his mediation effort.

Secretary of State Dulles entered Walter Reed Hospital tonight for a medical check-up. The examination is described as routine. Mr. Dulles...who underwent a major operation a year ago...says he feels fine.

The country's TWO biggest railroads...the Pennsylvania and the New York Central...are considering the possibility of merging into a single railroad system. An announcement issued jointly by the presidents of the two companies said, "Preliminary studies indicate that substantial benefits to all concerned might result from such a merger." It said further studies are being made...not only to determine how this step would result in more economical operation...but also how it would serve the best interests of the public. A consolidation of the New York Central and Pennsylvania Railroads would create the nation's 11th largest corporation, with total assets in the neighborhood of 6-billion dollars. The merger would have to be approved by the stockholders of the two companies...and by the Inter-state Commerce Commission.

The Associated Press reports that if Vice President Nixon seeks the Republican presidential nomination, Senator Knowland would step out of Nixon's way in the 1960 primaries---outside of California. Knowland at present is a candidate for governor of California. Governor Knight is

a candidate for re-election. /There are growing reports that Knight will pull out of the race and try...instead...for the seat Knowland will be vacating in the Senate. /But there is no confirmation of this from Knight. Knowland said today that if Knight does quit the governor's race, he will be acting on his own responsibility. "There have been," he said, "no commitments, direct or indirect, on my part."

In Little Rock, Arkansas...the local president of the National Association for the Advancement of Colored People, the Reverend J.C. Crenshaw, surrendered himself to police today on charges of violating a new city ordinance growing out of the integration dispute. The ordinance required the N.A.A.C.P....along with three segregationist groups...to submit their financial and membership records by 4 o'clock yesterday afternoon. /The other groups complied. /The local chapter of the N.A.A.C.P. regards the ordinance as unconstitutional, and has filed a test case in Federal Court. /Crenshaw was freed on 300 dollars bail. /The other official of the Little Rock chapter of the N.A.A.C.P., Mrs. Daisy Bates, is in New York City.

Edward R. Murrow: November 1, 1957. 7.45 p.m.

ONE of

The most striking lessons to be learned from the Zhukov crisis is the astonishing show of power by the Communist Party. It has boldly undertaken to take the Red Army away from the nation's most beloved soldier, and done so without court-martial and execution. It seems to be showing both the country and the army that it is the boss, and so firmly entrenched that it has ~~not needed~~ No Need of the firing squad. Russians will not forget that when Stalin felt the control of the army slipping he executed Marshall Tukachevsky and thousands of officers. But since then the power of the Party over the Army has been so well built-in that concerted Army resistance has been made difficult. Anyway, it is not feared at the moment. For if the Party had feared an Army uprising, it hardly would have hesitated to eliminate Zhukov altogether.

A few weeks ago, Allan Dulles, head of the Central Intelligence Agency, in an analysis of developments in Russia said: "Certainly military dictatorship is one of the possible lines of evolution in the Soviet Union." Mr. Dulles thought that the military had become the decisive element where force was required to support a political decision. Now the Communist Party leadership dissents from this judgment. Zhukov was removed to prevent the evolution to military dictatorship.

Zhukov was getting too strong. He had saved the Khrushchev regime, first in Hungary, then in preventing his dismissal by the Presidium last June. For this he wanted the reward of greater power for himself. He is said to have told the Yugoslavs last month that he already was the strong man of Russia. He also is said to have been seeking to name the top men in the re-organized Secret Police, which would have given him supervision over his colleagues. He was opposing efforts to reactivate the work of the political Commissars in the Red Army. An order had been adopted a year ago forbidding the political officers in the Army to criticize actions of the military officers. The Party wanted the order rescinded, and Zhukov was against doing so.

It is difficult for anyone outside Russia to measure the grip the Communist Party has over all ranks in the Army, but it has been able virtually to isolate all officers from one another, and to keep them under perpetual supervision. That is what has made organized revolt difficult.

The favorite current theory about the crisis, in Washington is that Zhukov's ambitions had been worrying his colleagues more and more, and they decided he had better be separated from the Army. But they did not want to lose his usefulness as a popular hero, so they decided to take the Army

away from him, but to make him Premier. There he would be a helpful figurehead but not dangerous. The theory is that when Zhukov came home from Albania, and was confronted by this decision, he refused to accept it. He would not give up the Army. Thereupon it was taken away from him, and he forfeited the premiership as well. Washington notes that Sobolovsky and Konev were passed over in naming his successor as Defense Minister, so it is assumed that they may have been on Zhukov's side and in their turn will be down-graded.

Another lesson of the crisis is the flexibility of the Communist Party when its own power is at stake. Today it removes Zhukov in the name of Marxism, Leninism and all that is sacred Communist doctrine. But during the war, the Communists did not hesitate to throw the dogmas out of the window to hold on to their power. They ruled Russia in the name of Holy Mother Russia, <u>not</u> the Bolshevik revolution.

This capacity for adaptation is one of the strengths of the Communist dictatorship. Times change, its techniques change. It is, to be sure, much too early to say that the Zhukov crisis has been weathered. It is hard to believe that the regime has not been seriously weakened by the elimination of a figure as beloved as Zhukov. But there are few alternatives. One is

an Army dictatorship, now eliminated for the present. Another is the rule of the old Stalinists, but they are still in exile. There always is the ominous possibility that a weakened Khrushchev may have to turn to dangerous foreign adventures to keep the country united behind him. In that event the removal of Zhukov will have been a loss to the world.

George Bryan

Word for Today

When Communist Party Boss Khrushchev attended the reception at the Turkish Embassy this week, he was described as being in "an affable mood." Marshal Zhukov might have done well to have remembered something Josh Billings once said. "Laffing devils," Billings warned, "are the most dangerous. If i had a mule that wouldn't kik nor bite, i would watch him dredful spry."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, NOVEMBER 1, 1957
7:45 - 8:00 PM EST

This is the news:

President Eisenhower today announced that he will make the first in a series of reports to the American people on November 13th. In that event, the removal of Zhukov will have been a loss to the world.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: When Communist Party Boss Khrushchev attended the reception at the Turkish Embassy this week, he was described as being in "an affable mood." Marshal Zhukov might have done well to have remembered something Josh Billings once said, "Laffing devils," Billings warned, "are the most dangerous. If i had a mule that wouldn't kik nor bite, i would watch him dredful spry."

Goodnight and good luck.

Edward R. Murrow Mon., Nov. 4, 1957

This is the news:

The Moscow radio said tonight that "new sources of power" were used to launch the new Russian satellite. The broadcast did not describe these "sources of power." It said, "The increase in the satellite's size...to provide for a large number of measuring and tele-metering instruments, (and even for an animal passenger)... necessitated the development of improved new instruments and sources of power." The broadcast also reported the use of "a multi-stage carrier rocket of new design, with fool-proof precision controls" for putting the satellite into its computed orbit.

And it called the launching...not only a triumph for Soviet engineers and scientists...but also "a tremendous contribution to world science."

Russia's second earth satellite weighs a thousand, 120 pounds... or more than six times as much as the first Sputnik launched a month ago. Also, as it revolves about the earth, it reaches a maximum altitude of a thousand, 56 miles...compared to a maximum altitude of 560 miles for Sputnik One.

The latest word on the condition of the dog-passenger comes from the Soviet news agency Tass. The report...based on [redacted] information radioed back to earth during the first 24 hours...describes the dog's condition as "satisfactory". Tass [redacted] says this is confirmed by "data [redacted] received as to heart beats, blood pressure and other physiological indications." And the party newspaper Pravda says the next space travelers may be anthropoid apes.

A Russian scientist...quoted by Moscow radio...revives speculation that the dog may survive the experiment. He speaks of the possibility of parachuting the animal to earth. And it is pointed out that, at one point in its orbit, Sputnik Two has slightly less altitude that Sputnik One.

Right now, it is circling the earth for the 29th time.

An American scientist...Dr. Fred L. Whipple of the Smithsonian Astro-physical Laboratory...says it is "possible" that the Russians already have launched a rocket to the moon. Dr. Whipple estimates that such a flight through space would take five days. So if the Russians should want a rocket to reach the moon by Thursday... the 40th anniversary of the Bolshevik revolution...they would have had to fire it last week-end. ~~"It is entirely possible," he said "that the Russians already have a rocket on the way."~~

Dr. Whipple believes the new satellite will not be visible in the United States for "about a month." However, he said, it may soon be visible in Canada.

The White House said today that President Eisenhower and his advisers are analyzing the launching of the new Russian satellite "very carefully, both as to what it means in terms of rocketry and, also, as to its scientific significance." The White House spokesman said there are no plans for a special session of Congress "as far as I know."

Democratic Senator Kefauver today renewed his demand that Congress be called back in special session. Congress, he said, should be asked to create a new cabinet office of "Secretary of Science" to stimulate our space program. Republican Senator Potter of Michigan told reporters that he is also in favor of creating an office...of cabinet rank...for co-ordination of all government activities in the science field.

President Eisenhower has called a special cabinet meeting for tomorrow...to discuss the program the Administration will present to Congress in January. /The White House says both legislative and budget proposals will be discussed...and that the special meeting was scheduled before the launching of Sputnik Two./ Mr. Eisenhower will also meet with his cabinet on Friday---the regular day for such meetings.

Secretary of Defense McElroy today briefed Senate leaders on the progress being made by the United States in the missiles field. Attending the briefing in the Pentagon were Democratic Senate Leader Johnson, Chairman Russell of the Senate Armed Services Committee, and Senator Bridges of New Hampshire, ranking Republican member of that committee. /Johnson said...before going into the meeting...that the time had come for "bold, new thinking" in the field of foreign policy as well as defense. "The question of who is to blame," he said, "is far less important than what is to be done."

Russia served notice today that it will have no part of disarmament negotiations under the present United Nations set-up./ Soviet Deputy Foreign Minister Kuznetsov said further negotiation in the United Nations disarmament commission...as well as in its five-power subcommittee...would be "fruitless"./ Last week, Russia proposed that all 82 members of the world organization take part in the disarmament negotiations. The Western powers objected...and Kuznetsov said today that, because of their rejection of the Russian plan, the talks are off. "The Soviet government," he said, "considers that all attempts to make use of the disarmament subcommittee for productive work have been exhausted." He said Russia is withdrawing from the commission and its subcommittee. Russia, he said, does not reject the idea of resuming negotiations..should the United States, Britain and France (in his phrase) put forward "constructive proposals."

American Ambassador Lodge reacted to the Russian statement by saying that he hoped it was "a passing thought"...that "wiser counsels in Moscow would prevail.

President Eisenhower and Governor Knight of California will meet at the White House tomorrow...and presumably Republican politics will be discussed. Both Knight and Senator Knowland are candidates for the Republican nomination for governor of California. There have been rumors that Knight might drop out of the race and run, instead, for Knowland's seat in the Senate...thus avoiding an intra-party fight. This may be what Knight will tell the President. Vice President Nixon will also see Knight tomorrow, after the White House meeting.

The United States Court of Appeals today upheld the preliminary injunction...barring James Hoffa from taking over as president of the Teamsters Union, until charges that his election was rigged can be adjudicated. The appeals court ordered a speedy trial on these charges.

Not the least of the achievements of Sputnik II is that it has pushed Marshal Zhukov out of the news almost altogether. It has done this in the Western press, which is important for the Russians, but more important still it has done it inside the Soviet Union and the Soviet bloc. This is a dividend from their heavy investment in science that the Soviet leaders could hardly have expected, for it came through coincidence. Sputnik II had long been scheduled for Thursday and the 40th anniversary of the Soviet Union. Zhukov's downfall came uncomfortably close to the big day, but all that had to be done to distract attention from it was to send up the second Sputnik five days early.

So Sputnik became a political, as well as a scientific, sensation. It not only is a propaganda victory that the West will not recover from for a long time, it is like a life-saver for the harrassed Kremlin. The propaganda victory would have been the same if Sputnik II had been launched on Thursday. But by that time the Soviet people would have had five days to brood over the fate of Zhukov to the

exclusion of everything else. The removal of Russia's greatest soldier revealed that a highly dangerous struggle for power was still going on within the Kremlin, and the country could hardly have been spared a sweep of suspicion and fear. Sputnik II not only has spared the country this wave of alarm, it already has made the 40th anniversary an assured success. Now the great demonstration of missiles and missile-launchers can take place without the absence of Zhukov being painfully felt. Soviet science and technology have replaced the national hero. And instead of mystery and dread, there will reign a spirit of triumph and rejoicing.

However, the political service of Sputnik II can only be of limited duration. At best Khrushchev has been given a breathing spell in which to prepare for the public reaction that is sure to develop. For the fall of Zhukov inevitably cuts down the prestige of the Kremlin. Collective leadership has now been found impossible in the Soviet system. After the death of Stalin, when no one man was near to a monopoly of power, collective leadership was a handy stop-gap. But in a dcitatorship there is something like an organic law that

the power tends to narrow down to fewer and fewer persons, until only two rivals remain, one of whom is destined to obliterate the other. Now a showdown has come between Khrushchev and Zhukov, and Khrushchev, at least on the face of things, has won. But the victory somehow is not convincing. It seems to have come too soon, perhaps ~~to have been~~ precipitated by forces beyond Khrushchev's control. It has about it an unmistakable ring of weakness. As recently as June, Khrushchev was so helpless, that only Zhukov could save him. Where has he picked up the strength to overthrow Zhukov? Signs point to the probability, that the fight inside the Kremlin and the country isn't over. In the end, Khrushchev may have been ~~well~~ ruthless enough to win out completely. He certainly has the inside track. But the number of the disgruntled in the Soviet Union is large. The friends of Malenkov, Molotov and Kaganovich still have very considerable influence, and the large army of civil servants uprooted in the unpopular decentralization of industry, which Khrushchev put through, is not going to be easy to make happy. It is noteworthy that Malenovsky, who was given Zhukov's post at the defense ministry,

is not an outright Khrushchev man. ~~It seems that he was~~ On the contrary, he seems to have been the soldier who Malenkov, Molotov and Kaganovich hoped would ~~resist their~~ save them from downfall. It still remains to be seen how much opposition will develop within the Red Army. Marshal Konev has now attacked Zhukov in an article in Pravda, charging that he was as much to blame as Stalin for Russia's unpreparedness in the last war. This is taking sides against Zhukov publicly. But Konev may have found he had to do so to save himself from being ousted. It certainly didn't win him the reward of the defense ministry, for which he outranked Malinovsky.

Here then is a strange anomoly. Soviet power stands at a new high, and in some respects it is ahead of United States power. We are well behind in the development of rocketry, and Russia has gained enormously in the world from proving it. But at the moment of reaching this power externally, the Soviet government finds itself in the throes of a crisis internally. Actually it is the same crisis that was produced by the death of Stalin, which by now has come to a head. It is like the fever of a grave illness. Now the fever may have broken, and the patient may be out of danger. But he is still a very sick man, too sick for a Sputnik alone to make him well.

George Bryan -

Word for Today

Russia's leaders seek desperately to maintain a facade of unity, but the bitter struggle for power goes on in private, nonetheless. Claudian said, "He who strikes terror into others is himself in continual fear." And James Russell Lowell made the historical observation, "Tyranny is always weakness."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, NOVEMBER 4, 1957
7:45 - 8:00 PM EST

This is the news:

The Moscow radio said tonight that, "new sources of power were used to launch the new Russian satellite. The broadcast did not describe these "sources of power." It said, "The increase in the satellite's size...to provide for a large number of measuring and tele-metering instruments, and even for an animal passenger...necessitated the development of improved new instruments and sources of power." The broadcast also reported the use of "a multi-stage carrier rocket of new design, with fool-proof precision controls" for putting the satellite into its computed orbit. And it called the launching...not only a triumph for Soviet engineers and scientists...but also "a tremendous contribution to world science."

Russia's second earth satellite weighs a thousand, 120 pounds... or more than six times as much as the first Sputnik launched a month ago. Also, as it revolves about the earth, it reaches a maximum altitude of a thousand, 56 miles... compared to a maximum altitude of 560 miles for Sputnik One.

The latest word on the condition of the dog-passenger comes from the Soviet news agency Tass. The report...based on information radioed back to earth during the first 24 hours...describes the dog's condition as "satisfactory". Tass says this is confirmed by "data received as to heart beats, blood pressure and other physiological indications." And the party newspaper Pravda says the next space travelers may be anthropoid apes.

A Russian scientist...quoted by Moscow radio...revives speculation that the dog may survive the experiment. He speaks of the possibility of parachuting the animal to earth. And it is pointed out that, at one point in its orbit, Sputnik Two has slightly less altitude than Sputnik One.

Right now, it is circling the earth for the 29th time.

An American scientist...Dr. Fred L. Whipple of the Smithsonian Astro-physical Laboratory...says it is "possible' that the Russians already have launched a

rocket to the moon. Dr. Whipple estimates that such a flight through space would take five days. So if the Russians should want a rocket to reach the moon by Thursday...the 40th anniversary of the Bolshevik revolution...they would have had to fire it last week-end.

Dr. Whipple believes the new satellite will not be visible in the United States for "about a month." However, he said, "it may soon be visible in Canada."

The White House said today that President Eisenhower and his advisers are analyzing the launching of the new Russian satellite "very carefully, both as to what it means in terms of rocketry, and also, as to its scientific significance." The White House spokesman said there are no plans for a special session of Congress "as far as I know."

President Eisenhower has called a special cabinet meeting for tomorrow... to discuss the program the Administration will present to Congress in January. The White House says both legislative and budget proposals will be discussed... and that the special meeting was scheduled <u>before</u> the launching of Sputnik Two. Mr. Eisenhower will also meet with his cabinet on Friday---the regular day for such meetings.

Secretary of Defense McElroy today briefed Senate leaders on the progress being made by the United States in the missiles field. Attending the briefing in the Pentagon were Democratic Senate Leader Johnson, Chairman Russell of the Senate Armed Services Committee, and Senator Bridges of New Hampshire, ranking Republican member of that committee. Johnson said...before going into the meeting...that the time had come for "bold, new thinking" in the field of foreign policy as well as defense. "The question of who is to blame," he said, "is far less important than what is to be done."

Russia served notice today that it will have no part of disarmament negotiations under the present United Nations set-up. Soviet Deputy Foreign Minister Kuznetsov said further negotiation in the United Nations disarmament commission... as well as in its five-power subcommittee...would be "fruitless". Last week,

Russia proposed that all 82 members of the world organization take part in the disarmament negotiations. The Western powers objected...and Kuznetsov said today that, because of their rejection of the Russian plan, the talks are off. "The Soviet government," he said, "considers that all attempts to make use of the disarmament subcommittee for productive work have been exhausted." He said Russia is withdrawing from the commission and its subcommittee. Russia, he said, does not reject the idea of resuming negotiations...should the United States, Britain and France (in his phrase) put forward "constructive proposals."

Not the least of the achievements of Sputnik 11 is that it has pushed Marshal Zhukov out of the news almost altogether. It has done this in the Western press, which is important for the Russians, but more important still, it has done it inside the Soviet Union and the Soviet bloc. This is a dividend from their heavy investment in science, that the Soviet leaders could hardly have expected, for it came through coincidence. Sputnik 11 had long been scheduled for Thursday, and the 40th anniversary of the Soviet Union. Zhukov's downfall came uncomfortably close to the,big day, but all that had to be done to distract attention from it, was to send up the second Sputnik five days early.

So Sputnik became a political, as well as a scientific, sensation. It not only is a propaganda victory that the West will not recover from for a long time, it is like a life-saver for the harrassed Kremlin. The propaganda victory would have been the same if Sputnik 11 had been launched on Thursday. But by that time the Soviet people would have had five days to brood over the fate of Zhukov, to the exclusion of everything else. The removal of Russia's greatest soldier revealed that a highly dangerous struggle for power was still going on within the Kremlin, and the country could hardly have been spared a sweep of suspicion and fear. Sputnik 11 not only has spared the country this wave of alarm, it already has made the 40th anniversary an assured success. Now the great demonstration of missiles and missile-laucchers can take place without the absence of Zhukov being painfully felt. Soviet science and technology have replaced the national hero. And instead of mystery and dread, there will reign a spirit of triumph and

rejoicing.

However, the political service of Sputnik 11 can only be of limited duration. At best Khrushchev has been given a breathing spell in which to prepare for the public reaction that is sure to develop. For the fall of Zhukov inevitably cuts down the prestige of the Kremlin. Collective leadership has now been found impossible in the Soviet system. After the death of Stalin, when no one man was near to a monopoly of power, collective leadership was a handy stop-gap. But in a dictatorship there is something like an organic law that the power tends to narrow down to fewer and fewer persons, until only two rivals remain, one of whom is destined to obliterate the other. Now a showdown has come between Khrushchev and Zhukov, and Khrushchev, at least on the face of things, has won. But the victory somehow is not convincing. It seems to have come too soon, perhaps precipitated by forces beyond Khrushchev's control. It has about it an unmistakable ring of weakness. As recently as June, Khrushchev was so helpless, that only Zhukov could save him. Where has he picked up the strength to overthrow Zhukov?

Signs point to the probability, that the fight inside the Kremlin and the country isn't over. In the end, Khrushchev may have been ruthless enough to win out completely. He certainly has the inside track. But the number of the disgruntled in the Soviet Union is large. The friends of Malenkov, Molotov and Kaganovich still have very considerable influence, and the large army of civil servants uprooted in the unpopular decentralization of industry, which Khrushchev put through, is not going to be easy to make happy. It is noteworthy that Malenowsky, who was given Zhukov's post at the defense ministry, is not an outright Khrushchev man. On the contrary, he seems to have been the soldier who Malenkov, Molotov and Kaganovich hoped would save them from downfall. It still remains to be seen how much opposition will develop within the Red Army.

Here then is a strange anomaly. Soviet power stands at a new high, and in some respects it is ahead of United States power. We are well behind in the development of rocketry, and Russia has gained enormously in the world from

proving it. But at the moment of reaching this power externally, the Soviet government finds itself in the throes of a crisis internally. Actually it is the same crisis that was produced by the death of Stalin, which by now has come to a head. It is like the fever of a grave illness. Now the fever may have broken, and the patient may be out of danger. But he is still a very sick man, too sick for a Sputnik alone to make him well.

This is Ed Murrow. I'll be back in a moment whih the Word for Today. But first, here is Gerrge Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Russia's leaders seek desperately to maintain a facade of unity, but the bitter struggle for power goes on in private, nonetheless. Claudian said, "He who strikes terror into others, is himself in continual fear." And James Russell Lowell made the historical observation, "Tyranny is always weakness."

Goodnight and good luck!

Edward R. Murrow Tues., Nov. 5, 1957

This is the news:

The White House announces that President Eisenhower will make a nationwide speech "of major importance" on Thursday night. Mr. Eisenhower will speak from his White House office on the subject, "Science and Security". And his news conference...scheduled for tomorrow...has been cancelled. The President already had announced that he would make a major ~~address~~ speech in Oklahoma City on November 13th...a week from tomorrow.

This is the news:

Secretary of State Dulles told a news conference today that Russia is ahead of the United States in some aspects of missile development. He expressed confidence that this country can catch up. But, at the same time, he indicated that the United States may never regain the military superiority of ten years ago, when it was the only atomic power. Mr. Dulles believes it is "desirable" for the United States to establish bases for intermediate-range ballistic missiles in other countries, besides Britain. (The United States and Britain already have an agreement in this regard). He said Russia has been able to forge ahead of us in some respects at the price of unbalancing its economy and forcing its citizens into "certain educational molds." Mr. Dulles does not think

the American people want to distort their pattern of living by being drawn into competition with a materialistic, atheistic system.

He said Soviet progress in the development of modern weapons calls for closer cooperation among the Allied powers. And he "hopes" some definite plans can be worked out in time for presentation at the NATO meeting in Paris the middle of next month.

Senate Democratic Leader Johnson said today that the Armed Services Subcommittee is going to make a "searching inquiry" of the United States missile and satellite programs. Johnson said the purpose of the investigation will be "to determine ways and means for speeding up the programs and for strengthening the security of the United States." It has not been decided, he said, whether to conduct the hearings in public or behind closed doors.

President Eisenhower met for nearly two hours today with members of his cabinet. Plans were discussed for next year's legislative program and a revised budget. Another cabinet meeting will be held on Friday.

The Air Force says it has assigned special investigators to look into reports of mysterious flying objects---other than Sputnik One and Two. There has been a flurry of such reports in the last two days from

persons living in New Mexico and Texas. A strange flying object was also reported last night by the crew of a Coast Guard cutter in the Gulf of Mexico.

American scientists say that Russia's new earth satellite may be visible in various parts of the United States shortly before dawn tomorrow. More than a hundred "moonwatch" teams have been alerted to that possibility.

The Moscow radio says the dog...encircling the earth in Sputnik Two... is in "good shape". The animal's respiration and pulse are said to be "apparently normal." A Russian scientist says flatly that a new fuel was used to launch the new satellite. He gives no particulars, but claims it was powerful enough to give the launching rocket a speed of 18-thousand miles an hour. ~~Another Russian scientist suggests that a rocket could fly to the moon in 10 hours. This suggestion, however, is rather vague and does not jibe with the 18-hundred-mile-an-hour figure.~~

The French General Assembly tonight approved the economic expert, Felix Gaillard, as premier...thus ending the crisis which has existed since the fall of the Bourges-Maunoury government, five weeks ago.

Gaillard was 38 years old today...making him the youngest premier of France since 1883. The vote of approval was 338 to 173. Gaillard served notice...before the vote was taken...that he would demand special economic powers to save the franc. His program for Algeria is vague. Terrorism must be repressed, he said, but there must also be a political solution of the Algerian problem. Both Socialists and Conservatives have agreed to serve in his government---the first time this has happened in the case of any French government since the elections of 1951.

Governor Knight of California announced today that he will not seek re-election...but will run, instead, for the Senate seat being vacated by Republican Senator Knowland. Knowland is a candidate for the Republican nomination for governor of California, and Knight's decision to quit the race removes the prospect of a bitter, intra-party fight. Knight announced his decision after conferring separately with President Eisenhower and Vice President Nixon. Knight said that Nixon urged him to run for the Senate in the interests of party harmony. And Nixon promptly issued a statement, pledging his "full support" to the ticket of Knight for senator and Knowland for governor. Senator Knowland has

declined to say whether he will support Knight's candidacy for the Senate before the June primary. But he said, "I will, of course, support the party nominee." Half a dozen politicians, besides Governor Knight, have expressed interest in the Republican senatorial nomination.

There were elections for governor today in New Jersey and Virginia. The voting was heavy in Virginia, where the race was between Democrat J. Lindsay Almond, who until recently was the state's attorney general, and Republican Ted Dalton, who is a state senator. Almond had the backing of Senator Byrd. The polls closed in Virginia only an hour ago, and there are no conclusive returns.

The major contest in New Jersey was between Democratic Governor Meyner...who wants a second term...and his Republican opponent, Malcolm S. Forbes. Forbes had the outspoken support of both President Eisenhower and Vice President Nixon, and so the outcome is being watched as a barometer of national sentiment. The polls in New Jersey are just closing, and there are no returns.

Edward R. Murrow: November 5, 1957. 7.45 p.m.

Most of the talk in Washington just now is about catching up with the Russians in rocket power. The emphasis is a natural and useful reaction to the surprise of the Sputniks. But it should not obscure the important fact the Russians have upset the balance of power, and even if we catch up we shall not be where we were. For years we were stronger than the Russians, and we based our foreign policy on our superiority. We negotiated from strength, that is, superior strength. Now if we catch up with the Russians we will not be superior, we shall only have equalized the balance of power. It is utterly necessary that we should do this, and our military experts are sure it can be done. But if we do it we still will have to revise our foreign policy. We no longer can negotiate from superior strength. So we shall have to change some of our habits of thought, our techniques of consultation, our opinion of ourselves, our opinions of our allies, and what may be ~~immediately noticeable~~ equally important, our rhetoric and tone of voice. We shall have to base our policy on keeping the balance of power equal, which henceforth we can only do in a full partnership with our allies.

So far a great deal has been heard about raising the defense budget, reorganizing the missile program, hiring a missile "czar" to run it, and

investing a lot more money in research. That is in line with catching up with the Russians. But little is being said about a new foreign policy. There was a dim glimpse of what it will have to be in part, in the statement Secretary Dulles made on the upcoming meeting of NATO heads of state. Since we are going to concentrate more on supplying nuclear weapons and missiles to our allies, and they are going to step up their contribution of manpower, NATO must become a tighter organization. / It must be given powers to make sure that every member of the team can play its ~~XXXX~~ part fully and punctually, and that all are under control, so as not to involve the alliance in useless war. This will entail a still undefined limitation of sovereignties.

But that is only part of the story. / Our military experts are sure we can answer the new Soviet inter-continental missile without having such a missile ourselves. To do this, two conditions have to be met: we must have plenty of 1500-mile missiles, which are yet to be put in full production. And then we must be able to launch them from the overseas bases which we and our allies already possess. This is where foreign policy plays a paramount role. With our 1500-mile missiles, fired from allied bases, we could reach ninety-five percent of the targets selected by the Strategic Air Command

as vital in the Soviet Union. So we can ~~c[illegible]~~ meet the Russian threat with equal threat, without having an inter-continental missile, but to do it we must solidify our alliances. Our life depends on having safe use of those bases. That does not simply mean that we must be nice to our allies. It means that the alliance as such is author of the foreign policy followed, and its members have a say in forming it and full confidence in its necessity. The United States, as strongest member of the alliance, still will lead it, but all members of the alliance will have to co-operate far better than they have been doing, or have been encouraged to do. The men who carry out the policy must do it in a way to instil confidence, and not to arouse distrust.

It may be that a preview of such a policy has been given by Lester Pearson, former Foreign Minister of Canada, in the first ~~address~~ speech he has made since being awarded the Nobel peace prize. The West, he said, cannot match the Soviet Union with the well-worn cliches of the superiority of freedom and democracy, nor can it insist on the rigid, unconditional-surrender type of diplomacy. It cannot maintain inflexible hostility to Soviet Russia, and determined opposition to every movement that country makes. "We should go on" he said, "seeking patiently and persistently a basis for negotiation and agreement. When Russia has a legitimate interest in some area or

development, we would be foolish to act as if that interest can either be ignored or destroyed.

Mr. Pearson counselled the West to maintain its strength, but he said that every possible step had to be taken to remove any doubt whatever that it would never be used for aggressive or unworthy purposes. Every opportunity must be seized, he said, to negotiate peaceful co-existence with the Soviet Union, and this, he insisted, can be done without sacrifice of principle if negotiated from a position of non-aggressive strength. "The alternative" he warned, "is a peace balanced precariously on the knife-edge of terror, followed by nuclear war and total annihilation."

George Bryan

There is a need in this country for new thinking. To catch up with the Russians...and to keep the balance of power equal...there must be a change in policy. NATO, for example, must be reknit. As Abraham Lincoln said in another time of difficulty, "As our case is new, so we must think anew and act anew. We must dis-enthrall ourselves."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, NOVEMBER 5, 1957
7:45 - 8:00 PM EST

This is the news:

Mr. Pearson counselled the West to maintain its strength, but he said that every possible step had to be taken to remove any doubt whatever that it would never be used for aggressive or unworthy purposes. Every opportunity must be seized, he said, to negotiate peaceful co-existence with the Soviet Union, and this, he insisted, can be done without sacrifice of principle, if negotiated from a position of non-agrressive strength. "The alternative" he warned, "is a peace balanced precariously on the knife-edge of terror, followed by nuclear war and total annihilation.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: There is a need in this country for new thinking. To catch up with the Russians...and to keep the balance of power equal...there must be a change in policy. NATO, for example, must be reknit. As Abraham Lincoln said in another time of difficulty, "As our case is new, so we must think anew and act anew. We must dis-enthrall ourselves."

Goodnight and good luck!

Edward R. Murrow Wed., Nov. 8, 1957

This is the news:

The United Nations political committee today approved a resolution endorsing Western disarmament proposals. The vote was 57 to 9, with 15 abstentions. And all nine opposing votes were cast by nations of the Soviet bloc. The resolution was sponsored by the United States and 23 other countries, including Britain and France. It calls on the United Nations disarmament subcommittee...which Russia has threatened to boycott...to resume its deliberations "as soon as feasible" and make a report on its progress by the end of April, 1958. The subcommittee is asked to give priority to reaching a disarmament agreement which...when it goes into effect...would provide for a suspension of nuclear tests under effective international control.

During the suspension of those tests, there would be a cessation of production of fissionable materials for weapons purposes. /There would also be...among other things...a joint study of an inspection system "to insure that the sending of objects through outer space will be exclusively for peaceful and scientific purposes." /Russia has objected to ~~[illegible]~~ negotiating in the subcommittee, on grounds that four of its five members -- the United States, Britain, Canada and France -- belong to NATO. /Russia wanted to have the negotiations carried on by all 82 members of the world organization...and said it would have no more to do with the subcommittee as presently constituted./ The resolution was passed today, despite this Soviet threat. /And it remains to be seen whether Russia will change its mind. The overwhelming approval of the resolution in the political committee makes Assembly approval almost certain.

Soviet Party Boss Khrushchev today called for a high-level meeting between capitalist and Communist countries in the interest of easing world tension. Such a meeting, he said, should aim specifically at "banning war as a method of solving international problems and ending the Cold War and the armaments race." Khrushchev promised the Supreme Soviet (which is

→

Russia's parliament) that the Soviet Union would overtake the capitalistic countries industrially within "an historically short period", and he boasted of Russia's scientific achievements as demonstrated by Sputniks One and Two. Khrushchev claimed that the United States named its earth satellite project "Vanguard", expecting it would be first. / He said Russia will never start a war...but that if Russia is attacked, "the capitalistic order will perish." / And he again accused the United States of inciting Turkey and Israel to attack Syria. / The Chinese Communist [redacted] leader, Mao Tse Tung, also spoke. Mao supported [redacted] Khrushchev's policies, [redacted] but added that "the Chinese revolution has its own characteristics."

President Eisenhower worked today on the radio and television report he will make tomorrow night to the American people. The speech...on science and security...had originally been scheduled for November 13th. The White House says the date was moved up to coincide with Russia's celebration of the 40th anniversary of the Bolshevik revolution...but adds that there were other factors, including "a stepping up of public interest." If Russia should make some new dramatic announcement in connection with

—)

tomorrow's anniversary celebration, Mr. Eisenhower would have an opportunity to offer immediate comment.

House Speaker Rayburn today expressed hope that President Eisenhower in his talk will convince the world that he is "willing and capable" of assuming the leadership that is required. Rayburn said, "If the President will lay down a firm and serviceable program for the defense of our country, I can say without fear that he will have the support of the Democrats in the House of Representatives."

The White House announces that President Eisenhower will meet congressional leaders of both parties on Tuesday, December 3rd...and that the discussion will cover next year's legislative program as well as the NATO "summit meeting" to be held in Paris the middle of next month. The White House says that in addition to plans for the NATO meeting, the bi-partisan conference will "run the legislative gamut from A to Z."

It has been decided that President Eisenhower will <u>not</u> visit London next month...when he attends the NATO meeting in Paris. Official London sources attributed the decision not to visit Britain to the state of Mrs. Eisenhower's health. A White House spokesman says this is not the case. The spokesman points out that no visit to London had been

scheduled, although the President would like to go there "sometime later on." / Mrs. Eisenhower ~~herself~~ said today that she is feeling fine.

In an unprecedented move, Secretary of State Dulles conferred today with six former officials of the Truman Administration. / The State Department said after the meeting (which lasted more than two hours) that Mr. Dulles sought their views on how to pool the resources of the free world in the face of the Soviet threat. (This, of course, in light of the NATO meeting next month). / Among those attending the State Department conference were Frank Pace, former budget director and secretary of the Army, and Paul Nitze, who was the State Department's chief policy planner under Dean Acheson. / George Kennen, the expert on Russia, was not present.

Sputnik Two was observed in a number of localities early today, as it passed over the United States. And American scientists expect to fix its orbit fairly accurately within the next 24 hours.

A late report from Moscow...based on radio signals received from the satellite...says the dog-passenger is still alive and in "satisfactory" condition.

The Army today ordered the number of National Guard and airborne troops assigned to Little Rock reduced by 11-hundred men. / ~~Secretary of the~~ Army Brucker said the reduction will be forthwith, ~~"in consonance with~~ the steady improvement in community stability ~~in the noted currently~~ in the Little Rock area." / ~~The order means that 900 National Guardsmen~~ and 225 ~~troops of the 101st~~ Airborne Division will remain ~~on the scene.~~

Teamsters President-elect James Hoffa received setbacks today in two federal courts, here in New York. / One federal court refused to dismiss a perjury indictment. / Another court told Hoffa he should be ready to go on trial next week on the perjury charge. / ~~Hoffa's attorney had moved for~~ an indefinite ~~postponement on grounds that an impartial trial is~~ impossible at this time. / ~~The court reserved decision on the motion,~~ ..but warned defense counsel not to assume that it will be granted. ~~Then came~~ the instruction to be ~~ready for trial~~ next week.

~~In Detroit, a federal court jury today~~

Edward R. Murrow: November 6, 1957. 7.45 p.m.

Yesterday's elections proved to be even more favorable to the Democrats than they had expected. / Governor Meyner won better than a 200,000 plurality in New Jersey, and the Democrats swept the State Assembly for the first time in twenty years. / They got a majority of twenty seats out of sixty, as against a previous Republican majority of eighteen. / President Eisenhower carried New Jersey last year by 750,000 votes, so the Republicans were decisively set back. / Mayor Wagner's victory in New York was the biggest in the city's history. / The Democratic-Liberal majority was well over 900,000, and the Republicans have only a single representative on the city council. / Both Governor Meyner and Mayor Wagner increased their statures as national figures. / Governor Meyner now belongs in the small group of probables for the presidential nomination in 1960, while Mayor Wagner may be drafted next year to run against Senator Ives.

The Wagner victory in New York was a foregone conclusion, but Governor Meyner's election was not. He had to overcome differences in his own party, and then fight a vigorous opponent for whom Vice President Nixon campaigned in person, and whom President Eisenhower endorsed three times. The Republicans worked hard to carry the state, and believed they stood a good chance. They were spurred by the realization that if Meyner won by a large

majority it would be a signal of troubles to come in the congressional elections next year. Today President Eisenhower admitted that this is what the outcome means.

The only other gubernatorial race was in Virginia, where Attorney General Lindsay Almond, the candidate of the Byrd machine, and a drastic segregationist, won by a landslide. It is no news for the Democrats to carry Virginia, nor, for that matter, for ~~them~~ Southern Democrats to be against integration. Theodore Dalton, the Republican candidate, never had a chance, even though he also had President Eisenhower's endorsement. The result is interesting chiefly for its bearing on school integration. Mr. Dalton ran on a modified anti-integration platform. He proposed a system by which students would be assigned to schools, some of which would have to be integrated, but most of which would not. But this device to stay within the constitution did not attract Virginia voters.

The Virginia result is not necessarily representative of the whole South. Election to the new board of city managers in Little Rock surely is quite as valid, and here six places out of seven were filled by candidates opposed by the segregationists. It was a close race, but a significant victory. It cannot have brought comfort to Governor Faubus.

The negro vote, which the Republicans are hoping to capture in the elections next year and 1960, did not behave as they expected. Mr. Dalton got very little help from them in Virginia. And in New York City, Mayor Wagner carried Harlem by four to one, twice the margin Adlai Stevenson had last year. Governor Meyner carried the negro districts in New Jersey and bettered his vote of four years ago in these districts. Both he and Mayor Wagner are outspoken advocates of school integration.

The Democrats have much to feel happy about, but that is not to say they got everything they wanted. Governor Harriman of New York had actively backed an amendment authorizing a constitutional convention next year. He hoped to re-district the state so as to reduce the artificial strength the Republicans enjoy through their upstate vote. The amendment was beaten. Ex-Governor Dewey warned against it in the final days before the election, and it appears that a good many Republicans voted against the amendment while voting for Democratic candidates. (an indication of Dewey's continuing power in the State)

It is generally accepted by most political observers that Democrats outnumber Republicans in this country, and it takes special circumstances for the Republicans to win a national election. The nomination of General Eisenhower was such a circumstance. He was a national hero whom the

Democratic candidate was unable to outshine. With Mr. Eisenhower not a candidate, Democrats are expected to vote Democratic, and the Republicans are expected to lose - that is, nationally. Even on a local scale, this is what happened yesterday.

Word for Today

The White House warns...on the basis of what happened yesterday in New York and New Jersey...that the Republican Party has "a fight on its hands." Personalities loomed large in the election results, to be sure, but much more was involved. As Henry Adams observed, "Modern politics is a struggle, not of men, but of forces."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, NOVEMBER 7, 1957
7:45 - 8:00 PM EST

This is the news:

The United Nations political committee today approved a resolution endorsing Western disarmament proposals. The vote was 57 to 9, with 15 abstentions. And all nine opposing votes were cast by nations of the Soviet bloc. The resolution was sponsored by the United States and 23 other countries, including Britain and France. It calls on the United Nations disarmament subcommittee...which Russia has threatened to boycott...to resume its deliberations "as soon as feasible," and make a report on its progress by the end of April, 1958. The subcommittee is asked to give priority to reaching a disarmament agreement which...when it goes into effect...would provide for a suspension of nuclear tests, under effective international control. During the suspension of those tests, there would be a cessation of production of fissionable materials for weapons purposes. There would also be...among other things...a joint study of an inspection system "to insure that the sending of objects through outer space will be exclusively for peaceful and scientific purposes." Russia has objected to negotiating in the subcommittee, on grounds that four of its five members -- the United States, Britain, Canada and France -- belong to NATO. Russia wanted to have the negotiations carried on by all 82 members of the world organization...and said it would have no more to do with the subcommittee as presently constituted. The resolution was passed today, despite this Soviet threat. And it remains to be seen whether Russia will change its mind. The overwhelming approval of the resolution in the political committee, makes Assembly approval almost certain.

Soviet Party Boss Khrushchev today called for a high-level meeting between capitalist and Communist countries, in the interest of easing world tension. Such a meeting, he said, should aim specifically at "banning war as a method of solving international problems, and ending the Cold War and the armaments race." Khrushchev promised the Supreme Soviet (which is Russia's parliament) that the

Soviet Union would overtake the capitalistic countries industrially within "an historically short period", and he boasted of Russia's scientific achievements as demonstrated by Sputniks One and Two. Khrushchev claimed that the United States named its earth satellite project "Vanguard", expecting it would be first. He said Russia will never start a war...but that if Russia is attacked, "the capitalistic order will perish." And he again accused the United States of inciting Turkey and Israel to attack Syria. The Chinese Communist leader, Mao Tse Tung, also spoke. Mao supported Khrushchev's policies, but added that "the Chinese revolution has its own characteristics."

President Eisenhower worked today on the radio and television report he will make tomorrow night to the American people. The speech...on science and security...had originally been scheduled for November 13th. The White House says the date was moved up to coincide with Russia's celebration of the 40th anniversary of the Bolshevik revolution...but adds that there were other factors, including "a stepping up of public interest." If Russia should make some new dramatic announcement in connection with tomorrow's anniversary celebration, Mr. Eisenhower would have an opportunity to offer immediate comment.

House Speaker Rayburn today expressed hope that President Eisenhower, in his talk, will convince the world that he is "willing and capable" of assuming the leadership that is required. Rayburn said, "If the President will lay down a firm and serviceable program for the defense of our country, I can say without fear ahat he will have the support of the Democrats in the House of Representatives."

It has been decided that President Eisenhower will not visit London next month...when he attends the NATO meeting in Paris. Official London sources attributed the decision not to visit Britain to the state of Mrs. Eisenhower's health. A White House spokesman says this is not the case. The spokesman points out that no visit to London had been scheduled, although the President would like to go there "sometime later on." Mrs. Eisenhower said today that she is feeling fine.

In an unprecedented move, Secretary of State Dulles conferred today with six former officials of the Truman Administration. The State Department said after the meeting, which lasted more than two hours) that Mr. Dulles sought their views on how to pool the resources of the free world in the face of the Soviet threat. (This, of course, in light of the NATO meeting next month.) Among those attending the State Department conference were Frank Pace, former budget director and secretary of the Army, and Paul Nitze, who was the State Department's chief policy planner under Dean Acheson. George Kennen, the expert on Russia, was not present.

Sputnik Two was observed in a number of localities early today, as it passed over the United States. And American scientists expect to fix its orbit fairly accurately within the next 24 hours.

A late report from Moscow...based on radio signals received from the satellite...says the dog-passenger is still alive and in "satisfactory" condition.

The Army today ordered the number of National Guard and airborne troops assigned to Little Rock reduced by 11-hundred men.

Teamsters President-elect, James Hoffa received setbacks today in two federal courts, here in New York. One federal court refused to dismiss a perjury indictment. Another court told Hoffa he should be ready to go on trial next week on the perjury charge.

Yesterday's elections proved to be even more favorable to the Democrats than they had expected. Governor Meyner won better than a 200,000 plurality in New Jersey, and the Democrats swept the State Assembly for the first time in twenty years. They got a majority of twenty seats out of sixty, as against a previous Republican majority of eighteen. President Eisenhower carried New Jersey last year by 750,000 votes, so the Republicans were decisively set back. Mayor Wagner's victory in New York was the biggest in the city's history. The Democratic-Liberal majority was well over 900,000, and the Republicans have only a single representative on the city council. Both Governor Meyner and Mayor Wagner increased their statures as national figures. Governor Meyner now belongs

in the small group of probables for the presidential nomination in 1960, while Mayor Wagner may be drafted next year to run against Senator Ives.

The Wagner victory in New York was a foregone conclusion, but Governor Meyner's election was not. He had to overcome differences in his own party, and then fight a vigorous opponent for whom Vice President Nixon campaigned in person, and whom President Eisenhower endorsed three times. The Republicans worked hard to carry the state, and believed they stood a good chance. They were spurred by the realization that if Meyner won by a large majority it would be a signal of troubles to come in the congressional elections next year. Today President Eisenhower admitted that this is what the outcome means.

The only other gubernatorial race was in Virginia, where Attorney General Lindsay Almond, the candidate of the Byrd machine, and a drastic segregationist won by a landslide. It is no news for the Democrats to carry Virginia, nor, for that matter, for Southern Democrats to be against integration. Theodore Dalton, the Republican candidate, never had a chance, even though he also had President Eisenhower's endorsement. The result is interesting chiefly for its bearing on school integration. Mr. Dalton ran on a modified anti-integration platform. He proposed a system by which students would be assigned to schools, some of which would have to be integrated, but most of which would not. But this device to stay within the constitution, did not attract Virginia voters.

The Virginia result is not necessarily representative of the whole South. Election to the new board of city managers in Little Rock surely is quite as valid, and here six places out of seven were filled by candidates opposed by the segregationists. It was a close race, but a significant victory. It cannot have brought comfort to Governor Faubus.

The negro vote, which the Republicans are hoping to capture in the elections next year and 1960, did not behave as they expected. Mr. Dalton got very little help from them in Virginia. And in New York City, Mayor Wagner carried Harlem by four to one, twice the margin Adlai Stevenson had last year. Governor Meyner carried the negro districts in New Jersey and bettered his vote

of four years ago in these districts. Both he and Mayor Wagner are outspoken advocates of school integration.

The Democrats have much to feel happy about, but that is not to say they got everything they wanted. Governor Harriman of New York had actively backed an amendment authorizing a constitutional convention next year. He hoped to re-district the state so as to reduce the artificial strength the Republicans enjoy through their upstate vote. The amendment was beaten. Ex-Governor Dewey warned against it in the final days before the election, and it appears that a good many Republicans voted against the amendment while voting for Democratic candidates, and indicating Dewey's continuing power in the state.

It is generally accepted by most political observers that Democrats outnumber Republicans in this country, and it takes special circumstances for the Republicans to win a national election. The nomination of General Eisenhower was such a circumstance. He was a national hero whom the Democratic candidate was unable to outshine. With Mr. Eisenhower not a candidate, Democrats are expected to vote Democratic, and the Republicans are expected to lose - that is, nationally. Even on a local scale, this is what happened yesterday.

This is Ed Murrow. I'll be back in a moment with the Word for Today, But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The White House warns...on the basis of what happened yesterday in New York and New Jersey...that the Republican Party has "a fight on its hands." Personalities loomed large in the election results, to be sure, but much more was involved. As Henry Adams observed, "Modern politics is a struggle, not of men, but of forces."

Goodnight and good luck.

Edward R. Murrow Thurs., Nov. 7, 1957

This is the news:

A few minutes from now (right after this ~~program~~ program) President Eisenhower will make the first in a series of radio and television reports to the American people. The reports are designed to stimulate confidence in the face of Russia's threat...and will deal with American scientific achievements, the state of the economy, foreign policy and defense. The subject of tonight's speech will be "Science and Security", and the White House says it will be "one of the most important ~~[illegible]~~ speeches" Mr. Eisenhower ever made.

President Eisenhower today announced the appointment of a Civil Rights Commission, as authorized by the last session of Congress. The chairman of the commission will be the retired Supreme Court justice, Stanley F. Reed. The other five members will be: John A. Hannah, president of Michigan State University; J. Ernest Wilkins, a Negro who is an assistant secretary of labor; John S. Battle, former governor of Virginia; Robert Storey, dean of the law school at Southern Methodist University, and the Reverend Theodore Hesburgh, president of Notre Dame. All the appointments are subject to Senate confirmation. The commission is empowered to investigate ~~allegation~~ violation of voting rights and to collect general information on denial of equal protection under the law.

This morning, Mr. Eisenhower presided at a meeting of the National Security Council...at which there was a record attendance. Sitting in in addition to regular members of the Security Council were the civilian and military heads of the armed services and the President's Scientific Advisory Committee. As usual, the discussion was secret. The White House would say only that the meeting was "connected with all developments of the last week or ten days."

President Eisenhower today conveyed his "good wishes" to the Russian people on the occasion of the 40th anniversary of the Bolshevik revolution. The message was routine...resembling those which the President sends to nearly all countries on their national holidays.

For a direct report on how Russia is marking the anniversary, we switch to Dan Schorr in Moscow.

(Tape runs 6:02
Ends on cue: "--to Edw. R.
Murrow in N.Y.")

That was my colleague, Dan Schorr, reporting at first-hand on today's demonstration in Red Square. Incidentally, the Moscow radio says that

the dog in Russia's second earth satellite is still alive. It has now circled the earth more than 60 times.

In Washington, a government scientist says that Russia has the ability to send up a manned satellite. The statement was made by Dr. Paul Foote, assistant secretary of defense in charge of engineering and research. "If they could send a dog," he said, "they could send a man." But he expressed doubt that the Russians, at this time, could get him back. Dr. Foote spoke to reporters, after testifying before a House committee looking into the American missile program. He said Russia got a head start in missile development...that at one time we were "four or five years behind." But, he said, "we're very close to them now." At another point in his testimony he said it would be "hard" for the United States to catch up. He called the charge that inter-service rivalry had hurt the missile program "absolute nonsense".

~~Democratic Senator Humphrey of Minnesota said today that the government should embark on a "talent hunt" for promising young scientists...and offer ~~them~~ scholarships to help them complete their education. Republican Senator Wiley of Wisconsin called the next decade "crucial".~~ It seemed to

him, he said, that Russia was "more determined than ever to destroy freedom throughout the world." Another Republican senator...Butler of Maryland...suggested that General MacArthur be recalled to active duty and placed in over-all charge of a unified rocket and missile program.

The State Department said today that a high-level East-West meeting would be desirable "only if there are reasonable grounds for expecting beneficial results." The statement was in reaction to Khrushchev's proposal yesterday that such a high-level meeting be held. Secretary Dulles supplemented the department statement, saying that he did not interpret the remarks of Khrushchev "as necessarily meaning a summit meeting." Dulles did not close the door to the possibility of any meeting.

The British defense minister...Duncan Sandys...told Parliament today that the United States and Britain must "go as far as practicable in planning and carrying out a common, rationalized program for research and development." Mere exchange of information, he said, is not enough. He announced that the command of British forces in East Africa and the Middle East is being transferred from Cyprus to London.

The Internal Revenue Service announces that persons filing income tax returns next year will have to list all the money they have received on expense accounts during 1957. A line will be added to the tax forms on which all expense money must be itemized. A law calling for complete accounting of expense accounts has been on the books since 1921. Until now...in the case of taxpayers with relatively small expense accounts... it has seldom been enforced.

George Bryan

Word for Today

In a couple of minutes, we shall hear a report by the President which is designed...in his own phrase...to stimulate the faith and confidence of the American people. Confidence is born naturally of conviction. As Daniel Webster said, "Confidence is not a thing to be produced by compulsion. Men cannot be forced into trust."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Thursday, November 7, 1957
7:45 - 8:00 P.M.

MURROW: ... For a direct report on how Russia is marking the anniversary, we switch to Dan Schorr in Moscow.

SCHORR: At the Kremlin tonight, there was the biggest public get-together of world Communist leaders in recent history, celebrating the fortieth anniversary of the Bolshevik Revolution. When you talk of world communism this was it. Khrushchev and Bulganin and China's Mao-Tse-tung and Poland's Gomulka and those like Thorez of France and Togliatti of Italy to whom Communist rule is still a dream. Tonight, altogether ...? toast and congratulate each other. Khrushchev may have his problems with Mao-Tse-tung and with Gomulka but the night was for merriment and tonight Khrushchev sang and danced.

Outside, beyond the (one word indistinct) disturbance, although the sky is black and eerie, the people also danced, in the streets, and there were fireworks, Sputniks in electric lights, the Square dimmed with people, automobile traffic banished. For once, man reigned over the machine. For almost everybody here, it was a holiday tonight, but not for the Western military attaches for whom this is a night of hard work. Their job, studying photos, comparing notes, to learn the significance of what the Soviets showed this morning in their parade of military might through Red Square.

The Red Square parade is a tradition; almost a ritual. Every year on May 1st and on November 7th, the Soviet leaders mount the balconies of the Lenin-Stalin Tomb and against the Kremlin wall facing across the red-festooned square. The Minister of Defense, this time Marshal Malinovsky, replacing the ousted Zhukov, speaks words of inspiration about the great might of the Soviet forces, their readiness to crush the aggressor.

Then for the next fifteen minutes or so, the machines of war rumble across the Square, followed by a peaceful demonstration of hundreds of thousands of persons, the two parts ofthe parade intended to emphasize Russia's warlike capabilities and her peaceful intentions. Frequently, the military demonstration unveils something new, (indistinct) the chancelleries and the War Ministries of the West a buzz. It's a great propaganda demonstration staged for maximum impact.

This time the expectancy was greater than usual, now Russia claimed an inter-continental missile, the ultimate weapon, and had sent two earth satellites into the skies, and its armament talks were floundering, and menace talks ... (indistinct) Middle East. And this was no ordinary Red Square show, but the fortieth anniversary, a time for something extra special. It took exactly 13-minutes for the military hardware to rumble through the cobbled square. No planes today, probably bad weather. And in that thirteen minutes, military attaches scribbled and photographed. Now they saw the juggernaut that had been lumbering through the streets, under canvas, for the past three weeks in rehearsal. Now they could decide how much military menace the Kremlin was putting on display.

Tonight, the preliminary conclusions are in. There was nothing in this demonstration to strike terror into Western hearts. Tanks were on parade for the first time in several years, including the big new tanks, a heavier version of the Joseph Stalin's breed. There was a new self-propelled anti-aircraft gun. And there was a giant gun that caused some head-scratching, about 50-feet long, a 12-to-14-inch bore, with obvious atomic capabilities, but seeming too heavy for its carriage. This one will take more study. There were banks of rocket launchers. And for the first time, as expected, missiles were shown, five different types. The biggest - two of them were shown - 70-to-75-feet long, a single stage rocket with four fins, considered to have a range of a few hundred miles, comparable to the

American Sergeant missile. It was an impressive delay, alright, all run off with perfect perfect precision, impeccable timing, enough to bring a tingle to the heart of Mao-Tse-tung and rejoicing for Maurice Thorez, undoubtedly happy to know that such mighty Russian weapons could ? savethe bourgeois French Army. But if the military attaches in Moscow are any index, it was not enough to strike (indistinct) in the West, nothing to plunge NATO into dismay. Certainly, the Soviets have bigger and more dreadful weapons, but they were not shown today.

For another three hours, there was the other demonstration, the sports club and the gay floats and the hundreds of thousands of workers with banners and pictures of their leaders, there were Marx and Lenin, here and there, Stalin, and the current leaders, Khrushchev and Bulganin, Mikoyan and the others, those of the now-14-member party Presidium. Yet, the keynote of the popular demonstration was not so much of persons but of things, (indistinct) not if anything else symbolizes these forty years, Sputnik. Model globes with Sputnik, sometimes in flowers ?, were one of the most popular exhibits in the parade. It was as though to say - "on this fortieth anniversary" that the faces of the leaders may change, but still there is Sputnik. And so these forty years have not been in vain.

Now, back to Edward R. Murrow in New York.

Ed. trans. - P. O.

EDWARD R. MURROW WITH THE NEWS

The State Department said today, that a high-level East-West meeting would be desirable "only if there are reasonable grounds for expecting beneficial results." The statement was in reaction to Khrushchev's proposal yesterday, that such a high-level meeting be held. Secretary Dulles supplemented the department statement, saying that he did not interpret the remarks of Khrushchev "as

necessarily meaning a summit meeting." Dulles did not close the door to the possibility of any meeting.

The British defense minister...Duncan Sandys...told Parliament today, that the United States and Britian must "go as far as practicable in planning and carrying out a common, rationalized program for research and development." Mere exchange of information, he said, is not enough. He announced that the command of British forces in East Africa and the Middle East is being transferred from Cyprus to London.

The Internal Revenue Service announces that persons filing income tax returns next year, will have to list all the money they have received on expense accounts during 1957. A line will be added to the tax forms, on which all expense money must be itemized. A law calling for complete accounting of expense accounts has been on the books since 1921. Until now...in the case of taxpayers with relatively small expense accounts...it has seldom been enforced.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: In a couple of minutes, we shall hear a report by the President, which is designed...in his own phrase...to stimulate the faith and confidence of the American people. Confidence is born naturally of conviction. As Daniel Webster said, "Confidence is not a thing to be produced by compulsion. Men cannot be forced into trust."

Goodnight and good luck!

Edward R. Murrow Fri., Nov. 8, 1957

This is the news:

Secretary of Defense McElroy today ordered the Army to launch an earth satellite, using its Jupiter-C missile. If a timetable was set for ~~launching~~ the launching, it was not divulged. The new program will be in addition to the Navy's Vanguard project for launching an earth satellite. In announcing that the Army also will try to send up a satellite, McElroy expressed confidence that the Vanguard schedule will be met. (That schedule calls for the launching of a small test satellite next month and a larger, fully instrumented satellite in March). McElroy said the decision to proceed with the additional project was made to

provide "a second means" of putting a satellite in orbit as part of the program for the International Geophysical Year. He made no reference to charges that work on the Navy project has lagged. Some Army scientists say they could have beaten Russia to launching a satellite, if the Administration had given them the green light. McElroy told his guided missile director, William Holaday, to supervise the new Army project as part of the whole satellite program. The Jupiter-C is a three-stage rocket, developed at the Army's Redstone Arsenal in Huntsville, Alabama. Its first stage is a Redstone rocket, of the type for launching against military targets at distances of around 200 miles. The other two stages are rockets having solid, instead of liquid, fuels. Last year, one Jupiter-C missile attained an altitude of about 600 miles...and traveled more than 3-thousand miles from the site of launching on the Florida coast.

The director of Project Vanguard...Dr. John P. Hagen... said today that he "wouldn't be surprised" if the Russians launch a Sputnik every month for the next 13 months---that is, until the end of 1958.

There are indications that the dog circling the earth in Sputnik Two may have died. For the first time, Moscow radio made no mention of the dog passenger in its nightly report.

The Defense Department says a "test vehicle" was fired today from the Air Force missile center in Florida. The department calls the test "routine" but will not say what missile project was involved.

The White House said today that Dr. James Killian, of M.I.T., probably will report for work in Washington in about a week. President Eisenhower announced last night...in his radio and television speech...that he had appointed Dr. Killian to the new post of Special Assistant to the President for Science and Technology. Mr. Eisenhower said that Dr. Killian, "aided by a strong advisory group of outstanding experts, will have the active responsibility of helping me follow through on the program of scientific improvement of our defenses." Republican Senator Bridges said today after a breakfast meeting with the President that Dr. Killian will have "full power and authority". He did not elucidate. Bridges said defense spending may have to be increased by one to two billion dollars next year to pay for an "accelerated" missiles program. He said this would mean cutting down on non-defense expenditures. Bridges...who is the ranking Republican on the Senate Appropriations Committee...predicted that Congress will vote whatever money is necessary to get the job done.

Democratic Senator Jackson issued a statement today...praising Dr. Killian...but adding, "We still need and we still do not have a full-time boss for the missiles program at the presidential level." He called the President's report on the present state of preparedness "less than frank." Democratic Senator Neuberger of Oregon urged that Killian's position be raised to cabinet rank.

The Senate Democratic leader...Lyndon Johnson...said he had hoped Mr. Eisenhower "would stress what we need to do as well as what we have done." And Republican Senator Flanders of Vermont said, "The time has now come to select, unify, organize, and proceed to the selection of our operative missiles."

The White House reported this forenoon that it had received more than 500 telegrams in reaction to the President's speech, and that, without exception, they reflected "wholehearted support" of what Mr. Eisenhower had to say.

The reaction in Western Europe has been mostly favorable. # A Moscow broadcast claims tonight that America's allies must feel apprehension. America's partners in NATO, it says, "will hardly rejoice at the shouldering of counter-blows that will follow any U.S. aggression."

~~A budget official told a House investigating committee today that the United States missile program "most certainly is not bogging down." He said the program lacks neither money nor manpower. The basic trouble, he said, is "we got a late start."~~

President Eisenhower today dedicated the new headquarters of the Atomic Energy Commission at Germantown, Maryland...using power drawn from batteries charged with atomic energy. Mr. Eisenhower said the world faces the awful choice of whether to use the "great discovery" of atomic ebergy for good or evil. Unless the judgment of man, he said, measures up to his scientific accomplishment, "his future is bleak indeed."

Today...in the Central Pacific....Britain exploded a nuclear weapon, which is presumed to have been a hydrogen bomb. The device was exploded in the vicinity of Christmas Island...from an aircraft flying at high altitude.

Edward R. Murrow: November 8, 1957. 7.45 p.m.

Two basic facts can be said to have moved President Eisenhower to go to the people in last night's broadcast. One is that the Russians have passed us in one vital respect, overtaken us in others and are catching up in ~~about everything else.~~ many areas The second fact is that we had not been prepared for this - we knew it but failed to take it in - and now we must act, if we are to restore our lead and redeem our leadership. The crisis called for a talk that showed concern in terms of the gravity of the situation. It called for a program of action on two levels, immediate action to push our weapons program, and long-term action to enable us to outdistance the Russians in science and education and to stay ahead. And because the situation is alarming, it called for reassurance, since we and our allies need a shot in the arm.

All three elements made up the President's broadcast last night - concern, reassurance and a program of action. But Mr. Eisenhower gave reassurance first place, action a close second and a show of concern third. His action program was limited to immediate steps. The long-term steps needed to establish the necessary educational program in science and technology are to be the subject of the next broadcast.

Because it dealt mostly with short-term solutions, the broadcast did not light up the full magnitude of the crisis. But the President devoted a few sentences to it. They are worth repeating. "It is entirely possible" he said, "that we could fall behind. I repeat, we could fall behind, unless we now face up to certain pressing requirements and set out to meet them at once. According to my scientific friends" he continued, "one of the greatest and most glaring deficiencies is the failure of us in this country to give enough priority to scientific education and to the place of science in our national life. And no amount of money spent now on weapons can meet a future danger as the scientists see it," the President said, "because education requires time, incentive and skilled teachers."

The appointment of Dr. James Killian, as the President's right-hand advisor, was the big item in the action part of the talk. Dr. Killian has the confidence of scientists and commands respect as an administrator. Surprise was expressed today that he was not given Cabinet rank. In a sense, his appointment is a repudiation of the policies of Defense Secretary Wilson, and he may need status equal to the Defense Secretary's to put through the new policy. It also was pointed out that President Eisenhower's treatment of the crisis seemed to add up by finding that what had been wrong was a

defect in organization in the government. Obviously it was due to weak leadership, insufficient money and too little attention to science. But this is the way Washington reacts. A crisis arises and is met by a shift in administrative heads and powers. Franklin Roosevelt did it over and over again. But the truth about the crisis was blurted out by Assistant Defense Secretary Foote to a Congressional Committee yesterday. "The real reason we're behind the Russians" he said, "is because they started in 1945, that is with rocketry. We didn't start until 1951 or 1952, because the sentiment after the war was against scientific and military development, and we slowed down." When we did go forward with missiles, we seem to have done it with a kind of shot-gun exuberance. Mr. Eisenhower reported last night that thirty-eight varieties had been or were being developed. One is entitled to wonder if better progress might have been made with greater concentration on fewer types.

What the President said about scientific co-operation with our allies had been anticipated. But it contained a word that no doubt is being studied uneasily in Europe today. Mr. Eisenhower spoke of sharing "appropriate" scientific information. The word appropriate implies a limitation, exercised at our discretion. He also seemed to limit sharing to information

the Russians already have. Since our hope to equalize the Soviet inter-continental missile lies in using our medium-range missiles from allied bases, the allies are acutely aware of being in the front rank of danger. It may be doubted whether President Eisenhower convinced them that they are to become full partners in the projected re-building of NATO.

Perhaps the outstanding omission from the talk last night was a candid appraisal of the extent and nature of the sacrifices this country must make. There was no economic blue-printing last night. The Russians have accepted sacrifices however unwillingly to be where they are. It will be harder for us to sacrifice, perhaps, because we must do it voluntarily. We must ask for it, as well as be asked. This theme is [redacted] more disagreeable than any the President used last night. Presumably he is saving it for a later talk.

George Bryant

Word for Today

Sacrifice is inherent in any real struggle. And there is no question of the seriousness of the struggle in which we are involved today. In 1917, Theodore Roosevelt said, "The things that will destroy America are prosperity at any price, peace at any price, safety first instead of duty first, and love of soft living and the get-rich-quick theory of life."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, NOVEMBER 8, 1957
7:45 - 8:00 PM EST

This is the news:

Secretary of Defense McElroy today ordered the Army to launch an earth satellite, using its Jupiter-C missile. If a timetable was set for the launching, it was not divulged. The new program will be in addition to the Navy's Vanguard project for launching an earth satellite. In announcing that the Army also will try to send up a satellite, McElroy expressed confidence that the Vanguard schedule will be met. (That schedule calls for the launching of a small test satellite next month and a larger, fully instrumented satellite in March.) McElroy said the decision to proceed with the additional project was made to provide "a second means" of putting a satellite in orbit as part of the program for the International Geophysical Year. He made no reference to charges that work on the Navy project has lagged. Some Army scientists say they could have beaten Russia to launching a satellite, if the Administration had given them the green light. MeElroy told his guided missile director, William Holaday, to supervise the new Army project as part of the whole satellite program. The Jupiter-C is a three-stage rocket, developed at the Army's Redstone Arsenal in Huntsville, Alabama. Its first stage is a Redstone rocket, of the type for launching against military targets at distances of around 200 miles. The other two stages are rockets having solid, instead of liquid fuels. Last year, one Jupiter-C missile attained an altitude of about 600 miles...and traveled more than 3-thousand miles from the site of launching on the Florida coast.

The director of Project Vanguard,..Dr. John P. Hagen...said today that he "wouldn't be surprised" if the Russians launch a Sputnik every month for the next 13 months---that is, until the end of 1958.

There are indications that the dog circling the earth in Sputnik Two, may have died. For the first time, Moscow radio made no mention of the dog passenger in its nightly report.

The Defense Department says a "test vehicle" was fired today from the

Air Force missile center in Florida. The department calls the test "routine" but will not say what missile project was involved.

The White House said today that Dr. James Killian of M.I.T. probably will report for work in Washington in about a week. President Eisenhower announced last night...in his radio and television speech...that he had appointed Dr. Killian to the new post of Special Assistant to the President for Science and Technology. Mr. Eisenhower said that Dr. Killian, "aided by a strong advisory group of outstanding experts, will have the active responsibility of helping me follow through on the program of scientific improvement of our defenses." Republican Senator Bridges said today after a breakfast meeting with the President, that Dr. Killian will have "full power and authority". He did not elucidate. Bridges said defense spending may have to be increased by one to two billion dollars next year to pay for an "accelerated" missiles program. He said this would mean cutting down on non-defense expenditures. Bridges...who is the ranking Republican on the Senate Appropriations Committee...predicted that Congress will vote whatever money is necessary to get the job done.

Democratic Senator Jackson issued a statement today...praising Dr. Killian ...but adding, "We still need, and we still do not have a full-time boss for the missiles program at the presidential level." He called the President's report on the present state of preparedness "less than frank." Democratic Senator Neuberger of Oregon urged that Killian's position be raised to cabinet rank.

The Senate Democratic leader...Lyndon Johnson...said he had hoped Mr. Eisenhower "would stress what we need to do as well as what we have done." And Republican Senator Flanders of Vermont said, "The time has now come to select, unify, organize, and proceed to the selection of our operative missiles."

The White House reported this forenoon that it had received more than 500 telegrams in reaction to the President's speech, and that, without exception, they reflected "wholehearted support" of what Mr. Eisenhower had to say.

The reaction in Western Europe has been mostly favorable. A Moscow

broadcast claims tonight that America's allies must feel apprehension. America's partners in NATO, it says, "will hardly rejoice at the shouldering of counter-blows that will follow any U.S. aggression."

President Eisenhower today dedicated the new headquarters of the Atomic Energy Commission at Germantown, Maryland...using power drawn from batteries charged with atomic energy. Mr. Eisenhower said the world faces the awful choice of whether to use the "great discovery' of atomic energy for good or evil. Unless the judgment of man, he said, measures up to his scientific achievement, "his future is bleak indeed."

Today...in the Central Pacific...Britain exploded a nuclear weapon, which is presumed to have been a hydrogen bomb. The device was exploded in the vicinity of Christmas Island...from an aircraft flying at high altitude.

Two basic facts can be said to have moved President Eisenhower to go to the people in last night's broadcast. One is that the Russians have passed us in one vital respect, overtaken us in others and are catching up in many areas. The second fact is that we had not been prepared for this - we knew it, but failed to take it in - and now we must act, if we are to restore out lead and redeem our leadership. The crisis called for a talk that showed concern in terms of the gravity of the situation. It called for a program of action on two levels, immediate action to push our weapons program, and long-term action, to enable us to outdistance the Russians in science and education and to stay ahead. And because the situation is alarming, it called for reassurance, since we and our allies need a shot in the arm.

All three elements made up the President's broadcast last night - concern, reassurance, and a program of action. But Mr. Eisenhower gave reassurance first place, action a close second, and a show of concern third. His action program was limited to immediate seeps. The long-term steps needed to establish the necessary educational program in science and technology are to be the subject of the next broadcast.

Because it dealt mostly with short-term solutions, the broadcast did not

light up the full magnitude of the crisis. But the President devoted a few sentences to it. They are worth repeating. "It is entirely possible" he said, "that we could fall behind. I repeat, we could fall behind, unless we now face up to certain pressing requirements, and set out to meet them at once. According to my scientific friends" he continued, "one of the greatest and most glaring deficiencies is the failure of us in this country to give enough priority to scientific education, and to the place of science in our national life. And no amount of money spent now on weapons can meet a future danger as the scientists see it." the President said, "because education requires time, incentive and skilled teachers."

The appointment of Dr. James Killian, as the President's right-hand advisor, was the big item in the action part of the talk. Dr. Killian has the confidence of scientists and commands respect as an administrator. Surprise was expressed today that he was not given Cabinet rank. This is Ed Murrow. I'll be back in a moment with the Word for Today. But, first here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Sacrifice is inherent in any real struggle. And there is no question of the seriousness of the struggle in which we are involved today. In 1917, Theodore Roosevelt said, "The things that will destroy America are prosperity at any price, peace at any price, safety first instead of duty first, and love of soft living, and the get-rich-quick theory of life."

Goodnight and good luck!

Edward R. Murrow Mon., Nov. 11, 1957

This is the news:

President Eisenhower's general physical condition has been pronounced "excellent", after a routine medical check-up at Walter Reed Army Hospital. The doctors' report says Mr. Eisenhower's heart "remains normal in size", and that no symptoms of "coronary insufficiency" have developed since the last thorough medical examination a year ago. The report says...in reference to the ileitis attack of June, 1956...that X-ray pictures "reveal no evidence of organic disease in the esophagus, stomach or duodenum and no evidence of extension of old disease process." It concludes:

"The President continues to maintain an excellent state of health, following recovery from his two illnesses." The report is signed by Mr. Eisenhower's personal physician, General Snyder, and General Heaton, commandant of Walter Reed Hospital. The President entered the hospital late yesterday and left shortly after noon today.

President Eisenhower conferred this afternoon with Secretary of Defense McElroy and Deputy Defense Secretary Quarles. The White House says the conference constituted a "preliminary discussion" of the military budget for the next year.

Dr. John Hagen, director of the satellite project Vanguard, said today that the United States should have a program aimed at sending man into outer space. He estimated that it will be "years" before man will be able to make such a journey in space---and return.

Soviet Premier Bulganin said in Moscow tonight that...as of yesterday... the dog circling the earth in Sputnik Two was still alive. Bulganin made the remark at a reception in the Swedish Embassy. However, the head of the Soviet Institute of Physics told Western correspondents, "By now, the dog must be dead." There have been no radio signals from the satellite since yesterday.

Governor Foss of South Dakota was the principal speaker at Veterans Day cememonies at Arlington National Cemetery. Foss...who holds the Congressional Medal of Honor...deplored recent cuts in defense spending as "reckless". But now, he said, the American people "realize that second place is not good enough in these turbulent times."

Former President Truman said...in a Veterans Day speech...that "one of the main reasons" the United States is behind Russia in satellite development has been the "character assassination" of some of America's top scientists. He did not elaborate, except to say that these scientists were driven out of government service.

Former President Hoover said...in another speech...that the United States has had "a great warning and is on the alert." He said, "I have no doubt of our ability to invent any horrible weapon necessary to deter our enemy."

Today...in Warsaw... three former officials of the Polish secret police were sentenced to prison terms ranging up to 15 years. All three were charged with ordering illegal detentions and with applying torture to obtain confessions.

~~Egypt today maintained its propaganda attack on King Hussein of Jordan.~~

And the Coast Guard says the search for the Pan American strato-cruiser, that disappeared in the Pacific Friday night with 44 persons on board, "will definitely continue tomorrow and probably the rest of this week."

~~No definite clues to the fate of the airliner have been found.~~

All through the Russian crisis...involving Marshal Zhukov...my colleague, Daniel Schorr, has been reporting from Moscow. Each broadcast he made, every word he wrote, had to be passed by the Moscow censor. But today Schorr was in Finland, beyond the reach of the censor. And here is the [redacted], full uncensored report by an American correspondent who was on the scene:

(Tape runs 7:17
Ends on cue: "---now back to
Edw. R. Murrow in N.Y.")

Helsinki

That was my colleague, Dan Schorr, with the first uncensored report he has been able to make on the removal of Marshal Zhukov as Soviet defense minister.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But, NOW, here is George Bryan.

HFR 7:45 PM EST NOV 11

DANIEL SCHORR: (11/11/57 -1-

On a brief trip to Helsinki, I should like to make some belated reflections on the disgrace of Marshal Georgi Zhukov until recently Russia's greatest military hero, now an unhero. To some of us in Moscow, it seemed all along that Zhukov's rise to re-eminence after the June Malenkov-Molotov purge had been somewhat over-estimated abroad. True, in the showdown in the party's Central Committee Zhukov threw his support to party chief Khrushchev. But that support came tardily. He apparently had stood on the sidelines as the rebels hatched their plots while Khrushchev and Bulganin toured Finland. Zhukov's last-minute support came when the main threat to Khrushchev had already ended with the success in convening his packed Central Committee to undo the vote against him in the 11-man Presidium. Zhukov was named to the Presidium, the first professional soldier to climb to the top of the party heap, and he might have stabilized his position were it not that he apparently read too much into his success. There is no evidence that Zhukov was reaching for supreme power, but feeling his oats he began to become more recalcitrant on a long wrangling issue, freedom of the armed forces from disruptive party interference, maintenance of unity of command. Marshal Zhukov is reported to have said to Khrushchev at one point, "You take care of the corn and I'll take care of the army." Such blunt talk is common among Communist leaders and does not necessarily mean a personal feud. But this pointed to a bigger issue, whether Russia is to be run by experts or by ideologists, by the men who know or by the men who claim to know why. For a long time now, the party has conducted a defensive battle against what Ambassador Charles Bohlen has called "the guys who make the joint run." The purge of Malenkov and company was meant to pull down the administrators, the industrial decentralization introducing stricter party control at regional levels was aimed against the industrial managers; more recently, the writers and artists who thought that they knew more about writing and art

than the faceless party and the ill-educated Khrushchev were dragged back unto the party's thumb. Now Zhukov, by acting up, was crystalizing a long-smoldering issue of rule over the Army, an issue on which an uneasy compromise had been reached last April, which confirmed party guidance but forbade the challenging of specific orders of commanding officers. It didn't help Zhukov that he had fanned jealousy and resentment among some of his own top subordinates who followed the time-honored Communist dictum of "never kick a man unless he seems to be down." Khrushchev who was probably not hankering for a new top-level scrap so soon after the last one, was pushed by the party organization into acting to eliminate a serious threat tom the party's rule. The machinery was set in motion before Zhukov left early in October for his trip to Yugoslavia and Albania. This indicated by the way his trip was played down in the Soviet press. Many of his speeches weren't quoted at all. His visit to Albania, originally set for one or two days, was extended to nine, presumably to allow time to complete a shift of control in the armed forces. There was no evidence of any great resistance to the shift but there was considerable nervousness around. The Security Police in Moscow were more in evidence than they had been for a long time. Guards were heavier than usual when Khrushchev and others attended an Iranian Embassy reception on October 26th, the day that Zhukov returned, the day of his dismissal as Defense Minister. And next day when a Soviet delegation came back from Asia, Moscow Airport was completely closed, cordoned off, by the N.V.D. and no other planes permitted to land or take off until the delegation was safely out of the way. There's reason to believe that Khrushchev at first tried to avoid a headon collision by easing Zhukov into some position of prestige, although without effective power. In the first two days, after Zhukov's return and dismissal as Defense Minister, the censor would not let us suggest that he was being downgraded, but he did let us speculate on another high appointment. A similar

line was fed to Western Communist correspondents. There were rumors that Zhukov might become deputy premier, premier or president. On Monday night, October 28th, the telegraph clerks at the Moscow Central Telegraph told us they had been alerted for a big night of work, implying there would be an announcement that night. But later that night the alert was called off. A second phase had apparently started. The Central Committee meeting ~~was~~ WENT on for two more days. From then on the censor permitted speculations about down-grading of Zhukov. Presumably, the stubborn Zhukov had balked at being kicked upstairs. There was nothing to do now but join the issue squarely. The result was a foregone conclusion: Zhukov's complete ouster and disgrace, decided by Wednesday of that week, announced the following Saturday after the party faithful around the country had been briefed. But it was not Khrushchev who delivered the main indictment against Zhukov in the Central Committee. The prosecutor was the dour, pinchmk-faced Mikhail Suslov, theoretician and watch-dog of the party's ideological purity. His functioning in this role was meant to emphasize that this was not a personal conflict but an issue of Communist orthodoxy. It is not surprising that indications since then - the position of the leaders' portraits and their place on the reviewing stand on Nov. 7th - the anniversary of the revolution - all these have pointed to increasing prominence for Suslov, the theoretician. But the resistance to party dictation by "the guys who know how to run the joint" is not over. The paradox of Russia, after 40-years of Communist rule, is that it has bred specialists who the more powerful and the more successful they become in their fields, the more they bridle at party interference. The most successful men in Russia today are the scientists. They are now feeling their oats. We have yet to hear from them. There are signs that we will, as Communist dogma clashes with the researcher's zeal. In recent months the party has cracked down on the government administrators, the industry builders, the military commanders.

DANIEL SCHORR: (11/11/57)

A future issue may be - the party versus the Sputnik-makers.] Now, back to Edward R. Murrow in New York.

Ed. trans. - P. O.

Word for Today

The downfall of Marshal Zhukov follows a familiar pattern. Henry Clay observed a long time ago, "The arts of power and its minions are the same in all ages. It marks its victim... denounces it... and excites the public odium and the public hatred to conceal its own abuses and encroachments."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Monday, November 11, 1957
7:45 - 8:00 P. M.

MURROW: All through the Russian crisis involving Marshal Zhukov, my colleague Daniel Schorr has been reporting from Moscow. Each broadcast he made, every word he wrote had to be passed by the Moscow censor, but today Schorr was in Finland, beyond the reach of the censor and here is the full uncensored report by an American correspondent who was on the scene.

SCHORR: On a brief trip to Helsinki, I should like to make some delated reflections on the disgrace of Marshal Georgi Zhukov, until recently Russia's greatest military hero...now an unhero.

To some of us in Moscow it seemed all along that Zhukov's rise to pre-eminence after the June Malenkov-Molotov purge had been somewhat over estimated abroad. True, in the showdown in the Party's Central Committee, Zhukov threw his support to party chief Khrushchev, but that support came tardily. He apparently had stood on the sidelines as the rebels hatched their plot while Khrushchev and Bulganin toured Finland.

Zhukov's last minute support came when the main threat to Khrushchev had already ended with his success in convening his packed Central Committee to undo the vote against him in the eleven man Presidium. The old Zhukov was named to the Presidium, the first professional soldier to climb to the top of the party heap and he might have stabilized his position were it not that he apparently read to much into his success. There is no evidence that Zhukov was reaching for supreme power, but feeling his oats, he began to become more recalcitrant on a long wrangling issue...freedom of the armed forces from disrupted party interference, maintenance of unity of command. Marshal Zhukov is reported to have said to Khrushchev at one point,"you take care of the corn and I'll take care of the Army." Such blunt talk is common among Communist leaders and does not necessarily mean a personal fued, but this pointed to a bigger

issue...whether Russia is to be run by experts or by ideologists, by the men who know how or by the man who claim to know why. For a long time now the Party has conducted a defensive battle against what Ambassador Charles Bolen has called "the guys who make the joint run." The purge of Malenkov and company was meant to pull down the administrative. The industrial deconcentration introducing stricter Party control at regional levelsuas aimed against the industrial managers. More recently, the writers and artists, who thought they knew more about writing and art, then the sacred Party and the ill-educated Khrushchev were dragged back under the Party thumb.

Now, Zhukov, by acting up was crystallizing a long smoldering issue of rule over the Army. An issue on which an uneasy compromise had been reached last April, which confirmed Party guidance, but forbade the challenging of specific orders of commanding officers. It didn't help Zhukov that he had planted jealousy and resentment among some of his own top subordinates who followed time honored Communist dictum of "never kick a man unless he seems to be down." Khrushchev, who was probably not hankering for a new top level scrap, so soon after the last one, was pushed by the Party organization into acting to eliminate a serious threat to the Party's rule. The machinery was set in motion before Zhukov left early in October for his trip to Yugoslavia and Albania. This, indicated by the way his trip was played down in the Soviet press. Many of his speeches weren't quoted at all. His visit to Albania, originally set for one or two days was extended to nine, presumably to allow time to complete the shift of control in the armed forces.

There was no evidence of any great resistance to the shift, but there was considerable nervousness around. The Security Police in Moscow were more in evidence than they had been for a long time. Guards were heavier than usual when Khrushchev and others attended an Iranian Embassy reception on October 26th, the day that Zhukov returned, the day of

his dismissal as Defense Minister. The next day when the Soviet delegation came back from Asia, Moscow Airport was completely closed, corded off by the M.V.D. and no other planes permitted to land or take off until the delegation was safely out of the way.

There is reason to believe that Khrushchev at first tried to avoid a head on collision by easing Zhukov into some position of prestige although without effective power. In the first two days after Zhukov's return and dismissal as Defense Minister, the censor would not let us suggest that he was being down graded, but he did let us speculate on another high appointment. A similiar line was fed to Western Communist correspondents. There were rumors that Zhukov might become Deputy Premier or President.

On Monday night, October 28th, the telegraph clerks at the Moscow Central Telegraph told us, they had been alerted for a big night of work, implying that there would be an announcement that night, but later that night the alert was called off. A second phase had apparently started. The Central Committee meeting went on for two more days. From then on the censor permitted speculation about down grading of Zhukov. Presumably, the stubborn Zhukov had balked at being kicked upstairs. There was nothing to do now but join the issue squarely. The result was a forgone conclusion...Zhukov's complete ouster and disgrace, decided by Wednesday of that week, announced the following Saturday after the Party faithful around the country had been briefed. But it was not Khrushchev who delivered the main indictment against Zhukov in the Central Committee. The prosecutor was the dour, pinch faced Mikliail Suslov, theoretician and watch-dog of the Party's ideological purity. His functioning in this role was meant to emphasize that this was not a personal conflict but an issue of Communist orthodoxy. It is nat surprising that indications since then, the position of the leaders portraits and their place on the reviewing stand on November 7th

7th, the anniversary of the revolution...all these have pointed to increasing prominence for Suslov the theoretician. But the resistance to Party dictation by the guys who know how to run the joint is not over. The paradox of Russia, after 40 years of Communist rule is that it has bred specialists, who the more powerful and the more successful they become in their field, the more they bridle at Party interference.

The most successful men in Russia today are the scientists. They are now feeling their oats. We have yet to hear from them, there are signs that we will as Communist dogma clashes with the researchers zeal. In recent months the Party has cracked down on the government administrators, the industry builders, the military commanders. The future issue may be the Party vs the Sputnik makers.

Now back to EDWARD R. MURROW in New York.

MURROW: That was my colleague Dan Schorr reporting from Helsinki. This is ED MURROW, I'll be back in a moment with the word for today.

Ed Trans. N.M.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, NOVEMBER 11, 1957
7:45 - 8:00 PM EST

This is the news:

President Eisenhower's general physical condition has been pronounced "excellent" after a routine medical check-up at Walter Reed Army Hospital. The doctors' report says, Mr. Eisenhower's heart "remains normal in size", and that no symptoms of "coronary insufficiency" have developed since the last thorough medical examination a year ago. The report says...in reference to the ileitis attack of June, 1956...that X-ray pictures "reveal no evidence of organic disease in the esophagus, stomach or duodenum, and no evidence of extension of old disease process." It concludes: "The President continues to maintain an excellent state of health, following recovery from his two illnesses." The report is signed by Mr. Eisenhower's personal physician, General Synder, and General Heaton, commandant of Walter Reed Hospital. The President entered the hospital late yesterday and left shortly after noon today.

President Eisenhower conferred this afternoon with Secretary of Defense McElroy and Deputy Defense Secretary Quarles. The White House says the conference constituted a "preliminary discussion" of the military budget for next year.

Dr. John Hagen, director of the satellite project Vanguard, said today, that the United States should have a program aimed at sending man into outer space. He estimated that it will be "years" before man will be able to make such a journey in space---and return.

Soviet Premier Bulganin said in Moscow tonight that...as of yesterday... the dog circling the earth in Sputnik Two was still alive. Bulganin made the remark at a reception in the Swedish Embassy. However, the head of the Soviet Institute of Physics told Western correspondents, "By now, the dog must be dead." There have been no radio signals from the satellite since yesterday.

Governor Foss of South Dakota was the principal speaker at Veterans Day ceremonies at Arlington National Cemetery. Foss...who holds the Congressional

Medal of Honor...deplored recent cuts in defense spending as "reckless". But now, he said, the American people "realize that second place is not good enough in these turbulent times."

Former President Truman said...in a Veterans Day speech...that "one of the main reasons" the United States is behind Russia in satellite development, has been the "character assassination" of some of America's top scientists. He did not elaborate, except to say that these scientists were driven out of government service.

Former President Hoover said...in another speech...that the United States has had "a great warning, and is on the alert." He said, "I have no doubt of our ability to invent any horrible weapon necessary to deter our enemy."

And the Coast Guard says the search for the Pan American strato-cruiser, that disappeared in the Pacific Friday night with 44 persons on board, "will definitely continue tomorrow and probably the rest of this week."

All through the Russian crisis...involving Marshal Zhukov...my colleague, Daniel Schorr, has been reporting from Moscow. Each broadcast he made, every word he wrote, had to be passed by the Moscow censor. But today Schorr was in Finland, beyond the reach of the censor. And here is the full uncensored report by an American correspondent who was on the scene.

DAN SCHORR: On a brief trip to Helsinki, I should like to make some belated reflections on the disgrace of Marshal Georgi Zhukov until recently Russia's greatest military here, now an unhero. To some of us in Moscow, it seemed all along that Zhukov's rise to re-eminence after the June Malenkov-Molotov purge had been somewhat over-estimated abroad. True, in the showdown in the party's Central Committee Zhukov threw his support to party chief Khrushchev. But that support came tardily. He apparently had stood on the sidelines as the rebels hatched their plots while Khrushchev and Bluganin toured Finland. Zhukov's last minute support came when the main threat to Khrushchev had already ended with the successsin convening his packed Central Committee to undo the vote against him in the 11-man Presidium. Zhukov was named to the Presidium, the first

professional soldier to climb to the top of the party heap, and he might have stabilized his position were it not that he apparently read too much into his success. There is no evidence that Zhukov was reaching for supreme power, but feeling his oats he began to become more recalcitrant on a long wrangling issue, freedom of the armed forces from disruptive party interference, maintenance of unity of command. Marshal Zhukov is reported to have said to Khrushchev at one point, "You take care of the corn and I'll take care of the army." Such blunt talk is common among Communist leaders and does not necessarily mean a personal feud. But this pointed to a bigger issue, whether Russia is to be run by experts or by ideologists, by the men who know or by the men who claim to know why. For a long time now, the party has conducted a defensive battle against what Ambassador Charles Bohlen has called "the guys who make the joint run." The purge of Malenkov and company was meant to pull down the administrators, the industrial deconcentration introducing stricter party control at regional levels was aimed against the industrial managers; more recently, the writers and artists who thought that they knew more about writing and art than the faceless party and the ill-educated Khrushchev were dragged back unto the party's thumb. Now Zhukov, by acting up, was crystalizing a long-smoldering issue of rule over the Army, an issue on which an uneasy compromise had been reached last April, which confirmed party guidance but forbade the channeling of specific orders of commanding officers. It didn't help Zhukov that he had fanned jealousy and resentment among some of his own top subordinates who followed the time-honored Communist dictum of "never kick a man unless he seems to be down." Khrushchev who was probably not hankering for a new top-level scrap so soon after the last one, was pushed by the party organization into acting to eliminate a serious threat to the party's rule. The machinery was set in motion before Zhukov left early in October for his trip to Yugoslavia and Albania, this indicated by the way his trip was played down in the Soviet press. Many of his speeches weren't quoted at all. His visit to Albania, originally set for one or two days, was extended to nine presumably to allow time to complete a shift of control in the

armed forces. There was no evidence of any great resistance to the shift but there was considerable nervousness around. The Security Police in Moscow were more in evidence than they had been in a long time. Guards were heavier than usual when Khrushchev and others attended an Iranian Embassy reception on October 26th, the day that Zhukov returned, the day of his dismissal as Defense Minister. And next day when a Soviet delegation came back from Asia, Moscow Airport was completely closed, cordoned off, by the N.V.D. and no other planes permitted to land or take off until the delegation was safely out of the way. There's reason to believe that Khrushchev at first tried to avoid a head-on collision by easing Zhukov into some position of prestige, although without effective power. In the first two days, after Zhukov's return and dismissal as Defense Minister, the censor would not let us suggest that he was being down-graded, but he did let us speculate on another high appointment. A similar line was fed to Western Communist correspondents. There were rumors that Zhukov might become deputy premier, premier or president. On Monday night, October 28th, the telegraph clerks at the Moscow Central Telegraph told us they had been alerted for a big night of work, implying there would be an announcement that night. But later that night the alert was called off. A second phase had apparently started. The Central Committee meeting went on for two more days. From then on the censor permitted speculations about down-grading of Zhukov. Presumably, the stubborn Zhukov had balked at being kicked upstairs. There was nothing to do now but join the issue squarely. The result was a foregone conclusion: Zhukov's complete ouster and disgrace, decided by Wednesday of that week, announced the following Saturday after the party faithful around the country had been briefed. But it was not Khrushchev who delivered the main indictment against Zhukov in the Central Committee. The prosecutor was the dour, pinch-faced Mikhail Suslov, theoretician and watch-dog of the party's ideological purity. His functioning in this role was meant to emphasize that this was not a personal conflict but an issue of Communist orthodoxy. It is not surprising that indications since then - the position of the leaders' portraits and their

place on the reviewing stand on Nov. 7th - the anniversary of the revolution - all these have pointed to increasing prominence for Suslov, the theoretician. But the resistance to party dictation by "the guys who know how to run the joint" is not over. The paradox of Russia, after 40-years of Communist rule, is that it has bred specialists who the more powerful and the more successful they become in their fields, the more they bridle at party interference. The most successful men in Russia today are the scientists. They are now feeling their oats. We have yet to hear from them. There are signs that we will as Communist dogma clashes with the researcher's zeal. In recent months, the party has cracked down on the government administrators, the industry builders, the military commanders. A future issue may be - the party versus the Sputnik-makers. Now, back to Edward R. Murrow in New York.

MURROW: That was my colleague, Dan Schorr with the first uncensored report he has been able to make on the removal of Marshal Zhukov as Soviet defense minister.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The downfall of Marshal Zhukov follows a familiar pattern. Henry Clay observed a long time ago, "The arts of power and its minions are the same in all ages. It marks its victim...denounces it...and excites the public odium and the public hatred to conceal its own abuses and encroachments."

Goodnight and good luck!

This is the news:

Adlai Stevenson has told Secretary of State Dulles that he will "gladly" confer with the Administration on proposals to be laid before the NATO summit meeting next month. Stevenson announced this today, after White House News Secretary Hagerty told reporters Stevenson had declined an invitation "to take part in preparing an American program." Hagerty quoted Stevenson as saying he would comment on the program after it had been prepared. This afternoon, Stevenson issued a statement to set the record straight. He said he had assured Dulles a week ago, both orally and in writing, and while he could not undertake to formulate the President's policies, he would "gladly review and discuss our

government's proposals before they were put into final shape."

Stevenson said, "I have also given the Secretary of State a memorandum of my first impressions on the problems we must confront." And he added, "In view of the gravity of our situation in the world, I have both a desire and a duty to assist our government, regardless of partisanship or personal convenience." Hagerty then called in reporters and said his earlier statement had been based on a misunderstanding. He did say at his first meeting with reporters that the Democratic Party leader wanted (in Hagerty's words) "to be as helpful as he could in the presentation of an American plan." Stevenson said in his statement that he would be willing, where he was in agreement with the Administration, to do such "missionary work" as he could...privately, publicly and politically...both in this country and in Europe in support of the American proposals. There is no confirmation in any of the statements for the report that President Eisenhower asked Stevenson to accompany him to the Paris meeting. (This is the conference at which leaders of the NATO countries will seek to strengthen their alliance in view of the growing Soviet threat. I should like to discuss the nature of this meeting further in a few minutes).

In Paris today, General Power...head of the United States Strategic Air Command...told a news conference it is not true that Russian missiles can simultaneously knock out the air bases we have around the world. "And nobody," he said, "knows this better than Khrushchev." He SAID that a certain percentage of bombers are always in the air. He said that under an alert...which went into effect last month...other aircraft loaded with nuclear bombs can be off the ground in 15 minutes. General Power also briefed the NATO parliamentary assembly...behind closed doors. Senator Jackson of Washington State suggested to the assembly that NATO set up a missile training center. And this received immediate support from General Schuyler, the chief of staff at NATO headquarters. Schuyler said a missile training center "is exactly what we have been trying to get for six months." "We have missiles pouring in," he said, "and nowhere to fire them."

A record for a non-stop jet flight...without refueling...was set today when an Air Force plane landed in Buenos Aires, after taking off 13 hours earlier from the Westover Air Force Base in Massachusetts. The distance: 6-thousand, 350 miles. The flight was made

in a military version of the Boeing 707, a jet airliner scheduled to go into commercial use the end of next year. For about eight hours of the 13-hour flight, General Curtis Lemay, Air Force vice chief of staff, was at the controls.

B ritish Prime Minister Macmillan said today that Britain will carry out no further tests of nuclear weapons "in the immediate future". A hydrogen bomb...exploded by Britain last week...was expected to mark the start of a new series of nuclear tests.

Today...in the United Nations...the United States accused Communist China of building up a massive stock-pile of modern weapons in North Korea, in violation of the Korean armistice agreement. The American delegate, Dr. Walter Judd, said the situation is "fraught with danger." Judd also demanded that North Korea give "a satisfactory accounting" of 2-thousand, 270 servicemen "whose fate still remains unknown." Four hundred and fifty of these are American. The United Nations Political Committee decided to hear representatives of the Republic of South Korea on the question of reunification of Korea. A resolution to give North Korea a voice in the debate was voted down.

The State Department said today that Soviet and Egyptian charges (that Jordan has been negotiating with Israel) are "made out of whole cloth." A department spokesman said, "The American government takes a dim view of this propaganda line that increases tension in the area."

President Eisenhower met today with his foreign aid advisers...and with the National Security Council. Again the Security Council meeting was greatly expanded. Fifty-seven persons were present, in addition to the five regular council members. Tomorrow night, Mr. Eisenhower makes the second in his series of reports to the American people.

~~The Supreme Court today struck down the ban ordered by the City of Chicago against the French movie, "Game of Love." The court said sex and obscenity are "not synonymous"...that the portrayal of sex in art and literature "is not sufficient reason to deny material the constitutional protection of freedom of speech and press."~~

~~The Supreme Court also rejected the eighth appeal of Morton Sobell for a new trial. Sobell was convicted in 1951 as a co-conspirator of Julius and Ethel Rosenberg, who were executed as Soviet spies.~~

Edward R. Murrow: November 12, 1957. 7.45 p.m.

This country is buzzing with talk of missiles and space travel, which is as it should be. / It is part of the process of a nation waking up. / But there are other things to talk about and to wake up to. One is the crisis of NATO.

President Eisenhower is going in person to the December NATO council meeting in Paris, and he and Prime Minister MacMillan already have had a heart-to-heart talk about strengthening NATO. / The Administration has sought the counsel of Adlai Stevenson to symbolize the bi-partisanship of foreign policy. / So it may sound unfair to speak of the need of waking up to the NATO crisis. / But these facts by themselves do not prove that the country is aware of the NATO situation, or that the Administration will be able to act in Paris. / As matters now stand the President, when he goes to Paris, will take with him words and good will, and very narrow powers of commitment. There will be little informed public opinion behind him. Anything he pledges has to be endorsed by Congress, after long debate next year. / So far Congress shows no convincing sign of concern over NATO. Congressmen are being vocal, but mostly over missiles and earth satellites.

Time is running out before the December meeting, but the President still

could be given a mandate to act as well as to talk. A special session of Congress could meet in a few days, and pass a resolution endorsing a policy that assured NATO of our co-operation on a basis of true partnership. The resolution would not have to be more detailed than the one adopted in the Quemoy and Matsu crisis, or the one that underwrote the Eisenhower doctrine.

What is not appreciated well enough is that the missile program and NATO are part of the same problem. If we rush through the program for intermediate missiles, they can offset the Soviet inter-continental missile. That is a fact that comforts the Pentagon. But it can only come to pass if we have advanced bases from which to fire the missiles. These bases have to be supplied by our allies. We are, in effect, proposing to set up launching sites in allied countries, and instal our missiles on them, and then lock them up and keep the keys in our own pocket. Our allies are not to fire the missiles. The decision to fire them is to be made by someone else, far away, subject to the constitutional procedures of another country. But since the missile bases will be attacked with hydrogen bombs first of all if war comes, our allies regard such a proposal with quite natural concern. The talk of strengthening NATO, they think, must include give as well as take. If they are to give us the security of forward missile bases, they must

become equals in the alliance, with equal voice in major foreign policy. This equality involves sharing not only of duties, but also of secrets and above all authority. That is what interdependence has to mean, they think.

When Mr. MacMillan returned home after the meeting with Mr. Eisenhower, he reported enthusiastically that the result had been the most important development since the war: the United States, he said, now understood the necessity of interdependence. But actually it is difficult to know how much anyone understands it, the Administration, Congress or the public.

NATO is weakening as an alliance for more reasons than just this missile problem. Our allies on the European mainland believe we have a false picture of the danger they face. To them the Red Army and the Red Air Force are the immediate danger, not missiles. And they do not think our nuclear program gives them adequate security. They are well aware that the Russian land force is overwhelmingly greater than anything NATO can muster, and is richly supplied with tanks and the most modern artillery. And the Russian Air Force is many times stronger than anything the NATO countries can put in the skies.

To quote the report the military committee made to the NATO parliamentarians now meeting in Paris: The Russians already have outflanked NATO by

breaking the link between the West and the Middle East and North Africa. The Algerian war has disorganized the French sector of NATO, and the British are withdrawing their ground forces from the Continent. This, the report says, "has a profound effect on the common defense of NATO countries." It cries out against a continuation of what it calls the absentee management of NATO affairs.

"If the NATO leaders" it says, "do not succeed in reaching agreement on a concept of defense acceptable to all members, it is feared that public opinion in the continental countries will veer still farther away from NATO." That is to say public opinion already is veering away, and unless the December meeting can pull it back, the alliance is in grave danger. And that is a more immediate peril than a dozen sputniks.

Word for Today

There is not much time to waste, if ~~Congress is to be called into~~ a policy is to be hammered out ~~special session~~ before next month's NATO meeting. Thomas Jefferson said, "No person will have occasion to complain of the want of time who never loses any." And Horace said, "Seize the present. Trust the future as little as you may."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, NOVEMBER 12, 1957
7:45 - 8:00 PM EST

This is the news:

Adlai Stevenson has told Secretary of State Dulles that he will "gladly" confer with the Administration on proposals to be laid before the NATO summit meeting next month. Stevenson announced this today, after White House News Secretary Hagerty told reporters Stevenson had declined an invitation "to take part in preparing an American program." Hagerty quoted Stevenson as saying he would comment on the program after it had been prepared. This afternoon, Stevenson issued a statement to set the record straight. He said he had assured Dulles a week ago, both orally and in writing, and while he "could not undertake to formulate the President's policies," he would "gladly review and discuss our government's proposals, before they were put into final shape." Stevenson said, "I have also given the Secretary of State a memorandum of my first impressions on the problems we must confront." And he added, "In view of the gravity of our situation in the world, I have both a desire and a duty to assist our government, regardless of partisanship, or personal convenience." Hagerty then called in reporters and said his earlier statement had been based on a misunderstanding. He did say at his first meeting with reporters that the Democratic Party leader wanted (in Hagerty's words) "to be as helpful as he could in the presentation of an American plan." Stevenson said in his statement, that he would be willing, where he was in agreement with the Administration, to do such "missionary work" as he could...privately, publicly, and politically...both in this country and in Europe, in support of the American proposals. There is no confirmation in any of the statements for the report that President Eisenhower asked Stevenson to accompany him to the Paris meeting. This, the report says, "has a profound effect on the common defense of NATO countries." It cries out against a continuation of what it calls the absentee management of NATO affairs.

"If the NATO leaders" it says, "do not succeed in reaching agreement on a concept of defense acceptable to all members, it is feared that public opinion in the continental countries will veer still farther away from NATO." That is to say, public opinion already is veering away, and unless the December meeting can pull it back, the alliance is in grave danger. And that is a more immediate peril than a dozen sputniks.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: There is not much time to waste, if a policy is to be hammered out before next month's NATO meeting. Thomas Jefferson said, "No person will have occasion to complain of the want of time who never loses any." And Horace said, "Seize the present. Trust the future as little as you may."

Goodnight and good luck!

Edward R. Murrow: November 13, 1957 7.45 p.m.

Wed

THIS IS THE NEWS:

President Eisenhower has arrived in Oklahoma City for the second in his series of "encouraging" speeches. The text of his speech has been released. He will say: "The budget must be increased to cover "a very considerable" increase in the cost of the missile program. We must spend more money. There was no mention of a possible tax increase. He said that "non-essential" government programs will have to be cut sharply. Mr. Eisenhower will express confidence that the American people will not "sacrifice security by worshipping a balanced budget." The Strategic Air Command, the heavy long-range bombers, are to be put on an emergency standby basis. The President will urge the country to take the Russian threat to "bury" the free nations, seriously. One of our most pressing needs is the development of a missile defense against missiles. We are devoting intensive research to this problem.

Mr. Eisenhower will not specify what government programs will be cut in order to provide the extra money for defense, but he will say that "entire categories of activity" will have to be eliminated. He will not advocate any reduction in foreign aid funds, either in the military or

economic field.

One of the most critical problems we face is the Russian lead over us in the production of scientists and engineers. The President will propose the nationwide testing of high school students, incentives for the unusual student to pursue scientific studies, and a program to stimulate good quality teaching of mathematics and science. We must also increase our laboratory facilities.

The President will discount Russian claims of having an accurate inter-continental ballistic missile. It will be "some time" before either we or the Russians will have a long-range missile capability equal to "even a small fraction of the total destructive power of our present bomber forces."

As part of our defensive plan there will be a speed-up in the dispersal of the Strategic Air Command to additional bases . Our early warning system is also to be improved, because with missiles and faster bombers, warning time will grow shorter.

The President will indicate that he'll ask Congress for a pay increase for the Armed Services. The present rate of pay makes it increasingly difficult to retain men with technical skill.

By his failure to mention the possibility of a tax increase, and by his statement that "over the long term a balanced budget is one indispensable aid in keeping our economy and therefore our total security strong", Mr. Eisenhower will probably create the impression that the extra money needed to carry out his program can be squeezed out of present revenue by the slashing of certain non-military, non-scientific government programs.

The President will say we want adequate security. We want no more than adequacy. We will accept nothing less. The President's speech will be broadcast by C.B.S. Radio at 10.30 p.m. Eastern Standard Time.

Secretary of State Dulles said today that the United States may have to give up "some small marginal freedoms" in order to cope with the Soviet threat. He did not specify these "marginal freedoms" which may have to be sacrificed. "But the essential thing," he said, "is whether we can retain the great bulk of our freedoms and at the same time beat back this great monolithic structure." He added, "I have no doubt it can be done." Mr. Dulles stressed the principle of inter-dependence. He said, "We must help each other. The United States must not be too proud to accept help from other countries, and it must extend help." Dulles spoke before a meeting of the National Defense Executive Reserve...an organization made up of businessmen who have served in government and who would return to government service in case of emergency. Secretary of Commerce Weeks told the meeting that the United States has an "immense" economic potential, the effectiveness of which, he said, "depends on how vigorously and how wisely we use it." "The emphasis now," he said, "is on less butter and more guns." Weeks urged industry to approve a budget "adequate for national defense"... although, he said, this may mean curtailment of "less essential programs not in the defense area." Republican Senator Capehart told the business

leaders he "abhors" controls...but that the country must be realistic enough to recognize the need for standby economic controls "in case war suddenly should be thrust upon us." The Army chief of staff...General Taylor... said the Army is making "encouraging progress" in the development of anti-missile missiles. "It is entirely possible," he said, "to develop an anti-missile defense for the United States at an acceptable cost and in a reasonable time."

The State Department announces that Adlai Stevenson has agreed to meet Secretary Dulles in Washington next Monday "to consult with him on preparations for the forthcoming NATO meeting of heads of government." Stevenson said yesterday that while he "could not undertake to formulate the President's policies," he would "gladly" accept Mr. Dulles' invitation "to discuss our government's proposals before they were put into final shape." A department spokesman says it is "a fair guess" that some working papers will have been drawn up by Monday for Stevenson to see.

U.S. Admiral Jerauld Wright told the NATO parliamentary conference in Paris today that Russia has three times as many submarines as all NATO countries combined. Wright is supreme commander of naval forces under the North Atlantic Pact. The "single purpose" of the Soviet navy, he warned, is the isolation of North America from Europe in event of war. And he proposed that Congress...by amending the McMahon Act...make it possible for allied countries to build atomic submarines such as those possessed by the United States. The Canadian delegate, Charles Cannon, told the parliamentary conference that European members of NATO should be armed with tactical atomic weapons for use against strictly military targets in

a limited war. United States Senator Jackson advanced the idea of floating "ocean platforms" which, he said, could be used for firing nuclear rockets in case of Soviet attack. Senator Saltonstall warned that the United States may go slow in sharing certain atomic secrets. He said, "The basic principles of present American legislation on military secrets must remain intact." He also said, "We all believe today that the severe restrictions should be relaxed to a considerable degree."

The Western powers let it be known today that they are willing to increase the membership of the United Nations Disarmament Commission to 22 countries instead of the present 12. Russia has threatened to boycott any new disarmament talks, unless the West agreed to wider representation. The original Soviet proposal was that all 82 members of the United Nations take part but Russian sources indicated later that adding 10 members to the 12-member disarmament commission might make it acceptable. Tomorrow, the Western powers are expected to submit a formal proposal to this effect.

In Moscow, Communist Party Boss Khrushchev said today that Marshal Zhukov was a "good soldier"...but didn't do so well in politics. Khrushchev made the remark at a reception at the Egyptian Embassy. My colleague, Dan Schorr, asked Khrushchev if Zhukov had been given a new job since being removed as defense minister. All Khrushchev would say in answer was that Zhukov is on "a well-deserved leave." He boasted of Russia's rocket achievements...and said he did not think the United States would catch up soo

The Egyptian minister of war conferred in Moscow today with Soviet leaders.

And in Jordan, King Hussein accused the present rulers of Egypt and Syria of being the "tools" of international Communism. Hussein said the propaganda campaign waged against him by Egypt and Syria had backfired. He called their agreement...to pay Jordan an annual subsidy..."not worth the paper it is written on." And he again proclaimed a policy of strict neutrality. The economic aid received from America, he said, is "without strings".

A long-range Navaho missile was fired today at the Air Force test center in Florida. And the test is described as "a complete success." The Navaho is a guided---not a ballistic---missile. It has a range of 3-thousand miles (perhaps more) and cruises at about three times the speed of sound. Further development of the Navaho has been discontinued in favor of OTHER MISSILE PROJECTS. The reason for today's test was not announced.

The Navy says it still plans to launch a test-satellite in December but that no exact date has been set. The statement was prompted by a report that the launching had been scheduled for December first.

The Navy today launched an improved version of its Regulus missile, using a rocket booster for the first time. It is also a guided missile, with a 1-thousand-mile range.

The Air Force jet tanker that made a record non-stop flight yesterday to Buenos Aires returned to Washington today in 11 hours and five minutes. This is automatically a record, since it marks the first non-stop jet flight

ever made between those two points. The aircraft...piloted by General Curtis Lemay...averaged almost 470 miles an hour. Early today, three Air Force twin-jet B-66 bombers arrived in the Philippines, after an 8-thousand mile non-stop flight from California. They were refueled in the air once, near Hawaii.

Latest returns in the Philippine voting indicate the re-election of Carlos Garcia as president. However, Garcia's running mate, José Laurel, Jr., is trailing in the race for vice president. The new vice president (of the opposition Liberal Party) apparently will be Diosdado Macapagal. The election of a president and a vice president, belonging to different parties, is permitted under the Philippine constitution.

Word for Today

There has been ~~most~~ MUCH emphasis of late ~~in this country, and in Britain,~~ on the Principle of Inter-dependence. Pierre van Paassen expressed this principle ~~[illegible]~~ when he said, "In whatever direction the future moves, whether the earthquake is long in coming or not, we must from now onward learn to live and act in the knowledge that we are all responsible <u>to</u> and <u>for</u> one another."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, NOVEMBER 13, 1957
7:45 - 8:00 PM EST

This is the news:

President Eisenhower has arrived in Oklahoma City for the second of his series of "encouraging" speeches. The text of his speech has been released. He will say: the budget must be increased to cover "a very considerable" increase in the cost of the missile program. We must spend more money. There was no mention of a possible tax increase. He said that "non-essential" government programs will have to be cut sharply. Mr. Eisenhower will express confidence that the American people will not "sacrifice security, by worshipping a balanced budget." The Strategic Air Command, the heavy long-range bombers, are to be put on an emergency standby basis. The President will urge the country to take the Russian threat to "bury" the free nations, seriously. One of our most pressing needs is the development of a missile defense against missiles. We are devoting intensive research to this problem.

Mr. Eisenhower will not specify what government programs will be cut in order to provide the extra money for defense, but he will say that "entire categories of activity" will have to be eliminated. He will not advocate any reduction in foreign aid funds, either in the military or economic field.

One of the most critical problems we face is the Russian lead over us in the production of scientists and engineers. The President will propose the nationwide testing of high school students, incentives for the unusual student to pursue scientific studies, and a program to stimulate good quality teaching of mathematics and science. We must also increase our laboratory facilities.

The President will discount Russian claims of having an accurate intercontinental ballistic missile. It will be "some time" before either we or the Russians will have a long-range missile capability equal to "even a small fraction of the total destructive power of our present bomber forces."

As part of our defensive plan there will be a speed-up in the dispersal

of the Strategic Air Command to additional bases. Our early warning system is also to be improved, because with missiles and faster bombers, warning time will grow shorter.

The President will indicate that he'll ask Congress for a pay increase for the Armed Services. The present rate of pay makes it increasingly difficult to retain men with technical skill.

By his failure to mention the possibility of a tax increase, and by his statement that "Over the long term, a balanced budget is one indispensable aid in keeping our economy and therefore our total security strong," Mr. Eisenhower will probably create the impression that the extra money needed to carry out his program can be squeezed out of present revenue by the slashing of certain non-military, non-scientific government programs.

The President will say we want adequate security. We want no more than adequacy. We will accept nothing less. The President's sppech will be broadcast by C.B.S. Radio at 10:30 P.M. Eastern Standard Time.

Secretary of State Dulles said today that the United States may have to give up "some small marginal freedoms," in order to cope with the Soviet threat. He did not specify these "marginal freedoms" which may have to be sacrificed. "But the essential thing," he said, "is whether we can retain the great bulk of our freedoms and, at the same time, beat back this great monolithic structure." He added, "I have no doubt it can be done." Mr. Dulles stressed the principle of inter-dependence. He said, "We must help each other. The United States must not be too proud to accept help from other countries, and it must extend help." Dulles spoke before a meeting of the National Defense Executive Reserve...an organization made up of businessmen who have served in government, and who would return to government service in case of emergency. Secretary of Commerce Weeks told the meeting that the United States has an "immense" economic potential, the effectiveness of which, he said, "depends on how vigorously and how wisely we use it." "The emphasis now," he said, "is on less butter, and more guns." Weeks urged industry to

approve a budget "adequate for national defense"...although, he said, this may mean curtailment of "less essential programs not in the defense area." Republican Senator Capehart told the business leaders he "abhors" controls... but that the country must be realistic enough to recognize the need for standby economic controls, "in case war suddenly should be thrust upon us." The Army chief of staff...General Taylor...said the Army is making "encouraging progress" in the development of anti-missile missiles. "It is entirely possible," he said, "to develop an anti-missile defense for the United States, at an acceptable cost, and in a reasonable time."

The State Department announces that Adlai Stevenson has agreed to meet Secretary Dulles in Washington next Monday "to consult with him, on preparations for the forthcoming NATO meeting of heads of government." Stevenson said yesterday that while he "could not undertake to formulate the President's policies," he would "gladly" accept Mr. Dulles' invitation "to discuss our government's proposals, before they were put into final shape." A department spokesman says it is "a fair guess" that some working papers will have been drawn up by Monday for Stevenson to see.

U. S. Admiral Jerauld Wright told the NATO parliamentary conference in Paris today, that Russia has three times as many submarines as all NATO countries combined. Wright is supreme commander of naval forces under the North Atlantic Pact. The "single purpose" of the Soviet navy, he warned, is the isolation of North America from Europe in event of war. And he proposed that Congress...by amending the McMahon Act...make it possible for allied countries to bulld atomic submarines, such as those possessed by the United States. The Canadian delegate, Charles Cannon, told the parliamentary conference, that European members of NATO should be armed with tactical atomic weapons for use against strictly military targets in a limited war. United States Senator Jackson advanced the idea of floating "ocean platforms" which, he said, could be used for firing nuclear rockets in case of Soviet attack. Senator Saltonstall warned that the United States may go slow in sharing

certain atomic secrets. He said, "The basic principles of present American legislation on military secrets, must remain intact." He also said, "We all believe today that the severe restrictions should be relaxed to a considerable degree."

The Western powers let it be known today that they are willing to increase the membership of the United Nations Disarmament Commission to 22 countries, instead of the present 12. Russia has threatened to boycott any new disarmament talks, unless the West agreed to wider representation. The original Soviet proposal was that all 82 members of the United Nations take part, but Russian sources indicated later that adding 10 members to the 12-member disarmament commission might make it acceptable. Tomorrow, the Western powers are expected to submit a formal proposal to this effect.

In Moscow, Communist Party Boss Khrushchev said today that Marshal Zhukov was a "good soldier"...but didn't do so well in politics. Khrushchev made the remark at a reception at the Egyptian Embassy. My colleague Dan Schorr, asked Khrushchev if Zhukov had been given a new job since being removed as defense minister. All Khrushchev would say in answer was that Zhukov is on "a well-deserved leave." He boasted of Russia's rocket achievements...and said he did not think the United States would catch up soon.

The Egyptian minister of war conferred in Moscow today with Soviet leaders.

And in Jordan, King Hussein accused the present rulers of Egypt and Syria of being the "tools" of international Communism. Hussein said the propaganda campaign waged against him by Egypt and Syria had backfired. He called their agreement...to pay Jordan an annual subsidy..."not worth the paper it is written on." And he again proclaimed a policy of strict neutrality. The economic aid received from America, he said, is "without strings."

A long-range Navaho missile was fired today at the Air Force test center in Florida. And the test is described as "a complete success." The Navaho is a guided---not a ballistic---missile. It has a range of 3-thousand

miles (perhaps more) and cruises at about three times the speed of sound. Further development of the Navaho has been discontinued in favor of other missile projects. The reason for today's test was not announced.

The Navy says it still plans to launch a test-satellite in December, but that no exact date has been set. The statement was prompted by a report that the launching had been scheduled for December first.

The Navy today launched an improved version of its Regulus missile, using a rocket booster for the first time. It is also a guided missile, with a 1-thousand-mile range.

The Air Force jet tanker that made a record non-stop flight yesterday to Buenos Aires, returned to Washington today in 11 hours and five minutes. Early today, three Air Force twin-jet B-66 bombers arrived in the Philippines, after an 8-thousand mile non-stop flight from California. They were refueled in the air once, near Hawaii.

Latest returns in the Philippine voting indicate the re-election of Carlos Garcia as president. However, Garcia's running mate, Jose Laurel, Jr., is trailing in the race for vice president. The new vice president (of the opposition Liberal Party) apparently will be Dios dado Macapagal. The election of a president and a vice president, belonging to different parties, is permitted under the Philippine constitution.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: There has been much emphasis of late on the Principle of Inter-dependence. Pierre van Paassen expressed this principle when he said, "In whatever direction the future moves, whether the earthquake is long in coming or not, we must from now onward, learn to live and act in the knowledge, that

we are all responsible to and for one another."

Goodnight and good luck!

Edward R. Murrow Thurs., Nov. 14, 1957

This is the news:

The United States and Britain today announced that they will sell arms to Tunisia, despite the strong objections voiced by France. French Foreign Minister Pineau said this morning that his government would consider such action "contrary to the conception of Atlantic solidarity." France feels that arms delivered to Tunisia might ultimately fall into the hands of Algerian rebel forces. The fear in London and Washington, on the other hand, is that if the Tunisian government cannot get arms from the West, it will turn to Russia. Consequently, the United States announced this afternoon that it is sending Tunisia a token shipment of

500 semi-automatic rifles and 50-thousand rounds of ammunition. The State Department said the Tunisian government had given "the most explicit assurances as to the defensive use of these weapons, their safe custody, and their non-transferability." The announcement expressed regret that France "had not found it possible to associate itself with the supply of arms to Tunisia." ~~The State Department said, "The United States still believes that the ties of history, culture and geography which bind France and Tunisia constitute the basis for a close and enduring relationship which can be mutually beneficial."~~ Britain announced that it was sending Tunisia a "token consignment" of 350 submachine guns and 70 Bren guns, together with ammunition for both types. These announcements brought consternation in France. Dispatches from Paris say the Anglo-American action may cause the new government of Felix Gaillard to fall. Premier Gaillard has promised a full statement tomorrow, and Foreign Minister Pineau will fly to Washington to confer with American leaders. American delegates attending the NATO parliamentary conference in Paris report "considerable concern" over the possibility of a split in the Atlantic Alliance on the eve of next month's "summit" meeting. Senator Jackson, ~~of Washington State, expressed fear that the NATO powers~~

may be so distracted by Tunisia as to fail to ~~act decisively to meet the~~ Soviet threat. ~~He urged putting "first things first." And Senator Javits~~ of New York suggested calling a meeting of the NATO Council at once to ~~decide the Tunisian arms question.~~ Paul-Henri Spaak, the secretary general of NATO, warned that the Western countries must cooperate more closely, or become second-class powers. In Washington, the ambassadors of the NATO countries met at the State Department .

~~West Germany said today that the ministers meeting in Bonn~~

West Germany said today that it plans to equip its army with short-range rockets...to take the place of "obsolete anti-aircraft and artillery weapons." Defense Minister Strauss said West Germany does not seek revision of the Paris treaties, so as to enable it to manufacture atomic weapons. My colleague, Ernest Leiser, cables me from Bonn that West Germany now expects to receive delivery of short-range tactical missiles from the United States in 1959. In the meantime, he says, the West German government will send key people to the United States for training in such missiles as the Army's Nike and the Air Force Matador.

The Moscow radio charged today that President Eisenhower's speech last night...in which he called for "a very considerable increase" in defense spending...was (in Moscow's words) "a return to the old imperialist slogan---guns before butter." / Moscow said the speech can only increase international tension.

Some Democratic members of Congress said the President "left a lot to be spelled out." / Senator McClellan said, "Before we start thinking about higher taxes, we ought to have some concrete, definite plan." Republican Senator Flanders of Vermont said he thought that to talk about a tax rise now was "premature". Republican Senator Smith of New Jersey said he was "particularly gratified" by Mr. Eisenhower's emphasis on basic research. (I ~~should like~~ Shall try to review the President's speech in a few minutes).

Today, Mr. Eisenhower met again (for the second time this week) with the National Security Council. / The meeting was attended by a number of budget experts.

The top financial expert in the Pentagon...Assistant Secretary of Defense Wilfred J. McNeil...said today that the new defense budget will be

→

"a trifle higher." He gave no figure...but said that, percentagewise, he would "guess" the increase will not be much.

The White House says President and Mrs. Eisenhower "hope" to go to Augusta, Georgia tomorrow for a vacation lasting about five days.

The New York Stock Market opened strong today, in response to President Eisenhower's call for an increase in defense spending. But later in the day the market turned mixed, and by closing many key issues had dropped [illegible] anywhere from a fraction to about two dollars a share.

The Federal Reserve Board has ordered the federal reserve banks in four cities to drop their discount rate to 3 percent, effective tomorrow. The present rate is three and a half percent. The four cities are New York, St. Louis, Atlanta and Richmond. The federal reserve banks in other cities are expected to receive similar orders soon. The effect of such a move is [illegible] to make borrowing easier and increase the supply of credit.

The Baltimore and Ohio Railroad asked permission today to abandon its passenger service between Baltimore and New York. It cited "an enormous

deficit in passenger operations."

A search plane from the aircraft carrier Philippine Sea today discovered wreckage of the Pan American stratocruiser that disappeared last week with 44 persons on board. Nine bodies were sighted...and are being recovered. The wreckage was found about 900 miles northeast of Hawaii.

The United States today eased its ban on travel to Albania but emphasized that this "in no way" implies a move toward recognition of that country's Communist regime.

In the United Nations, a resolution was introduced by Canada and Japan... proposing that the 12-member disarmament commission be enlarged to 22 members. The move was designed to placate Russia, which has demanded wider representation, but the Soviet delegate immediately called the plan unacceptable. The General Assembly then went on to vote for a resumption of disarmament talks.

Edward R. Murrow: November 14, 1957. 7.45 p.m.

The expected theme of President Eisenhower's speech last night was what it is going to cost to hold our own with the Soviet Union. / The occasion is not as dire as the one which produced Churchill's "blood, sweat and tears" speech. The crisis, however, is of similar magnitude if not of the same immediacy. Security and survival both are at stake. / Last night the President was grave in spirit. / He offered much less in the way of reassurance than in the preceding broadcast. / But while he indicated that the cost would be heavy in effort and money, he did not himself take the lead in saying what it would be, or what sacrifices Americans must accept. / He left no doubt that great decisions will have to be made. / But if the President has made these decisions he gave no hint of it, and seemed to be implying that many of them would have to be made by others, particularly in Congress. / He said that some services now being provided by the government would have to be suspended or cut out altogether. But he did not say which ones. / There are only two big items in the domestic budget which would make possible big savings in the interest of defense spending. They are the farm and veterans programs. The President predicted that when Congress comes to the distasteful job of wielding the axe, the pressure groups will wail in anguish. However, the

wailing has not set in today, for nobody can say today which of these, or any other services the President wants to suspend or cut out altogether.

The President said that tax money will be needed - "lots of it" - which suggests more than is now being raised. But he did not propose to increase taxes. He left an impression of certainty on only one point - there will be no tax cut next year. But whether he will ask Congress to increase the income tax is anybody's guess. Some people today are guessing that he will.

Moreover, the President did not shut out the possibility of a resort to deficit financing, though here again he did not speak unequivocally. What he did was to point out that "over the long term", as he put it, a balanced budget is indispensable to the strength of our economy, and hence our security. But he preceded this by saying that if we don't succeed in saving enough to meet our defense needs, our total expenditures will have to rise. "Our people will rightly demand it" he declared. "They will not sacrifice security to worship a balanced budget".

The fiscal part of the speech outlined three possible courses: there can be drastic reduction of domestic services; there can be increased taxation; there can be deficit spending. Since defense spending is to rise,

one or two, or all three courses may have to be followed. But the President did no more last night than to point out the roads. He did not choose any of them, or exhort the nation to follow him.

The President had served notice that his main subject last night would be the needs of education and science, so this must count as the theme he considered to be most important. "My scientific advisers" he said, "place this problem above all other immediate tasks of producing missiles, or developing new techniques in the armed services. We need scientists."

But this opinion was not given as the President's, but as that of his "scientific advisers." It may be questioned whether the President, in withholding his own judgment, did not weaken his case. The prestige of scientists, particularly in fields of national affairs, is not at its peak, and actually has declined during the Eisenhower administration.

Actually the President's own judgment would carry a maximum of weight. No one better than he can understand the relationship between science and education, on the one hand, and national defense and finance, on the other. Furthermore, Mr. Eisenhower is in a unique position. He has held responsible educational authority himself. He is past President of Columbia University, and knows about the shortage of scientists and engineers as an educational

administrator. Further, his brother Milton, also a University president, was chairman of a government committee that made a study of this very problem. And the Central Intelligence Agency has adequately briefed the National Security Council on the advanced state of Russian education.

We might think from the President's two talks that he had only recently heard about the educational crisis from his "scientific advisers." To have told about it forthrightly, in terms of his own experience, knowledge and judgment, would have been an act of leadership. Now nobody knows what the President is prepared to fight for, in this field, or in the field of finance.

The free world is looking to ~~the United States for leadership.~~ us for leadership.

Only the United States has the economic and military power...~~potential~~ ~~and in being~~...to lead the countries of the North Atlantic Treaty Organization into closer mutual cooperation. We must lead with assurance and in fact. For as St. Paul said: "If the trumpet give an uncertain sound, who shall prepare himself to battle?"

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, NOVEMBER 14, 1957
7:45 - 8:00 PM EST

This is the news:

The United States and Britain today announced that they will sell arms Tunisia, despite the strong objections voiced by France. French Foreign Minister Pineau said this morning, that his government would consider such action "contrary to the conception of Atlantic solidarity." France feels that arms delivered to Tunisia, might ultimately fall into the hands of Algerian rebel forces. The fear in London and Washington, on the other hand, is that if the Tunisian government cannot get arms from the West, it will turn to Russia. Moreover, the President did not shut out the possibility of a resort to deficit financing, though here again he did not speak unequivocally. What he did, was to point out that "over the long term", as he put it, a balanced budget is indispensable to the strength of our economy, and hence our security. But he preceded this, by saying that if we don't succeed in saving enough to meet our defense needs, our total expenditures will have to rise. "Our people will rightly demand it" he declared. "They will not sacrifice security to worship a balanced budget."

The fiscal part of the speech outlined three possible courses: there can be drastic reduction of domestic services; there can be increased taxation; there can be deficit spending. Since defense spending is to rise, one or two, or all three courses may have to be followed. But the President did no more last night than to point out the roads. He did not choose any of them, or exhort the nation to follow him.

The President had served notice that his main subject last night would be the needs of education and science, so this must count as the theme he considered to be most important. "My scientific advisers" he said, "place this problem above all other immediate tasks of producing missiles, or developing new techinques in the armed services. We need scientists."

But this opinion was not given as the President's, but as that of his

"scientific advisers." It may be questioned whether the President, in withholding his judgment, did not weaken his case. The prestige of scientists, particularly in fields of national affairs, is not at its peak, and actually has declined during the Eisenhower administration.

Actually the President's own judgment would carry a maximum of weight. No one better than he can understand the relationship between science and education on the one hand, and national defense and finance, on the other. Furthermore, Mr. Eisenhower is in a unique position. He has held responsible educational authority himself. He is past President of Columbia University, and knows about the shortage of scientists and engineers as an educational administrator. Further, his brother Milton, also a University president was chairman of a government committee that made a study of this very problem. And the Central Intelligence Agency has adequately briefed the National Security Council on the advanced state of Russian education.

We might think, from the President's two talks, that he had only recently haard about the educational crisis from his "scientific advisers." To have told about it forthrightly, in terms of his own experience, knowledge, judgment, would have been an act of leadership. Now nobody knows what the President is prepared to fight for, in this field, or in the field of finance.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The free world is looking to us for leadership. Only the United States has the economic and military power...to lead the countries of the North Atlantic Treaty Organization into closer, more efficient co-operation. We must lead with assurance, and in fact. For as St. Paul said; "If the trumpet give an uncertain sound, who shall prepare himself to battle?"

Goodnight and good luck!

Edward R. Murrow Fri., Nov. 15, 1957

This is the news:

Premier Gaillard said today that the French people regard the Anglo-American delivery of arms to Tunisia as "an unfriendly act." / Gaillard was speaking in the National Assembly. / He said there must be "a clear unequivocal solution" of the problem. / He said the solution must be found before the NATO heads of government meet in Paris next month...and that it must be satisfactory to the vital interests of France. / Otherwise, he warned, the hopes of solidarity raised by the summit meeting "cannot fail to be put in doubt." The premier said it is not the wish of France "to wreck whatever remains of the Atlantic Pact."

This morning, the French delegation walked out of the NATO parliamentary

conference...calling the Anglo-American shipment of arms to Tunisia "a brutal and unjustified act." The arms shipment split the American delegation to the conference. Six Democratic members of Congress...led by Senator Green of Rhode Island...issued a statement deploring the arms shipment as endangering allied unity. Eight Republican congressmen answered by expressing confidence that "present differences between our two governments will be shortly and finally resolved."

President Bourguiba of Tunisia said that the United States...by its action...had assumed the role of "champion of liberty." He said that Tunisia was also going to accept a "symbolic" gift of arms from Egypt. (I should like to discuss these developments further in a few minutes).

The NATO parliamentary conference approved a resolution today calling for the establishment of a missile training center for members of the Atlantic Pact. It also advocated a program for cooperative research...and for attracting young people with an aptitude for science into following scientific careers.

Secretary of Defense McElroy announced today that he will soon name "a single manager" to coordinate this country's development of "urgent,

top-priority" weapons. The new manager, he said, will carry these peojects through "from the time they are a mote in some scientist's eye until the time they are about to become operational." And the work is to be administered "without regard to the separate services." McElroy said the job will be in addition to that performed by William Holaday, his assistant on missiles. However, Holaday's title is being changed from assistant to director of guided missiles. ~~McElroy said it is "rather obvious" that the Russians are ahead of the United States in both missile and satellite development. He predicted that America will not only close the gap "but do even better."~~

The Air Force deputy chief of staff...General O'Donnell...today praised the recent performance of the Snark, an intercontinental guided missile with a 5-thousand-mile range. O'Donnell told a news conference in Chicago that...on October 31...the Snark performed under conditions simulating actual operations...and demonstrated its ability to place a nuclear warhead on a target anywhere in the world.

In Moscow, Communist Party Boss Khrushchev told the United Press today that any war fought in the era of ballistic missiles would be "fought on

the American continent." He conceded that Russia would also "suffer immensely" but that capitalism would perish. (He has said this before).

According to London sources, an official announcement that British scientists have discovered how to harness the fusion power of the hydrogen bomb for peaceful purposes may be made "fairly soon". Scientists at Britain's atomic research center in Harwell are encouraged by the success achieved...although they are aware that much additional research is required. We are reliably informed that a British announcement would have come earlier except for the objection of American authorities.

President Eisenhower presided today at a meeting of the cabinet...and then attended the swearing in of Dr. James Killian of M.I.T. as his special assistant for science and technology. Mr. Eisenhower has said that he intends through Dr. Killian to be assured that the program for military-scientific development "is carried forward in closely integrated fashion...and that projects of highest potential shall advance with the utmost possible speed." The procedure for doing this remains to be spelled out.

This afternoon, President and Mrs. Eisenhower flew to Augusta, Georgia, for a vacation lasting until about the middle of next week.

The Federal Reserve Board said today that the level of industrial production in the United States dropped in October to its lowest point in 15 months.

The New York Stock Market rallied sharply today...with gains of one to FIVE points over a wide front. The rise is attributed to the Federal Reserve Board action yesterday...cutting the discount rate in four districts from three and a half to three percent.

Today...in a New York federal court...the convicted Russian spy, Rudolf Abel, was sentenced to 30 years in prison. He could have received the death penalty.

The AFL-CIO today suspended the Bakery Workers Union for failure to "clean house". The union had refused to bar its president, James Cross, from seeking re-election...as directed by the AFL-CIO executive committee. Cross was accused in testimony before the Senate Rackets Committee of misusing union funds.

~~The Civil Aeronautics Board said today that "an exhaustive investigation" will be made as to what caused the Pan American stratocruiser to come down in the Pacific, apparently with the loss of all 44 persons on board. Seventeen bodies [illegible] have now been recovered.~~

The tempest over the delivery of arms to Tunisia is infinitely more serious than the five hundred rifles and three hundred and fifty Bren guns involved. It suddenly has disclosed the basic weakness of NATO. / Already the alliance has been sapped militarily by the Algerian crisis. / Now the gravest doubts arise as to whether it ever can be made into a great instrument of power unless that crisis is solved. / The French Government now may fall, and be difficult to replace through normal constitutional methods. / One can say gloomily that this was bound to happen some day. But to have it happen now, when the re-building of NATO is scheduled for December, fills all NATO governments with foreboding. / France's allies are in no position to solve the Algerian crisis. They haven't been asked to. But even if France should ask, they could not come up with a formula for peace in Algeria that everyone would accept. / This is a well-nigh insoluble problem. Full independence is unacceptable to the more than a million French settlers who have created most of Algeria's wealth, and so is unacceptable to the French Government. Anything less than full independence has by now become unacceptable to the Algerians.

Several questions arise from the present storm. One is whether it was

necessary or wise to let it blow up at this moment. The answer is that the United States and British Governments believed it was unavoidable. They had given President Bourguiba a promise and they had to keep it. If they didn't, Bourguiba would be disillusioned and undoubtedly would accept Russian arms. We knew the French would be upset, but thought it had to be done anyway.

That raises another question: why the promise of arms was made to Bourguiba in the first place. He needed them, he said, to maintain domestic order and to protect his Algerian border. He had to keep it from being overrun by Algerian rebels, not to mention French troops engaged in "hot pursuit". He needed arms to stop the smuggling of arms and supplies into Algeria, and promised to take every precaution against the arms received ending up with the rebels.

A further question is whether the French were left in the dark about negotiations with Bourguiba. It appears that they were not. The previous French Government had agreed to the shipment, and the arms were to have been provided by Belgium and Italy. Then when the Parliamentary crisis arose, the government repudiated the agreement, so as to deny in Parliament that it had ever existed. The present French Government also had been

fully informed, and a few days ago, knowing that Washington and London had set a deadline, offered to supply Bourguíba itself. We expected the delivery to be made on the terms we had offered. But the French imposed an additional condition. Last year, Bourguiba sent Egypt a token donation of food at the time of the Suez crisis. When Bourguíba broadcast his appeal for arms, Nasser responded with the offer of a token shipment. Bourguíba assured us that he would take this and decline any further Egyptian arms. But the French insisted that he reject the Nasser offer before receiving anything from France. Bourguíba considered this an infringement of sovereignty and rejected the French offer. A further question is whether, having chosen to disregard the French by our action, we carried through the operation with all the delicacy possible. And here the answer is that the State Department yesterday issued a pious ~~homilietic~~ Little Lecture that surely burned the French wounds like salt. "The United States" we said, "still believes that the ties of history, culture and geography, which bind France and Tunisia, constitute the basis for a close and enduring relationship which can be mutually beneficial in the military as well as other fields." This passage may pass as just a glimpse of the obvious. But it is also a lecture delivered by one nation to another, and a less

tactful and more painful time for delivering it could hardly have been found. ~~It may be necessary to~~

One reason we sent arms to Bourguiba was to keep the Russians from sending them, but anyone thinking we have beaten the Russians at their own game does not understand the game. For the Russians it is heads-I-win and tails-you-lose proposition. By threatening to deliver arms to Tunisia they forced us to do it. By forcing us to do it they made us alienate one of our major allies, and advertise a gaping rift in the NATO alliance. Russia has two big objectives in its foreign policy. One is to establish a foothold in the Middle East, the other is to break up the Western alliance. ~~Russia was using a tactic in its foreign policy.~~ By pushing ahead in the Middle East, it is exposing the weakness of NATO. It is a huge success to be able to win so big a victory over the matter of a few hundred small arms.

Word for Today

The shipment of arms to Tunisia has placed a strain on the Atlantic alliance at a time when unity is more essential than ever. We had to make a choice. Le Rochefoucauld said, "The greatest gift is the power to estimate correctly the value of things." And C.N. Bovee once observed very wisely: "Pure motives do not insure perfect results"

Goodnight and good luck!

"The United States" we said, "still believes that the ties of history, culture, and geography, which bind France and Tunisia, constitute the basis for a close and enduring relationship, which can be mutually beneficial in the military as well as other fields." This passage may paas as just a glimpse of the obvious. But it is also a lecture, delivered by one nation to another, and a less tactful and more painful time for delivering it could hardly have been found.

Onr reason we sent arms to Bourguiba was to keep the Russians from sending the but anyone thinking we have beaten the Russians at their own game does not understand the game. For the Russians it is heads-I-win and tails-you-lose proposition. By threatening to deliver arms to Tunisia they forced us to do it. By forcing us to do it, they made us alienate one of our major allies, and advertise a gaping rift in the NATO alliance. Russia has two big objectives in its foreign policy. One is to establish a foothold in the Middle East, the other is to break up the Western alliance. By pushing ahead in the Middle East, it is exposing the weakness of NATO. It is a huge success, to be able to win so big a victory over the matter of a few hundred small arms.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But, first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The shipment of arms to Tunisia has placed a strain on the Atlantic alliance at a time when unity is more essential than ever. We had to make a choice. Le Rochefoucauld said, "The greatest gift is the power to estimate correctly the value of things." And C.N. Bovee once observed, very wisely: "Pure motives do not insure perfect results."

Goodnight and good luck!

Edward R. Murrow Mon., Nov. 18, 1957

This is the news:

Adlai Stevenson conferred for 90 minutes with Secretary of State Dulles today, on American plans for next month's NATO "summit meeting". As he went into the meeting, Stevenson said, "I am here to make comments and be helpful, to consult and discuss." / When he came out, he said the meeting had been "very encouraging." / "We discussed some of the problems," he said, "and reviewed preparations." Stevenson told reporters there had been no discussion of whether he would accompany Secretary Dulles and President Eisenhower to the NATO meeting. / But he defined his role as Administration consultant in these terms: "I will review and discuss the various proposals," he said, "and give my ~~[illegible]~~ advice. Those I can

support, I will...as actively as possible." Stevenson added that if he encounters proposals he is against, he will say so in public. ~~"I am sure," he said, "the strength and confidence of our allies is of the first importance."~~

Earlier in the day, the White House released the text of a telegram President Eisenhower sent Stevenson last Thursday...expressing regret that he would not be in Washington today to see him. "I am sure," Mr. Eisenhower said, "that later there will be an opportunity for conferences at which we can both be present."

The State Department says Mr. Stevenson has been given security clearance so that he can see secret papers.

Dr. John P. Hagen, director of Project Vanguard, said today that it may be possible to launch the first full-scale American satellite in January, instead of in March. Hagen said this largely depends on whether all goes well with the small test satellites next month. Project Vanguard, he said, has been given a new priority "to enable us to meet our commitments."

French ~~Premier~~ Foreign Minister Pineau arrived in the United States today to confer with Secretary Dulles on the Tunisian question. Pineau told a news conference that...by sending arms to Tunisia...the United States and Britain had made "a ~~very~~ bad preparation" for next month's meeting of NATO heads of government. He said, "If these arms should fall into the hands of Algerian rebels, French public reaction would be very strong and very bad for the Atlantic Pact." Not since World War Two, he said, had the Communist Part gained such a victory in France. Pineau discounted the idea that Russia will send arms to Tunisia if the West does not. Moscow, he said, has given assurances that it has no such plan. Pineau said that when he sees Dulles tomorrow, he will try to get a guarantee that American arms deliveries to Tunisia will be limited...and that the weapons will be employed solely in Tunisia's own defense. ~~The French premier spent most of the day conferring with United Nations officials, here in New York.~~

In London, the British foreign secretary...Selwyn Lloyd...said today that it would have been "most unfortunate" if Tunisia had been forced to obtain arms...directly or indirectly...from the Soviet bloc. Lloyd told the House of Commons, "Tunisia, as an independent and sovereign state,

is entitled to arms for the purpose of legitimate self-defense." He said the Anglo-American action..."far from being contrary to the principle of Atlantic solidarity...was designed to protect the interests of the West as a whole." There is nothing in it, he said, that would prevent France from continuing to meet Tunisia's principal weapons requirements.

Representatives of the Egyptian and Syrian parliaments...meeting in Damascus...voted unanimously today for a "federal union" between the two Arab countries. Damascus newspapers report the holding of joint maneuvers in Syria by Syrian and Egyptian troops.

Prime Minister Ben Gurion won a vote of confidence in the Israeli parliament today on the issue of his foreign policy. The vote was 63 to 12. Ben Gurion rejected the proposition of peace with the Arabs at the expense of Israeli territory. "Peace is possible," he said, "only through negotiations with Israel and with Israel as it is."

The Western powers today agreed to expand the United Nations Disarmament Commission to 25 members...as a further concession to Russia, which has demanded broader representation in any future disarmament talks. The commission currently has 12 members. Only last week, the United States went along with a plan to expand the number of member countries to 22. The General Assembly is expected to vote tomorrow on the new compromise proposal. / And this time, Russia may go along.

~~The United Nations Political Committee today approved a resolution calling for a new effort to unify Korea, as an independent and democratic state. The vote was 53 to 9, with 15 abstentions. The nine opposing votes were cast by countries of the Soviet bloc.~~

Communist China today announced a program for de-centralizing some branches of its industry, effective January first. / The segments of Chinese industry most deeply affected are the building trades, textiles, communications, and timber.

A Japanese court is expected (within the next hour) to return a verdict in the manslaughter trial of U.S. Army Specialist William Girard. The verdict will be returned by a three-judge panel, which began hearing the case last August 26th.

The Supreme Court ruled today...in an unimous decision...that a labor union cannot legally discriminate against its members on the basis of race. The case involves the Brotherhood of Railway and Steamship Clerks, the ~~and the Bunn~~ Texas and New Orleans Railroad, and four of its Negro employes. The four Negroes...formerly employed by the railroad in Houston, Texas...charge that the company "purported" to abolish 45 jobs held by them in 1954, but subsequently hired white workers in their place. They also accuse the all-white union of "doing nothing to protect them." Lower courts failed to act...saying that they lacked jurisdiction. The Supreme Court says the lower courts were in error, and that the charges, if proved, constitute a clear violation of the Railroad Labor Act.

~~Late this afternoon, a tornado hit the northern and western suburbs of Birmingham, Alabama...killing at least one person and injuring 12 others. The heaviest damage is reported in the industrial suburb of Ensley.~~

~~Snow up to a foot deep has fallen in parts of Iowa, Nebraska and Kansas.~~

Edward R. Murrow: November 18, 1957. 7.45 p.m.

Every top communist leader, excepting only President Tito of Yugoslavia, has been in Moscow for the 40th anniversary of the Soviet Union, and has stayed on for consultations. Many separate talks have been held in the Kremlin, and over the week end all of the visiting leaders met in formal sessions. This, then, is a summit meeting for communists comparable to the December meeting of the NATO Council.

If a meeting of such importance were being held anywhere outside the Iron Curtain, we should have been amply served with news and speculation about it. But thanks to the Moscow censorship the occasion has had only the barest mention. A final declaration will be published, but there will be no helpful information about the strains and stresses within the Communist movement. The only speculation there has been has come from Warsaw, which heard that Khrushchev was seeking to set up a new communist international to take the place of the Comintern and Cominform. Moscow observers doubt that this will come to pass, but the subject must have produced some interesting reactions.

Khrushchev has wanted a new communist international ever since he snuffed out the Cominform in his drive to bring Yugoslavia back into the satellite family. To some extent his hold in Moscow depends on his influence in the

world communist movement. He proposed a new organization last January, but Mao Tse-tung in China, Gomulka in Poland and Togliatti in Italy, all shied away. That was soon after communist solidarity had been shattered by events in Hungary. But times have changed. Possession of the inter-continental missile and the two sputniks have added enormously to Soviet prestige inside the communist family as well as abroad. The Kremlin has now more than made up what it lost in Hungary.

Both Mao and Gomulka have reasons to stand by Khrushchev at this time. He has espoused the doctrine of separate roads to socialism, which is essential to both of them. Gomulka can expect more elbow-room from Khrushchev than from any other communist leader. Mao is beholden to Khrushchev because after the death of Stalin he rushed to Peiping and put through a vast program of economic aid. Today, China is in economic difficulties and needs the friendliness of Khrushchev as badly as ever.

A year ago Mao seemed to be reaching out for leadership of world communism himself. He made important speeches and experiments along the line of gentler party rule and greater diversity in political thinking. But the experiments did not pan out. There was far too much criticism. The freedom was promptly shut off, and repressive measures were resumed.

Floods and food shortages then developed, and any pretensions to world leadership on Mao's part has been played down.

Mao arrived in Moscow just after the purge of Zhukov. He at once threw all the influence his presence could give to Khrushchev, as though his most important service to world communism was to emphasize the stability of the regime in Moscow. It had been forecast that when Mao came to Moscow, he, Gomulka and Tito would by their very attendance, represent a kind of ~~tacit alliance within the~~ hand clue communist alliance, which would give an entirely new look to the world movement. But it has not happened. Tito did not even come to Moscow. Mao is probably not going to visit Poland this trip. There is no new face to the world movement. Russian leadership, whether formally or informally, is again unchallenged.

Western governments now will study the outcome of the meetings for clues about Khrushchev's state of mind. For one thing, they want to know what he meant by his offer of East-West negotiations in his anniversary address. The question is whether he wants real negotiations, that is, on a basis of mutual concessions, or whether the price for a broad settlement has already soared out of sight. Obviously, if a new communist international is set up, that will be conclusive - the talk of negotiations was just

propaganda.

And indeed it may be doubted whether Khrushchev yet feels strong enough to make concessions to the West. A man who acquires great power within a dictatorship cannot sit back and do what he likes. He has so many enemies, active and potential, that he must continually reach out for more power, to be sure of keeping the power he already has. This is particularly true of Khrushchev. He now has the field to himself, but he has had it too short a time to have overwhelmed all his opposition in the army and industry. Consequently he is expected to bolster his position at home for the time being, and put off till later any experiments in conciliation in foreign policy.

Word for Today

When the Russians make a proposal, it is Natural that we examine it for the motive. So when Khrushchev calls for new East-West talks, we wonder what it is he really wants. Henry Ward Beecher said, "God made man to go by motives...and he will not go without them any more than a boat without steam, or a balloon without gas."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, NOVEMBER 18, 1957
7:45 - 8:00 PM EST

This is the news:

Adlai Stevenson conferred for 90 minutes with Secretary of State Dulles today, on American plans for next month's NATO "summit meeting". As he went into the meeting, Stevenson said, "I am here to make comments and be helpful, to consult amd discuss." When he came out, he said the meeting had been "very encouraging." The State Department says Mr. Stevenson has been given security clearance so that he can see secret papers.

Dr John P. Hagen, director of Project Vanguard, said today that it may be possible to launch the first full-scale American satellite in January, instead of in March. Hagen said this largely depends on whether all goes well with the small test satellites next month. Project Vanguard, he said, aas been given a new priority, "to enable us to meet our commitments."

French Foreign Minister Pineau arrived in the United States today to confer with Secretary Dulles on the Tunisian question. Pineau told a news conference that...by sending arms to Tunisia...the United States and Britain had made "a

bad preparation" for next month's meeting of NATO heads of government. He said, "If these arms should fall into the hands of Algerian rebels, French public reaction would be very strong and very bad for the Atlantic Pact." Not since World War Two, he said, had the Communist Party gained such a victory in France. Pineau discounted the idea that Russia will send arms to Tunisia if the West does not. Moscow, he said, has given assurances that it has no such plan. Pineau said that when he sees Dulles tomorrow, he will try to get a guarantee that American arms deliveries to Tunisia will be limited...and that the weapons will be employed solely in Tunisia's own defense.

In London, the British foreign secretary...Selwyn Lloyd...said today that it would have been "most unfortunate" if Tunisia had been forced to obtain arms... directly or indirectly...from the Soviet bloc. Lloyd told the House of Commons, "Tunisia, as an independent and sovereign state, is entitled to arms for the purpose of legitimate self-defense." He said the Anglo-American action..."far from being contrary to the principle of Atlantic solidarity...was designed to protect the interests of the West as a whole." There is nothing in it, he said, that would prevent France from continuing to meet Tunisia's principal weapons requirements.

Representatives of the Egyptian and Syrian parliaments...meeting in Damascus...voted unanimously today for a "federal union" between the two Arab countries. Damascus newspapers report the holding of joint maneuvers in Syria, by Syrian and Egyptian troops.

Prime Minister Ben Gurion won a vote of confidence in the Israeli parliament today on the issue of his foreign policy. The vote was 63 to 12. Ben Gurion rejected the propositon of peace with the Arabs at the expense of Israeli territory. "Peace is possible," he said, "only through negotiations with Israel as it is."

The Western powers today agreed to expand the United Nations Disarmament Commission to 25 members...as a further concession to Russia, which has demanded broader representation in any future disarmament talks. The commission currently has 12 members. Only last week, the United States went along with a plan to expand the number of member countries to 22. The General Assembly is expected to vote tomorrow on the new compromise proposal. And this time, Russia may go along.

Communist China today announced a program for de-centralizing some branches of its industry, effective January first. The segments of Chinese industry most deeply affected are the building trades, textiles, communications, and timber.

A Japanese court is expected (within the next hour) to return a verdict in the manslaughter trial of U.S. Army Specialist, William Girard. The verdict will be returned by a three-judge panel, which began hearing the case last August 26th.

The Supreme Court ruled today...in an unanimous decision...that a labor union cannot legally discriminate against its members on the basis of race. The case involves the Brotherhood of Railway and Steamship Clerks, the Texas and New Orleans Railroad, and four of its Negro employees. The four Negroes... formerly employed by the railroad in Houston, Texas...charge that the company "purported" to abolish 45 jobs held by them in 1954, but subsequently hired white workers in their place. They also accuse the all-white union of "doing nothing to protect them." Lower courts failed to act...saying that they lacked jurisdiction. The Supreme Court says the lower courts were in error and that the charges, if proved, constitute a clear violation of the Railroad Labor Act.

Every top communist leader, excepting only President Tito of Yugoslavia, has been in Moscow for the 40th anniversary of the Soviet Union, and has stayed on for consultations. This, then, is a summit meeting for communists, comparable to the December meeting of the NATO Council.

If a meeting of such importance were being held anywhere outside the Iron Curtain, we should have been amply served with news and speculation about it. But thanks to the Moscow censorship, the occasion has had only the barest mention. A final declaration will be published, but there will be no helpful information about the strains and stresses within the Communist movement.

Khrushchev has wanted a new communist international ever since he snuffed out the Cominform in his drive to bring Yugoslavia back into the satellite family. To some extent his hold in Moscow depends on his influence in the world communist movement. He proposed a new organization last January, but Mao Tse-tung in China, Gomulka in Poland, and Togliatti in Italy, all shied away. That was soon after communist solidarity had been shattered by events in Hungary. But times have changed. Possession of the intercontinental missile and the two sputniks have added enormously to Soviet prestige inside the communist family as well as abroad. The Kremlin has now more than made up what it lost in Hungary.

Both Mao and Gomulka have reasons to stand by Khrushchev at this time. He has espoused the doctrine of separate roads to socialism, which is essential to both of them. Gomulka can expect more elbow-room from Khrushchev than from any other communist leader. Mao is beholden to Khrushchev because after the death of Stalin he rushed to Peiping and put through a vast program of economic aid. Today, China is in economic difficulties and needs the friendliness of Khrushchev as badly as ever.

A year ago Mao seemed to be reaching out for leadership of world communism himself. He made important speeches and experiments along the line of gentler

party rule and greater diversity in political thinking. But the experiment did not pan out. There was far too much criticism. The freedom was promptly shut off, and repressive measures were resumed. Floods and food shortages then developed, and any pretensions to world leadership on Mao's part has been played down.

Mao arrived in Moscow just after the purge of Zhukov. He at once threw all the influence his presence could give to Khrushchev, as though his most important service to world communism was to emphasize the stability of the regime in Moscow. It had been forecast that when Mao came to Moscow, he, Gomulka and Tito would by their very attendance, represent a kind of hard core communist alliance, which would give an entirely new look to the world movement. But it has not happened. Tito did not even come to Moscow. Mao is probably not going to visit Poland this trip. There is no new face to the world movement. Russian leadership, whether formally or informally, is again unchallenged.

Western governments now will study the outcome of the meeting for clues about Khrushchev's state of mind. For one thing, they want to know what he meant by his offer of East-West negotiations in his anniversary address. The question is whether he wants real negotiations, that is, on a basis of mutual concessions, or whether the price for a broad settlement has already soared out of sight. Obviously, if a new communist international is set up, that will be conclusive - the talk of negotiations was just propaganda.

And indeed it may be doubted whether Khrushchev yet feels strong enough to make concessions to the West. A man who acquires great power within a dictatorship cannot sit back and do what he likes. He has so many enemies, active and potential, that he must continually reach out for more power, to be sure of keeping the power he already has. This is particularly true of Khrushchev. He now has the field to himself, but he has had it too short a time to have overwhelmed all his opposition in the army and industry. Consequently, he is expected to bolster his position at home for the time being, and put off till later any

experiments in conciliation in foreign policy.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But, first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: When the Russians make a proposal, it is natural that we examnine it for the motive. So when Khrushchev calls for new East-West talks, we wonder what it is he really wants. Henry Ward Beecher said, "God made man to go by motives... and he will not go without them any more than a boat without steam, or a balloon without gas."

Goodnight and good luck!

Edward R. Murrow Tues., Nov. 19, 1957

This is the news:

Secretary of State Dulles suggested today what the United States will seek to accomplish at next month's meeting of NATO heads of government. He told a news conference that this country "very likely" will open negotiations with its allies for the setting up of missile bases in various European countries. These bases would be for missiles of intermediate range. And Dulles said they can be established through executive agreements that do not require Senate approval or amendment of the Atomic Energy Act. He said the intermediate-range missiles should be ready... in operational numbers...by the end of 1959. The nuclear warheads

would remain, technically, in American hands. Dulles explained that, in event of war, President Eisenhower...as commander-in-chief...could then turn the nuclear warheads over to our allies. / The NATO countries are to be trained in the use of the American missiles. / Dulles said that he and the President will try...at next month's NATO meeting...to dispel any doubt, that the United States Strategic Air Command will react to any attack in Europe, "if the situation seems to call for it." / It is not possible, he said, to give any legal commitment.

Secretary of Defense McElroy said today that he is "extremely hopeful" that the United States will be able to start delivery of intermediate range missiles to Britain, in 1959. / (The United States and Britain made an agreement to this effect last March). / McElroy talked to reporters after a two-hour conference with President Eisenhower...in which they discussed the military budget for the next fiscal year. / He was accompanied to the President's Augusta headquarters by the Pentagon's budget expert, Wilfred McNeil. / McElroy predicted a "moderate" increase in defense spending...something around a billion dollars...and said it may be necessary, for reasons of economy, to shut down some military installations in the United States. / He said that, so far, no final budget figure

has been fixed. As to the development of missiles, McElroy said the tests of the intermediate range Jupiter and Thor have been so successful that the United States "may be on the verge of having a choice, not only of one operational I.R.B.M., but of two."

Mr. Dulles was asked...in his news conference...about the role being played by Adlai Stevenson as consultant to the Eisenhower Administration. Dulles said Stevenson was free to make any public criticism he pleased, but he--Dulles---expected that Stevenson would take into account the main goal, the strengthening of the Atlantic Alliance.

Dulles expressed regret that France feels so strongly about the delivery of arms to Tunisia by Britain and the United States. Dulles said that "up until the last few minutes" before the arms were sent, the United States and Britain had both thought France would supply weapons to Tunisia. He conceded that there was some confusion in his mind about the whole situation, and he hoped that when he met French Foreign Minister Pineau this afternoon, an understanding would be reached. They failed to settle the issue in a three-hour meeting...but agreed to TRY FURTHER. Means for preventing the arms delivered to Tunisia from falling into the hands of

the Algerian rebels were discussed.

Before seeing Pineau, Dulles conferred with the ambassadors of the four Baghdad Pact countries---Britain, Turkey, Pakistan and Iran. The nature of the meeting was not announced.

The vacation White House announces that President Eisenhower will make the third in his series of reports to the American people next Tuesday night. Mr. Eisenhower will speak from Cleveland on "The Value of International Cooperation in our Nation's Security."

~~A former defense official said today that the United States might have developed missiles faster, if there had been freer exchange of information between the armed services. The view was expressed by Dr. Clifford Furnas, former assistant secretary of defense for research and development, in testimony before a House committee investigating secrecy in government.~~

A 21-million-dollar contract for construction of an atomic-powered merchant ship was awarded today to the New York Shipbuilding Corporation of Camden, New Jersey. The contract is for the hull of the vessel. Installation and testing of the atomic power plant will be carried out under a separate 9-million-dollar contract with the Babcock and Wilcox Company.

In Paris, Premier Gaillard has won a vote of confidence on a bill granting him emergency powers for bolstering the French economy. The vote in the National Assembly was 255 to 191, with 51 abstentions. The Anglo-American arms shipments to Tunisia are believed to have contributed to Gaillard's victory. He had appealed for a vote of confidence in his government as a means of supporting "the diplomatic authority of France."

Thousands of French civil servants staged a 24-hour strike today, in support of their demand for higher pay.

Tonight...in Moscow...Premier Bulganin said that Russia will help Egypt "build up its national economy." Bulganin gave no details of the economic aid program, which he said had been requested by President Nasser. ~~"Our contributions," he said, "are selfless, based on the mutual interests of our two countries."~~

~~The Czech parliament today elected Communist Party leader Antonin Novotny as the new president of Czechoslovakia...succeeding Antonin Zapotocky, who died.~~ (NOV-OTNY)

The United Nations General Assembly voted today to expand the 12-member disarmament commission to 25 members. / Russia wanted the commission to have 32 members, evenly divided between the supporters of the Western disarmament position, and the neutral countries and the countries of the Soviet bloc. ~~The General Assembly vote...in defiance of the Russian threat to boycott future disarmament talks...was 60 to 9, with 11 abstentions.~~

Secretary of the Army Brucker today announced that the last Regular Army troops will be pulled out of Little Rock on November 27th. / He said the action is made possible by the "continuing stability" of the situation at Central High School. About 900 members of the federalized National Guard will remain on duty at Little Rock for the time being.

Edward R. Murrow: November 19, 1957. 7.45 p.m.

Because of the crisis in foreign policy, "bi-partisanship" is a word on everyone's lips in Washington these days. However, it is a word that means different things to different people. To some Republicans bi-partisanship means the Republicans making the foreign policy and the Democrats supporting it, which admittedly is a kind of bi-partisanship. To some Democrats bi-partisanship means that the Democrats have a full part in making the policy, and that both parties then support it. That is bi-partisanship of a broader kind.

There are many shades and degrees of bi-partisanship. When John Foster Dulles served as roving ambassador under President Truman, that was one degree. He was an eminent Republican, he obviously supported only what he believed in, and he was able to vouch for the policy to Republicans and make it easier for them to vote for it. He may have influenced the making of policy, but he did not actually make it. Mr. Truman and Mr. Acheson did that.

Senator Vandenberg established another degree of bi-partisanship when he joined the United States delegation at the first United Nations meeting in San Francisco. He laid down precise conditions for his co-operation. He

made sure he would participate in making policy, with freedom not to support anything he did not believe in.

The highest degree of bi-partisanship in our modern history came when President Roosevelt named Henry Stimson Secretary of War and Colonel Knox Secretary of the Navy. However, this fell far short of giving us a coalition government, which is the highest degree of bi-partisanship possible. Both Mr. Stimson and Colonel Knox came into the cabinet as individuals, and had no authorization from their party to join, nor any responsibility to the party for their subsequent actions. But they laid down precise conditions for their service. They had to have full cabinet status and free hands in running their departments, subject only to the will of the President. But even though Mr. Stimson in time had much to do in shaping policy, this was not bi-partisanship in the most complete and formal sense.

Observers in Washington are scrutinizing the precise status of Adlai Stevenson, trying to decide just what grade and shade of bi-partisanship it is going to be. Obviously it will not be on a par with the status of Mr. Stimson or Colonel Knox, nor even of Senator Vandenberg. Mr. Stevenson, not having been asked to help make American policy has stated clearly he will not undertake to make it. Whether his status is higher or lower than

that of Mr. Dulles under Truman is not clear. Mr. Dulles had a full-time, paid job. Mr. Stevenson is volunteering his services for a few weeks. Mr. Stevenson, however, is a more important person in the Democratic hierarchy than Mr. Dulles was in the Republican Party in the Truman days, and his influence with Democrats and public opinion generally is correspondingly greater.

But what is clear is that Mr. Stevenson's status has been kept below the bi-partisanship symbolized by Mr. Stimson and Colonel Knox and by Senator Vandenberg. This certainly has been deliberate. If he was to have been asked into the Administration to help make foreign policy, the President would have had to invite him. After all, he is a kind of ex-officio head of the Democratic Party. But the President issued no invitation at all. When Mr. Stevenson came to Washington - at Mr. Dulles' invitation - he did receive a pleasantly informal letter from the President, but it did not hint that an offer might be coming that would raise Mr. Stevenson's status. Instead, the President said that he would be seeing Mr. Stevenson on his return as undoubtedly they would find themselves attending the same meeting.

Mr. Stevenson's friends are not happy about the limited role assigned to him, but they think he has gone just as far as the limited scope accorded

him permitted. He has shown that he is thoroughly aware of the urgency of the crisis and is ready to serve his country in a non-partisan way. If he has stated that he is not making policy himself, his friends say he is merely making it clear that he has not been asked to. And if asked to, the President would have to do the asking.

The usual kind of bi-partisanship in foreign policy practised by the Eisenhower Administration consists of the President consulting with Democratic leaders from Congress as well as Republicans. They come to the White House and are told what the policy is and why it is being adopted. Very rarely these White House visitors can say "No", but usually they listen, ask questions and are given explanations. That, I repeat, is a limited kind of bi-partisanship. Bringing in Mr. Stevenson has widened the limit, but not much. The foreign policy in the main will still be Republican policy which Mr. Stevenson and his fellow-Democrats are being asked to support.

Word for Today

We were talking about political bi-partisanship. Mark Twain said, "St. Patrick had no politics. His sympathies lay with the right---that was politics enough. When he came across a reptile, he forgot to enquire whether he was a Democrat or Republican...but simply exalted his staff and let him have it."

Goodnight and good luck!

Bringing in Mr. Stevenson has widened the limit, but not much. The foreign policy in the main will still be Republican policy which Mr. Stevenson and his fellow-Democrats are being asked to support.

This is Ed Murrow. I'll be back in a moment with the Word for Today., But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: We were talking about political bi-partisanship. Mark Twain said, "St. Patrick had no politics. His sympathies lay with the right---that was politics enough. When he came across a reptile, he forgot to enquire whether he was a Democrat or Republican...but simply exalted his staff and let him have it."

Goodnight and good luck!

Edward R. Murrow Wed., Nov. 20, 1957

This is the news:

The State Department said today that, henceforth, the United States will seek...in the matter of arms shipments to Tunisia..."to work out procedures which will allay French fears." A department spokesman said this agreement in principle is "foreseen" as the result of yesterday's meeting between Secretary of State Dulles and French Foreign Minister Pineau. France is concerned over the possibility that arms received by Tunisia may eventually come into the possession of Algerian rebel forces. The State Department spokesman said it was agreed in principle that weapons sent to the Tunisians "should be for their own internal security." But he

denied that any "plan" has been agreed upon. He said he knew of "no immediate plans." Foreign Minister Pineau conferred this morning with Adlai Stevenson, who is serving the Administration as consultant, preparatory to next month's NATO "summit" meeting. And ~~this~~ this afternoon, Pineau conferred for nearly two hours with Secretary of Defense McElroy, and other high officials of the Defense Department. He said afterward that they reviewed most of the problems...military and scientific...which will be examined at the NATO conference, and that they reached "a high degree of unity" on those matters which were discussed.

The permanent NATO Council met in Paris today, to take up the problem of arms deliveries to Tunisia. No progress was made. And the council decided to recess until next week, in view of the discussions taking place elsewhere.

The Defense Department tonight announced the creation of a new office to direct the development of nuclear power "for the propulsion of aircraft and missiles." The new office will be headed up by Major General Donald J. Keirn, who has been in charge of Air Force work in the development of nuclear power plants. The new centralized program will be carried out jointly by the Atomic Energy Commission and the Department of Defense. There has been a demand...on the part of some members of Congress...that the United States step up its effort to produce the first atomic-powered plane. And Deputy Defense Secretary Quarles promised some time ago that steps would be taken to reorganize the atomic aircraft project.

Secretary of Defense McElroy testified today before a House military appropriations committee which has been looking into the American missile program. After testifying, behind closed doors, McElroy told reporters that the development of the intermediate range ballistic missile is "on schedule". He said, "I believe we are in good shape." Committee Chairman Mahon commented that the "prevailing view" is that we are lagging behind Russia in the development of both the long-range <u>and</u> intermediate range missiles. He also charged that the Administration had withheld

→

some of the money appropriated by Congress for missiles. As to whether some funds may have been misused, McElroy conceded that "almost any program costing this much money could have been done better." Tonight, William Holaday, the director of missile development, disputed Mahon's statement that Russia is ahead of the United States in developing the intermediate range missile, as well as the I.C.B.M. But Chairman Mahon insisted he has information indicating to him "very positively" that such is the case.

The American Embassy in Cairo said today that the United States is giving Egypt a 600-thousand-dollar economic aid payment. The money is earmarked for rural development. And the payment comes on the heels of yesterday's announcement that Russia has agreed on an economic aid program for Egypt. American aid to Egypt was suspended after President Nasser nationalized the Suez Canal.

In the United Nations today, Saudi Arabia charged that, by supporting Israel, the West "is scoring failures and retreats." He called for the prohibition of Jewish immigration into Israel and the repatriation of all Arab refugees to the homes from which they fled during the Arab-Israeli War of 1948.

TheUnited Nations Political Committee today opened debate on the question of West New Guinea. Both Indonesia and the Netherlands claim sovereignty over the territory comprising some 130-thousand square miles. Nineteen Afro-Asian countries are sponsoring a resolution "inviting" the parties to find a solution in conformity with the principles of the United Nations Charter. The Indonesian foreign minister told the political committee that Dutch refusal to negotiate constitutes "a dangerous attitude." (President Sukarno of Indonesia has threatened to use force, if necessary). The representative of the Netherlands reiterated that his country "will not comply with any Indonesian demands for annexation," or enter into any negotiations concerning the future status of the island territory.

Britain announced today that it will build a series of atomic power stations in Italy.

Secretary of the Interior Seaton said today that steps have been taken to open up 20-million acres of public land in Alaska for mineral and mining claims. He made the announcement after conferring with Governor Stepovich of Alaska, who said the land has "great potential for gas and oil development."

Secretary of State Dulles said tonight that an attack on NATO forces anywhere would bring an American response "comparable to Pearl Harbor." The decision whether to respond to such an attack, he said, would rest with commanders in the field.

cut Seaton?

Edward R. Murrow: November 20, 1957. 7.45 p.m.

There are signs that the making of policy about missiles for our NATO allies is not far along. Defense Secretary McElroy said this week that treaties would be necessary before missiles would be placed in Western Europe, and Secretary Dulles had to correct him yesterday. Formal treaties will not be needed, and the matter can be handled by agreements. But Mr. Dulles himself was uncertain whether we have missiles with nuclear warheads in Canada. At first he said he thought we had, then left it that they are either there or in position to be quickly put there.

Since our medium-range missiles are not yet in production, and shipment cannot be anticipated before the end of next year, there is time for everybody in the Administration to become familiar with the problem. But certain topics are likely to come up at the NATO meeting in December which invite discussion.

Mr. Dulles said that we do not intend to start off negotiating with individual NATO countries about missile bases on the Continent, but will decide matters first through General Norstad, the NATO Commander. As Commander he will say where bases have the greatest military value, and negotiations with the appropriate governments will come at the end and not

the start. But we already have negotiated with Britain, and did not do it after consultation with General Norstad. And this gives rise to the idea that we are turning NATO into an alliance dominated by the British and ourselves. The French are sensitive on this point, which has been emphasized by the United States and Britain having joined in delivering arms to Tunisia. Foreign Minister Pineau is here in part to claim France's full share in Western policy. That may also be the motive that is bringing Herr von Brentano to Washington from Bonn.

But Europeans are sensitive about another point. They know that our missile bases invite attack or retaliation by Soviet missiles and air power. And they feel more and more helpless about being immersed in a war which they have had no voice to prevent. Secretary Dulles tried yesterday to allay any fears by our allies that we might not use our strategic air power against the Soviet Union if a Russian attack in Europe did not actually involve our own forces. That may worry some people, but more are worried over the changing nature of warfare. Instead of war beginning in a tempo permitting inter-governmental consultation, it is getting to be a push-button business, in which the President of the United States can immediately throw all NATO countries into the throes of nuclear warfare. We propose to

encourage our continental allies to train men in handling dummy missiles, so that they can use them if war comes, but this hardly gives them a feeling of being masters of their own destiny.

Many Europeans are talking of the real need of NATO solidarity, that is, not simply Anglo-American solidarity. And since in the missile age, there may never be time to consult the NATO council about going to war, they think the solidarity must start with policy-making. This opens a pandora's box of difficulties. The French, who want a say in ~~XXXXXXXX~~ ~~XXXXXXX~~ American defense policy, never have given the NATO allies a say in Algerian policy, which also affects the strength and security of NATO. There would be a problem dealing frankly and freely with Iceland, where two members of the government are communists. And there is the problem of the basic concept of sovereignty, which Mr. Dulles raised yesterday, in saying that one country never can be given the right to veto the right of another country to defend itself.

Real solidarity in policy-making pre-supposes real unity, and while the trend in Europe is in that direction, as witness the coal and steel community and the common market, no serious proposal has been made to match Winston Churchill's offer of common citizenship to France in 1940. On the

contrary, this is the hour of half-measures, as the London Economist points out. "In the long perspective of years men may adjust themselves to the idea of total unity and truly common policies" it writes, "but today the best is the enemy of the good, and in clutching at that shadow, we may lose the substance out of our grasp." What half-measures can pull NATO together The Economist does not specify. But obviously it does not expect the December meeting to be a turning-point in history. But it will measure the distance between what nations say they want, and what they are prepared to do.

Word for Today

It would seem that we must still go a far piece before we have a [redacted] policy for setting up missile bases in concert with our European allies. [redacted] Cervantes expressed the simple truth a long time ago when he said, "It's a long step from saying to doing." And it was also Cervantes who [redacted] observed, "The man who is prepared has his battle half fought."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, NOVEMBER 20, 1957
7:45 - 8:00 PM EST

This is the news:

The State Department said today that, henceforth, the United States will seek...in the matter of arms shipments to Tunisia..."to work out procedures which will allay French fears." A department spokesman said this agreement in principle is "foreseen" as the result of yesterday's meeting between Secretary of State Dulles and French Foreign Minister Pineau. France is concerned over the possibility that arms received by Tunisia may eventually come into the possession of Algerian rebel forces. The State Department spokesman said it was agreed in principle that weapons sent to the Tunisians "should be for their own internal security." But he denied that any "plan" has been agreed upon. He said he knew of "no immediate plans." Foreign Minister Pineau conferred this morning with Adlai Stevenson, who is serving the Administration as consultant preparatory to next month's NATO "summit" meeting. And this afternoon, Pineau conferred for nearly two hours with Secretary of Defense McElroy and other high officials of the Defense Department. He said afterward that they reviewed most of the problems...military and scientific...which will be examined at the NATO conference tnd that they reached "a high degree of unity" on those matters which were discussed.

The permament NATO Council met in Paris today, to take up the problem of arms deliveries to Tunisia. No progress was made. And the council decided to recess until next week in view of the discussions taking place elsewhere.

The Defense Department tonight announced the creation of a new office to direct the development of nuclear power "for the propulsion of aircraft and missiles." The new office will be headed up by Major General Donald J. Keirn, who has been in charge of Air Force work in the development of nuclear power plants. The new centralized program will be carried out jointly by the Atomic Energy Commission and the Department of Defense. There has been a demand... on

the part of some members of Congress...that the United States step up its effort to produce the first atomic-powered plane. And Deputy Defense Secretary Quarles promised some time ago, that steps would be taken to reorganize the atomic aircraft project.

Secretary of Defense McElroy testified today before a House military appropriations committee which has been looking into the American missile program. After testifying, behind closed doors, McElroy told reporters that the development of the intermediate range ballistic missile is "on schedule." He said, "I believe we are ingood shape." Committee Chairman Mahon commented that the "prevailing view" is that we are lagging behind Russia in the development of both the long-range and intermediate range missiles. He also charged that the Administration had withheld some of the money appropriated by Congress for missiles. As to whether some funds may have been misused, McElroy conceded that "almost any program costing this much money could have been done better." Tonight, William Holaday, the director of missile development, disputed Mahon's statement that Russia is ahead of the United States in developing the intermediate range missile, as well as the I.C.B.M. But Chairman Mahon insisted he has information indicating to him "very positively" that such is the case.

The American Embassy in Cairo said today that the United States is giving Egypt a 600-thousand-dollar economic aid payment. The money is earmarked for rural development. Amd the payment comes on the heels of yesterday's announcement that Russia has agreed on an economic aid program for Egypt. American aid to Egypt was suspended after President Nasser nationalized the Suez Canal.

In the United Nations today, Saudi Arabia charged that, by supporting Israel, the West "is scoring failures and retreats." He called for the prohibition of Jewish immigration into Israel and the repatriation of all Arab refugees to the homes from which they fled during the Arab-Israeli War of 1948.

The United Nations Political Committee today opened debate on the question

of West New Guinea. Both Indonesia and the Netherlands claim sovereignty over the territory comprising some 130-thousand square miles. Nineteen Afro-Asian countries are sponsoring a resolution "inviting" the parties to find a solution in conformity with the principles of the United Nations Charter. The Indonesian foreign minister told the political committee that Dutch refusal to negotiate constitutes "a dangerous attitude". (President Sukarno of Indonesia has threatened to use force, if necessary.) The representative of the Netherlands reiterated that his country "will not comply with any Indonesian demands for annexation," or enter into any negotiations concerning the future status of the island territory.

Britain announced today that it will build a series of atomic power stations in Italy.

Secretary of the Interior Seaton said today that steps have been taken to open up 20-million acres of public land in Alaska for mineral and mining claims. He made the announcement after conferring with Governor Stepovich of Alaska, who said the land has "great potential for gas and oil development."

Secretary of State Dulles said tonight that an attack on NATO forces anywhere would bring an American response "comparable to Pearl Harbor." The decision whether to respond to such an attack, he said, would rest with commanders in the field.

There are signs that the making of policy about missiles for our NATO allies is not far along. Defense Secretary McElroy said this week that treaties would be necessary before missiles would be placed in Western Europe, and Secretary Dulles had to correct him yesterday. Formal treaties will not be needed, and the matter can be handled by agreements. But Mr. Dulles himself was uncertain whether we have missiles with nuclear warheads in Canada. At first he said he thought we had, then left it that they are either there or in position to be quickly put there.

Since our medium-range missiles are not yet in production, and shipment

cannot be anticipated before the end of next year, there is time for everybody in the Administration to become familiar with the problem. But certain topics are likely to come up at the NATO meeting in December which invite discussion.

Mr. Dulles said that we do not intend to start off negotiating with individual NATO countries about missile bases on the Continent, but will decide matters first through General Norstad, the NATO Commander. Ss Commander, he will say where bases have the greatest military value, and negotiations with the appropriate governments will come at the end and not the start. But we already have negotiated with Britain, and did not do it after consultation with General Norstad. And this gives rise to the idea that we are turning NATO into an alliance dominated by the British and ourselves. The French are sensitive on this point, which has been emphasized by the United States and Britain having joined in delivering arms to Tunisia. Foreign Minister Pineau is here, in part, to claim France's full share in Western policy. That may also be the motive that is bringing Herr von Bretano to Washington from Bonn.

But Europeans are sensitive about another point. They know that our missile bases invite attack or retaliation by Soviet missiles and air power. And they feel more and more helpless about being immersed in a war which they have had no voice to prevent. Secretary Dulles tried yesterday to allay any fears by our allies that we might not use our strategic air power against the Soviet Union if a Russian attack in Europe did not actually involve our own forces. That may worry some people, but more are worredd over the changing nature of warfare. Instead of war beginning in a tempo permitting inter-governmental consultation, it is getting to be a push-button business, in which the President of the United States can immediately throw all NATO countries into the throes of nuclear warfare. We propose to encourage our continental allies to train men in handling dummy missiles, so that they can use them if war comes, but this hardly gives them a feeling of being masters of their own destiny.

Many Europeans are talking of the real need of NATO solidarity, that is, not simply Anglo-American solidarity. And since in the missile age, there may never be time to consult the NATO council about going to war, they think the solidarity must start with policy-making. This opens a pandora's box of difficulties. The French, who want a say in American defense policy, never have given the NATO allies a say in Algerian policy, which also affects the strength and security of NATO. There would be a problem dealing frankly and freely with Iceland, where two members of the government are communists. And there is the problem of the basic concept of sovereignty, which Mr. Dulles raised yesterday, in saying that one country never can be given the right to veto the right of another country to defend itself.

Real solidarity in policy-making pre-supposes real unity, and while the trend in Europe is in that direction, as witness the coal and steel community and the common market, no serious proposal has been made to match Winston Churchill's offer of common citizenship to France in 1940. On the contrary, this is the hour of half-measures, as the London Economist points out. "In the long perspective of years, men may adjust themselves to the idea of total unity and truly common policies" it writes, "but today the best is the enemy of the good, and in clutching at that shadow, we may lose the substance out of our grasp." What half-measures can pull NATO together the Economist does not specify. But obviously it does not expect the December meeting to be a turning-point in history. But it will measure the distance between what nations say they want, and what they are prepared to do.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: It would seem that we must still go a far piece before we have a policy for setting up missile bases in concert with our European allies. Cervantes expressed the simple truth a long time ago when he said, "It's a long step from

saying to doing." And it was also Cervates who observed, "The man who is prepared has his battle half fought."

Goodnight and good luck!

Edward R. Murrow Thurs., Nov. 21, 1957

This is the news:

Vice President Nixon said today that the United States is making a "massive effort" to catch up with Russia in missile development. He said, "If we continue to devote proper effort...and adequate funds...there is no reason why the United States and its allies need stay behind." Nixon blamed the American lag on "a calculated decision by military people" in the period between 1945 and 51...the period of the Truman Administration. The reason, he said, does not lie in any political decision. Rather, the military had to decide how to use the limited amount of money available and chose to concentrate on long-range strategic bombers. Nixon said the Soviet Union concentrated "to a certain extent on

long-range bombers, but also on missiles at the same time." The reason for this country's lag, he said, is primarily because the United States got a late start. Nixon warned that the United States must make "a far greater effort" to train scientists...but, he said, we don't want to get in a position of becoming "a pale carbon copy of the scientific materialists in Moscow." He also said the United States must continue its program of economic and military aid.

The House Military Appropriations Subcommittee heard more testimony today on the present state of our missiles program, and its chairman...Representative Mahon...said afterwards, "The experts feel the "hardware stage" is now due, and I agree." He said he was encouraged by the "climate" in the committee room today. The procurement of intermediate range missiles, he said, should now be "put into high gear."

The Navy missile director, Rear Admiral Clark, said today that the Navy is exploring "every possible way" to advance the scheduled operational date of the Polaris...a ballistic missile of 15-hundred-mile range. The operational date is said, unofficially, to be sometime in 1962. It appears, Clark said, that the time-table can be "appreciably" advanced.

VINE

Lieutenant General C.S. Irvine, of the Air Force, said today that "active research" is underway with regard to both "manned ballistic vehicles and so-called space platforms." He did not go into details.

And tonight the Defense Department announced plans for building a multi-million-dollar missile site near Cheyenne, Wyoming. Construction, it said, will start in the middle of 1958. ~~The project is to cost 65-million dollars. And there is speculation that intercontinental ballistic missiles may be launched from this base. The Defense Department says only that the base is "required to support the missile program."~~

~~The State Department confirmed today that Adlai Stevenson has been sworn in as a 50-dollar-a-day consultant on foreign policy. A department spokesman said Stevenson was sworn in yesterday in a private ceremony.~~

Secretary of State Dulles said today...in Chicago...that the invitation to ~~the Democratic leader~~ Adlai Stevenson to serve as consultant related only to preparation for the NATO "summit" meeting in Paris next month. Dulles added that he hopes Stevenson will be willing to testify at congressional hearings ~~dealing with legislation~~ on legislation growing out of the NATO conference, if Stevenson agrees that the legislation should be passed.

President Eisenhower flew back to Washington today, after a one-week vacation in Augusta, Georgia. Associates of the President report him "much refreshed." ~~Tomorrow, he will hold a meeting with his cabinet.~~

Secretary of the Treasury Anderson said today that the Administration will make "every effort" to stay within the national debt limit of 275-billion dollars. But he indicated that the ceiling may have to be raised. Anderson was testifying before the House Small Business Committee---his first appearance before a congressional group since becoming a cabinet member. He called a balanced budget "important to the national welfare"...said he didn't want to "minimize" that importance...but, at the same time, ~~[illegible]~~ couldn't say that the budget will be balanced under the present circumstances. ~~The Treasury secretary said [illegible] [illegible]~~ the country needs "a strong, adequate defense and a strong, virile economy." ~~And as far as the economy is concerned, he said he regards~~ the Federal Reserve Board action...~~lowering the discount rate for some of its member banks~~..."a step in the right direction." ~~(The effect of the~~ action ~~was to~~ make for easier credit).

Another member of the cabinet...Secretary of Labor Mitchell...told a news conference today that he believes the steady 13-month rise in the →

cost of living "has come to an end." The consumer price index for October will be released tomorrow, and Mitchell said it will show no basic change. He foresees an increase in unemployment the first of next year but does not believe that it will be serious.

British Prime Minister Macmillan will fly to Paris on Monday for a meeting with French Premier Gaillard. The French government had invited Macmillan "in view of recent developments in the situation in North Africa" and because of the upcoming NATO conference. The question of Anglo-American arms shipments to Tunisia will be discussed.

~~Talks between Britain and the Arab kingdom of Yemen on the Aden border dispute ended today without agreement. The conversations had been going on in London for 10 days.~~

Jordan charged today that Israeli forces opened fire on the Arab sector of Jerusalem and kidnaped a Jordanian worker about 400 yards inside Arab territory. It said that unless the worker is returned within 24 hours, Jordan will "take the necessary steps to safeguard her rights."

Russia tonight announced an agreement with Red China for greater cultural cooperation between the two countries. The announcement

makes no mention of the recent "summit" meeting of Communist leaders in Moscow. The Communist Daily Worker in London says the heads of Communist states arrived at "an identity of views on all questions." It says they agreed that Socialist revolutions should be achieved "by peaceful means"...that there is a real possibility of averting war, but that "should the imperialists unleash a war, then imperialism is doomed." This, according to the London Daily Worker, will be the substance of the Communist communique on the conference.

My colleague Daniel Schorr, in Moscow, has prepared a report on Soviet reaction to recent comments from abroad...comments ranging from how we regard Sputniks, to the personal appearance of the Russian man on the street. For that report, we switch now to Moscow.

(Tape runs 5:00
Ends on cue: "--to ERM in NY.")

That was Daniel Schorr, reporting from Moscow on Russian reactions to our reaction to the Russians.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

King Mohammed of Morroco, and President Bourguiba of Tunisia, tonight offered their good offices for ending the Algerian revolt. The offer was made to France and to Algerian rebel leaders, after two days of talks at Rabat.

There is a natural disposition on the part of politicians..of both parties..to make political capital out of our lag in the missile race.. It might be well to remember something Winston Churchill said ..shortly after he assumed power in the dark days of 1940...he advised his fellow countrymen not to spend too much time debating the past..lest they loose the future.....

good night and good luck

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Thursday, November 21, 1957
7:45 - 8:00 P.M.

MURROW: Russia tonight announced an agreement with Red China for greater cultural cooperation between the two countries. The announcement makes no mention of the recent Summit meeting of Communist leaders in Moscow. The Communist Daily Worker in London says "the heads of Communist States arrived at an identity of views on all questions" it says, "they agreed, that Socialist revolutions should be achieved by peaceful means and that there is a real possibility of averting war, but that should the imperialist's unleash a war, then imperialism is doomed."

My colleague Dan Schorr in Moscow has prepared a report on Soviet reaction to recent comments from abroad. Comments ranging from how we regard Sputniks to the personal appearance of the Russian man on the street.

For that report we switch now to Moscow;

SCHORR: When an American official made the hasty comment that Sputnik #1 was a chunk of iron hurled into the sky, the Soviets simply hooted and chortled at such ignorance, for they knew that the Sputnik was a complex and marvelous piece of machinery.

When American educational authorities warned that Russia is doing a better job of training engineers and experts, the Soviets react with a calm "of course" attitude. It was something they had known all along, although there are some defects in Soviet higher education, one of them, how unqualified students buy their way into universities and institutes...now the subject of a sharp campaign in the Soviet press.

Of all the Western reactions to the Sputniks, there is one that has touched a sensative nerve; the charge that Russia's scientific and military achievements were accomplished by crash programs,

taken as it were out of the hides of the people and that the price is lower living standards. This charge has brought a storm of denial and denounciation, indicating how sensative the Soviets are. Izvestia the government organ calls it "slanderous" and the search that such a missile would have been inconceivable without a highly developed industry.

Trud, the trade union organ denies that the cost was privation for the Soviet consumer. It says "the Soviet people live in-comparably better then 40 years ago" and notes for example, that Russia produces twice as much sugar as the United States, although it does not mention sugar imports or compare the per capita consumption of sugar.

Today the Soviet press reports that consumer buying in the first ten months of this year was 65 billion rubles more then the same period last year. But, the increase is attributed mainly to food rather then durable goods like clothing and appliances. The charge of slander has been hurled at Mrs. Eleanor Roosevelt quoted in the Soviet press as saying "that she saw no well dressed or smiling people in the Soviet Union." This reporter can vouch for the fact that among the people of this country there are the well dressed and Russians can often be seen smiling.

The Soviets tend to answer the charge of lagging living standards by per-centage increases in production and income rather then by absolute comparisons with other countries, and also by rosy promises for the future. The papers report new products being developed for the gadget hungry masses, new kinds of television sets and new spring operated shaver, which many hope will work better then the Soviet electric shaver and also Moscow's first movie with a wide parabolic screen.

But Party Chief Khrushchev admitted in his three hour speech to the Supreme Soviet, November 6th, that there are contidictions between the growing requirements of the people and a still

limited material and technical base from which to satisfy them. Contridictions, which he said, are being overcome. These contridictions are reflected in the Soviet press. Pravda today denounces short comings in housing construction in a front page editorial. Yesterday, Pravda excoriated a scandalous shortage of restaurants in Pushkin and their skimpy menus. The press reports that it's hard to by ski's and ice skates because the plan for these items was not fulfilled.

Recently Izvestia reported readers complaining that they couldn't buy 15 watt 25 watt electric light bulbs. That the garment industry wasen't producing enough sizes and lengths were limited to short and tall. There's no doubt that while food consumption has increased greatly, the supply of durable goods is spotty. The situation that Khrushchev, with his fine feeling for (indistinct) calls a "contridiction between requirements and a limited material and technical base."

But let noone say that this contridiction might be eliminated faster if Russia weren't concentrating on Sputniks and intercontinental missiles. The Soviet citizen is supposed to be more thrilled by news of an atomic icebreaker than a pair of ice skates on his feet. More encouraged by Sputniks in the sky than pie on the table in Pushkins. And whatever the shortages, the Soviet press thunders that Sputniks have not been achieved at the price of living standards. That Comrade is slander!

Now back to Ed. Murrow in New York.

MURROW: That was Dan Schorr reporting from Moscow.

Ed. Trans. N.M.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, NOVEMBER 21, 1957
7:45 - 8:00 PM EST

This is the news:

Vice President Nixon said today that the United States is making a "massive effort," to catch up with Russia in missile development. He said, "If we continue to devote proper effort...and adequate funds...there is no reason why the United States and its allies need stay behind." Nixon blamed the American lag on "a calculated decision by military people" in the period between 1945 and 51...the period of the Truman Administration. The reason, he said, does not lie in any political decision. The situation that Khrushchev, with his fine feeling for (indistinct) calls a "contradiction between requirements and a limited material and technical base."

But let none say that this contradiction might be eliminated faster if Russia weren't concentrating on Sputniks and inter-continental missiles. The Soviet citizen is supposed to be more thrilled by news of an atomic icebreaker than a pair of ice skates on his feet. More encouraged by Sputniks in the sky than pie on the table in Pushkins. And whatever the shortages, the Soviet press thunders that Sputniks have not been achieved at the price of living standards. That Comrade is slander!

Now back to Ed Murrow in New York

MURROW: That was Daniel Schorr, reporting from Moscow on Russian reaction to our reaction to the Russians.

King Mohammed of Morroco, and President Bourguiba of Tunisia, tonight offered their good offices for ending the Algerian revolt. The offer was made to France and to Algerian rebel leaders after two days of talks at Rabat.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: There is a natural disposition on the part of politicians... of both parties...to make political capital out of our lag in the missile race. It might be well to remember something Winston Churchill said...shortly after he assumed power in the dark days of 1940...he advised his fellow countrymen "not to spend too much time debating the past...lest they loose the future.

Good Night and Good Luck!

Edward R. Murrow Fri., Nov. 22, 1957

This is the news:

It was revealed today that the Air Force has fired at least two objects---about the size of small ball-bearings---many thousands of miles into outer space. An Air Force physicist, Mr. Maurice Dubin, said the two artificial meteorites were fired from the nose of an Aerobee rocket from an altitude of 54 miles and that they probably reached a maximum velocity of 40-thousand miles an hour. Mr. Dubin said it is "98 percent probable" that they escaped the pull of the earth's gravity. If they were drawn toward the face of the sun, it means that Man...for the first time...may have penetrated inter-planetary space. The Aerobee rocket was fired from a launching site in New Mexico on October 16th.

But the "shot" was not announced until now because scientific confirmation of the success of the experiment was received only a few days ago. Actually, about a hundred aluminum pellets were fired from the tip of the rocket...but the scientists were able to establish what happened to only two of them. Astronomers at Mount Palomar, 600 miles away, say the explosion was brighter than any planet or star. The Air Force says the "shot" was a scientific endeavor...and presumably that is why word of it has come first from a scientific source.

British astronomers reported tonight that the rocket carrier for the first satellite launched by Russia "is rapidly approaching the atmosphere." It may come down, they said, in a matter of hours, AND DISINTEGRATE.

Senate Democratic Leader Johnson said today that the American missile program must be speeded up. "Information available to us," he said, "indicates clearly that our present target dates are far too modest and not adequate to the nation's needs." Republican Senator Bridges agreed. Johnson is chairman of the Senate committee that will start hearings next week on the state of American preparedness in the missiles field. Bridges is the senior Republican member of that committee.

President Eisenhower met with his cabinet for nearly three hours today...and then presided at a meeting of the National Security Council. News Secretary Hagerty told reporters he "would think" the defense department budget was discussed. / Hagerty would not comment on the New York Times story that the Security Council has approved plans for producing the intermediate range Thor missile developed by the Air Force. (Production, The Times said, would be subject to the Defense Department spending schedule). Hagerty also declined comment on suggestions...in various quarters...that Dr. Robert Oppenheimer be called back into government service. Dr. Oppenheimer, who helped develop the A-bomb, was denied security clearance by the Atomic Energy Commission in 1954. The action was taken because of past associations...not because of any disloyalty. Thomas E. Murray...who voted for denial of clearance when he was a member of the A.E.C....said this week that he would "not be at all displeased" if Oppenheimer were reinstated.

The United States and Britain announced today that they have a close co-operative arrangement for sharing information about their efforts to tame the H-Bomb reaction for peaceful purposes. The statement said, "comparative observations made in the news recently on the British and American programs have been both unfortunate and confusing."

A separate statement issued in London said "it is seriously misleading to suppose one country has outpaced the other." ~~XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX~~ The statement adds: ~~"temperatures have been reached in~~ the controlled thermo-nuclear experiments ~~in the two countries~~ that suggest the achievement of neutrons from thermo-nuclear reactions, but more experimental ~~work will be necessary~~ to establish ~~this as a~~ fact.

Neither statement denies previous reports that it was the British who made the limited break-through. ~~These reports are merely~~ labelled "unfortunate and ~~confusing~~" and "seriously misleading."

The United Nations General Assembly today authorized the spending of an additional 38 and a half million dollars to maintain its emergency force in the Middle East through 1958. The vote was 51 to 11, with 19 abstentions. Russia voted against the resolution...and served notice that it will pay nothing toward maintenance of the United Nations force. So far this year, the emergency force has run 18-million dollars into the red.

Jordan says that two Israelis...dressed in khaki uniforms... were killed yesterday, 12 miles inside Jordanian territory. It says the Israelis were intercepted by Jordanian border guards.

Jordan claimed yesterday that Israeli forces kidnaped a Jordanian farmer...and gave Israel 24 hours to return the farmer to Jordanian territory. The ultimatum has expired. And a dispatch from Amman, the capital of Jordan, says the farmer has not been returned.

Seventeen members of the Syrian parliament tried to enter Lebanon today... but were turned back by security forces. Lebanon gave no official reason for the action. And Egyptian authorities refused to let a Jordanian passenger plane land at the Cairo airport. Again, no reason was given.

The Yugoslav ambassador in Moscow said tonight that Yugoslavia did not sign the communique issued after the Communist "summit" conference "because we do not agree with it." / The communique...issued last night... called for Communist world unity. It described Russia as "the first and mightiest socialist power"...and revived the idea of a popular front / to take over the capitalist countries without war. The communique...signed by 11 Communist countries, including China, also accused the United States and other so-called "imperialists" of plotting against the independence of under-developed peoples. Our State Department today described the declaration as "full of vast distortions." / And Yugoslavia is publishing its own version---minus all attacks on the United States.

In Cuba, the Army today reported 46 rebels killed in a series of small battles in Oriente Province. Government casualties were listed as seven killed and 10 wounded.

The teamsters president-elect, James Hoffa, went on trial in New York federal court today on wiretap charges. Most of the day was devoted to selection of a jury.

The government announced today that the cost of living held steady in October for the first time in 14 months. The consumer price index for October was the same as for September...primarily because of lower prices for food. However, the index for September stood at a record high. And the average factory worker now has about 3 percent less buying power than he had a year ago.

Edward R. Murrow: November 22, 1957. 7.45 p.m.

Admiral Hyman Rickover is best known to the public as the man who built the atomic submarine Nautilus, in the face of opposition and scepticism. He wears two hats, works for the Navy and the Atomic Energy Commission; runs the most unorthodox civilian-military establishment in this or any other country; has military officers taking orders from civilians; and his real concern is not so much nuclear submarines or atomic power reactors, as it is education. The little Admiral who respects ability more than authority, loosed off another blast in a speech at Detroit today. He contended that Sputnik's launching device "blasted the comfortable conviction that only in an atmosphere of personal independence and political liberty can science and scientists flourish." It did greatest damage to our trust in the American educational system, up to now almost as sacrosanct as motherhood. The Admiral left no doubt that in his opinion this shock was a very good thing. He wants us to "rise up in righteous anger" and do something about the state of education in this country.

Rickover analyzes at length the Russian educational system, the rewards they provide for intellectual excellence; points out that Russia has put a larger percentage of her smaller national income into public

education than we have. "It is difficult for us to understand the intense longing for education - any kind of education - of under-developed people". And Rickover says: "Russia appears to have found a way of allowing superior minds freedom in the field of their special competence, while denying them the right of political criticism."

"Faced with this formidable and ruthless adversary, who has openly promised to "bury us", and who grows daily in industrial and military might, what are we to do?" Rickover attempts to answer the question; points out that we spend as much money on advertising as we do on all of our primary and secondary public schools put together. He thinks we had better stop calling scientists "long-hairs, egg-heads, and little men with beards". He contends that all European secondary education is superior to ours, (and few educators will disagree with him on that). European schools are neither social clubs nor finishing schools. They seek to equip the child with all the intellectual tools he can handle; whereas we in this country have no set standards either for admission or graduation.

Rickover says that Russia has been more realistic than we in education, and less dominated by political dogma, strange as this may sound. She was able to use the European educational system because she could readily see

that methods of teaching a subject like French or Physics were basically non-political, hence it was wise to copy the best methods, no matter who had devised them. And he says: "When a country with a much lower living standard than ours spends a greater percentage of her income on education, it is time we paused and reflected."

One of Rickover's main complaints about our educational system is that there is no national standard for the high school diploma. It is granted for educational efforts so dissimilar as to be valueless in judging a graduate's competence. Admiral Rickover contends we must devise a way to introduce uniform standards into American education. He thinks it would be best to set up a private agency, a council of scholars, which would set a national standard for the high school diploma, as well as for the scholastic competence of teachers. High schools accepting this standard would receive official accreditation somewhat on the order of the accreditation given medical schools and hospitals. Community pride would become a factor -- parents would have a real yardstick to measure their schools. If the local school continued to teach such pleasant subjects as life adjustment, and How to Know When You are Really in Love, instead of Trigonometry, French and Physics, its diploma, for all the world to see,

would be inferior, and the graduates couldn't get into College. Schools would soon discover that to obtain the coveted accreditation they would have to have teachers with a thorough knowledge of their subjects. Properly qualified teachers would be in greater demand, and that in turn would mean that their salaries and prestige would rise.

Admiral Rickover urges that industry, labor and the foundations endow some twenty-five model high schools which would be open to all children, but only upon passing rigid entrance examinations. He contends that we are in our present predicament because education in America has deteriorated in quality for lack of standards. The feeling that "you too can have a degree." Rickover wants to sweep clean the temple of learning, and bring back quality. Strange talk to come from an Admiral, but very straightforward.

Word for Today

Education lies at the very heart of democracy. Thomas Jefferson said: "I know no safe depository of the ultimate powers of society but the people themselves. If we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them...but to inform their discretion by education."

Goodnight and good luck.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, NOVEMBER 22, 1957
7:45 - 8:00 PM EST

This is the news:

It was revealed today that the Air Force has fired at least two objects--about the size of small ball-bearings---many thousands of miles into outer space. An Air Force physicist, Mr. Maurice Dubin, said the two artificial meteorites were fired from the nose of an Aerobee rocket from an altitude of 54 miles and that they probably reached a maximum velocity of 40-thousand miles an hour. Mr. Dubin said it is "98 percent probable" that they escaped the pull of the earth's gravity. If they were drawn toward the face of the sun, it means that Man...for the first time...may have penetrated inter-planetary space. The Aerobee rocket was fired from a launching site in New Mexico on October 16th. But the "shot" was not announced until now because scientific confirmation of the success of the experiment was received only a few days ago. Actually, about a hundred aluminum pellets were fired from the tip of the rocket...but the scientists were able to establish what happened to only two of them. Astonomers at Mount Palomar, 600 miles away, say the explosion was brighter than any planet or star. The Air Force says the "shot" was a scientific endeavor...and presumably that is why word of it has come first from a scientific source.

British astronomers reported tonight that the rocket carrier for the first satellite launched by Russia "is rapidly approaching the atmosphere." It may come down, they said, in a matter of hours and disintegrate.

Senate Democratic Leader Johnson said today that the American missile program must be speeded up. Properly qualified teachers would be in greater demand, and that in turn would mean that their salaries and prestige would rise.

Admiral Rickover urges that industry, labor and the foundations endow some twenty-five model high schools which would be open to all children, but only upon passing rigid entrance examinations. He contends that we are in our present predicament because education in America has deteriorated in quality for lack of standards. The feeling that "you too can have a degree." Rickover wants to sweep clean the temple of learning, and bring back quality. Strange talk to come from an Admiral, but very straightforward.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN:COMMERCIAL

MURROW: Education lies at the very heart of democracy. Thomas Jefferson said: "I know no safe depository of the ultimate powers of society, but the people themselves. If we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them...but to inform their discretion by education!

Goodnight and good luck!

Edward R. Murrow Mon., Nov. 25, 1957

This is the news:

The White House announces that President Eisenhower has been ordered to bed with a chill. Mr. Eisenhower suffered the chill after meeting the King of Morocco at National Airport...and riding with him to Blair House, the official residence for foreign dignitaries visiting the capital. Mr. Eisenhower will not attend the state dinner for the king tonight. Mrs. Eisenhower will attend in his place, escorted by the Vice President. The White House says there will be no further report on the President's condition until in the morning. Mr. Eisenhower is scheduled to make another report to the American people on the state of American preparedness from Cleveland tomorrow night.

1A

[redacted]

The Senate today began a full-scale investigation of the state of American preparedness. The chairman of the investigating committee, Senator Lyndon Johnson, said in his opening statement: "We have lost an important battle in technology to Russia. But a lost battle is not a defeat---it is a challenge for America to respond with her best efforts." Johnson, who is also the Senate Democratic leader, said, "There were no Republicans and no Democrats after Pearl Harbor." He added, "I do not feel that we have as much time as we had after Pearl Harbor. But we do have time, determination and willpower to accomplish what we must."

The goal of the Senate investigation, he said, is not to render any preconceived judgment but to find out what is to be done.

The first witness, Dr. Edward Teller, told the committee that he believes Russia has the ability now to hit an American city as far away as Houston, Texas, with the intercontinental ballistic missile...or will have in a short time. The scientist (who has been called the architect of the H-bomb) does not believe the Russians have caught up with the United States yet in nuclear weapons, but they are gaining. "There is no doubt," he said, "that since the war Russia has moved much more rapidly in the application of technology to the military system. If this continues, there is no doubt the Russians will leave us behind---and way behind." Teller was asked what he thinks the country should do in view of the growing Soviet threat. These, he said, are some of the things we should do: Speed up and expand the missile program, look carefully into the status of the Strategic Air Command and our capacity to strike back, put more emphasis on the atomic-powered submarine, and place more stress on passive defense---on shelters and steps for restoring the country economically and physically in event of nuclear attack. He also advocated

an immediate start on improving science education at the elementary and secondary school level...and a greater sharing of military and scientific secrets with our allies. He conceded that, in this, there is a danger of leaks. But, he said, we must accept the danger. "The danger of not cooperating would be greater." He told the committee that...all along...Russia has been willing to take greater gambles. He said, "We are not taking the kind of risks we have to take." Another scientist...Dr. Vannevar Bush...supported Teller's contention that in the area of space weapons Russia is dangerously ahead. He called the launching of the two Sputniks "one of the finest things Russia ever did for us." There hasn't been an awakening like this, he said, since Pearl Harbor.

The secretary of the Air Force...James Douglas...said in an interview tonight there is "no evidence" that there could be an attack with intercontinental missiles "in the near future." ~~Douglas said he would favor mass-producing both the Army "Jupiter" and the Air Force "Thor" only if "economically justified" and if he were reasonably sure both would work. The Jupiter and Thor are both missiles of intermediate range.~~

The Supreme Court ruled today that the refusal of a witness to answer a series of related questions constitutes a single contempt. The court said...in a split 6-to-3 decision...that the California Communist leader, Mrs. Cleta Yates, should not have been convicted on 11 separate counts of criminal contempt in refusing to answer questions during her trial for alleged violation of the Smith Act. The court today upheld the contempt conviction...but said the prosecution "cannot multiply contempts by repeated questioning on the same subject."

The Supreme Court has agreed to review the decision that passports may be denied persons who refuse to sign non-Communist affidavits. The Court of Appeals has ruled that State Department regulations requiring the affidavits are valid. The review was requested by Rockwell Kent, the artist, and Dr. Walter Briehl, a Psychiatrist, who declined to sign the affidavits on constitutional grounds.

And for the second time, the Supreme Court refused to review the contempt conviction of segregationist John Kasper...in connection with the integration, last year, of the high school in Clinton, Tennessee. Kasper is serving a one-year sentence for violating a court order not to interfere with integration of the school.

The United Nations announced tonight that Secretary General Hammarskjold will fly to the Middle East on Friday to confer with representatives of Jordan in the current border dispute with Israel. The announcement says Hammarskjold will confer with other governments in the area "insofar as time permits." Israel today accused Jordan of three violations of its frontier, and Jordan has charged Israel with similar violations. Jordan is demanding the removal of Colonel Byron Leary, the American officer in charge of the Palestine Truce Commission, on grounds of bias in favor of the Israelis.

In Paris today, British Prime Minister Macmillan and French Premier Gaillard failed to reach any kind of agreement on the issue of arms for Tunisia. At the end of the day's meeting, a French government spokesman said, "A common point of view has not been reached." And tomorrow the talks will continue.

King Mohammed of Morocco arrived in Washington today for a three-day state visit. He was met at the airport by President Eisenhower...and received a 21-gun salute. Tonight the White House announced that Mr. Eisenhower has been ordered to bed by his doctors, after suffering a chill.

He will not attend the state dinner for the King of Morocco tonight. Mrs. Eisenhower will attend in his place, escorted by the Vice President. The White House said there will be no further report on the President's condition until the morning. ~~Mr. Eisenhower is scheduled to make~~ another report to the American people on the state of ~~American preparedness~~ from Cleveland ~~tomorrow night.~~

My colleague, David Schoenbrun, has returned to Paris after a two-week assignment in Morocco. And I have asked him for a report on what he believes King Mohammed hopes to achieve in his Washington talks. For that report, we switch now to Paris.

Tape runs 2:25

Ends on cue: "--to ERM in NY."

Edward R. Murrow: November 25, 1957. 7.45 p.m.

The state visit of Mohammed the Fifth, King of Morocco, is of greater interest to the United States Government than simply the future of the five American bases in Morocco which is to be decided. Presumably an agreement will be completed while the King is here for the use of the bases for a further term of years. There also will be discussion of increased economic aid, which Moroccans need acutely, and need all the more urgently because France has not come through with the economic help expected.

The major significance of the King of Morocco's visit is the chance it gives to push the proposal to end the warfare in Algeria by establishing a North African Federation. This would be one to which Algeria, Morocco and Tunisia would belong, along with France. Washington has the liveliest interest in this project. It believes in it not only because it would give a workable kind of independence to the North African countries, but because it seems to be the only conceivable way to end France's costly war in Algeria. And not till that war ends will France, as we see things, be able to pull its full military weight in NATO.

Just before the King left Morocco, he and President Bourguiba of Tunisia issued an offer to France to mediate the Algerian war. Mediation

is to be understood as ~~[illegible]~~ MEANING the acceptance of a federation. The offer already has had a slightly more positive response in France than had been anticipated. It produced a vote in Premier Gaillard's own Radical Socialist Party recommending the acceptance of mediation, though the Premier himself submitted a resolution urging its rejection. Gaillard's resolution lost to one introduced by former Premier Mendez-France. But the present Assembly probably would reject mediation or any negotiations with Algerian nationalist leaders before hostilities cease.

One may wonder what part in the campaign for federation the talks between King Mohammed and Washington officials can play. It is considerable. So long as we support France on the Algerian question in the United Nations we are entitled to let the French know how anxious we are to see the war end in Algeria. ~~There may be a technical inconsistency in promising Foreign Secretary Pineau to vote with France in the U.N., while talking federation with the King of Morocco. But it is only technical.~~ We sympathize with France in its difficulties and refrain from taking sides publicly against its actions in Algeria. But we refrain just as carefully from taking sides publicly against the Algerian nationalists. We want the French and

the nationalists to compose their differences. We think they can do it through a federation. We want it not only because we see it as a way to end the fighting in Algeria, we believe that North African problems should be dealt with as a whole. We have told the French so ever since they got into conflict with their North African subjects. #

The talks with King Mohammed are timely because he comes fresh from consultations with President Bourguiba of Tunisia, their first meeting after many months of estrangement due to Bourguiba's overthrow of the Bey of Tunis. Both Mohammed and Bourguiba have had recent talks with all the important liberation leaders in Algeria. They induced them to modify their insistence on full independence in advance of negotiations.

Both Mohammed and Bourguiba of Tunisia have reasons of their own for wanting to retain a commonwealth relationship with France. France then would keep the balance between them and the Algerians if and when Algeria became free. A free Algeria would automatically be the strongest military state in North Africa. It would overshadow Morocco and be still more overpowering to its next-door neighbor Tunisia. But in a federation, with France as a restraining influence, either Bourguiba or Mohammed could hope to be leaders of a federation, which both of them aspire to be.

The Algerians understand these motives and may not like them. But they know they cannot hope to get as good terms from France by themselves as through the help of their neighbors, and they have accepted the federation idea. That is why they now have approved the demand for sovereignty rather than independence.

Proposal for Federation -

This presumably is what King Mohammed is explaining in Washington. He can stress that the federation idea represents compromises by the North Africans as well as by the French. But by that fact, he can say, the solution in the end should prove acceptable all around. If he does, Washington couldn't agree more.

George Bryan

Word for Today

In his Washington conversations, the King of Morocco...quite naturally... will make certain demands. And so will we. As Thomas Fuller observed, "He'll never get a pennyworth that is afraid to ask a price." But if the negotiations are fruitful, ~~and the way is paved for a Federation of North Africa,~~ all will benefit. In the words of the old English proverb, "It's a bad bargain where nobody gains."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Monday, November 25, 1957
7:45 - 8:00 P.M.

MURROW: King Mohammed of Morocco arrived in Washington today for a three day State visit. He was met at the airport by President Eisenhower and received a 21-gun salute.

My colleague David Schoenbrun has returned to Paris after a two week assignment in Morocco, and I have asked him for a report on what he believes King Mohammed hopes to achieve in his Washington talks.

For that report, we switch now to Paris;

SCHOENBRUN: King Mohammed the Fifth intends to explore three major areas of deep concern to him in his talks with President Eisenhower. That is; the presence of American bases on Moroccan soil, the question of Algeria and finally economic and technical assistance for the Moroccan nation.

On the question of the bases, the King told this reporter a few days ago, that there was no objection at all to the maintenance of our bases on the one condition, that they did not in any way infringe upon the sovereignty of his country. That means of course no extra territorial privileges for our sources. Our men must be subject to Moroccan law. There are many other legal tangles to be worked out, somehow we've got to find a way out of our contracts with the French, who first granted us those bases under their protectorate.

The King is also concerned about the continued presence in Morocco of French and Spainish troops, left over from protectorate days. Any concessions he makes to us on our bases may have to be granted to the others, but the French and Spainish armies are hated symbols of the colonial past and they don't want to make any

concessions to them. I think the King undoubtedly asked the President to use his influence to persuade the French and Spainish to be reasonable. Above all, the King is extremely concerned about the Algerian war on his Eastern frontier, and he will certainly urge the President to make a maximum effort to bring the French to accept his offer of mediation in that conflict.

Finally, King Mohammed will frankly ask for American economic and technical assistance to lift his people out of the misery and poverty of feudalism.

The King, as Chief of State, will not of course enter into any detailed negotiations with President Eisenhower. The two leaders will discuss only policy principals and attitudes. The details will be left to their Ministers. The two key men with the King for these tactical talks are his Foreign Minister, Ahmed Belafrej and his Economic Minister,Abderrahim Bouabid.

I know both of these men quite well, Ed, and I can assure you, that ther're very Western minded and are admirers of America.

Moroccans look upon this visit as of the greatest importance. They see themselves as a bridge between the Orient and the occident, the very name of their country in Arabic means; the country farthest to the West. It's our hope and their hope that we can keep them that way in the troubled Arab world today.

This is David Schoenbrun reporting from Paris, now back to Edward R. Murrow in New York.

Ed Trans. N.M.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, NOVEMBER 25, 1957
7:45 - 8:00 PM EST

This is the news:

The White House announces that President Eisenhower has been ordered to bed with a chill. Mr. Eisenhower suffered the chill after meeting the King of Morocco at National Airport...and riding with him to Blair House, the official residence for foreign dignitaries visiting the Capital. Mr. Eisenhower will not attend the state dinner for the king tonight. Mrs. Eisenhower will attend in his place, escorted by the Vice President. The White House says there will be no further report on the President's condition until in the morning. Mr. Eisenhower is scheduled to make another report to the American people on the state of American preparedness from Cleveland tomorrow night.

The Senate today began a full-scale investigation of the state of American preparedness. The chairman of the investigating committee, Senator Lyndon Johnson, said in his opening statement: "We have lost an important battle in technology ro Russia. But a lost battle is not a defeat---it is a challenge for America to respond with her best efforts." Johnson, who is also the Senate Democratic leader, said, "There were no Republicans and no Democrats after Pearl Harbor." He added, "I do not feel that we have as much time as we had after Pearl Harbor. But we do have time, determination and willpower to accomplish what we must." The goal of the Senate investigation, he said, is not to render any preconceived judgment but to find out what is to be done.

The first witness, Dr. Edward Teller, told the committee that he believes Russia has the ability now to hit an American city as far away as Houston, Texas with the intercontinental ballistic missile...or will have in a short time. The scientist (who has been called the architect of the H-bomb) does not believe the Russians have caught up with the United States yet in nuclear weapons, but they are gaining. "There is no doubt," he said, "that since the war, Russia has moved much more rapidly in the application of technology to the military

system. If this continues, there is no doubt the Russians will leave us behind---and way behind." Teller was asked what he thinks the country should do inview of the growing Soviet threat. These, he said, are some of the things we should do: Speed up and expand the missile program, look carefully into the status of the Strategic Air Command and our capacity to strike back, put more emphasis on the atomic-powered submarine, and place more stress on passive defense---on shelters, and steps for restoring the country economically and physically in event of nuclear attack. He also advocated an immediate start on improving science education at the elementary and secondary school level... and a greater sharing of military and scientific secrets with our allies. He conceded that, in this, there is a danger of leaks. But, he said, we must accept the danger. "The danger of not cooperating would be greater." He told the committee that....all along... Russia has been willing to take greater gambles. He said, "We are not taking the kind of risks we have to take." Another scientist....Dr. Vannevar Bush...supported Teller's contention that in the area of space weapons, Russia is dangerously ahead. He called the launching of the two Sputniks "one of the finest things Russia ever did for us." There hasn't been an awakening like this, he said since Pearl Harbor.

The Secretary of the Air Force...James Douglas...said in an interview tonight there is "no evidence" that there could be an attack with intercontinental missiles "in the near future."

The Supreme Court has agreed to review the decision that passports may be denied persons who refuse to sign non-Communist affidavits. The Court of Appeals has ruled that State Department regulations requiring the affidavits are valid. The review was requested by Rockwell Kent, the artist and Dr. Walter Briehl, a psychiatrist, who declined to sign the affidavits on constitutional grounds.

The United Nations announced tonight that Secretary General Hammarskjold will fly to the Middle East on Friday to confer with representatives of Jordan

in the current border dispute with Israel. The announcement says Hammarskjold will confer with other governments in the area "insofar as time permits." Israel today accused Jordan of three violations of its frontier, and Jordan has charged Israel with similar violations.

In Paris today, British Prime Minister Macmillan and French Premier Gaillard failed to reach any kind of agreement on the issue of arms for Tunisia. At the end of the day's meeting, a French government spokesman said, "a common point of view has not been reached." And tomorrow the talks will continue.

King Mohammed of Morocco arrived in Washington today for a three-day state visit. He was met at the airport by President Eisenhower...and received a 21-gun salute.

My colleague, David Schoenbrun has returned to Paris after a two-week assignment in Morocco. And I have asked him for a report on what he believes King Mohammed hopes to achieve in his Washington talks. For that report, we switch now to Paris.

SCHOENBRUN: King Mohammed the Fifth intends to explore three major areas of deep concern to him in his talks with President Eisenhower. That is; the presence of American bases on Moroccan soil, the question of Algeria and finally economic and technical assistance for the Moroccan nation.

On the question of the bases, the King told this reporter a few days ago, that there was no objection at all to the maintenance of our bases on the one condition, that they did not in any way infringe upon the sovereignty of his country. That means of course no extra territorial privileges for our sources. Our men must be subject to Moroccan law. There are many other legal tangles to be worked out; somehow we've got to find a way out of our contracts with the French, who first granted us those bases under their protectorate.

The King is also concerned about the continued presence in Morocco of French and Spanish troops, left over from protectorate days. Any concessions he makes to us on our bases may have to be granted to the others, but the French

and Spanish armies are hated symbols of the colonial past, and they don't want to make any concessions to them. I think the King undoubtedly asked the President to use his influence to persuade the French and Spanish to be reasonable. Above all, the King is extremely concerned about the Algerian war on his Eastern frontier, and he will certainly urge the President to make a maximum effort to bring the French to accept his offer of mediation in that conflict.

Finally, King Mohammed will frankly ask for American economic and technical assistance to lift his people out of the misery and poverty of feudalism.

The King, as Chief of State, will not of course enter into any detailed negotiations with President Eisenhower. The two leaders will discuss only policy principles and attitudes. The details will be left to their Ministers. The two key men with the King for these tactical talks are his Foreign Minister, Ahmed Belafrej and his Economic Minister, Abderrahim Bouabid.

I know both of these men quite well, Ed, and I can assure you that they're very Western minded and are admireres of America.

Moroccans look upon this visit as of the greatest importance. They see themselves as a bridge between the Orient and the Occident, the very name of their country in Arabic menas; the country farthest to the West. It's our hope that we can keep them that way in the troubled Arab world today.

This is David Schoenbrun reporting from Paris; now back to Edward R. Murrow in New York

MURROW: The major significance of the King of Morocco's visit is the chance it gives to push the proposal to end the warfare in Algeria by establishing a North African Federation. This would be one to which Algeria, Morocco and Tunisia would belong, along with France. Washington has the liveliest interest in this project. It believes in it not only because it would give a workable kind of independence to the North African countries, but because it seems to be the only conceivable way to end France's costly war in Algeria. And not till

that war ends will France, as we see things, be able to pull its full military weight in NATO.

Just before the King left Morocco, he and President Bourguiba of Tunisia issued an offer to France to mediate the Algerian war. Mediation is to be understood as meaning the acceptance of a federation. The offer already has had a slightly more positive response in France than had been anticipated. It produced a vote in Premier Gaillard's own Radical Socialist Party recommending the acceptance of mediation, though the Premier himself submitted a resolution urging its rejection. Gaillard's resolution lost to one introduced by former Premier Mendez-France. But the present Assembly probably would reject mediation or any negotiations with Algerian nationalist leaders before hostilities cease.

One may wonder what part in the campaign for federation the talks between King Mohammed and Washington officials can play. It is considerable. So long as we support France on theAlgerian question in the United Nations, we are entitled to let the French know how anxious we are to see the war end in Algeria. We sympathize with France in its difficulties and refrain from taking sides publicly agiinst its actions in Algeria. But we refrain just as carefully from taking sides publicly against the Algerian nationalists. We want the French and the nationalists to compose their differences. We think they can do it through a federation. We want it not only because we see it as a way to end the fighting in Algeria, we believe that North African problems should be dealt with as a whole. We have told the French so ever since they got into conflict with their North African subjects.

This proposal for federation presumably is what King Mohammed is explaining in Washington. He can stress that the federation idea represents compromises by the North Africans as well as by the French. But by that fact, he can say, the solution in the end should prove acceptable all around. If he does, Washington couldn't agree more.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: In his Washington conversations, the King of Morocco...quite naturally...will make certain demands. And so will we. As Thomas Fuller observed, "He'll ne'er get a pennyworth, that is afraid to ask a price." But if the negotiations are fruitful, all will benefit. In the words of the old English proverb, "It's a bad bargain, where nobody gains."

Goodnight and good luck!

Edward R. Murrow Tues., Nov. 26, 1957

This is the news:

The latest bulletin on the condition of President Eisenhower was issued by the White House an hour and a half ago. It says, "The President has had an occlusion (that is to say, blockage) of a small branch of a cerebral vessel, which has produced a slight difficulty in speaking." The bulletin adds, "There is no evidence of a cerebral hemorrhage, or any serious lesion of the cerebral vessels. The difficulty in speaking has improved over the period of the last 24 hours, and is now manifested only by a hesitancy in saying certain difficult words. The President's physical strength," it continues, "is normal..and he is allowed to be up and about his home. He is alert. His spirits are good, and he discussed

with interest and clarity recent events." The medical bulletin concludes by describing Mr. Eisenhower's disability as "mild and transitory in nature."

Now, for a direct report on the President's illness, we switch to Bill Downs in Washington.

Downs to run approx 4 mins.
Returns on cue, "to Ed Murrow in N.Y."

Here in New York, the mid-afternoon medical bulletin caused a heavy selling wave on the Stock Market. Losses were widespread...with some issues off more than 6 dollars a share. The information reached Wall Street only 20 minutes before closing...but, in that time, stock values fell about 5-billion dollars. The selling wave caused tickers to run 25 minutes late.

The news of Mr. Eisenhower's illness has caused strong repercussions in Britain and France. For the reaction in Britain, we switch to London and Charles Collingwood.

#1 Tape runs 1:35
ends on cue "to Ed Murrow in N.Y."

The shock is no less in France. And for the French reaction, we switch to David Schoenbrun in Paris.

#2 Tape runs 1:30
ends on cue "to Edw R. Murrow in N.Y."

5 #

The State Department said this afternoon that it is "assumed" that President Eisenhower will not be able to attend the NATO summit meeting in Paris next month. The State Department has cabled Paul-Henri Spaak, the secretary general of NATO, asking him...in effect...to poll the other 14 member countries as to whether they thought the meeting should be postponed. The possibility of a meeting of foreign, finance and defense ministers...instead of a meeting of heads of government...is not ruled out. When a reporter asked the department spokesman, Lincoln White, whether Vice President Nixon may go to Paris in Mr. Eisenhower's place, White said he does not know.

In Paris, British Prime Minister Macmillan and French Premier Gaillard ended two days of talks. France has been concerned over Anglo-American arms shipments to Tunisia. The two premiers said...in a joint communique... that they decided to make arrangements for avoiding the "recurrence of of difficulties similar to those which have recently arisen." They do not define the "arrangements", except to say that consultations are continuing. Macmillan concedes that "responsibility for a solution of the Algerian question lies with France." ~~And he and Gaillard agree that next month's NATO meeting should...in the words of the communique..."give a more precise definition to the principles of interdependence and to the solidarity of the alliance in accordance with the spirit of equality which under lies the treaty." They believe, in particular, that this solidarity should result in "increased pooling of resources and knowledge." They also agree that everything possible should be done to develop the "system of consultation" in the alliance.~~ The communique indicates that no real settlement was reached.

Word for Today

The people of America...and their allies...are distressed by the President's illness and hope for his speedy recovery. Ralph Waldo Emerson, ~~knowing the value of health,~~ said, "The first wealth is health. Sickness is poor-spirited and cannot serve anybody." And President Eisenhower himself once observed, "Misfortune..and particularly the misfortune of illness...brings to all of us an understanding of how good people are."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Tuesday, November 26, 1957
7:45 - 8:00 P.M.

MURROW: ... Now, for a direct report on the President's illness, we switch to Bill Downs in Washington.

DOWNS: The White House is beginning to settle down for the night now; the lid is on, no more medical bulletins until morning, the all-night news watches are beginning, as usual, during a Presidential illness. And perhaps it's possible to reconstruct what has been happening in the past 36-hours or so, a hectic time of tension and mystery and confusion. At about noon yesterday, the President gave an official 21-gun welcome to King Mohammed V of Morocco. It was a damp and cold day at the Washington Airport and when Mr. Eisenhower returned to the White House, he complained that he had a chill. Mamie immediately put him to bed. After an hour's rest, he got up and had a light lunch and went downstairs to his office. This was 2:40 in the afternoon, yesterday. He still did not feel well and told White House doctors, General Snyder and Col. Tkach, about it. They in... immediately put him back into bed and began an examination. Presumably, it was at this time that the Presidential physicians noted the slight impediment in Mr. Eisenhower's speech. They immediately summoned two top Army specialists from Walter Reed Hospital for consultation. Outside of the speech impediment and general feeling of illness, the President showed no abnormal signs of any serious malady; no headache, nausea, impairment of breathing, paralysis or abnormal reflexes. The doctors determined that the President of the United States had suffered an occlusion, a small clot or vascular spasm, of a small branch of the middle cerebral artery on the left side of his brain. All findings, the medical bulletin 24-hours later, said "no brain hemorrhage." This happened yesterday afternoon, remember. So the doctors gave Mr. Eisenhower a sleeping potion and he slept until 8:00 P.M. Meanwhile, the gears of

the White House official machinery began to shift from high to low. A public statement was issued that the President had been sent to bed with a chill. Nothing else. The King of Morocco was scheduled to be the guest of honor at a state dinner at the White House last night, and Mr. Eisenhower then made his first executive decision since suffering his latest attack. He ordered that the state dinner be held despite his absence. Mrs. Eisenhower received with Vice President Nixon as her escort. Then tonight's science and security speech, scheduled for Cleveland, was cancelled. Well, the President last night slept eight hours and this morning again was examined by Army specialists. His speech impediment, they said, had improved perceptibly during the night. The doctors agreed that the cerebral disturbance was mild and transitory. However, a 67-yr. old man, no matter how robust, they said, would require several weeks of rest away from the pressure of Presidential duties. Today Mr. Eisenhower awoke early and rested. He's been able to walk around the family suite on the second floor of the White House. His speech has improved and he now only shows a hesitancy in saying certain difficult words. Reading, writing and reasoning powers are not affected according to this evening's final medical bulletin.

Well, neither the White House nor the doctors will call the Presidential illness what everyone else here is naming it, a slight stroke.

The repercussions of this latest illness, like the others, have been felt around the world. President Eisenhower will not go to the NATO summit meeting Dec. 16th in Paris. Here at home, the Stock Market plunged in its closing hours. Vice President Nixon and Attorney General Wm. Rogers came to the White House early today. Secretary of State Dulles met in the President's office for diplomatic discussions with King Mohammed. After five hours of conferring with White House staff members

and other Executive officials, Vice-President Nixon emerged and told us, that there is no question of delegating the President's authority to anyone else. Nixon said, he would come around to the White House tomorrow to help out, but that under the present circumstances, Attorney-General Rogers has advised that there is no necessity of discussing the delegation of Presidential authority.

However, on Capital Hill, G.O.P. Senator Styles Bridges of New Hampshire said, "that if the President is incapacitated, that Nixon should take over." His personal opinion was, according to Bridges,"that that is what a Vice-President is for."

The Constitution provides that in case the President is unable to discharge the powers and duties of his office, they shall bevolve to the Vice-President. However, no one in the 180 years of Constitutional history has ever figured out, 'who is to determine whom will determine when a President is disabled.'

Now back to Ed. Murrow in New York.

MURROW: Here in New York, the mid-afternoon medical bulletin caused a heavy selling wave on the stock market. Losses were widespread with some issues off more than $6.00 a share. The information reached Wall Street only 20 minutes before closing time, but in that time stock values fell about five billion dollars. The selling wave caused the tickers to run 25 minutes late.

The news of Mr. Eisenhower's illness has caused strong repercussions in Britain and France.

For the reaction in Britain, we switch to London and Charles Collingwood.

COLLINGWOOD: Ed, the British had a feeling of foreboding as soon as they had the announcement that the President had had a chill, which

is I suppose, a measure of the importance they attribute to him in the present scheme of things. The story was headlined in the early additions of the afternoon papers.

Prime Minister MacMillan, who didn't get back until quite late this afternoon from his trip to see M. Gaillard in Paris was told of the gravity of the President's condition, when he was actually at Buckingham Palace reporting to the Queen on the Paris talks. Presumably, the Queen learned of it at the same time.

Official quarters don't quite know what to say, officially, beyond the fact, that there're concerned and there're sorry, because they don't really know how serious the President's attack is. If it isn't terribly serious, they don't want to be funereal about it, on the other hand, if it is, they don't want to minimize it. But, they are quite frank to admit ... unofficially, that the President's illness is a blow to hopes for progress toward a greater degree of Western inter-dependence. Ever since his war-time days here in Britain, he's been a symbol of Allied cooperation. Those days are the ones they hark back to here when they talk of drawing togather again in the face of the present Russian threat.

Since Eisenhower has been President, there have been many things that his Administration has done with which the British have disagreed. But in the present crisis, they've been looking to him for leadership ... they had hoped that that leadership would be manifested at next months NATO Meeting in Paris. With the President prevented from attending, they fear that the task of re-vitalizing the Western Alliance will be even more difficult.

Now back to Ed. Murrow in New York.

MURROW: The shock is no less in France and for the French reaction we switch to David Schoenbrun in Paris.

SCHOENBRUN: The American delegation to NATO here in Paris has already been advised that Vice President Nixon is available to come here for the Summit meeting if the Alliance decides to go ahead according to plans. And the consensus here tonight, Ed., is that the NATO Council will go ahead on schedule. Everyone here in Paris was shocked and grieved by the news. There's a great personal affection for Dwight D. Eisenhower here in Europe and there is of course, the deep awareness, that the health and strength of the United States is inseperable from the security of this Alliance and the Alliance is agonizing through a period of great strain... internal discords enhancing the dangers of external threats.

The illness of the American President coming so soon after the spectacular Soviet technological achievement is a severe blow to NATO. This Summit meeting was supposed to ba maximum effort to meet this challenge and President Eisenhower was slated to play the principal role in the regeneration of the Alliance. His undoubted qualities as a conciliator and above all, the enormous power of his Office, were counted upon to assure the success of this effort. Now, his incapacity at this critical moment, is a terrible blow to the allies of our country.

Everyone here in Paris wishes him a speedy recovery, but they cannot help speculating about what might happen to the Alliance if his recovery is slow ... you can hear and feel the fear in Paris tonight.

Now back to Edward R. Murrow in New York.

MURROW: The State Department said this afternoon, "that it is assumed that President Eisenhower will not be able to attend the NATO Summit meeting in Paris next month.

Ed. Trans. N.M.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The people of America...and their allies...are distressed by the President's illness and hope for his speedy recovery. Ralph Waldo Emerson, said, "The first wealth is health. Sickness is poor-spirited and cannot serve anybody." And President Eisenhower himself once observed "Misfortune...and particularly the misfortune of illness...brings to all of us an understanding of how good people are."

Goodnight and good luck!

Edward R. Murrow Wed., Nov. 27, 1957

This is the news:

The White House says that President Eisenhower is making an "excellent" recovery. During the day, Mr. Eisenhower conferred with government officials, signed some papers, and had a visit...lasting 10 or 12 minutes... with King Mohammed of Morocco. He also did some oil painting.

~~News Secretary Hagerty knocked down reports that Mr. Eisenhower may be thinking of resigning...in view of his third illness in a little more than two years. Hagerty said he had heard no talk to this effect by anybody, including the President.~~ The question arose today as to who will take Mr. Eisenhower's place if the NATO countries decide...in

→

spite of his illness...to hold their summit meeting in Paris next month. The State Department said today that it feels that, under the circumstances, the "level" of the meeting---that is, whether it should still be a conference of heads of government---is something for the other members of NATO to decide. "The United States Government," it said, "will be glad to abide by the views of its NATO partners in this matter." ~~Reports from Paris say that Britain, West Germany, Italy and France still favor a summit conference...starting on December 16th. Norway and Greece are said to favor a postponement.~~ And the question is expected to be definitely decided tomorrow at a meeting of the NATO Council. An American Embassy spokesman in Paris said today that Vice President Nixon is "ready" to come..if that is the wish of our allies. News Secretary Hagerty said in Washington that [redacted] the decision who will attend will be "up to the President, after we hear from NATO." Hagerty did not rule out the possibility that Mr. Eisenhower may still attend the meeting. When asked about such a possibility, he said, "I can't give you any definitive answer on that at this time."

Hagerty told reporters that the President is rapidly recovering from his slight impairment in speech...and that when he "makes a slip", he corrects it and laughs. Doctors, he said, still are not positive whether the nature of the President's seizure was a clot in a branch of an artery supplying blood to the brain or a vascular spasm---which is to say, a contraction of the blood vessel. Hagerty said Mr. Eisenhower will observe Thanksgiving---with a regular Thanksgiving dinner---tomorrow at the White House.

Attorney General Rogers said tonight that he has advised the White House that the President's illness "presents no legal problems which would call for any consideration of possible delegation of the presidential powers." Rogers said he adopted this view "after a full discussion with the President's doctors."

Vice President Nixon touched on this subject of presidential disability tonight at a news conference. For a full report on that, we switch direct to Bill Downs at the White House. (DOWNS TO RUN 2½ MINUTES, RETURNS ON CUE: "TO ED MURROW IN N.Y."

EDWARD R. MURROW WITH THE NEWS

Wednesday, November 27, 1957
7:45 - 8:00 P.M.

MURROW: Attorney General Rogers said tonight, that he has advised the White House, that the President's illness presents no legal problems which would call for any consideration of possible delegation of the Presidential powers. Rogers said, he adopted this view after a full discussion with the President's doctors.

Vice President Nixon touched on this subject of Presidential disability tonight at a news conference. For a full report on that, we switch direct to Bill Downs at the White House.

DOWNS: Vice President Richard Nixon used the White House tonight as the senior active executive of the American Government to underline the fact, that ailing Dwight D. Eisenhower, is and will continue to be the President of the United States. In an extraordinary 45-minute news conference, held in the office of Presidential News Secretary James Hagerty, Nixon took pains to scotch what he called rumors, that Mr. Eisenhower's cerebral attack had put him in a condition which would force the President to resign. The Vice President said, "after seeing Mr. Eisenhower this morning and talking with his doctors, that one, his recovery is sure and that it may be sooner than normally would be the case and, two, that the President himself, gave no hint at all of resigning, that neither Mr. Eisenhower nor his official family had discussed the possibility."

Vice President Nixon described his role in the Government during the Eisenhower recuperation as "a kind of Administrative

straw boss, he presides at meetings of the Cabinet of the National Security Council at the President's request and under an informal but effective system of Administration, set up in 1955 after Mr. Eisenhower's heart attack. Any major decisions will be submitted to the Chief Executive," Nixon said, "but thus far, since Monday's attack, none have been." Nixon also emphasized "that no major decisions were being withheld or delayed because of this latest illness." Nixon said, that, "President Eisenhower already is like a caged lion, anxious to get back to work." "The Eisenhower speech defect," he described, "as that of a normal person - searching for words, when that person is extremely tired."

As to wheather the Vice-President will represent the United States at the impending NATO Summit meeting in Paris, Nixon said, "that Mr. Eisenhower would make that decision after the NATO Council meeting tomorrow." The betting is, that Nixon will go to Paris.

Now back to Ed. Murrow in New York.

MURROW: The Defense Department has authorized production for operational purposes of both the Jupiter and Thor inter-mediate range missiles...

... Mr. Eisenhower has made quite concise promises, arising from his illnesses. Here are the President's own words; "Unless I feel absolutely up to the performance of the duties of the Presidency, I would no longer be there in the job, or, I wouldn't be available for the job."

Ed. Trans. N. M.

The Defense Department has authorized production...for operational purposes...of both the Jupiter and Thor intermediate-range missiles. Secretary of Defense McElroy made this known today in testifying before the Senate committee investigating our missile program. McElroy said the decision to mass produce both weapons was made late last night after "an intensive reassessment." The Jupiter has been developed by the Army. The Thor is a product of the Air Force. And former Secretary Wilson had planned to choose one or the other---not both. In reversing this decision, McElroy said he had been "greatly encouraged" by the success achieved in recent tests...although neither missile could be regarded as "having completed its development phase." The investigating committee also received secret testimony today from Allen Dulles, head of the Central Intelligence Agency. After the briefing, Committee Chairman Johnson said, "There is little comfort to be gained from realizing what the facts are concerning the advances Russia has made in certain respects." Johnson said he would try to see that the public gets all the information, "consistent with national security." Republican Senator Bridges called the information "very unpleasant." And Democratic Senator Symington called it

→

"a sad and shocking story." The sonner the American people know it, he said, the better.

The United Nations today opened debate on the Algerian revolt. French Foreign Minister Pineau said France cannot accept the offer of Morocco and Tunisia to mediate. He spoke of rebel bases in Morocco and Tunisia and noted that the offer referred only to mediation between France and the National Liberation Front. And the National Liberation Front, he said, "cannot claim to be the sole representative." ~~Pineau said that only free elections can produce "undisputed spokesmen". But pending negotiations, France is willing to negotiate a cease-fire. Pineau warned that although leaders of the revolt sincerely oppose Communism, the Communists in Algeria constitute a real danger. They are well disciplined, he said, and can rely on "powerful aid from foreign countries." He did not name the "foreign countries". He appealed to the United Nations not to "interfere" in Algeria. This, he said, not only would violate the United Nations Charter (France regards the revolt as an internal problem), but might delay a settlement.~~ The debate will resume on Friday.

A communique issued after King Mohammed of Morocco's conversations in Washington expresses hope that friendly negotiations will settle the Algerian problem. and that eventually an agreement can be reached regarding the status of American forces now stationed in Morocco.

Edward R. Murrow : November 27, 1957. 7.45 p.m.

~~With three serious illnesses during his presidency, Mr. Eisenhower holds a record for that office.~~ Due to the Presidents previous two illnesses the subject of the delegation of presidential powers in case of disability has become one of the leading issues before the country and congress. It is now thoroughly appreciated that there is a gap in the Constitution, and that it should be closed. But all the thought and talk given the question by the President, the Attorney General and Congress has not resulted in closing the gap. And there is no prospect of early action. Congress certainly will not be called into a special session. And even if Congress in January were to pass quickly the legislation recommended by the President, through Attorney General Brownell, it would be in the form of a Constitutional amendment, and would need the concurrence of three-fourths of the states. Congress might be able to solve the problem without a Constitutional amendment, but no solution now under discussion appears to be sure of a majority in Congress.

In Mr. Eisenhower's present condition the gap in the Constitution is mainly of only academic importance. What the Constitution fails to specify is who is to determine when a President's disability starts or ends. Mr.

Eisenhower is in full possession of his faculties, so there is no compelling need for his authority to be delegated. He is capable of making all major decisions, and can leave most of his work to subordinates. The White House staff is already geared to function in this way. The President has been working on a reduced schedule ever since his re-election. He can carry on by doing considerably less work.

But to say this is not to dispose of the gap in the Constitution. The President does not have the authority to delegate his functions to the Vice President for a temporary period, and then to resume them after he is well again. He does have the right under existing statutes to delegate many of his duties. But these are confined to his services in the executive branch of the government. His duties in dealing with Congress, and his international obligations, cannot be delegated. For example, Mr. Nixon could go to the NATO meeting to represent the President, but not to be acting president himself.

Mr. Eisenhower wants a president to be empowered to declare his own disability so that the Vice President could exercise all his authority until his recovery. The Constitutional amendment the President favors, which was recommended to Congress by Attorney General Brownell, would give

the President this right. Mr. Brownell also told Congress that the Vice President by himself already has the right to declare a president's disability. "It is a well-established rule of law" he said, "that in contingent grants of power, the one to whom power is granted is to decide when the emergency has arisen. Thus the Vice President is constituted the judge of the president's disability."

The amendment he recommended would have curbed this power by making its use depend on a majority vote of the cabinet. The solution proposed by the House Judiciary Committee would give the President the right to declare his own disability, but if he failed to do it the Vice President would be authorized to call a joint session of Congress to announce that he was taking over as acting President. Then either the President or the Vice President could decide when the President was able to resume his duties.

The President, of course, has a right to resign from the presidency altogether, although it has never been done. If he is unable to delegate his authority temporarily he can, if he wishes, delegate it for the remainder of his term. This possibility is now the subject of considerable speculation in Washington. Mr. Eisenhower has made quite concise promises arising from his illnesses. He said in a news conference in March of last year that if

it developed during the campaign, or while he was "in the job", that he felt at any time not absolutely up to the performance of the duties of the presidency he would go before the American people and put the facts before them. Here are the President's own words: "Unless I feel absolutely up to the performance of the duties of the Presidency I would no longer be there in the job, or I wouldn't be available for the job."

If the President fully recovers from his present illness in a reasonable period of time -- to use the language of his physicians -- this promise does not become operative. And it will not become operative unless the President himself decides that he has not recovered fully and that the time of his disability has ceased to be reasonable.

Word for Today

The ~~latest~~ illness of the President reminds us that the problem of presidential succession...due to disability...still has not been solved. Although Mr. Eisenhower's present condition requires no one to take over, a definite rule needs to be established. As Bernard Baruch once said, "We cannot cross a bridge until we come to it...but I always like to lay down a pontoon ahead of time."

Goodnight and good luck!

Edward R. Murrow Thurs., Nov. 28, 1957

This is the news:

President Eisenhower attended Thanksgiving services at the First National Presbyterian Church...and then had a traditional Thanksgiving Day dinner at the White House. / Joining him at dinner in the family dining room...besides Mrs. Eisenhower...were his son and daughter-in-law, Major and Mrs. John Eisenhower, and the four grandchildren. / News Secretary Hagerty said Mr. Eisenhower's decision to attend church had the "complete approval" of the President's personal physician, General Snyder.

He announced that Mr. and Mrs. Eisenhower plan to drive tomorrow to their Gettysburg farm, but that these plans are tentative...depending on

→

what the doctors decide after they examine Mr. Eisenhower in the morning. The only medical bulletin issued today said his progress "continues to be excellent." Hagerty told reporters that Mr. Eisenhower's attendance at church indicated "just exactly what the doctors have been saying--that his progress has been excellent." But he cautioned against assuming the President has made a complete recovery. That, he said, would be "an error." He said that in the course of talking with the President for about 20 minutes this morning, he was "not conscious" of any difficulty in his speech. ~~The slight impairment noticeable after Mr. Eisenhower's seizure on Monday apparently had disappeared.~~

Hagerty read a statement...leaving open the possibility that President Eisenhower may still attend the NATO summit meeting next month. The statement said Mr. Eisenhower had anticipated attending the conference...and that his doctors "will decide later whether he can make the trip." The statement added, "If the President finds he cannot go, he will ask the Vice President to head the United States delegation." (In Paris today, the NATO Council voted unanimously to hold the meeting of heads of government as scheduled on December 16th. A communique...issued after

the vote...said the council had learned "with satisfaction" that Vice President Nixon ~~would~~ MIGHT lead the American delegation. / It expressed "best wishes" for Mr. Eisenhower's speedy recovery. / And a NATO spokesman said tonight, "If President Eisenhower recovers sufficiently to attend, everybody would be delighted.")

The NATO countries would be "delighted" to have the President come to Paris, health permitting, but they also have a certain curiosity about Nixon. As one NATO ambassador told my colleague, David Schoenbrun, "This would be an opportunity to test the mettle of your Vice President in a major challenge. Mr. Nixon's conversion from isolationist to internationalist," he said, "has been carried out under the President's guidance and influence. We'd like a chance to judge this in action...and see whether Mr. Nixon has, indeed, been imbued with the President's almost religious faith in the inter-dependence of free nations." / Schoenbrun cables me that this is not an isolated reaction.

President Eisenhower's illness is still getting wide attention in the European press. ~~Paris'~~ The biggest newspaper in Paris "~~France-Soir~~" carries the headline tonight: "Eisenhower Better, but Nixon in Fact Governing." The paper says there is talk in the United States that Mr. Eisenhower may resign.

—7

And in London, the Daily Express has a report from its Washington correspondent headed, "A personal plea to Ike---as a good friend, I say it is time he stood down." /In this country, the Chattanooga Times reports "an apparent readiness" among Republicans "to contemplate the prompt accession of Richard Nixon to the presidency."/ The paper says loyal Eisenhower Republicans in the Administration...and in Congress...feel the accession of Nixon might (in its phrase) "be best for the country." /Today, when News Secretary Hagerty was asked if he cared to comment on this report, he referred newsmen to what Nixon had said on the subject yesterday. /What Nixon said was: "I would like to scotch...once and for all...any reports that the President is in a condition that would make it necessary for him to consider resigning." /Nixon went on to say that nobody in the President's official family was considering the possibility. /And Hagerty today repeated his earlier statement that, so far as he knew, no one had discussed the question with the President. It hasn't been discussed, Hagerty said, "because we don't think it is necessary."

The magazine "Democratic Digest" is saying in its December issue that the build-up to put Nixon in the White House in 1960 is "now on in full force." "Does his 20-20 hindsight," it asks, "qualify him as

a national leader?" ~~The Digest is the official~~ publication of the Democratic ~~National Committee.~~ / ~~The article makes no reference to Mr. Eisenhower's~~ current ~~illness...and apparently was written before the~~ event.

King Mohammed of Morocco left Washington today...after a three-day state visit...and flew to Williamsburg, Virginia. / Vice President Nixon saw him off at the airport. / Later, Mr. Nixon dropped in at the White House, where, he said, he had gone "to see if there are any loose ends that I can take care of."

~~President Bourguiba of Tunisia said today that~~

Morocco charged today that Spanish troops...attempting to put down a tribal revolt in Spanish Morocco...had violated Moroccan territory. Two women were reported killed by shells ~~[illegible]~~ fired across the frontier.

The United Nations today announced that Secretary General Hammarskjold will visit Israel and Syria...as well as Jordan...on his forthcoming mission to the Middle East. Hammarskjold will leave New York tomorrow night.

The British Foreign Office revealed today that the Arab kingdom of Yemen recently asked France for arms...and that France refused. / British and Yemeni troops have been engaged off and on for months in a border dispute. ~~[illegible]~~

British Prime Minister Macmillan told the House of Commons today that American aircraft...based in Britain...cannot drop hydrogen bombs on enemy targets without the permission of the British government. The United States, he said, has given B ritain a "firm undertaking" to that effect. Macmillan was trying to quell Labourite criticism...following his disclosure yesterday that American aircraft, patroling from British bases, are armed with nuclear bombs.

~~The Moscow radio said tonight that the Supreme Soviet (Russia's parliament) will meet on December 19th. No reason given.~~

~~And~~ In Warsaw, Communist Party Leader Gomulka predicted in a speech tonight that "socialism" will defeat capitalism in all fields in which they compete. Gomulka said Poland's policies...internal and external... cannot be shaped by credits, either from the East or from the West.

Word for Today

There are many things for which we can be thankful...and not least among them is the fact that we live in a momentous time in which we have much to gain and everything to lose. What must we do to be saved? Stephen Vincent Benet once said in a Thanksgiving prayer, "Give us brotherhood, not only for this day but for all our years, a brotherhood not only of words but of deeds."

Goodnight and good luck!

The United States, he said, has given Britain a "firm undertaking" to that effect. Macmillan was trying to quell Labourite criticism...following his disclosure yesterday that American

aircraft, patroling from British bases, are armed with nuclear bombs.

In Warsaw, Communist Party Leader Gomulka predicted in a speech tonight that "socialism" will defeat capitalism in all fields in which they compete. Gomulka said Poland's policies...internal and external...cannot be shaped by credits, either from the East or from the West.

This is the season for the counting of blessings. This reporter would doubt that any man has ever set down in a fashion that satisfied him completely his manifold reasons for being thankful.. And this reporter has no intention of trying it. For most of us, the real reasons for giving thanks are probably too personal to be made public, or at least unlikely to be of any considerable interest to our fellow citizens.

For my own part, I am grateful for being alive and curious at this particular time in human history. If given a choice of living a few score of years at any period in the recorded history of man, I would quickly choose to live those years here and now, because never before has so much been at stake. History turns on pivots, and we are the pivot. This, I think, is the first time in the history of mankind when everyone is able to partake in a choice, indeed is forced to partake in a choice between having a future and having no future. There has never been a time when the future was at the same time so promising and so ominous.

We in this country are going to play a leading role in detemmining whether the threat or the promise shall be realized. When man possessed only a dull hoe, how he used it made very little difference to the society in which he lived. Only his immediate family was affected. Humans now have instruments capable of destroying humanity, and there is no guarantee that they will not be used. This small planet on which we live, can within reasonable time become literally a land of milk and honey, or it can with very little effort commit suicide. That, of course, would take care of the cows and the bees too.

We are I think, going to find out something about our own country. Are we merely an accident of history and geography? To what extent have we been living

on the wisdom and dedication of our ancestors? They established on this continent a set of profound values, the belief in freedom, belief in the search for truth, belief in hard work - willingness to sacrifice. And in this generous and capacious land they scored a great success. We built within our borders; we were spared the exhaustive struggles for power outside those borders. When we took part in the world battles, we did it from a distance, so that two World Wars left us even richer, stronger and more productive than before. Now there is no safety in distance. Now there are no allies capable of holding and bleeding, while we re-tool.

About twenty years ago, a perceptive Frenchman, Andre Siegfried wrote a book called "America Comes Of Age." The title would be more appropriate today. We can no longer use our youth as an excuse for what we do or fail to do at home or abroad. If we place private good ahead of the public good, it will be known. We can, for the time being, probably maintain our luxurious standard of living, and end up by being a great continental island off the coast of Siberia with the rest of the world either united against us or indifferent to our fate. We can also lose our freedom while busily preparing to defend it. Or we can set an example of expanding social and economic equality, which may in the end of the day be more powerful than the export of our dollars.

I had the privilege of watching the testing time of another nation. That was Britain in the time of Baldwin and Chamberlain. The British has finally to choose between comfort and commitments. They chose a trial of faith by fire. There was a time when it appeared that the trial would not be risked; but it was, and the record will be there so long as man read English.

We in this country do not face a similar trial by fire. The challenge is utterly different. The British were saved because they found themselves in a common peril that affected them all and united them all. They were great because greatness was demanded of them by Winston Churchill. We also face a common peril, together with what is left of the free world. When we understand it, it may unite

us. As a young nation, we face an old problem. What must we do to be saved? It is possible that the world will again resort to the terrible arbitrament of war. No one knows. Meanwhile, we must make our plans, our policies and our sacrifices in cold blood. There are no trumpets, no first light glancing off bayonets - and there won't be. Nothing less than the sum total of man's achievements to date, and his hopes for the future is at stake. And we Americans, by our action or inaction, whether we want to or not, are going to play a large role in determining the outcome. This, without question, is the best time to be alive. For we approach, and I should think fairly rapidly, the dawn of a new era, or the destruction of civilization as we have known it. We in this country are not cast in the role of spectators; and who among us would have it otherwise?

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: There are many things for which we can be thankful...and not least among them is the fact that we live in a momentous time in which we have much to gain and everything to lose. What must we do to be saved? Stephen Vincent Benet once said in a Thanksgiving prayer, "Give us brotherhood, not only for this day, but for all our years, a brotherhood not only of words but of deeds."

Goodnight and good luck!

Edward R. Murrow Fri., Nov. 29, 1957

This is the news:

President Eisenhower left Washington today to continue his convalescence on his Gettysburg farm. News Secretary Hagerty said the trip...of slightly more than two hours by car...was taken with the approval of Mr. Eisenhower's doctors. The President was accompanied to Gettysburg by his personal physician, General Snyder, and by Mrs. Eisenhower. ~~There is no definite word on when the President will return to Washington, but Mrs. Eisenhower is due back in the capital on Wednesday for a luncheon engagement.~~

Before leaving Washington ~~this morning,~~ Mr. Eisenhower conferred for about half an hour with ~~presidential assistant Sherman Adams and General Goodpaster, the White House staff secretary, on the Administration's legislative program~~ for next year. ~~Mr. Eisenhower also signed several government papers.~~

Vice President Nixon was at the White House today but did not see the President. Nixon talked with Governor Adams, Secretary of Agriculture Benson and Secretary of Welfare Folsom. It was, he said, "a hoe-down to determine what will be presented to legislative leaders next week"---a reference to the two meetings scheduled with key members of Congress on Tuesday and Wednesday.

Democratic Representative Powell of New York has sent President Eisenhower a telegram... requesting "respectfully" that Mr. Eisenhower resign. Powell...who supported Mr. Eisenhower in '56...told the President, "I know that we in the free world need your leadership, but you have given your all... all your life...and I am positive that you are now entitled to spend the balance of your life relaxed."

Chairman Celler...of the House Judiciary Committee...predicted today that Congress will pass a presidential succession law within 60 days after it reconvenes in January. Celler made the prediction at a news conference in Rome.

President Eisenhower's illness is still causing deep concern among our allies. It is also causing speculation about the role of Vice President Nixon. My colleague, David Schoenbrun,

makes this report from Paris.

Tape runs 2:05
Ends on cue: "--to Edw R. Murrow
in N.Y."

French Premier Gaillard won two votes of confidence tonight in the National Assembly. The votes were taken on his two measures for easing the Algerian situation---one of them to provide limited home rule and the other to set up a new electoral system. Neither vote was close.

Today...at the United Nations...Tunisia repeated its offer to mediate the Algerian dispute. The Tunisian ambassador called the French reform program a "retrogression"...and said its ratification by the National Assembly cannot end the Algerian war. (I should like to discuss this problem further in a few minutes).

United Nations Secretary General Hammarskjold left New York tonight on a new mission to the Middle East. The trip was necessitated by recent border incidents, which have increased tensions between Israel and the Arab states.

The Air Force chief of staff...General White...today announced a change in [redacted] the Air Force ballistic missile program. White said that responsibility for both the inter-continental and intermediate range ballistic missiles in their "initial operational capability phase" has been transferred from the Air Research and Development Command to the Strategic Air Command. He said the First Missile Division...stationed at Camp Cooke, California...also has been transferred to SAC. General White made the announcement in speaking before the National Press Club. The transfers were made, he said, "to give us an earlier operational capability in the missiles field." He said that with its bases overseas American air power can "zero in" on the Soviet Union "from every direction." But he acknowledged that "the airpower we have today is not the answer for all time." New weapons have to be developed. He said, "We airmen who have fought to assure that the United States has the capability to control the air are determined that the United States must win the capability to control space." White confirmed that the Air Force has under development an anti-missile missile...called the Wizard.

It was announced tonight that the Science Advisory Committee...which was set up in the Office of Defense Mobilization...is being transferred to the White House. The committee is also being expanded from 12 to 17 members. One of the new members is General Doolittle, who has advocated an "aggressive" research and development program. News Secretary Hagerty says the transfer was made "in order that there will be a more direct relationship between the committee, the President and Dr. Killian, his newly appointed special assistant for science and technology." The chairman is Dr. Rabi, professor of physics at Columbia University.

Dr. Edward Condon, former director of the United States Bureau of Standards, said tonight that the Administration should---in his words---"remove from itself the badge of dishonor it has worn for so long" in dealing with American scientists. Russia's scientific progress, he said, is not surprising to "those who have known dozens of cases of scientists who have been hounded out of jobs by silly disloyalty charges." Condon spoke at a meeting of the American Physical Society in St. Louis.

Edward R. Murrow: November 29, 1957. 7:45 p.m.

The passage of the Algerian electoral reform bill in the French Assembly is a stinging defeat for the French right, and gives the Gaillard government a pledge of at least a brief term of life. But it is not going to solve the Algerian crisis, because it will not bring early peace in Algeria. The French have rejected the mediation offer of Morocco and Tunisia, saying they would agree to no more than an agreement to bring about a cease-fire. They specified that the "sovereignty" mentioned in the mediation offer was unacceptable.

This statement makes it possible to simplify the difficulties in Algeria. President Bourguiba of Tunisia and the King of Morocco had prevailed upon the liberation leaders in Algeria to drop the demand for independence in advance of negotiations, and to ask for sovereignty instead. Sovereignty would be possible in a federation with France, even if France had final responsibility for defense, and were given special economic advantages. But the French reform bill doesn't go that far. All it offers is autonomy, that is, local self-government. True, this is to be superceded in two years by federation. But there is a joker in the deck. For the bill does not provide genuine majority rule by the majority of Moslems.

The Moslems number nine millions in Algeria to a million two-hundred thousand French. The reform bill does give man-for-man equality between Moslems and French in local affairs. But a Council of Communities is set up to which the local assemblies are to be subordinate to some extent. And in these councils the French are to have equal membership with Moslems, and this, of course, gives them a veto over the Moslem majority. In the federation that is to come in two years, this same veto power would be retained.

This is not the way the architects of the reform program wanted it. They were ready to create a structure in which the Algerians could ultimately achieve independence by democratic procedures. But the French Assembly has so many members who hold fanatically to the rights of the French in Algeria, that the program had to be watered down. Today's bill confirms full French sovereignty, and grants only a compromised kind of local autonomy.

The theatrical gesture of Foreign Minister Pineau in the United Nations, in inviting democratic countries to send ten thousand observers to watch elections in Algeria does not meet this issue. The elections may be free, but the Moslem majority would still be less than free.

French officials report that Moslem interest in the rebellion is waning, and that more and more Moslems are reporting for service in the French Army. They also note a slowing down of military activities by the liberationists. Pineau told the United Nations Assembly, that the rebel cause already was lost, and could only hope to survive through international intervention.

But the French have been promising the collapse of the resistance ever since it started. By now the Algerians have men and arms enough to make Algeria the strongest military state in North Africa if it were independent. It would be five times as strong as Morocco and ten times as strong as Tunisia.

This disparity in power had at least something to do in prompting the mediation offer by Morocco and Tunisia. What they want is a federation tied to France in matters of defense, for then France would have a balance as between Algeria and its weaker neighbors. If this does not come to pass, they predict that Algeria will ultimately line up against the West, and that they too will be drawn into the Soviet world.

President Bourguiba aspires to be leader of this federation, and obviously his best chance of success is that the federation gets set up

soon, that it is linked with France, and then that North Africa is developed economically with aid and technology from the Western world. He is quite willing that the federation should be part of the European common market. The King of Morocco is of the same mind. It is an attractive picture. And to most of France's allies it looks more attractive than the Algeria provided in the reform bill adopted today. For one thing, it could stop the fighting right away. For another, it would convince the Middle East of the sincerity of the West's dedication to end colonialism in constructive ways. The picture not only is more attractive, it seems to be a great deal safer.

George Bryan

Word for Today

France is (TRYING TO MAKE) a painful adjustment in Algeria...but, in the face of compromise, the nationalist forces are demanding that France go all the way. They want nothing less than full independence. Disraeli said, "Change is inevitable." And (SOUL) George Soule observed, "The old is cracking. Something new is rising to take its place."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS

Friday, November 29, 1957
7:45 - 8:00 P.M.

MURROW: President Eisenhower's illness is still causing deep concern among our allies. It is also causing speculation about the role of Vice President Nixon. My colleague David Schoenbrun makes this report from Paris.

SCHOENBRUN: News that President Eisenhower may come here to Paris after all has been greeted publicly with great satisfaction by NATO officials, but Ed., privately they are considerably less elated. In fact, many delegates and officials are hoping that the President will not come. The reasons are these; as put to me by a number of diplomats. First, the President's health is to uncertain. If he were to have an attack over here in the middle of the conference, it would be a catastrophe. Delegates think it's to big a risk to take despite the optimistic health bulletins from Washington.

Secondly, they are realistically facing up to the possibility that Mr. Nixon may come to power. They are praying for the President's health but, as one of them put it to me, "we must recognize the uncertainty of the future. This being so, we should take the opportunity now to test Mr. Nixon's metal in a major challenge. We want to know whether his conversion to internationalism is genuine and enthusiastic."

Thirdly, and this is perhaps the most important point. NATO officials suddenly realize that this is an opportunity at the very highest level to get Mr. Nixon deeply and personally committed to Atlantic policies. If Mr. Nixon did not come here and if he later were to come to power, he might not feel bound by decisions taken ... at least not so tightly bound as if he had taken the decisions himself. This development Ed., is very new and/yet only privately and cautiously stated.

Everyone to whom I spoke has insisted that I not quote him by name, they do not want to appear to be interferring in American internal politics nor speculating about the delicate and sad issue of the President's health. There is a deep affection over here for Dwight D. Eisenhower. If they could have their wish ... it would be that the President do come in perfect health, but they feel that they cannot count on hopes and on prayers, and their future is just as much at stake as ours.

This is David Schoenbrun reporting from Paris, I return you now to EDWARD R. MURROW in New York.

MURROW: French Premier Gaillard won two votes of confidence tonight in the National Assembly. The votes were taken on his two measures for easing the Algerian situation.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, NOVEMBER 29, 1957
7:45 - 8:00 PM EST

This is the news:

President Eisenhower left Washington today to continue his convalescence on his Gettysburg farm. News Secretary Hagerty said the trip...of slightly more than two hours by car...was taken with the approval of Mr. Eisenhower's doctors. The President was accompanied to Gettysburg by his personal physician, General Snyder, and by Mrs. Eisenhower.

Vice President Nixon was at the White House today, but did not see the President. Nixon talked with Governor Adams, Secretary of Agriculture Benson, and Secretary of Welfare Folsom. It was, he said, "a hoe-down to determine what will be presented to legislative leaders next week"---a reference to the two meetings scheduled with key members of Congress on Tuesday and Wednesday.

President Eisenhower's illness is still causing deep concern among our allies. It is also causing speculation about the role of Vice President Nixon. My colleague, David Schoenbrun makes this report from Paris.

SCHOENBRUN: News that President Eisenhower may come here to Paris after all has been greeted publicly with great satisfaction by NATO officials, but Ed., privately they are considerably less elated. In fact, many delegates and officials are hoping that the President will not come. The reasons are these; as put to me by a number of diplomats. First, the President's health is to uncertain. If he were to have an attack over here in the middle of the conference, it would be a catastrophe. Delegates think it's too big a risk to take despite the optimistic health bulletins from Washington.

Secondly, they are realistically facing up to the possibliity that Mr. Nixon may come to power. They are praying for the President's health but, as one of them put it to me, "we must recognize the uncertainty of the future. This being so, we should take the opportunity now to test Mr. Nixon's metal in a major challenge. We want to know whether his conversion to internationalism is genuine

and enthusiastic."

Thirdly, and this is perhaps the most important point. NATO officials suddenly realize that this is an opportunity at the very highest level to get Mr. Nixon deeply and personally committed to Atlantic policies. If Mr. Nixon did not come here and if he later were to come to power, he might not feel bound by decisions taken...at least not so tightly bound as if he had taken the decisions himself. This development Ed, is very new and is yet only privately and cautiously stated.

Everyone to whom I spoke has insisted that I not quote him by name; they do not want to appear to be interferring in American internal politics nor speculating about the delicate and sad issue of the President's health. There is a deep affection over here for Dwight D. Eisenhower. If they could have their wish...it would be that the President does come in perfect health, but they feel that they cannot count on hopes and on prayers, and their future is just as much at stake as ours.

This is David Schoenbrun reporting from Paris, I return you now to Edward R. Murrow in New York

MURROW: French Premier Gaillard won two votes of confidence tonight in the National Assembly. The votes were taken on his two measures for easing the Algerian situation---one of them to provide limited home rule and the other to set up a new electoral system. Neither vote was close.

Today...at the United Nations...Tunisia repeated its offer to mediate the Algerian dispute. The Tunisisan ambassador called the French reform program a "retrogression"...and said its ratification by the National Assembly cannot end the Algerian war. (I should like to discuss this problem further in a few minutes.)

The Air Force chief of staff...General White...today announced a change in the Air Force ballistic missile program. White said, that responsibility for both the inter-continental and intermediate range ballistic missiles in their "initial operational capability phase" has been transferred from the Air Research

and Development Command to the Strategic Air Command. He said the First Missile Division...stationed at Camp Cooke, California...also has been transferred to SAC. General White made the announcement in speaking before the National Press Club. The transfers were made, he said, "to give us an earlier operational capability in the missiles field." He said that with its bases overseas, American air power can "zero in" on the Soviet Union "from every direction." But he acknowledged that "the airpower we have today is not the answer for all time." New weapons have to be developed. He said, "We airmen who have fought to assure that the United States has the capability to control the air are determined that the United States must win the capability to control space." White confirmed that the Air force has under development an anti-missile missile ...called the Wizard.

It was announced tonight that the Science Advisory Committee...which was set up in the Office of Defense Mobllization...is being transferred to the White House. The committee is also being expanded from 12 to 17 members. One of the new members is General Doolittle, who has advocated an "agressive" research and development program. News Secretary Hagerty says the transfer was made "in order that there will be a more direct relationship between the committee, the President and Dr. Killian, his newly appointed special assistant for science and technology." The chairman is Dr. Rabi, professor of physics at Columbia University.

Dr. Edward Condon, former director of the United States Bureau of Standards, said tonight that the Administration should---in his words---"remove from itself the badge of dishonor it has worn for so long" in dealing with American scientists. Russia's scientific progress, he said, is not surprising to "those who have known dozens of cases of scientists who have been hounded out of jobs by silly disloyalty charges." Condon spoke at a meeting of the American Physical Society in St. Louis.

The passage of the Algerian electoral reform bill in the French Assembly is

a stinging defeat for the French right, and gives the Gaillard government a pledge of at least a brief term of life. But it is not going to solve the Algerian crisis, because it will not bring early peace in Algeria. The French have rejected the mediation offer of Morocco and Tunisia, saying they would agree to no more than an agreement to bring about a cease-fire. They specified that the "sovereignty" mentioned in the mediation offer was unacceptable.

This statement makes it possible to simplify the difficulties in Algeria. President Bourguiba of Tunisia and the King of Morocco had prevailed upon the liberation leaders in Algeria to drop the demand for independence in advance of negotiations, and to ask for sovereignty instead. Sovereignty would be possible in a federation with France, even if France had final responsibility for defense, and were given special economic advantages. But the French reform bill doesn't go that far. All it offers is autonomy, that is, local self-government. True, this is to be superceded in two years by federation. But there is a joker in the deck. For the bill does not provide genuine majority rule by the majority of Moslems. The Moslems number nine millions in Algeria to a million two-hundred thousand French. The reform bill does give man-for-man equality between Moslems and French in local affairs. But a Council of Communities is set up to which the local assemblies are to be subordinate to some extent. And in these councils the French are to have equal membership with Moslems, and this, if course, gives them a veto over the Moseem majority. In the federation that is to come in two years, this same veto power would be retained.

The theatrical gesture of Foreign Minister Pineau in the United Nations, in inviting democratic countries to send ten thousand observers to watch elections in Algeria does not meet this issue. The elections may be free, but the Moslem majority would still be less than free.

French officials report that Moslem interest in the rebellion is waning, and that more and more Moslems are reporting for service in the French Army. They also note a slowing down of military activities by the liberationists. Pineau

told the United Nations Assembly, that the rebel cause already was lost, and could only hope to survive through international intervention.

But the French have been promising the collapse of the resistance ever since it started. By now the Algerians have men and arms enough to make Algeria the strongest military state in North Africa if it were independent. It would be five times as strong as Morocco and ten times as strong as Tunisia.

This disparity in power had at least something to do in prompting the mediation offer by Morocco and Tunisia. What they want is a federation tied to France in matters of defense, for then France would have a balance as between Algeria and its weaker neighbors. If this does not come to pass, they predict that Algeria will ultimately line up against the West, and that they too will be drawn into the Soviet world.

President Bourguiba aspires to be leader of this federation, and obviously his best chance of success is that the federation gets set up soon, that it is linked with France, and then that North Africa is developed economically with aid and technology from the Western world. He is quite willing that the federation should be part of the European common market. The King of Morocco is of the same mind. It is an attractive picture. And to most of France's allies it looks more attractive than the Algeria provided in the reform bill adopted today. For one thing, it could stop the fighting right away. For another, it would convince the Middle East of the sincerity of the West's dedication to end colonialism in constructive ways. The picture not only is more attractive, it seems to be a great deal safer.

This is Ed Murrow. I'll be back in a moment with theWord for Today. But, first here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: France is trying to make a painful adjustment in Algeria...but, in the face of compromise, the nationalist forces are demanding that France go all the way. They want nothing less than full independence. Disraeli said, "Change is

inevitable." And George Soule observed, "The old is cracking. Something new is rising to take its place."

Goodnight and good luck!

Edward R. Murrow Mon., Dec. 2, 1957

This is the news:

President Eisenhower today returned to Washington from Gettysburg...and presided for an hour and forty minutes at a meeting of his cabinet. He also conferred separately with Secretary of State Dulles, and practiced hitting golf balls...for about 15 minutes...in the White House backyard. News Secretary Hagerty said Mr. Eisenhower "hopes and expects" to attend tomorrow's bipartisan meeting with Congressional leaders. At this meeting the Administration will outline its latest proposals with regard to

both foreign and domestic policy.

Plans for the NATO summit meeting in Paris will be discussed. And Adlai Stevenson...as consultant to the Administration in preparation for the summit meeting...will take part in the discussion.

The State Department said today that the future role of Stevenson as NATO adviser may be "clarified" tomorrow. Stevenson said today, in answer to reporters' questions, that he has not been invited to attend the Paris meeting...that his position has "not changed". "I was asked," he said, "to give the President and the Secretary of State my views on the NATO meeting, and I have reviewed and commented to the Secretary on the material developed to date." Stevenson said he expects his assignment to be completed "within a week or 10 days." The NATO conference opens two weeks from today.

House Speaker Rayburn arrived in Washington today for tomorrow's White House meeting with congressional leaders... and said he would be for increasing the budget, "if it is necessary." He said, "I think

the outstanding issue right now is that we have been humiliated by Russia's successes in the missile and satellite field." He declined to say how Congress will react to Administration proposals for sharing atomic secrets...and possibly atomic weapons...with our allies. But, for himself, Rayburn said, "I think the free nations of the world are all in this thing together."

At Cape Canaveral, preparations are underway for launching America's first earth satellite on Wednesday. This will be a small "test" satellite...measuring six inches in diameter. The Defense Department says there is "no certainty" that the small satellite, when launched, will start circling the earth. The "prime purpose" of the test, it says, is to try out the complete launching equipment and gather performance data. Other test satellites are scheduled to be launched this month...with the launching of a 21-inch fully equipped satellite set for sometime between January and March. Reports from the test center tonight say that some "bugs" have been discovered in the rocket mechanism for launching the

the first test satellite. But the firing is still set for Wednesday.

A chain reaction was started today in this country's first full-scale nuclear power plant, designed to produce electricity solely for commercial use. The firing up of the atomic furnace...at Shippingport, Pennsylvania...was announced by Chairman Strauss of the Atomic Energy Commission. Full operation of the plant is expected before the end of the year. (Chairman Strauss made the announcement on the 15th anniversary of the first nuclear chain reaction achieved by Man. That was at the University of Chicago, in a reactor designed by the late Enrico Fermi).

Secretary of the Treasury Anderson will say in a speech in New York tonight that hopes for a balanced budget must be weighed against the defense needs of the country. He will say, "I want to make it quite clear that ~~we~~ the Treasury ~~are~~ is never going to take any positions which ~~are inimicable to~~ will damage the defense."

A leader of the AFL-CIO building and construction trades department suggested today that the 19 unions...affiliated with it... renounce any wage demands they might want to make in 1958. The 19 unions have more than 3-million members. Richard Gray, president of the Building and Construction Trades Department, said higher pay would mean "more tight money, more inflation, less construction and more unemployment for our people." Gray spoke at the department's convention in Atlantic City.

A Federal Court...here in Washington...began hearing testimony today in the suit filed by 13 rank-and-file teamsters...demanding that the election of James Hoffa as president of the Teamsters Union be declared null and void. The suit charges that the recent election in Miami Beach was "rigged". And a truck driver testified today that, to the best of his knowledge, his local elected no delegates to send to the Miami Beach convention. He "supposed" they were appointed instead.

In the United Nations, Saudi Arabia today accused France of claiming the existence of a Communist menace in Algeria...in order to gain Western support. Saudi Arabia made the charge before the Political Committee, which is debating the Algerian question. France, it said, must accept the principle of independence.

Secretary General Hammarskjold today concluded two days of talks in Amman, the capital of Jordan...where he went in the hope of reducing new tensions that have arisen in the Middle East. My colleague, Winston Burdett, has been covering these talks, and so...for a direct report...we switch now to Amman.

Tape runs 5:14

Ends in cue: "--to Edw. R. Murrow in Washington."

That was my colleague, Winston Burdett, reporting on Secretary General Hammarskjold's new mission to the Middle East...and some of the thorny problems that need to be solved.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

word for today

Fifteen years ago, Enrico Fermi and his associates proved that nuclear fission can be self-sustained and controlled...thus demonstrating the immense power of the atom to serve Mankind. Oliver Wendell Holmes said, "Science is a first-rate piece of furniture for a man's upper chamber, if he has common sense on the ground floor."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Monday, December 2, 1957
7:45 - 8:00 P.M.

MURROW: ... In the United Nations, Saudi Arabia today accused France of claiming the existence of a Communist menace in Algeria in order to gain Western support. Saudi Arabia made the charge before the Political Committee, which is debating the Algerian question.

Secretary General Hammarskjold today concluded two days of talks in Amman, the capital of Jordan, where he went in the hope of reducing new tensions that have arisen in the Middle East. My colleague, Winston Burdett, has been covering these talks and so for a direct report, we switch now to Amman.

BURDETT: Secretary General Dag Hammarskjold today spent six hours and forty minutes closeted with Jordanian government and Army leaders. In his two days in Amman, he's had twelve and a half hours of negotiations and this concludes the first round of his mission. Tomorrow he will go to United Nations truce headquarters in Jerusalem to meet the man who stands in the middle of this dispute, the Chief of Staff of the truce organization, Lieut. Col. Byron Leary, an American. Mr. Hammarskjold will then go on to the Israeli side of Jerusalem, for the second round, his talks with Prime Minister Ben-Gurion.

The discussions here in Amman have centered on two questions: What right, if any, do the Israelis have to bring gasoline to their police unit on Mt. Scopus? That is the demilitarized area above Jerusalem where Israeli police are stationed in order to protect the Hebrew University and Hadassah Hospital. And: What right, if any, does the UN truce organization have to inspect this area in order to insure that it remains demilitarized and that the Israelis are not storing arms in the university and hospital buildings or digging fortifications around them? Today the

Chief of Staff's representative on Mt. Scopus, Lieut. Col. George Flint, a Canadian, was called in to take part in the discussions.

The Jordanians have their own slim? answers to the two key questions. They say that the Israelis may bring food, water and even Diesel oil to Mt. Scopus but have no right to bring gasoline. They claim that the Israelis are using the gasoline to run a generator that is allegedly powering compressors in the drilling of trenches and emplacements. The Jordanians insist that the United Nations does have the right to inspect the area. And not only that, they say that it is the UN's duty to do so under an agreement that placed Mt. Scopus under UN control. And, finally, the Jordanians have asked Mr. Hammarskjold to dismiss Colonel Leary, the Chief of Staff, because they say he's failed to exercise his inspection authority and they accuse the colonel of being partial toward Israel. Quite apart from this personal issue, the fact is that no thorough UN inspection has been made in the nine years that the Israeli police have been there.

Mr. Hammarskjold has been urging the Jordanians to go slow. He has at least succeeded in persuading them not to boycott the truce organization until this issue has been cleared. His great hope, of course, is to find some middle ground between the seemingly irreconcilable positions of Jordan and Israel and he must still find out exactly what the Israeli position is. Today a United Nations spokesman declined to say whether the Secretary General is empowered to make an on-the-spot decision himself should he fail to get agreement between the two governments. Can he order Jordan to let the Israeli convoy through? Can he order Israel to accept an inspection? UN spokesmen suggest that Hammarskjold has no power to judge, no authority to say that this side or that is right or wrong. And it is hinted that he may simply refer his findings back to the Security Council.

Mr. Hammarskjold's declared purpose in coming here

has been to assert UN strength and authority where there has admittedly been UN weakness. It is very generally felt among Western diplomats here, that unless there is a definite reassertion, unless, in fact, there is a UN inspection, Mr. Hammarskjold's truce machinery will pay a heavy price in lost prestige and effectiveness.

There is no doubt that an agreement to demilitarize Mt. Scopus was reached nine years ago, and was later embodied in the final armistice agreement. But this agreement has apparently been allowed to lapse. Is it still binding? Can Hammarskjold enforce it on his own authority? Undoubtedly, all these questions have been discussed here today. Will Hammarskjold be able to reconcile Jordan and Israel? The next Israeli convoy to Mt. Scopus is scheduled to come through on Wednesday. Will it try to bring in gasoline?

The Jordanians, for their part, seem less and less inclined to give way. The whole Arab world is watching them. Saudi Arabia, Iraq, Syria, all have announced that they are firmly on Jordan's side in this, an Arab cause. But not all of this Arab support is politically disinterested. Today the Egyptian military attache in Amman called on Jordan's foreign minister and announced that Jordan has Egypt's full support right-down-the-line on the issues of the convoy, Mt. Scopus and the firing of Colonel Leary. The political effect of this move was not to encourage Jordan particularly, but to make it still more difficult for her to compromise - and that was its intention. It was the Egyptian way of saying "if you dare give in, you will hear from us about it."

And, now, back to Edward R. Murrow in Washington.

The political effect of this move was not to encourage Jordan particularly, but to make it still more difficult for her to compromise - and that was its intention. It was the Egyptian way of saying "If you dare give in, you will hear from us about it."

And now, back to Edward R. Murrow in Washington.

MURROW: That was my colleague, Winston Burdett, reporting on Secretary General Hammarskjold's new mission to the Middle East...and some of the thorny problems that need to be solved.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now,

here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: Fifteen years ago, Enrico Fermi and his associates proved that nuclear fission can be self-sustained and controlled...thus demonstrating the immense power of the atom to serve Mankind. Oliver Wendell Holmes said, "Science is a first-rate piece of furniture for a man's upper chamber, if he has common sense on the ground floor."

Goodnight and good luck!

Edward R. Murrow Tues., Dec. 3, 1957

This is the news:

Congressional leaders of both parties today received a White House briefing that lasted for five hours. President Eisenhower presided for about two and a half hours. And when he was not present, Vice President Nixon sat in his place. Senate Republican Leader Knowland said, "We had a full and frank discussion of the coming NATO conference, mutual security and national defense. There was no discounting of Soviet armed strength. Nor," he said, "was there any evidence that our own Defense Department is unmindful of the challenges confronting us, or that we are without the means to meet any aggression we may face either presently or in the future."

Senate Democratic Leader Johnson told reporters...after the briefing...that he still thinks the Administration needs "a good dose of urgency." Senator Fulbright of Arkansas, the second-ranking Democrat on the Foreign Relations Committee, came away with the same impression. He said, "I had expected a more vigorous reaction to the development of Sputnik and all that it implies." And House Speaker Rayburn said, "It didn't seem to me like any of the things they proposed were too immediate." The Administration is repprted (at today's briefing) to have proposed spending an additional 2-billion dollars next year for defense and about half a billion more for foreign aid. Much of the 2-billion-dollar increase in defense spending would go for missiles. Chairman Cannon of the House Appropriations Committee said he "gathered" that the over-all budget for next year would run only "a little more" than the budget this year...indicating a cutting down on domestic programs. And Republican Senator Bridges says no suggestion was made for raising the ceiling on the national debt. The Administration proposed a five-year extension of the Reciprocal Trade Act. Chairman Strauss of the Atomic Energy Commission outlined a series of amendments to the Atomic Energy Act...to enable the United States to share

more atomic secrets with its allies. And Secretary of State Dulles reviewed plans for the NATO meeting in Paris later this month. Adlai Stevenson attended this part of the briefing...lasting an hour and a half...but did not speak. Democratic Senator Hennings quotes Dulles as saying that the Paris meeting "should not emphasize the military but infuse a new sense of understanding and purpose between us and our allies."

Stevenson conferred privately with President Eisenhower and Secretary Dulles for about 10 minutes. Stevenson said afterward that the President had indicated he would be "very happy" to see him---Stevenson---go to Paris. The Democratic leader said, however, that he didn't know whether this constituted an actual invitation. Later, News Secretary Hagerty said it did. And then...after that...Stevenson issued a statement saying he would decline the invitation, "unless there are compelling developments." "I would," he explained, "be without authority and necessarily identified with decisions I might not always agree with and could not publicly oppose."

Hagerty said there has not been the "slightest change" in his previous statement that the doctors will decide whether President Eisenhower should attend the NATO meeting. If he does not attend, Vice President Nixon will go as head of the American delegation. Hagerty also said that the

White House is discontinuing medical bulletins on the President's condition that unless there is word to the contrary, it can be assumed that his condition continues to improve. Mr. Eisenhower, he said, plans to attend tomorrow's meeting with Republican congressional leaders on the Administration's domestic program.

Secretary of Agriculture Benson called a news conference today and said he has no intention of resigning. He then restated his views on farm policy...calling them "good for the farmers and good for our nation."

Former Supreme Court Justice Stanley F. Reed has resigned from the newly created Civil Rights Commission...on grounds that his membership might reflect on the impartiality of the Federal Courts. President Eisenhower appointed Reed chairman of the commission on November 7th. Although Reed stepped down from the Supreme Court last year, he has been serving on a part-time basis as a judge in lower courts. He was a member of the Supreme Court in 1954, when it issued its decision outlawing racial segregation in the public schools.

Secretary of Labor Mitchell said today that the proposal of a union leader for a voluntary moratorium on wage increases next year "deserves

consideration." The suggestion came from Richard Gray, president of the AFL-CIO building trades department. President Meany of the AFL-CIO has indicated his opposition...calling the high purchasing power of workers "the most dynamic ingredient in our economy."

At Cape Canaveral, Florida...final preparations are being made for the launching tomorrow morning of this country's first earth satellite. It will be a small "test" satellite...part of Project Vanguard...and a Navy spokesman says there is a "good probability" it will be placed in orbit, "if everything works the way it should." He added, "We know we have the capability."

United Nations Secretary General Hammarskjold conferred in Jerusalem today with Prime Minister Ben Gurion of Israel... in the second stage of his latest peace mission to the Middle East. A communique says the discussions "extended over the main problems affecting the Israel-Jordan armistice situation.". and that further talks will be held tomorrow. Hammarskjold conferred with Jordanian leaders yesterday in Amman.

In the United Nations Political Committee today...here in New York... the United States opposed any United Nations action in Algeria at this time.

Edward R. Murrow: December 3, 1957. 7.45 p.m.

In 1952, the Russians demanded the recall of George Kennan as United States Ambassador to Moscow, and the Russian public heard of him no more. Today he is being quoted again in the Soviet press. This has been brought to pass by the lectures Mr. Kennan has been delivering on foreign policy, in London. In them he has been proposing a radical revision of Western policy in Europe. He has urged our European allies in NATO to reject our offer of missiles, and to work instead for a withdrawal of all foreign forces from Europe. He proposes German re-unification on the basis of neutrality. He wants American and British troops withdrawn from West Germany, and Soviet troops from East Germany and other Eastern European satellites. He is not sure the Soviet Union will agree to such a settlement, but he is sure the offer should be made. Then it would be clear who was responsible for the continued tension over Germany. ~~XXXXXXXXXXXXXXXXXX~~

The Soviet press is quoting Mr. Kennan without comment, and so is not endorsing his views. But in printing them it is advertising profound differences over Western policy in Europe. Mr. Kennan's ideas about neutralizing a united Germany are very much like the policy of the German social democrats the the British Labor party. Since there is more than a

fair chance that both these parties may come to power in their countries, a good deal more is sure to be heard about these proposals.

Mr. Kennan takes the line that the German problem stands at the center of world tensions, and that no greater contribution to world peace can be made, than to end the German deadlock. He believes that the present American intention to supply NATO allies with strategic or tactical nuclear weapons will seriously increase tension. Moscow, he says, will not entrust similar weapons to the full control of its satellites, and if Western countries are to be armed in this way, any Russian withdrawal from central and eastern Europe will become unthinkable, once and for all.

He argues that the present Western policy toward Germany is not one the Russians should be expected to accept. It deprives them of a military bastion in central Europe without any compensating withdrawal of American armed forces from the heart of the Continent. "It seems to me" he said, "far more desirable on principle, to get the Soviet forces out of Central Europe, than to cultivate a new German army, for the purpose of opposing them while they remain there."

Under the terms of the German peace treaty, a united Germany is free to decide whether or not to join NATO. Mr. Kennan proposes to forbid it

6

to do so, and to insist on neutrality. "Might it not be" he asks, "that the only feasible way to unification and independence for Germany, should lie precisely through her accepting certain restraints on her freedom to shape her future military position in Europe? Is it not a bit quixotic to cling, in the name of freedom and independence, to a position which implies the sacrifice of all freedom and independence to the many millions in East Germany?"

Mr. Kennan -- and the German social democrats and British laborites - assume that Germany is the root of all the troubles between East and West in Europe. Hence it follows that if the German problem can be solved, the cold war itself can come to an end. But that is assuming that a divided Germany is responsible for a divided world, and not that a divided world is responsible for a divided Germany.

If a divided world is the true root of the trouble, neutralization in Germany might not solve things. A united Germany, lying between East and West, might be under irresistible pressure and temptation to line up on one side or the other, if not in war, then in all other ways, and the tension between East and West might not abate at all.

However, if the cold war could be ended on acceptable terms, the arms race could be ended, and then the German problem might be comparatively simple to solve. That is saying, that the one sure way to peace is to end the cold war, and that this, rather than German unification, should be the ultimate Western objective. Admittedly it will be harder to end the cold war on decent terms, than to unify and neutralize Germany. But the NATO governments may have to decide that even if it is harder, it still has to be the basic aim of Western policy.

George Bryan

Word for Today

It has been proposed that the reunification of Germany be achieved on a basis of German neutrality. But the root of the trouble in Europe would not appear to be a divided Germany but a divided world. How we go about solving the German problem is ~~important~~ crucial. For as H.W. Shaw observed, "Method is the architecture of success."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, DECEMBER 3, 1957
7:45 - 8:00 PM EST

This is the news:

Congressional leaders of both parties today received a White House briefing that lasted for five hours. President Eisenhower presided for about two and a half hours. And when he was not present, Vice President Nixon sat in his place. Senate Republican Leader Knowland said, "We had a full and frank discussion of the coming NATO conference, mutual security, and national defense. There was no discounting of Soviet armed strength. "Nor," he said, "was there any evidence that our own Defense Department is unmindful of the challenges confronting us, or that we are without the means to meet any aggression we may face either presently or in the future." Senate Democratic Leader Johnson told reporters... after the briefing...that he still thinks the Administration needs "a good dose of urgency."

Senator Fulbright of Arkansas, the second-ranking Democrat on the Foreign Relations Committee, came away with the same impression. He said, "I had expected a more vigorous reaction to the development of Sputnik and all that it implies." And House Speaker Rayburn said, "It didn't seem to me like any of the things they proposed were too immediate." The Administration is reported (at today's briefing) to have proposed spending an additional 2-billion dollars next year for defense and about half a billion more for foreign aid. Much of the 2-billion-dollar increase in defense spending would go for missiles. Chairman Cannon of the House Appropriations Committee said he "gathered" that the over-all budget for next year would run only "a little more" than the budget this year...indicating a cutting down on domestic programs. And Republican Senator Bridges says, no suggestion was made for raising the ceiling on the national debt. The Administration proposed a five-year extension of the Reciprocal Trade Act. Chairman Strauss of the Atomic Energy Commission outlined a series of amendments to the Atomic Energy Act...to enable the United States to

share more atomic secrets with its allies. And Secretary of State Dulles reviewed plans for the NATO meeting in Paris later this month. Adlai Stevenson attended this part of the briefing...lasting an hour and a half...but did not speak. Democratic Senator Hennings quotes Dulles as saying that the Paris meeting "should not emphasize the military but infuse a new sense of understanding and purpose between us and our allies."

Stevenson conferred privately with President Eisenhower and Secretary Dulles for about 10 minutes. Stevenson said afterward that the President had indicated he would be "very happy" to see him---Stevenson---go to Paris. The Democratic leader said, however, that he didn't know whether this constituted an actual invitation. Later, News Secretary Hagerty said it did. And then... after that...Stevenson issued a statement saying he would decline the invitation, "unless there are compelling developments." "I would," he explained, "be without authority, and necessarily identified with decisions I might not always agree with and could not publicly oppose."

Hagerty said there has not been the "slightest change" in his previous statement that the doctors will decide whether President Eisenhower should attend the NATO meeting. If he does not attend, Vice President Nixon will go as head of the American delegation. Hagerty also said that the White House is discontinuing medical bulletins on the President's condition, that unless there is word to the contrary, it can be assumed that his condition continues to improve. Mr. Eisenhower, he said, plans to attend tomorrow's meeting with Republican congressional leaders on the Administration's domestic program.

Secretary of Agric ulture Benson called a news conference today and said he has no intention of resigning. He then restated his views on farm policy... calling them "good for the farmers and good for our nation."

Former Supreme Court Justice Stanley F. Reed has resigned from the newly created Civil Rights Commission...on grounds that his membership might reflect on the impartiality of the Federal Courts. President Eisenhower appointed

Reed chairman of the commission on November 7th. Although Reed stepped down from the Supreme Court last year, he has been serving on a part-time basis as a judge in lower courts. He was a member of the Supreme Court in 1954, when it issued its decision outlawing racial segregation in the public schools.

Secretary of Labor Mitchell said today that the proposal of a union leader for a voluntary moratorium on wage increases next year "deserves consideration." The suggestion came from Richard Gray, president of the AFL-CIO building trades department. President Meany of the AFL-CIO has indicated his opposition...calling the high purchasing power of workers "the most dynamic ingredient in our economy."

At Cape Canaveral, Florida...final preparations are being made for the launching tomorrow morning of this country's first earth satellite. It will be a small "test" satellite...part of Project Vanguard...and a Navy spokesman says there is a "good probability" it will be placed in orbit, "if everything works the way it should." He added, "We know we have the capability."

United Nations Secretary General Hammarskjold conferred in Jerusalem today with Prime Minister Ben Gurion of Israel...in the second stage of his latest peace mission to the Middle East. A communique says the discussions "extended over the main problems affecting the Israel-Jordan armistice situation"...and that further talks will be held tomorrow. Hammarskjold conferred with Jordanian leaders yesterday in Amman.

In the United Nations Political Committee today...here in New York... the United States opposed any United Nations action in Algeria at this time.

In 1952, the Russians demanded the recall of George Kennan as United States Ambassador to Moscow, and the Russian public heard of him no more. Today he is being quoted again in the Soviet press. This has been brought to pass by the lectures Mr. Kennan has been delivering on foreign policy, in London. In them he has been proposing a radical revision of Western policy in Europe. He has urged our European allies in NATO to reject our offer of missiles, and to

work instead for a withdrawal of all foreign forces from Europe. He proposes German re-unification on the basis of neutrality. He wants American and British troops withdrawn from West Germany, and Soviet troops from East Germany and other Eastern European satellites. He is not sure the Soviet Union will agree to such a settlement, but he is sure the offer should be made. Then it would be clear who was responsible for the continued tension over Germany.

The Soviet Press is quoting Mr. Kennan without comment, and so is not endorsing his views. But in printing them, it is advertising profound differences over Western policy in Europe. Mr. Kennan's ideas about neutralizing a united Germany are very much like the policy of the Germany social democrats and the British Labor party. Since there is more than a fair chance that both these parties may come to power in their countries, a good deal more is sure to be heard about these proposals.

Mr. Kennan takes the line that the German problem stands at the center of world tensions, and that no greater contribution to world peace can be made, than to end the German deadlock. He believes that the present American intention to supply NATO allies with strategic or tactical nuclear weapons will seriously increase tension. Moscow, he says, will not entrust similar weapons to the full control of its satellites, and if Western countries are to be armed in this way, any Russian withdrawal from Central and Eastern Europe will become unthinkable, once and for all.

He argues that the present Western policy toward Germany is not one the Russians should be expected to accept. It deprives them of a military bastion in Central Europe without any compensating withdrawal of American armed forces from the heart of the Continet. "It seems to me" he said, "far more desirable on principle, to get the Soviet forces out of Central Europe, than to cultivate a new German army, for the purpose of opposing them while they remain there."

Under the terms of the German peace treaty, a united Germany is free to decide whether or not to join NATO. Mr. Kennan proposes to forbid it to do so,

and to insist on neutrality. "Might it not be" he asks, "that the only feasible way to unification and independence for Germany, should lie precisely through her accepting certain restraints on her freedom to shape her future military position in Europe? Is it not a bit quizotic to cling, in the name of freedom and independence, to a position which implies the sacrifice of all freedom and independence to the many millions in East Germany?"

Mt. Kennan - and the German social democrats and British laborites - assume that Germany is the root of all the troubles between East and West in Europe. Hence it follows, that if the German problem can be solved, the cold war itself can come to an end. But that is assuming that a divided Germany is responsible for a divided world, and not that a divided world is responsible for a divided Germany.

If a divided world is the true root of the trouble, neutralization in Germany might not solve things. A united Germany, lying between East and West, might be under irresistable pressure and temptation to line up on one side or the other, if not in war, then in all other ways, and the tension between East and West might not abate at all.

However, if the cold war could be ended on acceptable terms, the arms race could be ended, and then the German problem might be comparatively simple to solve. That is saying, that the one sure way to peace is to end the cold war, and that this, rather than German unification, should be the utlimate Western objective. Admittedly it will be harder to end the cold war on decent terms, than to unify and neutralize Germany. But the NATO governments may have to decide that even if it is harder, it still has to be the basic aim of Western policy.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: It has been proposed that the reunification of Germany be achieved

on a basis of German neutrality. But the root of the trouble in Europe would not appear to be a divided Germany, but a divided world. How we go about solving the German problem is crucial. For as H. W. Shaw observed, "Method is the architecture of success."

Goodnight and good luck!

Edward R. Murrow Wed., Dec. 4, 1957

This is the news:

The latest word on plans for launching the first United States test satellite is that the firing...at Cape Canaveral, Florida...will take place in about half an hour. The launching originally was scheduled for 8 o'clock this morning, but there have been repeated delays due to what the scientists describe as "minor adjustments."

The American Rocket Society said today that it gave President Eisenhower a report...in October...calling for a space flight program to put Americans on the moon within 20 years. Copies also were sent to the President's scientific advisory committee. The report suggested that a special government agency...along the lines of the Atomic Energy Commission...be set up to research and develop the space program. The cost, it estimated, would run about 200-million dollars a year after the first year.

The Air Force announced today that it has ordered the construction of four launching sites for the Bomarc interceptor missile. The Bomarc has a range of 300 miles...and is designed to bring down enemy aircraft. The launching sites, costing a total of 46-million dollars, are to be built at four Air Force bases in New York, New Jersey, Massachusetts and Maine.

The British government revealed today...in the House of Commons... that British aircraft are being outfitted with hydrogen bombs. / In answer to questions, the under-secretary of the Air Ministry...Charles Orr-Ewing... said the British Bomber Command was "in the process of being equipped with bombs in the megaton range." / The Air Ministry says this was a reference to hydrogen bombs.

Forty persons are reported dead in a train wreck in London. Two commuter trains collided in a heavy fog, outside St. John's Station.

In this country, the eastern seaboard is being blanketed by the first heavy snow of the season. About six inches of snow has fallen so far, here in New York. Washington had got six inches by the middle of the afternoon, and government workers were sent home an hour early.

President Eisenhower today conferred at length with Republican congressional leaders on the domestic program to be presented to Congress in January. Republican Senate Leader Knowland said the meeting was in the main a "general" discussion. Detailed proposals, he said, will be submitted at a later meeting with the President. Senator Dirksen, who attended today's meeting, said the final budget figure for next year is "still fluid"... that he does not think there is "any assurance" the ceiling on the national debt will have to be raised, despite increased defense spending. He indicated that a balanced budget may be possible by economies in non-defense categories, but he did not specify these categories. Knowland told reporters, "We are all very hopeful there will be a balanced budget, but the final figures are not in." News Secretary Hagerty...who sat in on most of the White House meeting...said it may be necessary to continue excise and corporation taxes at their present rates.

The Associated Press...quoting "informed sources"...says Adlai Stevenson may soon make a public appeal for a program of substantially more foreign aid and increased cooperation with our allies in face of the

Soviet threat. Stevenson would make this appeal as a private citizen...and a Democrat...when he finishes his job as consultant to the Administration in about another week.

The AFL-CIO Building Trades Department...representing more than a million union members... has urged the AFL-CIO not to expel the Teamsters Union on corruption charges. The Building Trades Department approved a resulution to this effect, on the eve of the AFL-CIO convention tomorrow at Atlantic City. The convention will vote on whether to expel the teamsters from the federation.

Today...at the Hague...the Dutch parliament completed approval of the treaties for a common European market and Euratom, the European agency for developing nuclear power for industry. The Netherlands is the last of six participating countries to ratify the treaties, ~~and the only~~ procedural step remaining is for the six ~~governments to~~ file the documents of ratifi~~cation in Rome~~. The participating countries....besides the Netherlands...are Belgium, Luxembourg, West Germany, Italy and France.

In Indonesia, the Communist-led trade unions have "taken over" at least three Dutch companies...under cover of the Indonesian campaign for possession of West New Guinea, a Dutch ~~province~~ colony. The government of Indonesia today warned workers against seizing Dutch properties, without official approval. And the Netherlands has begun alerting ships for an evacuation of Dutch nationals from Indonesia, ~~if~~ in case the situation gets out of hand.

Fighting continued today in the Spanish colony of Ifni, on the African coast. Both the Spanish Army and the rebels claim to have gained ground.

Jordan today lifted its ban on the movement of Israeli supplies to Mt. Scopus. Mt. Scopus is situated in a demilitarized area, a mile inside Jordanian territory. Both the Hadassah Hospital and the Hebrew University are located on the hill, and its possession by Israel was authorized under the 1949 armistice agreement. Two weeks ago, Jordan turned back an Israeli convoy...charging that it carried gasoline the Israelis planned to use for fortifying Mt. Scopus. Israel denied this...saying that the gasoline was to be used for generating electric light and power. The incident heightened the tension between Israel and Jordan, and United Nations Secretary General Hammarskjold flew to the Middle East to confer with leaders on both sides. He met again today with both King Hussein of Jordan and Prime Minister Bengurion of Israel. A joint communique...issued after Hammarskjold's final meeting with Ben Gurion... said, "Arrangements for a resumption of convoys to Mt. Scopus have been made." A Jordanian government spokesman said the first Israeli convoy will go through tomorrow. He added, "The convoy will carry supplies approved by Jordan authorities only." He would not say whether such supplies would include gasoline. Israel says nine drums of gasoline will be in tomorrow's convoy.

Edward R. Murrow: December 4, 1957. 7.45 p.m.

The crisis of the presidency has outwardly passed. Thanks to the President's quick recovery from his very minor stroke, and his fully publicized resumption of duties, the conduct of the office is back to what it was before the illness. Authentic word from Washington is that no thought is being given the two drastic steps the public has heard so much discussed, the President's resignation, or the temporary delegation of his powers to the Vice President. Nor is there any appreciable increase in Vice President Nixon's role in making policy. Not only has the crisis passed, it seems to promise no aftermath of changes in the White House's method of conducting presidential affairs.

But while the crisis has outwardly passed, it has not ended in any other respect. For one thing, Mr. Eisenhower's quick recovery is less of a guarantee against another stroke than his recovery from thrombosis or ileitis was a guarantee against a recurrence. The President needs an extended period of rest, and while this does not rule out making important decisions, and transacting a considerable amount of business, it means that he must do less work than he had been doing.

For another thing, the world crisis has markedly sharpened, and this

calls for dynamic leadership by the President, both in world and domestic affairs. The time seems to demand that the President should be doing more than he has done since his re-election. Inevitably he will be doing less. And if he pushes himself against the advice of his doctors, the chances of another stroke are at once increased.

One can foresee a special kind of difficulty in this situation. There will be a race between keeping up appearances, and trying to get world and domestic business transacted, by a slightly incapacitated president. It would be almost unnatural if this did not bring on a struggle for power behind the scenes in Washington. It would be between those who now wield the power, in the cabinet and the White House staff, and those who may be heirs to it under changed circumstances.

The behavior of Vice President Nixon is consequently under closest observation. He is being just as cautious at this time, to avoid showing any eagerness for power, as he was during the President's previous illnesses. Also he is in a difficult position in respect to the President. If he acts on his own initiative, he may do something that incurs the President's displeasure. He may well recall that President Wilson summarily dismissed Secretary of State Lansing, because he dared to call a cabinet meeting on

his own authority. This particular problem won't repeat itself because Mr. Nixon already has the President's authority to preside over cabinet meetings. But the lesson is pertinent all the same. Not till the President's power passes to the Vice President, or the President delegates it temporarily to the Vice President, do his actual powers increase. Anything he does before such a time, no matter how good his intentions, can get him into trouble.

However, Mr. Nixon may not feel in a hurry to have more power, and if it is going to come to him, would prefer having it after next year. Constitutionally, if he serves out more than half of a President's term, that counts as a full term for him, and he can be re-elected to only one more term as president in his own right. Even if Mr. Nixon is not influenced by such remote considerations, he may feel it much better to let the re-organization of NATO and the presentation to Congress of the budget, and proposals of policy be handled without his having the sole responsibility for them.

The effect on our allies of the present situation is disheartening, to say the least. They hear that the congressional leaders at the White House yesterday noted no sense of urgency on the part of the Administration.

Even though Mr. Dulles is the architect of proposed changes in NATO, they know that NATO needs a new dynamic drive more than new architecture. There was a hope that Mr. Eisenhower could supply the drive. Now he may not be permitted to go to Paris at all, and even if he goes, he will be less than dynamic. / Our allies have suffered many times over what seemed to them unclarity or indecision in American foreign policy, but they always could appeal to the President, if they had to, or thought they could. They now fear they can't.

Word for Today

It is natural...in the crisis of the presidency...that politicians will act like realists and read the political implications. Lord Chesterfield observed a long time ago, "Politicians neither love nor hate. Interest, not sentiment, directs them." And Will Rogers said, "Politics and self-preservation come first."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, DECEMBER 4, 1957
7:45 - 8:00 PM EST

This is the news:

The latest word on plans for launching the first United States test satellite is that the firing...at Cape Canaveral, Florida...will take place in about half an hour. The launching originally was scheduled for 8 o'clock this morning, but there have been repeated delays due to what the scientists describe as "minor adjustments."

The American Rocket Society said today that it gave President Eisenhower a report...in October...calling for a space flight program to put Americans on the moon within 20 years. Copies also were sent to the President's scientific advisory committee. The report suggested that a special government agency... along the lines of the Atomic Energy Commission...be set up to research and develop the space program. The cost, it estimated, would run about 200-million dollars a year, after the first year.

The Air Force announced today that it has ordered the construction of four launching sites for the Bomarc interceptor missile. The Bomarc has a range of 300 miles...and is designed to bring down enemy aircraft. The AFL-CIO Building Trades Department...representing more than a million union members...has urged the AFL-CIO not to expel the Teamsters Union on corruption charges. The Building Trades Department approved a resolution to this effect, on the eve of the AFL-CIO convention tomorrow at Atlantic City. The convention will vote on whether to expel the teamsters from the federation.

Today...at the Hague...the Dutch parliament completed approval of the treaties for a common European market and Euratom, the European agency for developing nuclear power for industry. The Netherlands is the last of six participating countries to ratify the treaties. The participating countries...

besides the Netherlands...are Belgium, Luxembourg, West Germany, Italy and France.

In Indonesia, the Communist-led trade unions have "taken over" at least three Dutch companies...under cover of the Indonesian campaign for possession of West New Guinea, a Dutch colony. The government of Indonesia today warned workers against seizing Dutch properties without official approval. And the Netherlands has begun alerting ships for an evacuation of Dutch nationals from Indonesia in case the situation gets out of hand.

Fighting continued today in the Spanish colony of Ifni, on the African coast. Both the Spanish Army and the rebels claim to have gained ground.

Jordan today lifted its ban on the movement of Israeli supplies to Mt. Scopus. United Nations Secretary General Hammarskjold flew to the Middle East to confer with leaders on both sides. He met again today with both King Hussein of Jordan and Prime Minister Ben Gurion of Israel. A joint communique...issued after Hammarskjold's final meeting with Ben Gurion...said, "Arrangements for a resumption of convoys to Mt. Scopus have been made." A Jordanian government spokesman said the first Israeli convoy will go through tomorrow. He added, "The convoy will carry supplies approved by Jordan authorities only." He would not say whether such supplies would include gasoline. Israel says nine drums of gasoline will be in tomorrow's convoy.

The crisis of the presidency has outwardly passed. Thanks to the President's quick recovery from his very minor stroke, and his fully publicized resumption of duties, the conduct of the office is back to what it was before the illness. Authentic word from Washington is that no thought is being given the two drastic steps the public has heard so much discussed, the President's resignation, or the temporary delegation of his powers to the Vice President. Nor is there any appreciable increase in Vice President Nixon's role in making policy. Not only has the crisis passed, it seems to promise no aftermath of changes in the White House's method of conducting presidential affairs.

But while the crisis has outwardly passed, it has not ended in any other respect. For one thing, Mr. Eisenhower's quick recovery is less of a guarantee against another stroke than his recovery from thrombosis or ileitis was a guarantee against a recurrence. The President needs an extended period of rest, and while this does not rule out making important decisions, and transacting a considerable amount of business, it means that he must do less work than he had been doing.

For another thing, the world crisis has markedly sharpened, and this calls for dynamic leadership by the President, both in world and domestic affairs. The time seems to demand that the President should be doing more than he has done since his re-election. Inevitably he will be doing less. And if he pushes himself against the advice of his doctors, the chances of another stroke are at once increased.

One can foresee a special kind of difficulty in this situation. There will be a race between keeping up appearances, and trying to get world and domestic business transacted by a slightly incapacitated president. It would be almost unnatural if this did not bring on a struggle for power behind the scenes in Washington. It would be between those who now wield the power in the cabinet and the White House staff, and those who may be heirs to it under changed circumstances.

The behavior of Vice President Nixon is consequently under closest observation. He is being just as cautious at this time, to avoid showing any eagerness for power, as he was during the President's previous illnesses. Also he is in a difficult position in respect to the President. If he acts on his own initiative, he may do something that incurs the President's displeasure. He may well recall that President Wilson summarily dismissed Secretary of State Lansing, because he dared to call a cabinet meeting on his own authority. This particular problem won't repeat itself because Mr. Nixon already has the President's authority to preside over cabinet meetings. But the lesson is

pertinent all the same. Not till the President's power passes to the Vice President, or the President delegates it temporarily to the Vice President, do his actual powers increase. Anything he does before such a time, no matter how good his intentions, can get him into trouble.

However, Mr. Nixon may not feel in a hurry to have more power, and if it is going to come to him, would prefer having it after next year. Constitutionally, if he serves out more than half of a President's term, that counts as a full term for him, and he can be re-elected to only one more term as president on his own right. Even if Mr. Nixon is not influenced by such remote considerations, he may feel it much better to let the re-organization of NATO and the presentation to Congress of the budget, and proposals of policy be handled without his having the sole responsibility for them.

The effect on our allies of the present situation is disheartening, to say the least. They hear that the congressional leaders at the White House yesterday noted no sense of urgency on the part of the Administration.

Even though Mr. Dulles is the architect of proposed changes in NATO, they know that NATO needs a new dynamic drive more than new architecture. There was a hope that Mr. Eisenhower could supply the drive. Now he may not be permitted to go to Paris at all, and even if he goes, he will be less then dynamic. Our allies have suffered many times over what seemed to them unclarity or indecision in American foreign policy, but they always could appeal to the President, if they had to, or thought they could. They now fear they can't.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: It is natural...in the crisis of the presidency...that politicians will act like realists and read the political implications. Lord Chesterfield observed a long time ago, "Politicians neither love nor hate. Interest, not sentiment, directs them." And Will Rogers said, "Politics and self-preservation come first." Goodnight and good luck!

Edward R. Murrow Thurs., Dec. 5, 1957

This is the news:

Secretary of Labor Mitchell today outlined the Administration program for curbing corruption in the labor-management field. Mitchell spoke at the opening session of the AFL-CIO convention in Atlantic City. He was greeted after his ~~address~~ speech by polite applause. The program...which Mitchell outlined in detail...calls for the secret election of union officers, and full disclosure of union funds. Employers would be required to file annual reports of payments made to union representatives. And reports would have to be filed with regard to the handling of welfare and pension funds, whether operated by a union or an employer, or jointly. The Administration also proposes that a new bribery section be added to the Criminal Code...

making it a felony for employers OR union representatives "to make or receive payments to influence the actions of either." President Eisenhower will ask Congress for authority to name a Commissioner of Labor Reports to receive, inspect and police the required statements from union and management. Mitchell said the Administration will "vigorously oppose" any Federal "right-to-work" law...banning the union shop.

The keynote speech in Atlantic City was made by AFL-CIO President George Meany. Meany said there will be "no deals" in the federation's drive to eliminate any corruption which may exist in the ranks of labor. He flatly denied reports that the AFL-CIO leadership is willing in any way to water down its clean-up demands on the Teamsters Union. "We are not going to compromise," he said, "with this or any other evil."

The Senate Rackets Committee today resumed its hearings in Washington. Chairman McClellan said the committee has evidence of organized terrorism by teamsters "in a broad area of the southern United States"...and he accused law enforcement officials "in certain instances" of failing to make proper investigation. Only eight of the 173 acts of violence, he said, have been solved.

Suggestions for turning certain federal programs over to the states were submitted to President Eisenhower today by a 16-member committee made up of officials of the Federal Government and nine state governors. In line with Mr. Eisenhower's expressed desire for more state responsibility, the committee recommended that federal legislation authorizing vocational training in agriculture, home economics and the fishery trades be repealed. Financial support from the Federal Government for the construction of local waste treatment plants also would be terminated. [It ~~was proposed that~~ in ~~return for taking over these and other responsibilities the states~~ would get ~~4 percent of the present 10 percent federal tax on local telephone~~ service. ~~Only it would be a state tax of 4 percent; the federal tax~~ would go down ~~to 6 percent.~~]

President Eisenhower presided today at a meeting of the National Security Council...and then drove to his Gettysburg farm for a few days of rest.

There was more Democratic criticism today of the Administration approach to the threat posed by Russia's advances in the military and scientific fields. House Leader McCormack said the Republicans "evidently are thinking of the defense of our country in terms of a balanced budget."

It was announced today that the next attempt to launch the first American earth satellite [redacted] is scheduled for tomorrow.

William Holaday...who is director of the [redacted] missiles program in the Defense Department...said today that the United States now has the [redacted] "hardware [redacted] easily capable of launching large satellites." But right now, he said, "satellites are not as militarily useful as a working [redacted] dependable ballistic missile weapon system."

West Germany's foreign minister...Heinrich von Brentano...today ended two days of talks in London. A joint communique said Von Brentano and the British foreign secretary...Selwyn Lloyd...agreed that "positive measures" should be decided upon at the forthcoming NATO meeting "to put into practice the principle of inter-dependence."

French Premier Gaillard won a vote of confidence today on a program calling for higher taxes. Gaillard then was confronted with a new problem. Eight Socialist ministers and secretaries of state threatened to leave his cabinet unless he reinstated certain food subsidies and offered more pay to government workers. Gaillard replied that if they quit, he would quit. The leaders of all parties met with Gaillard for three and a half hours...and came up with a partial agreement: All subsidies will be maintained except those on bread.

Indonesia today ordered all but one of the Dutch consulates in the country closed. (The only exception was the consulate in Jakarta, the capital). Thousands of Dutch nationals are being asked to leave. And the Indonesian cabinet decreed that all Dutch companies...seized by the Communist-led trade unions...be administered by the government. A

→

government spokesman declined to say whether this means nationalization of the companies. The Indonesian Foreign Ministry says diplomatic relations with the Netherlands have not been broken. ~~The crisis began building up last month when the Netherlands refused to negotiate with Indonesia on the future of West New Guinea, which is a Dutch colony.~~ Indonesia claims it should have ~~possession of the area...amounting to some 160-thousand square miles.~~

United Nations Secretary General Hammarskjold flew to Damascus today and conferred with Syrian leaders. A communique says they agreed "on the necessity of reinforcing the authority of the United Nations truce organization."

An Israeli convoy of supplies...including gasoline...crossed the Jordanian frontier to Mt. Scopus today without incident.

Russia today launched the world's first atomic-powered surface vessel, the 16-thousand-ton icebreaker Lenin. The United States has atomic-powered submarines, but the first American surface ship...powered by nuclear energy...is not expected to be launched until 1960. Its keel was laid only this week.

Edward R. Murrow: December 5, 1957. 7.45 p.m.

A sharp and significant difference of opinion between Secretary Dulles and Senator Fulbright marked the Tuesday meeting of congressional leaders at the White House. It was over the power of the Soviet Union, and it focussed attention on what might be called the "Dulles dogma on Soviet weaknesses." This dogma is worth setting forth in some detail since it accounts for the basic attitudes and some key decisions of the Administration's policy.

As told by James Reston in the New York Times, this is what took place on Tuesday: at the President's invitation, Mr. Dulles made a short review of Soviet policy. He said it was a mistake to think only of Soviet military strength. The Russians are powerful but one-sided, and are not irresistible. Soviet society is unbalanced, it denies freedom of thought and movement to its citizens, it has concentrated on heavy industry to the point where it is warped, and the strains of its imbalance and repression are beginning to tell. The five-year plan had to be abandoned recently. Consumer goods are scarce, the country has a paltry 100,000 private automobiles, and Communist leaders are having trouble with intellectuals. These are signs of Soviet weakness, and Moscow is seeking external successes to cover up

its internal troubles. His conclusion was that the United States had merely to remain alert and strong, and in due course the United States would force the Soviet Union to abandon its external adventures and concentrate on the solution of its internal problems.

Senator Fulbright said he failed to understand the Secretary's evaluation. The Russians have only 100,000 private cars and limited consumer goods because, he said, they have concentrated on missiles and other military engines that increased the strength, and danger, of the Soviet state. He was afraid that Mr. Dulles was describing Soviet strengths and calling them weaknesses. Later he told the President that this kind of talk about Soviet weakness was not only misleading, but highly dangerous to the purpose of getting through Congress the hard, essential and expensive program necessary to meet the Soviet challenge.

As commonly understood in Washington, the essence of the "Dulles dogma" is that we have only to keep up the pressure on the Soviet Union, and one day it will be overwhelmed and changed by internal difficulties. With this the view, it is understandable why there was so little alarm over the inter-continental missile, and why we failed to appreciate the effect the Sputniks would have on world opinion. The Administration knew we were

behind in the missile race, and it also knew the Sputniks were to be launched. Still it felt it was safe to slash defense costs so as to produce a tax reduction for the congressional elections next year. This is what was going on when the Sputniks finally awoke all sleepers.

Another consequence of the Dulles dogma is that it discouraged persistent efforts on our part to find ways to get along with the Soviet Union. Since we believed the Soviet Union would be thoroughly changed from within, we felt no need to make adjustments in the interest of co-existence. This played into the hands of Soviet propaganda, for Moscow scored repeatedly with world opinion by making peace proposals which we summarily rejected. It didn't help us to say that the Russian gestures were insincere, since we were not in the business of trying to promote understanding ourselves, and therefore could seldom score points of our own. Our NATO allies do not subscribe to the Dulles dogma. They are closer to Soviet missiles than we are, and do not feel that their safety lies in contemplating a future collapse of the Soviet system.

In a sense it was the Dulles dogma that made the present crisis possible. To what extent President Eisenhower's prestige with the country has been hurt is too early to say. But certainly no man could have been

more trusted to look out for the maintenance of our defenses. So it may have come as a considerable surprise to some of the congressional leaders to have the President ask for a re-statement of the Dulles dogma as a guidepost for action at this juncture.

Senator Fulbright's criticism was subsequently endorsed by Adlai Stevenson. This highlights the possibility that the Democrats in Congress will make a strong effort to alter both our defense and foreign policies.

George Bryant

Word for Today

The Dulles policy toward Russia is being questioned by leaders of the Democratic party. Debate is of course an indispensable part of democracy. Professor Edmund Cahn once said, "The voices of the republic are not mere discord. Conflicts there must be from time to time...for when all conflicts cease, the spirit of political institutions dies."

Goodnight and good luck!

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMEERCIAL

MURROW: The Dulles policy towardRussia is being questioned by leaders of the Democratic party. Debate is of course an indispensable part of democracy. Professor Edmund Cahn once said, "The voices of the republic are not mere discord. Conflicts there must be from time to time...for when all conflicts cease, the spirit of political institutions dies." --Goodnight and good luck!

Edward R. Murrow Fri., Dec. 6, 1957

This is the news:

The director of Project Vanguard...Dr. John Hagen...says that "so far, nobody knows for certain" why the attempt to launch America's first earth satellite failed. He says that for safety reasons a close inspection is still not possible. Dr. Hagen told reporters at a news conference that whatever the failure was, it was mechanical---not due to improper design. He said the mishap will not hold up progress to any material extent. The larger 20-inch satellite is still scheduled to be fired next March. And new tests of the 6-inch satellite---such as the one which today

hardly got off the ground---will be undertaken "just as soon as possible." According to some reports, the next test may not be for several weeks.

Dr. Hagen said the first and second stages of the three-stage rocket were destroyed in the explosion...which ripped the vehicle as it fell over on its side only two seconds after take-off. The third stage was thrown clear. It was not damaged, and the satellite (which had been placed in its nose cone) apparently came through unscathed. Its radio transmitter continued to send out signals long after the accident.

It was unfortunate, Dr. Hagen said, that the launching had been given "unprecedented publicity." He said he had suggested less publicity...but that he had been overruled. He did not say who did the overruling. But the public, he said, lost sight of the fact that this was a test which he had warned in advance might fail.

When reporters asked Secretary of Defense McElroy about charges of undue publicity, McElroy said that "in a country like ours, it seems better to give too much publicity rather than too little." He called today's failure "disappointing" but "not too surprising." Deputy Defense Secretary Quarles said the mishap has "no bearing" on the military

missile program. "A rocket is complex," he said, "and elements of it can always fail." He said, "We, of course, regret the failure."

At Gettysburg, White House News Secretary Hagerty told reporters that President Eisenhower was disappointed. Hagerty said he assumes it will take "some time" for the Defense Department to come up with a full report.

Democratic leaders of Congress are calling the failure a "grievous blow" to American prestige. / Senator Lyndon Johnson characterizes it as "one of the best publicized---and most humiliating---failures in our history." He says, "I shrink a little inside of me whenever the United States announces a great event---and it blows up in our face." / Chairman Russell of the Senate Armed Services Committee also feels there was too much publicity. / He told reporters, "We are putting emphasis in the wrong place. / We couldn't have impressed anybody even if we had been successful...putting up a small satellite." / And Democratic Senator O'Mahoney of Wyoming says, "Propagandawise, the failure was disastrous."

Republican Senator Wiley of Wisconsin regards what happened at Cape Canaveral as "one more indication of the long trial-and-error process which still lies ahead of us in the missile field. It should serve," he says, "as

a reminder that there is no magic way of overcoming...overnight...the gap which exists between ourselves and Russia in certain types of missile development." Wiley hopes the setback will spur the United States to make a stronger, long-range effort...one, he says, "which combines speed with precision and effectiveness."

Moscow Radio has reported the American failure in one sentence: "The much-publicized artificial earth satellite Vanguard, which was to have been launched today, exploded with the carrier-rocket during the launching."

Earlier, at a reception in the Finnish Embassy, Khrushchev told correspondents that the United States will launch a satellite "sooner or later." He said, "It is time for the Americans to launch it." Khrushchev made the statement shortly before the attempt was made. He surprised correspondents by saying that part of the carrier-rocket that launched the first Russian satellite landed last Sunday in the United States. Khrushchev said, "I am quite serious about this. We know it fell on United States territory, and they don't want to give it back to us." The State Department in Washington says it knows nothing of such a thing happening. It says, "We have received no request from the Soviet government...or any

—>

notification that its rocket was supposed to have fallen on American territory."

American labor history was made today in Atlantic City. The AFL-CIO convention voted...5 to 1...to expel the Teamsters Union on corruption charges. Before the vote, the AFL-CIO appeals committee rejected an appeal which the Teamsters Union had filed on Wednesday. The committee said in a report (which was read to the convention) that the teamsters had failed to answer the charges of corruption or to take steps to remedy the situation. There was no reason, it said, to give the teamsters union special treatment, merely because of its large membership...or its longtime affiliation. The committee said that the findings of the AFL-CIO Executive Council against President-elect Hoffa and Dave Beck "constitute a sufficient basis upon which to conclude that there are substantial corrupt influences within the Teamsters Union." And it recommended expulsion. To tolerate the violation of ethical standards, it said, would be doing rank-and-file members a disservice. The Teamsters Union then made a last-ditch appeal from the convention floor. The teamsters administrative vice president, Einar Mohn, said there must be a better way to handle

—>

union corruption than dismemberment. He scored Chairman McClellan of the Senate Rackets Committee...predicting that the senator will wind up leaving organized labor "torn asunder, bloody and weak---but perhaps ethical." Mohn said he did not mean to excuse corruption. "Sin is something we all despise." But, he said, "neither is there much hope for labor to survive and grow strong under this form of 'helpful' cleaning up." Mohn spoke in the forenoon. There was more debate...for three hours...and then the roll-call vote was taken. ~~The AFL-CIO had expelled a union [illegible] of one and a half million members...~~ 70 percent of its own membership. When Hoffa ~~heard of the outcome, he said the federation "didn't build us and [illegible] it won't weaken us. I'm still head of the teamsters."~~ Dave Beck said in ~~Seattle...where he is being tried~~ on charges of grand larceny...that the action was ~~"fully expected." The Teamsters Union, he said, has planned an "organizational campaign" to start after the first of the year.~~

Vice President Nixon will say in a speech tonight that President Eisenhower expects to present a balanced budget to Congress in January. "The prospects are good," he will say, "that the Administration will be able to [illegible] submit its fourth balanced budget in a row." Nixon

will add, however, that the Administration will not shrink from deficit spending...if that is necessary to maintain an adequate defense. And he will serve notice that there will be no tax cuts. Nor, he will say, do we anticipate a tax increase. Mr. Nixon believes that, in the cold war, the "total" danger is great. "The Sputniks," he will say, "are but a single episode." And he will make a new plea for foreign aid.

~~The State Department said today that it will allow close relatives of the six persons still held in Chinese Communist prisons to visit them. It will continue, however, it general policy of [redacted] refusing to grant passports for travel to Red China.~~

The Netherlands today asked for a special meeting of the NATO permanent council...to take up Indonesia's action against Dutch nationals and the seizure of Dutch enterprises in Indonesia. Indonesia has ordered most of the 50-thousand Dutch nationals in Indonesia out of the country in the dispute over possession of West New Guinea...which is NOW a Dutch colony. The ~~NATO Council~~ will meet to CONSIDER the question ~~next Wednesday~~.

Ten days from now...the heads of government of the NATO countries will be meeting in Paris, and for a report on the prospects of that meeting, we switch now to David Schoenbrun in the French capital.

Schoenbrun runs 3:30
Ends on cue: "--to ERM in NY.

That was my colleague David Schoenbrun reporting from Paris on the forthcoming NATO summit meeting. whether Juno the Rudolfo of this matter.

This is Ed Murrow. I'll be back in a Moment with the Word for Today. Now, here is George Bryan.

Word for Today

The failure of the United States to launch a test satellite brings to this reporter's mind two quotations: Robert Ingersoll said, "The toughest test of courage on earth is to bear defeat without losing heart." Nearly all successes are founded on previous failures. The other quotation is from the late Mayor Laguardia. "When I make a mistake," he said, "it's a beaut."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Friday, December 6, 1957
7:45 - 8:00 P.M.

MURROW: ... Ten days from now the heads of government of the NATO countries will be meeting in Paris, and for a report on the prospects of that meeting, we switch now to David Schoenbrun in the French capital.

SCHOENBRUN: With the American President and the German Chancellor ailing, with the French Premier in danger of having his Cabinet fall apart, with unripe grapefruits exploding in mid-air, it would seem that the prospects for the forthcoming NATO summit conference are anything but bright. There are only ten days to go, and no one knows yet whether President Eisenhower will or will not decide to come to Paris. Some American diplomatic sources here are now betting that the President will come based on today's health reports, but they admit they can't be sure that the same will be true a few days from now.

European sources from the NATO countries are betting that the President will not come. More remarkable, Ed, is the fact that the majority of our NATO allies are now saying that the President should not come to Paris if there's the slightest doubt, the smallest risk, about his health. As important as his presence is to our Allies - and they all agree that no one can fully replace Mr. Eisenhower at this time - our Allies would risk losing his prestige here rather than risk straining his health. They're truly worried about this. French President Rene Coty has been telling many friends that our President must not take chances, his health is too important to the alliance to risk it on any one conference, no matter how critical the conference is. And no one here in Paris denies that this is one of the most critical conferences of the Atlantic alliance, one that needs the missionary spirit of Dwight D. Eisenhower. Yet most of

our Allies to whom I've talked this week say that they don't want to risk putting a new strain on the President. Some of them add that profit could be drawn out of a Nixon visit. It could be an excellent opportunity to test and commit the Vice President personally on Atlantic policies. Now, Ed, this is being said privately and cautiously for it's a delicate issue. It's regrettable perhaps that it's not being said frankly and publicly or at the very least told confidentially to the President so that he can make his decision with full knowledge of all the facts. Our Allies would, of course, prefer above all a healthy Eisenhower. But they want to be sure that he is completely recovered. If not, they are ready and willing to go ahead with Nixon. The Allies have already been encouraged this week by the American plan for NATO, which was submitted a few days ago. The details are still secret but the broad outlines are known. One of the important points is to offer an atomic stockpile to NATO forces on the continent. The warheads will remain of course, under control of American officers, but they'll be available to NATO teams who'll be trained in the use of the weapons. And, as Mr. Dulles has already stated publicly, America is ready to establish IRBM bases in any country that wants to take the intermediate range missile. This is the first time that Europeans will be given an opportunity to participate in America's deterrent power. I think, Ed, that in the general area of mutual defense this conference will produce important progress. Advance information also points to progress in setting up a scientific pool, the NATO brains trust, both in mutual weapons development and in peaceful uses of the atom. Now, back to Edward R. Murrow in New York.

This is the news:

The director of Project Vanguard...Dr. John Hagen...says that "so far, nobody knows for certain" why the attempt to launch America's first earth satellite failed. He says that for safety reasons, a close inspection is still not possible. Dr. Hagen told reporters at a news conference that whatever the failure was, it was mechanical---not due to improper design. He said the mishap will not hold up progress to any material extent. The larger 20-inch satellite is still scheduled to be fired next March. And new tests of the 6-inch satellite---such as the one which today hardly got off the ground---will be undertaken "just as soon as possible." According to some reports, the next test may not be for several weeks.

Dr. Hagen said the first and second stages of the three-stage rocket were destroyed in the explosion...which ripped the vehicle as it fell over on its side only two seconds after take-off. The third stage was thrown clear. It was not damaged, and the satellite (which had been placed in its nose cone) apparently came through unscathed. Its radio transmitter continued to send out signals long after the accident.

It was unfortunate, Dr. Hagen said, that the launching had been given "unprecedented publicity." He said he had suggested less publicity...but that he had been overruled. He did not say who did the overruling. But the public, he said, lost sight of the fact that this was a test which he had warned in advance might fail.

When reporters asked Secretary of Defense McElroy about charges of undue publicity, McElroy said that "in a country like ours, it seems better to give too much publicity rather than too little." He called today's failure "disappointing" but "not too surprising." Deputy Defense Secretary Quarles said the mishap has "no bearing" on the missile program. "A rocket is complex."

he said, "and elements of it can always fail." He said, "We, of course, regret the failure."

At Gettysburg, White House News Secretary Hagerty told reporters that President Eisenhower was disappointed. Hagerty said he assumes it will take "some time" for the Defense Department to come up with a full report.

Democratic leaders of Congress are calling the failure a "grievous blow" to American prestige. Senator Lyndon Johnson characterizes it as "one of the best publicized---and most humiliating---failures in our history." He says, "I shrink a little inside of me whenever the United States announces a great event---and it blows up in our face." Chairman Russell of the Senate Armed Services Committee also feels there was too much publicity. He told reporters, "We are putting emphasis in the wrong place. We couldn't have impressed anybody even if we had been successful...putting up a small satellite." And Democratic Senator O'Mahoney of Wyoming says, "Propagandawise, the failure was disastrous."

Republican Senator Wiley of Wisconsin regards what happened at Cape Canaveral as "one more indication of the long trial-and-error process, which still lies ahead of us in the missile field. It should serve," he says, "as a reminder that there is no magic way of overcoming...overnight...the gap which exists between ourselves and Russia in certain types of missile development." Wiley hopes the setback will spur the United States to meke a stronger, long-range effort...one, he says, "which combines speed with precision and effectiveness."

Moscow Radio has reported the American failure in one sentence:"The much-publicized artificial earth satellite Vanguard, which was to have been launched today, exploded with the carrier-rocket during the launching."

Earlier, at a reception in the Finnish Embassy, Khrushchev told correspondents that the United States will launch a satellite "sooner or later." He said, "It is time for the Americans to launch it." Khrushchev made the statement

shortly before the attempt was made. He surprised correspondents by saying that part of the carrier-rocket that launched the first Russian satellite landed last Sunday in the United States. Khrushchev said, "I am quite serious about this. We know it fell on United States territory, and they don't want to give it back to us." The State Department in Washington says it knows nothing of such a thing happening. It says, "We have received no request from the Soviet government...or any notification that its rocket was supposed to have fallen on American territory."

American labor history was made today in Atlantic City. The AFL-CIO convention voted...5 to 1...to expel the Teamsters Union on corruption charges. Before the vote, the AFL-CIO appeals committee rejected an appeal which the Teamsters Union had filed on Wednesday. The committee said in a report (which was read to the convention) that the teamsters had failed to answer the charges of corruption or to take steps to remedy the situation. There was no reason, it said, to give the teamsters union special treatment, merely because of its large membership...or its longtime affiliation. The committee said that the findings of the AFL-CIO Executive Council against President-elect Hoffa and Dave Beck "constitute a sufficient basis upon which to conclude that there are substantial corrupt influences within the Teamsters Union." And it recommended expulsion. To tolerate the violation of ethical standards, it said, would be doing rank-and-filemembers a disservice. The Teamsters Union then made a last ditch appeal from the convention floor. The teamsters administrative vice-president, Einar Mohn, aaid there must be a better way to handle union corruption than dismemberment. He scored Chairman McClellan of the Senate Rackets Committee ...predicting that the senator will wind up leaving organized labor "torn assunder, bloody and weak---but perhaps ethical." Mohn said he did not mean to excuse corruption. "Sin is something we all despise." But, he said, "neither is there much hope for labor to survive and grow strong under this form of 'helpful' cleaning up." Mohn spoke in the forenoon. There was more debate...

for three hours...and then the roll-call vote was taken.

Vice President Nixon will say in a speech tonight that President Eisenhower expects to present a balanced budget to Congress in January. "The prospects are good," he will say, "that the Administration will be able to submit its fourth balanced budget in a row." Nixon will add, however, that the Administration will not shrink from deficit spending...if that is necessary to maintain an adequate defense. And he will serve notice that there will be no tax cuts. Nor, he will say, do we anticipate a tax increase. Mr. Nixon believes that, in the cold war, the "total" danger is great. "The sputniks," he will say, "are but a single episode." And he will make a new plea for foreign aid.

The Netherlands today asked for a special meeting of the NATO permanent council...to take up Indonesia's action against Dutch nationals and the seizure of Dutch enterprises in Indonesia. Indonesia has ordered most of the 50-thousand Dutch nationals in Indonesia out of the country in the dispute over possession of West New Guinea...which is now a Dutch colony.

Ten days from now...the heads of government of the NATO countries will be meeting in Paris, and for a report on the prospects of that meeting, we switch now to David Schoenbrun in the French capital.

SCHOENBRUN: With the American President and the German Chancellor ailing, with the French Premier in danger of having his Cabinet fall apart, with unripe grapefruits exploding in mid-air, it would seem that the prospects for the forthcoming NATO summit conference are anything but bright. There are only ten days to go, and no one knows yet whether President Eisenhower will or will not decide to come to Paris. Some American diplomatic sources here are now betting that the President will come based on today's health reports, but they admit they can't be sure that the same will be true a few days from now.

European sources from the NATO countries are betting that the President will not come. More remarkable, Ed, is the fact that the majority of our NATO allies are saying that the President should not come to Paris if there's the

slightest doubt, the smallest risk, about his health. As important as his presence is to our Allies - and they all agree that no one can fully replace Mr. Eisenhower at this time - our Allies would risk losing his prestige here rather than risk straining his health. They're truly worried about this. French President Rene Coty has been telling many friends that our President must not take chances, his health is too important to the alliance to risk it on any one conference, no matter how critical the conference is. And no one here in Paris denies that this is one of the most critical conferences of the Atlantic alliance, one that needs the missionary spirit of Dwight D. Eisenhower. Yet most of our Allies to whom I've talked this week say that they don't want to risk putting a new strain on the President. Some of them add that profit could be drawn out of a Nixon visit. It could be an excellent opportunity to test and commit the Vice President personally on Atlantic policies. Now, Ed, this is being said privately and cautiously for it's a delicate issue. It's regrettable perhaps that it's not being said frankly and publicly or at the very least told confidentially to the President so that he can make his decision with full knowledge of all the facts. Our Allies would of course, prefer above all a healthy Eisenhower. But they want to be sure that he is completely recovered. If not, they are ready and willing to go ahead with Nixon. The Allies have already been encouraged this week by the American plan for NATO, which was submitted a few days ago. The details are still secret but the broad outlines are known. One of the important points is to offer an atomic stockpile to NATO forces on the continent. The warheads will remain of course, under control of American officiers, but they'll be available to NATO teams who'll be trained in the use of the weapons. And, as Mr. Dulles has already stated publicly, America is ready to establish IRBM bases in any country that wants to take the intermediate range misiile. This is the first time that Europeans will be given an opportunity to participate in America's deterrent power. I think, Ed, that in the general area of mutual defense this conference will produce important

progress. Advance information also points to progress in setting up a scientific pool, the NATO brains trust, both in mutual weapons development and in peaceful uses of the atom. Now, back to Edward R. Murrow in New York.

MURROW: That was my colleague David Schoenbrun reporting from Paris on the forthcoming NATO summit meeting which opens the middle of this month.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The failure of the United States to launch a test satellite brings to this reporter's mind two quotations: Robert Ingersoll said, "The roughest test of courage on earth is to bear defeat without losing heart." Nearly all successes are founded on previous failures. The other quotation is from the late Mayor LaGuardia. "When I make a mistake," he said, "it's a beaut."

Goodnight and good luck!

Edward R. Murrow Mon., Dec. 9, 1957

This is the news:

The Supreme Court ruled today that wire-tap evidence obtained by state law enforcement officers may not be introduced in a federal trial. The ruling was unanimous. It upset the decision of the United States Circuit Court of Appeals in the case of Salvatore Benanti, of New York. Benanti was convicted of possession of bootleg alcohol...on the basis of wire-tap information. The circuit court acknowledged that wire-tapping is prohibited under terms of the Federal Communications Act. But it upheld the conviction on grounds that no federal officer participated in the tap. The Supreme Court ruled today that the fact that no federal

officer took part in the actual wire-tapping is beside the point.

Chief Justice Warren...reading the Supreme Court decision...said that "distinctions designed to defeat the plain meaning of the statute will not be countenanced." He said the prohibition applies, regardless of whether the evidence was obtained by state or federal agents.

The perjury trial of James Hoffa has been held up, here in New York, pending a Supreme Court decision. This is because state-obtained wire-tap evidence was to have been introduced. A second trial of the teamster union official...on charges of conspiracy to wire-tap the teamsters office in Detroit...apparently will not be affected by today's ruling. The government has said in this case that it does not intend to introduce wire-tap evidence.

The Supreme Court ruled today...in a 6-to-3 decision...that state courts have the right to bar strikers from "threatening, intimidating or coercing non-striking employes." It said, however, that an Arkansas state court went too far when...in 1955...in forbidding peaceful picketing of a factory by the Amalgamated Clothing Workers. The field of peaceful picketing, it said, is exclusively within the jurisdiction of the National Labor Relations Board.

President Eisenhower returned to Washington today after a long week-end at his Gettysburg farm. The White House says Mr. Eisenhower will have a medical check-up tomorrow...to determine whether he can go to Paris next week for the NATO summit conference. News Secretary Hagerty "believes" the doctors will announce their findings shortly after the medical examination tomorrow afternoon.

Presidential Assistant Sherman Adams said tonight...in a speech in St. Louis...that Mr. Eisenhower is on his way to "complete recovery." "We have been fortunate," Adams said, "but the possibility remains of being less fortunate in the years ahead." He urged Congress...next year... to approve a constitutional amendment, making clear the procedure to be followed in case of presidential disability. Even if Congress acts immediately, he said, the amendment could not be ratified by the states and take effect before 1960. [~~"In these times," he said, "It takes no imagination at all to think of a situation where delay of a presidential decision due to incapacity for a day...or even for a few hours...could have grave consequences."~~]

Attorney General Rogers does not favor additional civil rights legislation at this time. Rogers told his first news conference since becoming head of the Justice Department that he does not intend to recommend any new civil rights proposals. Congress last summer passed the first civil rights legislation since the Reconstruction. Rogers told reporters, "Let's let a little time elapse and see how the new law works. He indicated that...in his opinion...another congressional debate on civil rights in 1958 might have a bad effect.

The Administration said officially tonight that it will ask Congress for a five-year renewal of the Reciprocal Trade Act...calling it vital if the United States is to meet the "intensified challenge presented by International Communism." Congress will be urged to give President Eisenhower authority to reduce tariffs up to 10 percent a year for three years. He would also be authorized...in some instances... to cut tariffs 5 percent a year for five years. The Administration will also urge American membership in an Organization for Trade Cooperation, through which free nations would seek "to reinforce their unity and economic strength."

The Administration also confirmed reports today that the United States is discontinuing military aid to Yugoslavia at the request of President Tito. American economic aid to Yugoslavia is not affected. The United States has been conducting a reappraisal of military and economic aid to Yugoslavia as a result of Tito's recognition of East Germany. Tito is reported to have told the American ambassador in Belgrade that he found the frequent reviews of the military aid program "embarrassing". ~~The State Department does not confirm this...other than~~ to say that Tito and the American ~~ambassador met~~ last Friday "for a discussion of United States-Yugoslav relations."

The Office of Naval Research...which has jurisdiction over Project Vanguard...said today that it has determined the cause of the failure to launch America's first test satellite. The accident, it says, "was caused by a mechanical failure in the propulsion system, details of which are classified." The Defense Department says no further information can be given out at this time.

A federal jury today convicted John Joseph Frank of acting illegally in this country as an agent of the Dominican Republic. Specifically, he was charged with failure to register with the Justice Department under the Foreign Agents Registration Act. ~~Testimony during the three-week trial had linked Frank to the American pilot, Gerald Murphy, who disappeared mysteriously in December, 1956. Murphy...in turn...reportedly was involved in the disappearance of Dr. Jesus de Galindez, an outspoken opponent of Generalissimo Trujillo.~~ Frank is free on 10-thousand-dollar bond. And his attorney says he will appeal.

The government of Indonesia today announced that it is taking over all Dutch plantations in the island. The order came from the Defense Ministry and was announced by the Indonesian premier. The Netherland says it is proceeding with plans for the evacuation of Dutch nationals. Indonesia is demanding that the Dutch hand over West New Guinea.

The United Nations Political Committee opened debate today on the Cyprus question. The British Minister of State, Allan Noble, told the committee that Britain wants to settle the dispute...that it is willing to enter into discussions "at the appropriate time with all concerned. But

B ritain, he said, cannot go along with the Greek resolution under which the United Nations would first recognize the right of self-determination.

~~The Greek foreign minister told the political committee that the British attitude~~ Greece charged in the political committee that the British attitude indicated lack of desire for a solution.

In Cyprus itself, a 24-hour strike was called throughput the island. At least 50 persons...most of them Greek Cypriots...were injured when British troops sought to halt anti-British demonstrations.

A few days ago, this reporter had the opportunity to interview the Greek Cypriot leader...Archbishop Makarios...on the Cyprus question. Here is our recorded report.

Take runs 3:50

Ends on cue: "---Thank you, sir, very much indeed."

Here in New York, a subway strike has snarled transportation for millions of persons. The strike is a jurisdictional dispute. An Independent Union wants the subway workers organized on a craft basis. At present, the United Transport Workers Union is the recognized representative. Officials of the independent union say the strike will continue...as long as four of its members are in jail. The transport strike is illegal under New York state law.

George Bryan

Word for Today

Important social movements usually are identified more closely with one name than any other. In the Greek Cypriot movement, the name is Archbishop Makarios. William Cowper made the observation that to really report history, "describe the man...and paint his person, character and views." And Thomas Carlyle said, "Biography is the only true history."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Monday, December 9, 1957
7:45 - 8:00 P.M.

MURROW: The United Nations Political Committee opened debate today on the Cyprus question. The British Minister of State, Allen Nobel, told the Committee, "that Britain wants to settle the dispute, that it is willing to enter into discussions at the appropriate time with all concerned, but, Britain," he said, "cannot go along with the Greek resolution under which the United Nations, would first of all, recognize the right of self determination." Greece charged, in the Political Committee, "that the British attitude indicated a lack of desire for a solution of any kind."

In Cyprus itself, a 24 hour strike was called throughout the island. At least 50 persons - most of them Greek Cypriots, were injured when British troops sought to halt anti-British demonstrations.

A few days ago, this reporter had the opportunity to interview the Greek Cypriot leader, Archbishop Makarios on the Cyprus question. Here is our recorded report.

MURROW: Your Grace, if Cyprus should gain its independence or be united with Greece, what guarantees would you offer to the Turkish minority?

MAKARIOS: We are willing to provide international guarantees for the safe-guard of the rights of the Turkish minority under the supervision of the United Nations or any other international instrument. We wish to have a flourishing Turkish minority in our midst which would be a factor in the further development of the whole island.

MURROW: Are you prepared to settle for anything less then out-right union with Greece - perhaps a temporary trusteeship under the United Nations?

MAKARIOS: Ah, the question of Cyprus is not one of united... of union with Greece, but of self-determination. We ask that the Cypriot people be given the right to determine their political future and freely decide whether they wish to remain with the British Commonwealth or have a seperate independence or be united with another country. In view of the long history of civilization of the people of Cyprus and considering their degree of maturity, there could be no excuse for not applying self-determination out right. In order, however, to facilitate a settlement we would accept and prefer a transitory period under the Trusteeship of the United Nations, provided self determination were assured.

MURROW: Well sir, would you and do you support the use of force on Cyprus in opposition to British rule?

MAKARIOS: I am certainly not in favor of the use of violence but, it should be remembered that it is the exercise of force by those in power for the continuation of a colonial status in Cyprus, that has led to the armed resistance by the people. Today, however, there is no viblence from the part of the Cypriots, but there is still from British side, emergency regulations continue in full force and application; under them, many hundreds of people are detained without trial in concentration camps.

MURROW: Well, the Middle-East is certainly a troubled area of the world. Would an independent Cyprus have any effect on the Middle East situation in your view?

MAKARIOS: Yes. A free Cyprus would exercise beneficent influence in the whole area of the Middle-East. The granting of certain self determination to the island would tend to restore a much shaken confidence of the Middle-East countries in the aims and purposes of the Western world. Moreover, a free Cyprus would be in a position to play an effective role in the promotion of the ideals of peace and freedom in the Middle-East.

MURROW: Well, Archbishop Makarios, what role do you aspire to play in the State of Cyprus?

MAKARIOS: When Cyprus obtains its freedom my part as a national leader will automatically come to an end and I shall be restricted to my purely religious duties. In the meantime, I shall carry on the leadership of the liberation efforts of the people with which I have been entrusted by them.

MURROW: Thank you Sir, very much indeed.

Here in New York a subway strike has ...

Ed. Trans. N.M.

Your Grace, if Cyprus should gain its independence or be united with Greece, what guarantees would you offer to the Turkish minority?

MAKARIOS: We are willing to provide international guarantees for the safeguard of the rights of the Turkish minority, under the supervision of the United Nations or any other international instrument. We wish to have a flourishing Turkish minority in our midst, which would be a factor in the internal development of the whole island.

MURROW: Are you prepared to settle for anything less than outright union with Greece, perhaps a temporary trusteeship under the United Nations?

MAKARIOS: The question of Cyprus is not one of a united ... of union with Greece but of self determination. We ask that the Cypriot people be given the right to determine their political future and freely decide whether they wish to remain within the British Commonwealth or have a separate independence or be united with another country. In view of the long history of civilization of the people of Cyprus, and considering their degree of maturity, there could be no excuse for not applying self determination outright. In order, however, to facilitate a settlement, we would accept and prefer a transitory period under the trusteeship of the United Nations, provided self determination were assured.

MURROW: Well, sir, would you and do you support the use of force on Cyprus in opposition to British rule?

MAKARIOS: I am certainly not in favor of the use of violence - but it should be remembered that it is the exercise of force by those in power for the continuation of a colonial state as in Cyprus that has led to the armed resistance by the people. Today, however, there is no violence from the part of the Cypriots but there is still from British side emergency

regulations continue in full force and application. Under them many hundreds of people are detained without trial, in concentration camps.

MURROW: Well, the Middle East is certainly a troubled area of the world, would an independent Cyprus have any effect on the Middle East situation in your view?

MAKARIOS: Yes. A free Cyprus would exercise a beneficent influence in the whole area of the Middle East. The granting of self determination to the island would tend to restore a much shaken confidence of the Middle East countries in the aims and purposes of the Western world. Moreover, a free Cyprus would be in a position to play an effective role in the promotion of the ideals of peace and freedom in the Middle East.

MURROW: Archbishop Makarios, what role do you aspire to play in the state of Cyprus?

MAKARIOS: When Cyprus obtains its freedom, my part as a national leader will automatically come to an end and I shall then be restricted to my purely religious duties. In the meantime, I shall carry on the leadership of the liberation efforts of the people with which I have been entrusted by them.

MURROW: Thank you, sir, very much indeed.

MURROW: Important social movements usually are identified more closely with one name than any other. In the Greek Cypriot movement, the name is Archbishop Makarios. William Cowper made the observation that to really report history, "describe the man...and paint his person, character, and views." And Thomas Carlyle said, "Biography is the only true history."

Good night and good luck!

Edward R. Murrow Tues., Dec. 10, 1957

This is the news:

The White House today announced that President Eisenhower will attend the NATO summit meeting. The announcement was made after six doctors reported...on the basis of a new medical check-up...that "the President's general condition is excellent." According to their report, the examination "confirmed the estimate of November 26 that there was no evidence of cerebral hemorrhage or any serious lesion of the cerebral vessels." It said, "The difficulty in speaking has continued to improve and in ordinary conversation was almost impossible to detect except by trained observers. The consultants," the report concluded, "unanimously agreed that the

President's recovery to date is such that it permits him to attend the Paris meeting." Although the report was issued by six doctors, only three of them who are neurologists made the actual examination. The other three doctors...including the President's personal physician, Major General Snyder...concurred in the decision that Mr. Eisenhower is well enough to make the Paris trip.

News Secretary Hagerty told reporters that President Eisenhower plans to leave Washington by air on Friday and arrive in Paris the following afternoon. He said Mr. Eisenhower probably will make the opening speech for the American delegation on Monday and stay for three or four days. The doctors, he said, have placed no limitation on his activities.

Secretary of State Dulles told a news conference today that the most important thing that could come out of the NATO meeting would be the re-emphasis of a spirit of unity..." a conception of the importance of cooperative action." He said Russia has adopted new tactics of economic penetration. The threat is economic...as well as military...and if NATO is to meet the changing situation, he warned, greater flexibility is required. Dulles expressed hope that NATO countries will consult each other as partners before making major policy decisions. But the United States,

he said, must remain free to carry out the decisions of its choice. The United States will seek voluntary agreements with its allies on the setting up of bases for intermediate range ballistic missiles. No country will have missile bases imposed on it.

~~Mr. Dulles said Adlai Stevenson had made a number of "valuable and useful suggestions" for the NATO meeting. He denied that the Administration has lacked a sense of urgency. He said the fact that a meeting of heads of government is being held shows recognition of the danger.~~

Dulles' references to what the United States will propose in Paris were all couched in general terms. My colleague, David Schoenbrun, in Paris has a detailed ~~report~~ run-down on the American policy proposals. We switch now to Paris for his exclusive report.

Tape runs 5:30
Ends on cue: "--to Edw. R. Murrow
in N.Y."

That was my colleague, David Schoenbrun, with an exclusive report on the ~~nine~~ proposals the United States will submit at next week's NATO meeting.

Soviet Premier Bulganin has sent a new letter to President Eisenhower. The contents have not been divulged. But there is an indication of what Bulganin may have had to say in a message he sent today to Prime Minister Nehru of India. Bulganin told Nehru that Russia will set off no more "nuclear explosions" after January first, if the United States and Britain will agree to halt their tests as of the same date.

There was more violence today on the island of Cyprus. In addition to anti-British rioting, Turkish and Greek Cypriots fought in the streets of Nicosia. At least 30 persons were injured.

The first Dutch nationals to leave Indonesia...under the expulsion edict...arrived by plane today in Singapore. THREE planes brought (MORE THAN 100) refugees to the British crown colony.

The United Nations General Assembly today approved a compromise resolution on Algeria. The vote was unanimous. The resolution "takes note" of the offer of Morocco and Tunisia to mediate the Algerian problem and "expresses the wish" that private, informal talks will be entered into "with a view to a solution in conformity with the principles and purposes of the United Nations Charter." It does not commit France to negotiate with Algerian rebel leaders.

The General Assembly also received a report from Prince Wan of Thailand on the Hungarian question. Wan was chosen by the Assembly...last September... as its special representative to seek compliance of the demand that Soviet troops be withdrawn from Hungary and that free elections be allowed. Wan said...in his report...that he was rebuffed by both Russia and Hungary, despite repeated personal appeals. He said, "I cannot believe, however, that the Hungarian and Soviet governments will remain insensible to the voice of world opinion and the conscience of mankind." After hearing this report, the Assembly voted...at the suggestion of the United States... not to act on the credentials of the Hungarian delegation at this time. Thus, for the present, the credentials are neither rejected nor approved.

In Washington, the Civil Service Commission has authorized a series of pay increases for government scientists and engineers. The pay hikes... ranging from 135 to a thousand dollars a year...go into effect late this month. The government says it is taking the action because it is unable "to obtain critically needed scientists and engineers in sufficient supply at present rates."

~~Today...at the AFL-CIO convention in Atlantic City...labor leaders went on record as opposing any legislation which would weaken the labor movement under the guise of rooting out corruption. They urged passage of legislation to protect the pension funds of both management and labor.~~

Here in New York, two-thirds of the city's rapid transit service is knocked out because of the subway strike. The strike (which began yesterday because of a jurisdictional grievance) spread today. And both Governor Harriman and Mayor Wagner have appealed to the strikers to go back to work...warning them that they are breaking state law.

George Bryan

Word for Today

The news that President Eisenhower will go to Paris has cheered our NATO allies...but more than the presidential presence will be required to make the meeting a success. And this meeting may be crucial. For as James Russell Lowell said...in another day..."Truly there is a tide in the affairs of men, but there is no Gulf Stream setting forever in one direction."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Tuesday, December 10, 1957
7:45 - 8:00 P. M.

MURROW: My colleague David Schoenbrun in Paris, has a detailed run down on the American policy proposals. We switch now to Paris for his exclusive report.

SCHOENBRUN: The American policy proposals for the NATO Summit conference contain some exciting new plans to meet the crisis of the Atlantic Alliance, and it's a double-barreled crisis, for NATO is torn by internal discord as well as menaced by a much greater Soviet capability then faced this Alliance when the pact was signed in April of 1949.

Let's firs t consider the proposals designed to meet the external threat. The first of nine policy papers is an American offer to make available to the Supreme Commander of NATO an atomic stockpile on the continent of Europe. American forces already have atomic weapons over here, but now we propose to make them available to NATO forces. The NATO Supreme Commander is an American, General Lauris Norstad and the custody of the stock pile will remain in the hands of American elements, but allied troops will be trained in the use of these atomic weapons and the Supreme Commander will now be in a position to transfer the weapons to non-American elements instantly in event of war.

Although, the policy paper does not say so specifically, Ed., it's obvious from the language and the concept itself that the nuclear warheads will be put on NATO bases within a few feet of non-American troops, ready for instant transfer to trained teams. The second paper carries this principal even further. It provides for creation of inter-mediate range ballistic missile bases in NATO territory and eventually the production of these missiles by

our European allies from blueprints furnished by us.

Once again Ed, a note of caution, the actual nuclear warhead will remain in American hands. We are prevented by law - the McMann Act, for example, from sharing nuclear military secrets, and as yet, there seems to be no disposition on the part of Congress to remove that restriction. However, reading between the lines, you can see a new concept emerging. One that should go far towards satisfying European demands.

Many Europeans are reluctant to grant us bases unless they have guarantees that we will not use the weapon without consulting them. Well, Ed., there is a way to achieve that without breaking Congressional laws. It amounts to this; U. S. elements in NATO will possess the warhead, but non-U. S. members of the combat team will operate the I.R.B.M. launching platform and missile. In other words, our men will put the warhead into the missile but only the Europeans will pull the trigger. That's basically, what these new proposals add up to.

The third policy paper proposes a scientific pool - a NATO brain's trust in the form of a chief scientific advisor to the Secretary General and a 15 man committee composed of the leading scientists in all the member countries. The fourth paper carries that concept further - towards a mutual weapons pool, a kind of joint ordinance department. Under this proposal America would make available such hardware as the Honest John and the Nike and many other weapons yet to be designed. We would also profit from the considerable scientific know-how of our allies. For example, the French are well ahead of us in the electronics field.

The fifth proposal is a re-affermation of our intention to maintain our ground forces in Europe and to urge our partners to carry out the NATO force goal of 30 nuclear equipped divisions. That

goalis only about one-half achieved, because the British have cut back their forces and the Germans are lagging far behind in their committments.

The sixth paper is a re-statement of Western proposals on disarmament and a challenge to the Russians to demonstrate their readiness to further the cause of world peace.

The seventh proposals states America's agbeement that constant political consultation is necessary to prevent discord inside the Alliance. However, this paper does not satisfy current French and German demands for something like automatic consultation. In fact Ed., as I suggested in previous reports to you, this is largely an emotional issue. Of course, the allies ought to consult, but the French, who are shouting the loudest about it are the very people who did not consult with us on Suez. Consultation really is a matter of good faith - to be worked out in day to day practice. It cannot be institutionalized without a surrender of sovereignty - which no one is proposing.

The last two papers deal with the reaffermation of President Eisenhower's atoms for peace plan and the need for economic cooperation inside NATO. That's about it Ed., it adds up to some exciting new military concepts but very little in the political, economic or social fields. NATO was and remains essentially a military alliance - a shield and a counter-punch. Unfortunately, the hands that hold the shield have been trembeling. The recent illness of the President, the internal quarrels among NATO members, the narrowness of the Alliance - all these have caused great anxiety. The American proposals will help relieve some of this anxiety. I would guess, however, that something more will be needed to make the Summit conference a success, perhaps President Eisenhower's presence may re-vitalize the Alliance, but the Paris paper, <u>Le Monde</u> puts it this way tonight It says, " the presence of President Eisenhower does not by itself meet the challenge to the West."

Now, back to Edward R. Murrow in New York.

MURROW: That was my colleague David Schoenbrun with an exclusive report on the proposals the United States will submit at next week's NATO meeting.

ED. TRANS. N.M.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, DECEMBER 10, 1957
7:45 - 8:00 PM EST

This is the news:

The White House today announced that President Eisenhower will attend the NATO summit meeting. The announcement was made after six doctors reported... on the basis of a new medical check-up...that "the President's general condition is excellent." According to their report, the examination "confirmed the estimate of November 26th that there was no evidence of cerebral hemorrhage or any serious lesion of the cerebral vessels." It said, "The difficulty in speaking has continued to improve and in ordinary conversation was almost impossible to detect except by trained observers. The consultants," the report concluded, "unanimously agreed that the President's recovery to date is such that it permits him to attend the Paris meeting."

News Secretary Hagerty told reporters that President Eisenhower plans to leave Washington by air on Friday and arrive in Paris the following afternoon. He said Mr. Eisenhower probably will make the opening speech for the American delegation on Monday and stay for three or four days. The doctors, he said, have placed no limitation on his activities.

Secretary of State Dulles told a news conference today that the most important thing that could come out of the NATO meeting would be the re-emphasis of a spirit of unity..."a conception of the importance of co-operative action." He said Russia has adopted new tactics of economic penetration. The threat is economic as well as military...and if NATO is to meet the changing situation, he warned, greater flexibility is required. Dulles expressed hope that NATO countries will consult each other as partners before making major policy decisions. But the United States, he said, must remain free to carry out the decisions of its choice. The United States will seek voluntary agreements with its allies on the setting up of bases for intermediate range ballistic missiles. No country will have missile bases imposed on it.

Dulles' references to what the United States will propose in Paris were all couched in general terms. My colleague, David Schoenbrun, in Paris has a detailed run-down on the American policy proposals. We switch now to Paris for his exclusive report.

SCHOENBRUN: The American policy proposals for the NATO Summit conference contain some exciting new plans to meet the crisis of the Atlantic Alliance, and it's a doubled barreled crisis for NATO is torn by internal discord as well as menaced by a much greater Soviet capability then faced this Alliance when the pact was signed in April of 1949.

Let's first consider the proposals designed to meet the external threat. The first of nine policy papers is an American offer to make available to the Supreme Commander of NATO an atomic stockpile on the continent of Europe. American forces already have atomic weapons over here, but now we propose to make them available to NATO forces. The NATO Supreme Commander is an American, General Lauris Norstad and the custody of the stock pile will remain in the hands of American elements, but allied troops will be trained in the use of these atomic weapons and the Supreme Commander will now be in a position to transfer the weapons to non-American elements instantly in event of war.

Although, the policy paper does not say so specifically, Ed, it's obvious from the language and the concept itself that the nuclear warheads will be put on NATO bases within a few feet of non-American troops, ready for instant transfer to trained teams. The second paper carries this principle even further. It provides for creation of inter-mediate range ballistic missile bases in NATO territory and eventually the production of these missiles by our European allies from blueprints furnished by us.

Once again Ed, a note of caution, the actual nuclear warhead will remain in American hands. We are prevented by law - the McMann Act, for example, from sharing nuclear military secrets, and as yet, there seems to be no disposition on the part of Congress to remove that restriction. However, reading between

the lines, you can see a new concept emerging. One that should go far towards satisfying European demands.

Many Europeans are reluctant to grant us bases unless they have guarantees that we will not use the weapon without consulting them. Well, Ed, there is a way to achieve that without breaking Congressional laws. It amounts to this; U. S. elements in NATO will possess the warhead, but non-U. S. members of the combat team will operate the I.R.B.M. launching platform and missile. In other words, our men will put the warhead into the missile but only the Europeans will pull the trigger. That's basically, what these new proposals add up to.

The third policy paper proposes a scientific pool - a NATO brain's trust in the form of a chief scientific adviser to the Secretary General and a 15 man committee composed of the leading scientists in all the member countries. The fourth paper carries that concept further - towards a mutual weapons pool, a kind of joint ordinance department. Under this proposal America would make available such hardware as the Honest John and the Nika and many other weapons yet to be designed. We would also profit from the considerable scientific know-how of our allies. For example, the French are well ahead of us in the electronics field.

The fifth proposal is a re-affirmation of our intention to maintain our ground forces in Europe and to urge our partners to carry out the NATO force goal of 30 nuclear equipped divisions. That goal is only about one-half achieved, because the British have cut back their forces and the Germans are lagging far behind in their committments.

The sixth paper is a re-statement of Western proposals on disarmament and a challenge to the Russians to demonstrate their readiness to further the cause of world peace.

The seventh proposal states America's agreement that constant political consultation is necessary to prevent discord inside the Alliance. However, this paper does not satisfy current French and German demands for something like

automatic consultation. In fact, Ed, as I suggested in previous reports to you, this is largely an emotional issue. Of course, the allies ought to consult, but the French, who are shouting the loudest about it are the very people who did not consult with us on Suez. Consultation really is a matter of good faith - to be worked out in day to day practice. It cannot be institutionalized without a surrender of sovereignty - which no one is proposing.

The last two papers deal with the reaffirmation of President Eisenhower's atoms for peace plan and the need for economic cooperation inside NATO. That's about it Ed; it adds up to some exciting new military concepts but very little in the political, economic or social fields. NATO was and remains essentially a military alliance - a shield and a counter-punch. Unfortunately, the hands that hold the shield have been trembling. The recent illness of the President, the internal quarrels among NATO members, the narrowness of the Alliance - all these have caused great anxiety. I would guess, however, that something more will be needed to make the Summit conference a success, perhaps President Eisenhower's presence may re-vitalize the Alliance, but the Paris paper Le Monde puts it this way tonight. It says, "The presence of President Eisenhower does not by itself meet the challenge to the West."

Now, back to Edward R. Murrow in New York.

MURROW: That was my colleague David Schoenbrun with an excluiive report on the proposals the United States will submit at next week's NATO meeting.

Soviet Premier Bulganin has sent a new letter to President Eisenhower. The contents have not been divulged. But there is an indication of what Bulganin may have had to say in a message he sent today to Prime Minister Nehru of India. Bulganin told Nehru that Russia will set off no more "nuclear explosions" after January first, if the United States and Britain will agree to halt their tests as of the same date.

There was more violence today on the island of Cyprus. In addition to anti-British rioting, Turkish and Greek Cypriots fought in the streets of Nicosia.

At least 30 persons were injured.

The first Dutch nationals to leave Indonesia...under the expulsion edict... arrived by plane today in Singapore. Three planes brought more than 100 refugees to the British crown colony.

The United Nations General Assembly today approved a compromise resolution on Algeria. The vote was unanimous. The resolution "takes note" of the offer of Morocco and Tunisia to mediate the Algerian problem and "expresses the wish" that private, informal talks will be entered into "with a view to a solution in conformity with the principles and purposes of the United Nations Charter." It does not commit France to negotiate with Algerian rebel leaders.

The General Assembly also received a report from Prince Wan of Thailand on the Hungarian question. Wan was chosed by the Assembly...last September... as its special representative to seek compliance of the demand that Soviet troops be withdrawn from Hungary and that free elections be allowed. Wan said...in his report...that he was rebuffed by both Russia and Hungary, despite repeated personal appeals. After hearing this report, the Assembly voted... at the suggestion of the United States...not to act on the credentials of the Hungarian delegation at this time. Thus, for the present, the credentials are neither rejected nor approved.

In Washington, theCivil Service Commission has authorized a series of pay increases for government scientists and engineers. The pay hikes...ranging from 135 to a thousand dollars a year...go into effect late this month. The government says it is taking the action because it is unable "to obtain critically needed scientists and engineers in sufficient supply at present rates."

Here in New York, two-thirds of the city's rapid transit service is knocked out because of the subway strike. The strike (which began yesterday because of a jurisdictional grievance) spread today. And both Governor Harriman and Mayor Wagner have appealed to the strikers to go back to work...warning them that they are breaking state law.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But, first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The news that President Eisenhower will go to Paris has cheered our NATO allies...but more than the presidential presence will be required to make the meeting a success. And this meeting may be crucial. For as James Russell Lowell said...in another day..."Truly there is a tide in the affairs of men, but there is no Gulf Stream setting forever in one direction."

Goodnight and good luck!

Edward R. Murrow Wed., Dec. 11, 1957

This is the news:

The government reports 680-thousand more persons unemployed in November than in October. Unemployment at the end of last month stood at 3-million, 188-thousand...the highest unemployment figure for any November since 1949. Nearly a quarter of a million factory workers were laid off in November...many of them in the aircraft industry.

The AFL-CIO today adopted a policy calling for another round of wage increases in 1958. A resolution declaring that "sizeable" increases are necessary to bolster consumer buying power was approved unanimously by delegates attending the AFL-CIO convention in Atlantic City. The delegates represent 13-million workers in 135 affiliated trade unions.

And the action kills the proposal...made last week by Richard Gray, president of the building trades department...for a wage freeze. The resolution states that "while American labor will cooperate wholeheartedly in the national defense effort, no need has been demonstrated for any wage freeze or nationwide extension of the statutory work week." (The work-week clause was a reference to reports that Senate Democratic Leader Johnson in a speech yesterday had advocated scrapping the 40-hour week. Johnson said today that his remarks had been misunderstood. He said his proposal was not meant to apply to private industry, only to the intercontinental ballistic missile program). The resolution was approved by the AFL-CIO convention after it heard Walter Reuther of the United Auto Workers charge that "big business" had taken (in his phrase) "a disproportionately large share of the fruits of our developing economy." "Our basic problem," Reuther said, "is that we have mastered the techniques of mass production but we have not developed a comparable system for mass distributing our great abundance." He predicted that the unemployment picture will get worse until productive power and purchasing power are brought into balance.

The Senate Rackets Committee today concluded its hearings on labor violence in Tennessee. Five of today's witnesses---all members of the Teamsters Union---refused to answer questions and pleaded the Fifth Amendment. ~~Chairman McClellan told one of them, "You are nothing but a gang of thugs"...and expressed the hope that "honest" members of the union would find a way to get rid of the "hoodlum leaders". He then recessed the hearings until next week.~~

Here in New York, the subway strike has gone through its third day. A transit official says, "We refuse to negotiate with the leaders of an illegal strike." Strikes by public transport workers ~~is~~ are forbidden by state law.

In Washington, President Eisenhower and Secretary of State Dulles today discussed plans for next week's NATO meeting. Adlai Stevenson personally delivered to Dulles his final suggestions for the conference... thereby ending his assignment as consultant to the Administration on NATO problems.

~~Chairman Green of the Senate Foreign Relations Committee said today~~ that Mr. Eisenhower has ~~"a great opportunity to demonstrate leadership"~~

—>

Last night in London Prime Minister MacMillan made reference to a subject of truly revolutionary importance. He spoke of "controlled hydrogen experiments" which might produce a completely new source of power, "the raw material of which could be got out of the sea itself." This is a reference to controlled fusion - the peacetime use of the power of the hydrogen bomb. When and if this is achieved - and British scientists do not claim to have achieved it yet - it will mean an inexhaustible supply of cheap, safe power. If this process is perfected it would, as MacMillan predicted, create an industrial revolution which in turn would create a world as different from what we have now as the 19th century was from the Middle Ages. #

David Schoenbrun reports from Paris that....right after the NATO meeting...six European foreign ministers will meet to select a new "European" capital. The capital will serve as headquarters for Euratom and the European Common Market, as well as for the Coal and Steel Community. It will be of a supra-national character...and may be located on the banks of the Rhine, near Strasbourg, as a symbol of the new relationship between Germany and France.

Because of its budget deficit, France needs about 500 million dollars in foreign loans. Schoenbrun cables that...tomorrow...the Finance Ministry will announce the appointment of France's elder statesman, Jean Monnet, to head a committee for negotiating these loans.

In Algeria, French authorities report 151 rebels killed last night in the Constantine area. The French were supported by aircraft in what is described as the largest single action in months. Other French troops surrounded a rebel force near Philippeville, killing 67 insurgents and capturing eight. No French losses are reported.

The United Nations Political Committee today resumed debate on the Cyprus question. Greece accused Britain of "obstinate refusal" to make

real concessions. Turkey...in turn...denounced what it called the attempt of the Greek Cypriot majority to rule the Turkish minority on the island. And Bolivia said the time had come for the United Nations to arrange a plebescite so that the people of Cyprus can choose union with Greece or Turkey, continuation of British administration, or independence.

The government of Indonesia said tonight that it would welcome a United States offer to mediate its dispute with the Netherlands over possession of West New Guinea. A government spokesman said, "If the United States offered to mediate, we would be glad to accept."

Edward R. Murrow: December 11, 1957. 7.45 p.m.

When national energies are whipped up to avert dangers in one direction, it can happen that other dangers are ignored, and grievous losses can be suffered almost without notice. Just now, with attention focussed on the missile race with the Soviet Union and the NATO summit meeting, the free world is sustaining a sensational defeat in Indonesia, and doing nothing about it.

The drama that is playing itself out in Indonesia, if its title could be believed, is about the final end of Dutch colonialism. The seizures of plantations, banks, shipping lines and other enterprises, first by the labor unions, then by the government, are called reprisals against the Netherlands Government, for not surrendering its control of its half of New Guinea. The Indonesian government has taken full responsibility for all the seizures so far carried out. It announces it will compensate the displaced owners. But its treasury is empty, and there is no prospect of funds for this purpose. This drama is badly misnamed. It is not the end of Dutch colonialism, it is one of the most spectacular successes of communism since the war.

The issue of New Guinea is ~~remote from such vivid and revolutionary~~ developments. Actually no one has proposed ending colonialism in New Guinea. The Indonesians proposed simply to substitute their own colonialism

for that of the Dutch. For the territory is one of the most benighted jungle lands in the world, and will not be ready for self-rule for decades. The Dutch had not agreed to turn over New Guinea, at the time they gave Indonesia its independence. They merely promised to consider transferring the colony at a future date. They have considered it, and decided against doing anything now. / That was their right. / And, one can add, they are paying dearly for it. / The value of their Indonesian plantations is a billion and a half. They stand to lose it all, and will have to repatriate 40,000 Dutch settlers to boot. New Guinea will not be worth that much materially for a long time, if ever. But the Dutch believed they were better off not to submit to blackmail.

Now Indonesia faces chaos of one sort or another. President Sukarno is gambling everything on the hope that Indonesian communists will be Indonesians first, and communists second, and that somehow, he can preserve what he calls a "directed democracy" through co-operation of all parties. But the ground has been slipping under his feet. He deliberately whipped up the anti-Dutch feeling, to bolster his own position. The result is, that he is under the thumb of the communists more than before.

This does not necessarily mean that the communists will or can take

over the government of Indonesia. They may be strong enough to seize power in Java, and part of the army is friendly to their interests. But if they do, the outlying islands probably will declare their independence and apply to the United Nations for recognition. Then civil war is pretty sure to result.

The communists set off a revolution in 1948, and lost. Then they changed tactics, played down allegiance to Moscow or Peiping, and gained more ground than they had lost.

In the 1955 election, they won 39 out of 260 seats in the Assembly, and have captured control of the most important labor unions. But in Sumatra, Borneo and the Celebes, anti-communists are in control, and if the Sukarno regime goes any further to the left, they promise to break away.

One tragedy of the situation is, that the uprooting of the Dutch spells immediate economic disaster to the entire country. They provide much of the administrative ability in the islands, their banks financed the islands' trade, their ships carried three-fourths of the inter-island and world commerce.

But a greater tragedy, is what has happened to one of the fairest dreams of the post-war era. Indonesia, with its 77 million people, was the fourth largest democracy in the world. Its 3,000 islands fill an area in the

Pacific as vast as that between San Francisco and Hawaii. Had the liberated Indonesians learned self-government more quickly their Republic would have become one of the pillars of the free world. Today it is no pillar, it is more like a political quagmire.

Had the Soviet Union conspired to bring this to pass, the free world no doubt would have done something about it. But Moscow did not advertise its interest or need to. Now the free world is suffering a defeat that is just as painful as though Moscow had inflicted it by avowed design. It is hard to believe that it could not have been averted by more generous and enlightened aid by this and other western countries.

Mr. Dulles yesterday expressed concern over this state of affairs. He said the United States is advising moderation. He could not have washed his hands with better-sounding or less realistic words.

Word for Today

The tragedy of Indonesia is the more disappointing because of the high expectations held at the time it gained independence in 1949. Samuel Johnson said, "He who expects much will often be disappointed, yet disappointment seldom cures us of expectation... or has any other effect than that of producing a moral sentence or peevish exclamation."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, DECEMBER 11, 1957
7:45 - 8:00 PM EST

This is the news:

The government reports 680-thousand more persons unemployed in November than in October. Unemployment at the end of last month stood at 3-million, 188-thousand...the highest unemployment figure for any November since 1949. Nearly a quarter of a million factory workers were laid off in November...many of them in the aircraft industry.

The AFL-CIO today adopted a policy calling for another round of wage increases in 1958. A resolution declaring that "sizeable"increases are necessary to bolster consumer buying power was approved unanimously by delegates attending the AFL-CIO convention in Atlantic City. The delegates represent 13-million workers in 135 affiliated trade unions. And the action kills the proposal... made last week by Richard Gray, president of the building trades department... for a wage freeze. The resolution states that "while American labor will co-operate wholeheartedly in the national defense effort, no need has been demonstrated for any wage freeze or nationwide extension of the statutory work week." (The work-week clause was a reference to reports that Senate Democratic Leader Johnson in a speech yesterday had advocated scrapping the 40 hour week. Johnson said today that his remarks had been misunderstood. He said his proposal was not meant to apply to private industry, only to the intercontinental ballistic missile program.) The resolution was approved by the AFL-CIO convention after it heard Walter Reuther of the United Auto Workers charge that "big business" had taken (in his phrase) "a disproportionately large share of the fruits of our developing economy." "Our basic problem," Reuther said, "is that we have mastered the techniques of mass production, but we have not developed a comparable system for mass distributing our great abundance." He predicted that the unemployment picture will get worse until productive power and purchasing power are brought into balance.

The Senate Rackets Committee today concluded its hearings on labor violence in Tennessee. Five of today's witnesses---all members of the Teamsters Union---refused to answer questions and pleaded the Fifth Amendment.

Here in New York, the subway strike has gone through its third day. A transit official says, "We refuse to negotiate with the leaders of an illegal strike." Strikes by public transport workers are forbidden by state law.

In Washington, President Eisenhower and Secretary of State Dulles today discussed plans for next week's NATO meeting. Adlai Stevenson personally delivered to Dulles his final suggestions for the conference...thereby ending his assignment as consultant to the Administration on NATO problems.

Last night in London, Prime Minister MacMillan made reference to a subject of truly revolutionary importance. And Bolivia said the time had come for the United Nations to arrange a plebescite so that the people of Cyprus can choose union with Greece or Turkey, continuation of British administration or independence.

The government of Indonesia said tonight that it would welcome a United States offer to mediate its dispute with the Netherlands over pssession of West New Guinea. A government spokesman said, "If the United States offered to mediate, we would be glad to accept."

When national energies are whipped up to avert dangers in one direction, it can happen that other dangers are ignored, and grievous losses can be suffered almost without notice. Just now, with attention focussed on the missile race with the Soviet Union and the NATO summit meeting, the free world is sustaining a sensational defeat in Indonisia, and doing nothing about it.

The drama that is playing itself out in Indonesia, if its title could be believed, is about the final end of Dutch colonialism. The seizures of plantations, banks, shipping lines and other enterprises, first by the labor unions, then by the government, are called reprisals against the Netherlands Government, for not surrendering its control of its half of New Guinea. The Indonesian government has taken full responsibility for all the seizures so far carried out. It announces it will compensate the displaced owners. But its treasury is empty, and there is no prospect of funds for this purpose. This drama is badly misnamed. It is not the end of Dutch colonialism, it is one of the most spectacular successes of communism since the war.

Actually no one has proposed ending colonialism in New Guinea. The Indonesians proposed simply to substitute their own colonialism for that of the Dutch.

For the territory is one of the most benighted jungle lands in the world, and will not be ready for self-rule for decades. The Dutch had not agreed to turn over New Guinea, at the time they gave Indonesia its independence. They merely promised to consider transferiing the colony at a future date. They have considered it, and decided against doing anything now. That was their right. And, one can add, they are paying dearly for it. The value of their Indonesian plantations is a billion and a half. They stand to lose it all, and will have to repatriate 40,000 Dutch settlers to boot. New Guinea will not be worth that much materially for a long time, if ever. But the Dutch believed they were better off not to submit to blackmail.

Now Indonesia faces chaos of one sort or another. President Sukarno is gambling everything on the hope that Indonesian communists will be Indonesians first and communists second, and that somehow he can preserve what he calls a "directed democracy" through co-operation of all parties. But the ground has been slipping under his feet. He deliberately whipped up the anti-Dutch feeling to bolster his own position. The result is that he is under the thumb of the communists more than before.

This does not necessarily mean that the communists will or can take over the government of Indonesia. They may be strong enough to seize power in Java, and part of the army is friendly to their interests. But if they do, the outlying islands probably will declare their independence and apply to the United Nations for recognition. Then civil war is pretty sure to result.

The communists set off a revolution in 1948, and lost. Then they changed tactics, played down allegiance to Moscow or Peiping, and gained more ground than they had lost.

In the 1955 election, they won 39 out of 260 seats in the Assembly, and have capturedcontrol of the most important labor unions. But in Sumatra, Borneo and the Celebes, anti-communists are in control, and if the Sukarno regime goes any further to the left they promise to break away.

One tragedy of the situation is that the uprooting of the Dutch spells immediate economic disaster to the entire country. They provide much of the administrative ability in the islands, their banks financed the islands' trade, their ships carried three-fourths of the inter-island and world commerce.

But a greater tragedy is what has happened to one of the fairest dreams of the post-war era. Indonesia, with its 77 million people, was the fourth largest democracy in the world. Its 3,000 islands fill an area in the Pacific as vast as that between San Francisco and Hawaii. Had the liberated Indonesians learned self-government more quickly, their Republic would have become one of the pillars of the free world. Today it is no pillar, it is more like a political quagmire.

Had the Soviet Union conspired to bring this to pass, the free world no doubt would have done something about it. But Moscow did not advertise its interest or need to. Now the free world is suffering a defeat that is just as painful as though Moscow had inflicted it by avowed design. It is hard to believe that it could not have been averted by more generous and enlightened aid by this and other western countries.

Mr. Dulles yesterday expressed concern over this state of affairs. He said the United States is advising moderation. He could not have washed his hands with better-sounding or less realistic world.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The tragedy of Indonesia is the more disappointing because of the high expectations held at the time it gained independence in 1949. Samuel Johnson said, "He who expects much will often be disappointed, yet disappointment seldom cures us of expectation...or has any other effect than that of producing a moral sentence or peevish exclamation."

Goodnight and good luck!

Edward R. Murrow Thurs., Dec. 12, 1957

This is the news:

Russia announced tonight that it is sending a note to every United Nations member, warning that "the danger of nuclear war has greatly increased." According to Moscow Radio, the notes say: "Action must be taken at once to prevent a war and to improve relations between countries. Like the earlier messages from Premier Bulganin to the United States, West Germany, Britain and France, the notes call for a high-level East-West meeting. They also propose a non-aggression pact between the NATO and Warsaw Treaty countries...and the creation of a large zone in Central Europe where nuclear armaments would be banned. As for the Middle East, Russia urges that the big powers take it upon themselves to

adhere strictly to a principle of non-interference in the internal affairs of countries in that part of the world. A State Department spokesman said today that Premier Bulganin's message to President Eisenhower...delivered day before yesterday...is "under most careful study." And Adlai Stevenson says that he hopes Mr. Eisenhower's response to the letter will be "affirmative in spirit." (I should like to go into the matter of the ~~This is the news:~~ Bulganin letters further in a few minutes).

President Eisenhower today conferred for two hours and 15 minutes with the National Security Council. The White House says it can be "assumed" that plans for next week's NATO meeting were discussed.

Secretary of State Dulles left Washington today for the NATO conference, and President Eisenhower will leave tomorrow. Dulles declined at the airport to make a statement...such as he usually makes when starting out on a major diplomatic mission. He told reporters, "The President is the head of this delegation. I'm just one of his assistants." Dulles said he was going to Paris early to do "a little preparatory work" before the President's arrival. News Secretary Hagerty...who is in Paris...

says that Mr. Eisenhower will try, in addition to the regular conference sessions next week, to meet separately with each of the other 14 heads of government.

Twenty-eight Democratic congressmen today sent President Eisenhower a telegram, urging him to broaden the scope of the NATO meeting. They expressed hope that the heads of government...in addition to military and scientific matters...will also give careful consideration to other problems such as coordination of foreign policy, economic cooperation, and the Middle East. They said that "while we are keenly aware of the urgency of the military situation, we dare not continue to neglect the less dramatic but equally important factors, which could have been so effectively exploited to defeat Soviet advances in recent years."

The government of Tunisia today confirmed that it has received a conseignment of 2-thousand rifles from Egypt. Also a few mortars. President Bourguiba said he wished to thank Egypt "in the same way we recently thanked the United States and Britain for their arms aid." He said the weapons will be employed for "defensive purposes". The Anglo-American shipment...last month...touched off strong protests in France, which fears the equipment ultimately may fall into the hands of the Algerian rebels. The French feel that Anglo-American policy in North Africa is contrary to the spirit of NATO solidarity. My colleague, David Schoenbrun, reports from Paris tonight that Britain and the United States are refusing to provide France with the serial numbers of the rifles and sub-machine guns they sent, so that the French can tell if and when the weapons come into rebel possession. Schoenbrun says the Anglo-American argument against giving the French this information is that to do so would be "an infringement of Tunisia's sovereign rights." Bourguiba already has promised that the arms will not be transferred. The Anglo-American position is that they must accept his word. The question of arms shipments is bound to come up at the NATO conference...and, of course,

so will the American offer to set up launching sites for intermediate range missiles on the territory of NATO countries. The French cabinet discussed this proposal today for three hours. A decision whether France will allow such bases on its soil was not reached.

Republican Senator Flanders of Vermont said today that the first intermediate range missiles for assignment to European bases are "going into" operational production. He criticized the publicity given the attempt to launch our first test satellite...and said that President Eisenhower's scientific adviser, Dr. Killian, should have more authority. Flanders said the missiles program needs a top boss with complete authority to act.

The Army said today that it is making "a critical re-examination", with a view to freeing enlisted scientists and engineers from routine assignments, such as guard duty and K.P.

Talks between the United States and Red China...which have been going on intermittently in Geneva for the past two years...adjourned today indefinitely. The United States has been trying to get a promise from Red China that it will not use force against Formosa. It has also been seeking the release of the last American civilians held in Red China.

The prime minister of Indonesia said today that President Sukarno is going to take a "rest" in a foreign country "for reasons of health." There are rumors (which are not confirmed) that Sukarno has been deposed and succeeded by a three-man directorate. The Netherlands Radio said this afternoon that he has been taken prisoner by the Indonesian Army. It based its broadcast on "a message received from a private source in Jakarta," the Indonesian capital.

The AFL-CIO today re-elected George Meany as president. It also expelled the laundry and bakery workers unions for corrupt practices.

Here in New York, the subway motormen...who have been on strike since early Monday...have made Mayor Wagner a proposal for ending the walkout. ~~Terms of the proposal have not been divulged.~~ THEY SAY THEY WILL GO BACK TO WORK IMMEDIATELY, IF THERE ARE NO REPRISALS.

Edward R. Murrow: December 12, 1957. 7.45 p.m.

Since the cold war with the Soviet Union is on in full blast, it is only natural that the Bulganin letters to President Eisenhower and other heads of government are being labelled "propaganda." Mr. Bulganin himself would hardly deny that they are. They were written to make it harder for our NATO allies to establish missile bases in Europe, and they offer both warnings and inducements. ~~They also include a proposal for fresh East-West negotiations, and this is not being taken any more seriously in Washington than the other features. It is considered part of the propaganda. However, it may not be good propaganda on our part to throw it into the waste-basket with the rest of the letter.~~

Lester Pearson, former Canadian Minister of External Affairs, underscored the need for ~~just such~~ negotiations in his speech accepting the Nobel Peace Prize. He pointed out that power has ceased to be the best defense of peace, and its place has been taken by agreements that put peace on a stronger foundation than the terror of destruction. "Our policy and diplomacy - as the two sides face each other in the cold war" he said, "is becoming as rigid and defensive as the trench warfare of forty years ago, when the two sides dug in, dug deeper and lived in their ditches.... The grim fact" he said, "is that

we prepare for war like precocious giants, and for peace like retarded pygmies."

Mr. Pearson is a veteran of the world of realities, and no peddler of panaceas. "What I plead for" he said, "is no spectacular meeting of the Big Two, or Big Three, or Big Four at the summit, where the footing is precarious and the winds blow hard, but for a frank, serious and complete exchange of views, especially between Washington and Moscow, through diplomatic channels." If such exchanges are to succeed, he said, the West must recognize that there are certain issues - such as the unification of Germany and the stabilization of the Middle East - which are not likely to be settled without the participation of the Soviet Union. "Where that country has a legitimate security interest in an area or problem" he said, "that must be taken into account." And the Soviet Union for its part, he said, must recognize the right of people to choose their own form of government without interference from outside, or subversive domestic forces assisted from the outside. He granted that a diplomatic approach of this kind involves baffling complexities, difficulties and even risks. Perhaps it would not succeed, "but speaking as a North American" he said, "I merely state that we should be sure that the responsibility for any failure is not ours. The

first failure would be to refuse to make the attempt.

"The time has come" he urged, "to make a move, not only from strength, but from wisdom and from confidence in ourselves; to concentrate on the possibilities of agreement rather than on disagreements and failures, and on the evils and wrongs of the past. It would be folly to expect easy, quick or total solutions. It would be folly also to expect hostility and fears suddenly to vanish. But it is equal or even greater folly to do nothing; to sit back, answer missile with missile, insult with insult, ban with ban."

Mr. Pearson believes the Russian people want peace. He also believes that many of them think that the Americans don't. "So might I" he said, "if I had as little chance to get objective information. Similarly" he went on, "our Western fears have been partly based on a lack of information about the people of Russia. I can find nothing for keeping one people malevolently misinformed about others."

He was sure no progress would be made if one side merely shouts co-existence" - which he called a sterile and negative concept - or "parleys at the summit", while the other replied "no appeasement" or "no negotiation without proper proof of good faith". "What is needed" he urged, "is a new and vigorous determination to use every technique of discussion and

negotiation that can be made available. We must keep on trying to solve problems, one by one, stage by stage, if not on the basis of confidence and co-operation, at least on one of mutual toleration and self interest."

No one will say that Mr. Pearson's formula for peace is glamorous, or that it seeks to do too much. It is both somber and modest. And it could hardly have been offered at a more appropriate time.

Word for Today

There is no question that the Bulganin messages constitute a form of propaganda. But this does not mean we should ignore everything the Russians have to say and refuse to talk to them. Nor does it follow that because agreement is difficult we should not make the attempt. Charles B. Marshall said, "Life imposes on nations, as on men, the obligation to strive without despair."

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, DECEMBER 12, 1957
7:45 - 8:00 PM EST

This is the news:

Russia announced tonight that it is sending a note to every United Nations member, warning that "the danger of nuclear war has greatly increased." According to Moscow Radio, the notes say: "Action must be taken at once to prevent a war and to improve relations between countries. Like the earlier messages from Premier Bulganin to the United States, West Germany, Britain and France, the notes call for a high-level East-West meeting. No one will say that Mr. Pearson's formula for peace is glamorous, or that it seeks to do too much. It is both somber and modest. And it could hardly have been offered at a more appropriate time.

This is Ed Murrow. I'll be back in amoment with the Word for Today. But, first here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: There is no question that the Bulganin messages constitute a form of propaganda. But this does not mean we should ignore everything the Russians have to say and refuse to talk to them. Nor does it follow that because agreement is difficult, we should not make the attempt. Charles B. Marshall said, "Life imposes on nations, as one men, the obligation to strive without despair."

Goodnight and good luck!

Edward R. Murrow Fri., Dec. 13, 1957

This is the news:

President Eisenhower left Washington this afternoon for the NATO summit conference. / He is being accompanied...on the Columbine Third... by his personal physician, Major General Snyder; his scientific adviser, Dr. James R. Killian, and Lewis Strauss, chairman of the Atomic Energy Commission. / Sea-level pressure will be maintained in the aircraft, as recommended by the doctors. / And as customary...when the President makes a trans-Atlantic flight...warships are stationed along the route. This time, both British and American warships are taking part.

Mr. Eisenhower is due in Paris tomorrow morning, and he is expected to

→

make a statement at that time. He limited himself today...at the airport... to exchanging greetings with Vice President Nixon and others who came to see him off.

Secretary of State Dulles already is in Paris and had his first preliminary meeting today with French leaders. For a direct report on that...and the prospects of the NATO conference...we switch to David Schoenbrun in Paris.

Tape runs 5:25

Returns on cue to ERM in NY

Tomorrow, this reporter will be flying to Paris to join his colleagues in covering the NATO meeting. Atmospherics, [redacted] permitting, I shall be reporting back to you on this program throughout most of next week. Sitting in for me here, while I am gone, will be my ~~good and capable~~ old friend, Larry Lesueur.

A West German spokesman...in Bonn...today denied reports that West Germany has decided in favor of setting up American missile bases on German soil. The spokesman said a decision, one way or the other, has not been reached. Chancellor Adenauer's Christian Democratic Party said today...in

its newsletter...that West Germany will not decide this matter at the NATO meeting. "Such a decision," it said, "can only be expected after a detailed discussion of the problem with Parliament and all other competent bodies."

Russia has warned West Germany and other West European countries that they run "a grave risk" in establishing missile bases on their territory. ~~Yesterday, Moscow sent a separate note to each member of the United Nations, asking them to support the Soviet program of "peaceful coexistence."~~ And last night...in the United Nations political committee...Soviet Deputy Foreign Minister Kuznetsov proposed a friendship treaty with the United States and peaceful cooperation. Today...in the political committee... Ambassador Lodge made the American reply. The United States, he said, wants to work with Russia for peace "but mere coexistence while one side tries to bury the other is not the answer." Lodge said, "We would be delighted to be able to believe that one speech here at the United Nations... delivered by coincidence on the eve of the NATO meeting...means that the trend which has been building up in Russia for forty years has been reversed." But until we see a "real" change, he said, "we're from Missouri. We want to be shown."

The State Department said today that it was "shocked" by the bombing of American property last night in Greece. A time-bomb wrecked the United States Information Service library in Athens. /An American air installation near Athens was damaged by two other bombs, and four American servicemen were injured. /The Greek government has ordered the "most severe measures" against those responsible.

President Sukarno of Indonesia appeared at a special news conference to disprove the Netherlands Radio report...of last night...that he had been deposed and was a prisoner of the Indonesian Army. /Sukarno did not deny the announcement...made in Jakarta...that he may soon go abroad for reasons of health. ~~The Indonesian Army chief of staff today ordered a halt to the further seizure of businesses operated by the Dutch. The Associated Press correspondent...reporting this development...adds that the effect of this order "remains to be seen."~~

The Senate preparedness subcommittee today resumed its hearings with regard to the United States missile program. The first witness, William Holaday...who is the Pentagon missiles director...stood by his statement (of December 5) that the United States "has the hardware today which is easily capable of launching large satellites." He could not amplify the

statement, he said, in a public hearing...because it might help the Russians. Holaday did say the United States is "planning" to put up a satellite weighing half a ton. And he conceded "we made a mistake" in not using the Army's Jupiter-C missile in an effort to place a satellite in orbit as early as September, 1956.

Secretary of the Air Force Quarles today suspended an order, establishing an Air Force office on space projects. He said the order had been issued prematurely "as the result of a misunderstanding."

The National Science Foundation announces that a new, 3-million-dollar observatory will be built in Arizona "for the conduct of basic research in the field of astronomy." It will be a national observatory, available to all astronomers in the United States.

Secretary of Welfare Folsom said today that the United States and Russia have been negotiating for months on an exchange of experts in education. Folsom said...in a letter to Democratic Senator Fulbright...that he believes this to be "the most constructive next step" the United States can take to find out about education in Russia. Fulbright had asked Folsom about reports that the Office of Education was not making a continuing study OF SOVIET EDUCATION.

The Air Force announced tonight that it will build a testing site for its Snark missile at Presque Isle Air Base in Maine. The installation is to cost about 12-million dollars.

Word for Today

The NATO conference will open on Monday with speech-making. Alfred Nobel, founder of the Nobel Peace Prize, once remarked, "Long speeches will not insure peace." And half a century ago...when Theodore Roosevelt received the Nobel Prize...he said, "Words count only when they give expression to deeds, or are to be translated into them."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Friday, December 13, 1957
7:45 - 8:00 P. M.

MURROW: Mr. Eisenhower is due in Paris tomarrow morning, and he is expected to make a statement at that time. He limited himself today at the airport to exchaning greetings with Vice President Nixon and others who came to see him off.

Secretary of State Dulles already is in Paris, and had his first preliminary meeting today with French leaders. For a direct report on that and the prospects of the NATO conference, we switch to David Schoenbrun in Paris.

SCHOENBRUN: Secretary of State John Foster Dulles met tonight for almost an hour with his opposite number French Foreign Minister Christian Pinean and with the Chief of Government Felix Gaillard. A close associate of the French Prime Minister, who was present at the meeting told me that it was and I quote "extremely cordial, in fact," he said, "it surprised me and delighted me - an excellent meeting." This is really news and good news too, for until now there was anything but cordial relations between French Premier Gaillard and the Americans. Mr. Gaillard has been taking a very tough line. A few days ago, he made a speech to the French-American Society of Paris in the presence of the American Ambassador talking about the danger of neutralism in his country. It was a shapp speech, very critical of American policy. Mr. Gaillard, the youngest Premier in French history, only 38-years old has been playing the role of l'enfant terrible, the dynamic youth. He's been particularly critical of American policy in respect to Africa. Mr. Gaillard has protested American and British shipments of arms to Tunisia - a country that supports the Algerian rebels. And he has said, that America's refusal to support French policy in North Africa cannot help but have an unfavorable influence on French attitudes toward NATO.

Solidarity, the French say, is a two-way street, you cannot expect France to cooperate with you and grant you missile bases for example, in the interests of American security, while you Americans take steps that are dangerous to French security in North Africa.

Despite this tense and hostile attitude these past few weeks, the French now tell me, that today's talks were extremely friendly the French informant said, however, "we did not solve any problems, we did not enter into the substance of many questions before us yet, we did succeed in creating the kind of atmosphere in which these problems can be considered, you might say, that we're having a friendly disagreement on some issues," Well, this is good news, for it appeared until now that the disagreement was not very friendly.

The disagreements are on the following points and they reflect some of the major issues of the NATO Summit conference. First, missile bases. The French feel that the entire strategy of the world has changed, America used to be the invulnerable support area of NATO offering its nuclear deterent in exchange for American leadership of the Alliance, now, however, the French say, America is no longer vulnerable, indeed it's mome vulnerable then Europe and desperately needs European bases for security. Therefore, American leadership is less exclusive. America ought to treat its allies as equals and share its atomic deterent with them. France wants to share atomic secrets and the atomic warhead in exchange for bases, that's one of the issues, for America is offering the missile but not the warhead to its NATO allies and is not willing to share atomic secrets.

The second major issue is political consultation on a global bases. France thinks that NATO ought to be the principal alliance of the West taking precedence over SEATO and the Bagdad Pact of which France is not a member and recognizing certain zones of influence

of its partners such as; North Africa for France. America does not admit this concept.

These are the principal areas of Franco-American disagreement plusthe fact that, the French suspect that there is a kind of Anglo-American club from which they are excluded. It is among the principal issues of this conference. The issues have not changed, but at least tonight, they do not threaten to break up the Alliance or to sabotage the conference, thanks to the cordial talks held here today.

That's the story from the French-American conference. Now, a report on how the British see this from my colleague, CBS NEWS London correspondent Charles Collingwood who is here to cover the NATO conference. Charles.

COLLINGWOOD: The French and some of the smaller countries have talked about an Anglo-American plot to dominate the NATO alliance. At about this stage, the Americans and British rather wish they could. At the Embassies and hotels as they fill with the delegations of the 15 NATO countries, Paris is buzzing with talk about missiles and bases and whose finger is on the trigger and what about Algeria and Cyprus and etc. Even before the conference has begun the various national spokesmen are busily telling reporters not for attribution all their fears, anxities and disagreements with the current state of things. The British and Americans and really quite a few of the other nations, are anxious that the Heads of Government emphasize the things they agree on rather then the things they disagree on. The British and Americans, who do see eye to eye on most things - at this juncture at least, are under no illusions that a brief meeting of the Chief men of the West held in the full glare of publicity is going to produce definitive and detailed specifications for the renaissance of NATO. They feel that if NATO can be revived in spirit, the detailed agreements on what is to be done will follow naturally. But the

NATO meeting still has not got a clear lead or a clear sense of direction. If that is going to come, it will come from the United States, and we will see whether it is coming after President Eisenhower arrives in Paris tomarrow.

Now back to Ed Murrow in New York.

MURROW: Tomarrow, this reproter will be flying to Paris to join his colleagues in covering the NATO meeting...

ED. TRANS. N. M.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, DECEMBER 13, 1957
7:45 - 8:00 PM EST

This is the news:

President Eisenhower left Washington this afternoon for the NATO summit conference. He is being accompanied...on the Columbine Third...by his personal physician, Major General Snyder; his scientific adviser, Dr. James Killian, and Lewis Strauss, chairman of the Atomic Energy Commission. Sea-level pressure will be maintained in the aircraft, as recommended by the doctors. And as is customary...when the President makes a trans-Atlantic flight...warships are stationed along the route. This time, both British and American warships are taking part. Mr. Eisenhower is due in Paris tomorrow morning, and he is expected to make a statement at that time. He limited himself today ...at the airport...to exchanging greetings with Vice President Nixon and others who came to see him off.

Secretary of State Dulles already is in Paris and had his first preliminary meeting today with French leaders. For a direct report on that... and the prospects of the NATO conference...we switch to David Schoenbrun in Paris.

DAVID SCHOENBRUN: Secretary of State John Foster Dulles met tonight for almost an hour with his opposite number French Foreign Minister Christian Pineau and with the Chief of Government Felix Gaillard. A close associate of the French Prime Minister, who was present at the meeting told me that it was and I quote "extremely cordial, in fact," he said, "it surprised me and delighted me - an excellent meeting." This is really news and good news too, for until now there was anything but cordial relations between French Premier Gaillard and the Americans. Mr. Gaillard has been taking a very tough line. A few days ago, he made a speech to the French-American Society of Paris in the prescence of the American Ambassador talking about the danger of neutralism in his country. It was a sharp speech, very critical of American policy. Mr. Gaillard, the

youngest Premier in French history, only 38-years old has been playing the role of l'enfant terrible, the dynamic youth. He's been particularly critical of American policy in respect to Africa. Mr. Gaillard has protested American and British shipments of arms to Tunisia - a country that supports the Algerian rebels. And he has said, that America's refusal to support French policy in North Africa cannot help but have an unfavorable influence on French attitudes toward NATO. Solidarity, the French say, is a two-way street; you cannot expect France to cooperate with you and grant you missile bases for example, in the interests of American security, while you Americans take steps that are dangerous to French security in North Africa.

Despite this tense and hostile attitude these past few weeks, the French now tell me, that today's talks were extremely friendly. The French informant said, however, "we did not solve any problems, we did not enter into the substance of many questions before us yet, we did succeed in creating the kind of atmosphere in which these problems can be considered, you might say, that we're having a friendly disagreement on some issues," Well, this is good news, for it appeared until now that the disagreement was not very friendly.

The disagreements are on the following points and they reflect some of the major issues of the NATO Summit conference. First, missile bases. The French feel that the entire strategy of the world has changed; America used to be the invulnerable support area of NATO offering its nuclear deterrent in exchange for American leadership of the Alliance; now, however, the French say, America is no longer in vulnerable, indeed it's more vulnerable than Europe and desperately needs European bases for security. Therefore, American leadership is less exclusive. America ought to treat its allies as equals and share its atomic deterrent with them. France wants to share atomic secrets and the atomic warhead in exchange for bases, that's one of the issues, for America is offering the missile, but not the warhead to its NATO allies and is not

willing to share atomic secrets.

The second major issue is political consultation on a global basis. France thinks that NATO ought to be the principal alliance of the West taking precedence over SETO and the Bagdad Pact of which France is not a member and recognizing certain zones of influence of its partners such as; North Africa for France. America does not admit this concept.

These are the principal areas of Franco-American disagreement plus the fact that, the French suspect that there is a kind of Anglo-American club from which they are excluded. It is among the principal issues of this conference. The issues have not changed, but at least tonight, they do not threaten to break up the Alliance or to sabotage the conference, thanks to the cordial talks held here today.

That's the story from the French-American conference. Now, a report on how the British see this from my colleague, CBS NEWS London correspondent Charles Collingwood who is here to cover the NATO conference. Charles.

COLLINGWOOD: The French and some of the smaller countries have talked about an Anglo-American plot to dominate the NATO alliance. At about this stage, the Americans and British rather wish they could. At the Embassies and hotels as they fill with the delegations of the 15 NATO countries, Paris is buzzing with talk about missiles and bases and whose finger is on the trigger and what about Algeria and Cyprus and etc. Even before the conference has begun the various national spokesmen are busily telling reporters not for attribution all their fears, anxieties and disagreements with the current state of things. The British and Americans and really quite a few of the other nations, are anxious that the Heads of Government emphasize the things they agree on rather than the things they disagree on. The British and Americans, who do see eye to eye on most things - at this juncture at least, are under no illusions that a brief meeting of the Chief men of the West held in the full glare of publicity is going to produce definitive and detailed specifications for the

renaissance of NATO. They feel that if NATO can be revived in spirit, the detailed agreements on what is to be done will follow naturally. But the NATO meeting still has not got a clear lead or a clear sense of direction. If that is going to come, it will come from the United States, and we will see whether it is coming after President Eisenhower arrives in Paris tomorrow.

Now back to Ed Murrow in New York.

MURROW: Tomorrow, this reporter will be flying to Paris to join his colleagues in covering the NATO meeting. Atmospherics permitting, I shall be reporting back to you on this program throughout most of next week. Sitting in for me here while I am gone, will be my old friend, Larry Lesueur.

A West German spokesman...in Bonn...today denied reports that West Germany has decided in favor of setting up American missile bases on German soil. The spokesman said a decision one way or the other has not been reached. Chancellor Adenauer's Christian Democratic Party said today...in its newsletter ...that West Germany will not decide this matter at the NATO meeting. "Such a decision," it said, "can only be expected after a detailed discussion of the problem with Parliament and all other competent bodies."

Russia has warned West Germany and other West European countries that they run "a grave risk" in establishing missile bases on their territory. And last night...in the United Nations political committee...Soviet Deputy Foreign Minister Kuznetsov proposed a friendship treaty with the United States and peaceful cooperation. Today...in the political committee...Ambassador Lodge made the American reply. The United States, he said, wants to work with Russia for peace "but mere coexistence while one side tries to bury the other is not the answer." Lodge said, "We would be delighted to be able to believe that one speech here at the United Nations...delivered by coincidence on the eve of the NATO meeting...means that the trend which has been building up in Russia for forty years has been reversed." But until we see a "real" change, he said, "we're from Missouri. We want to be shown."

The State Department said today that it was "shocked" by the bombing of American property last night in Greece. A time-bomb wrecked the United States Information Service library in Athens. An American air installation near Athens was damaged by two other bombs, and four American servicemen were injured. The Greek government has ordered the "most severe measures" against those responsible.

President Sukarno of Indonesia appeared at a special news conference to disprove the Netherlands Radio report...of last night...that he had been deposed and was a prisoner of the Indonesian Army. Sukarno did not deny the announcement...made in Jakarta...that he may soon go abroad for reasons of health.

The Senate preparedness subcommittee today resumed its hearings with regard to the United States missile program. The first witness, William Holaday...who is the Pentagon missiles director...stood by his statement (of December 5) that the United States "has the hardware today which is easily capable of launching large satellites." He could not amplify the statement he said, in a public hearing...because it might help the Russians. Holaday did say the United States is "planning" to put up a satellite weighing half a ton. And he conceded "we made a mistake" in not using the Army's Jupiter-C missile in an effort to place a satellite in orbit as early as September, 1956.

Secretary of the Air Force Quarles today suspended an order establishing an Air Force office on space projects. He said the order had been issued prematurely "as the result of a misunderstanding."

The National Science Foundation announces that a new, 3-million-dollar observatory will be built in Arizona "for the conduct of basic research in the field of astronomy." It will be a national observatory, available to all astronomers in the United States.

Secretary of Welfare Folsom said today that the United States and Russia have been negotiating for months on an exchange of experts in education.

Folsom said...in a letter to Democratic Senator Fulbright...that he believes this to be "the most constructive next step" the United States can take to find out about education in Russia. Fulbright had asked Folsom about reports that the Office of Education was not making a continuing study of soviet education.

The Air Force announced tonight that it will build a testing site for its Snark missile at Presque Isle Air Base in Maine. The installation is to cost about 12-million dollars.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The NATO conference will open Monday with speech-making. Alfred Nobel founder of the Nobel Peace Prize, once remarked, "Long speeches will not insure peace." And half a century ago...when Theodore Roosevelt received the Nobel Prize...he said, "Words count only when they give expression to deeds or are to be translated into them."

Goodnight and good luck!

Lesueur for Murrow Mon., Dec. 16, 1957

Good evening, everyone. Here's what happened today:

The NATO summit meeting opened in Paris. FOR A [redacted] report on the latest developments, AT ONCE we switch to Ed Murrow in the French capital.

Tape runs 7:00
Ends on cue: "--this is Ed Murrow in Paris."

In his speech, President Eisenhower called on the 15 NATO countries... in the spirit of self-sacrifice... to make AN heroic effort to defend their way of life. Together, he said, "we possess today the most powerful military establishment in the world." But he warned against complacency,

declaring that it is "imperative" to take the necessary defense measures while the margin of power is still ours." Mr. Eisenhower reviewed the Western disarmament proposals. He invited Russia to join in bringing under Rational control..."the vast physical forces which cast a pall over the world." But until such control can be established, he said, "we must continue to create and sustain...within the free world...the necessary strength to make certain of the common security."

There were statements of policy...as the conference opened...by OTHER heads of government. The Dutch prime minister said the Netherlands is prepared to accept the American offer to set up intermediate-range ballistic missile bases on Dutch soil, if NATO military leaders deem it necessary for the defense of the free world. Chancellor Adenauer of West Germany suggested that a decision, as to missile bases, be deferred until next spring. He said it might be a good thing to negotiate with Russia... on the diplomatic level. TO see just what lies behind Premier Bulganin's latest flurry of messages. Said the old chancellor, "I should see no objection TO AN ATTEMPT to inquire from the Soviet government what precise conceptions form the basis for these proposals." Premier Gerhardsen of NORWAY

~~Norway~~ suggested direct diplomatic negotiations between the United States and Russia, if necessary, on the subject of disarmament. And he was cool, toward the idea of setting up bases for intermediate range missiles on Norwegian soil. The proposal has aspects, he said, which the NATO governments "have (not) had sufficient time and opportunity to consider." Later, the prime minister of Denmark said flatly that his country will not permit the construction of missile bases on its territory. British Prime Minister Macmillan agreed with Chancellor Adenauer, that the West should "not be unwilling" to discuss Bulganin's latest proposals. which hint at the need for another East -West meeting, and call, again, for an end to nuclear tests. And the young French premier, Felix Gaillard, called for an expansion of NATO responsibilities. NATO, he said, should react to Russian subversion in any part of the world--- whether in North Africa or the Middle East. And he reiterated the French demand for more political consultation within NATO.

Paul-Henri Spaak, the secretary-general of NATO, announces that the conference will run an extra day. .that it will wind up Thursday morning, instead of Wednesday night.

Today...at Cape Canaveral, Florida...the Air Force began the "countdown" for launching AN Atlas intercontinental missile--and then, suddenly, called off the test. No official reason was given.

The Senate preparedness subcommittee continued its public hearings today on the United States missile program. Garrison Norton, the assistant secretary of the Navy for air, said the Navy wanted to conduct the recent Vanguard satellite test in secret...but was overruled by Murray Snyder, assistant secretary of defense.

Vice President Nixon told an Air Force Association meeting today that the United States has...and will continue to have...over-all military superiority. Nixon said that if inter-service rivalry has caused delays, the public is entitled to know. He said, "There can be no sacred cows where defense is concerned."

And here in New York, the eight-day-old subway strike has ended. The striking motormen voted...a little more than an hour ago...to go back to work at once...on the basis of a new settlement plan advanced by Mayor Wagner.

This is Larry Lesueur. I'll be back in a moment with a Footnote to the News. Now a word from George Bryan.

As the French say, "There's nothing so permanent as the Temporary."

And the entire 15 nation summit conference in Paris meets [redacted] inside A PRE-FABRICATED BUILDING [redacted] erected temporarily seven years ago... Its wooden floors were quickly reinforced to handle the suddenly-summoned NATO summit conference. One french official explained to the visiting newsman, "If the floor falls in, that's our responsibility...But if the BAR caves in, that's your responsibility..."

This is Larry LeSueur....goodnite..

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS (LARRY LE SUEUR SUBSTITUTING)

Monday, December 16, 1957
7:45 - 8:00 P. M.

LE SUEUR: The NATO Summit meeting opened in Paris. For a report on the latest developments we switch at once to Ed. Murrow in the French capital.

MURROW: This is Paris. President Eisenhower decided not to attend the NATO State dinner tonight. News Secretary Hagerty told us, that he had spoken with the President and with Dr. Snyder - that the President was fine. Had just decided that tonight he would be a 9:30 or 10:00 boy. Hagerty declined to say whether the President had been examined by Dr. Snyder. Mr.Hagerty said, "that the President was due to see the Italian Premier at nine tomarrow morning, Chancellor Adenauer at 9:30 and then he is scheduled to visit his old headquarters at SHAPE. This afternoon, in a closed session, the President and Mr. Dulles set forthe the American proposals. In essence, they are as follows: We stand pact on our previous disarmament proposals. We want re-unification of Germany and the rights of the Western powers in Berlin must be maintained.

The President promised that the United States would come at once and with all appropriate force to the assistance of any NATO nation subjected to armed attack. "This,"he said, "is the resolve t of the United States, of all parts and of all parties. An attack against one is an attack against all." There must be more consultation between NATO members. Eisenhower will propose to Congress that our development loan fund be increased from the present three hundred million by an additional six hundred and twenty-five million. He will also ask Congress to give the export-import bank an additional two billion.

Mr. Dulles then talked about retalitory powers. He said, "we are willing to participate in a NATO atomic stock pile.

Nuclear warheads would be deployed under United States custody and in the event of war, the Supreme Allied Commander would release them for use. We are prepared to make available to other NATO countries intermediate range ballistic missiles, but each country would have to reach an agreement with the United States - with respect to material, training and what Mr. Dulles called, "other necessary arrangements."

We think, there ought to be some talk about which country should develop and produce specific weapons. We might then support and finance the making of certain weapons in Europe. We think our allies should have more information about nuclear weapons and Congress will be asked to pass the necessary legislation to make this possible. We are prepared to contribute to a talent development program to train 500 scientist from the NATO countries, also, if Congress agrees, we will give our allies information about nuclear submarines - like the Nautilus and the Sea Wolf. But, over shadowing everything else here in Paris tonight, is the question whether President Eisenhower will be able to meet his commitments tomarrow.

We watched him at fairly close range this morning. The room in the Palais de Chaillot was dull and drab. The walls a dreary dispirited yellow. The round table in the center about 25 feet in diameter was covered with blue felt. There was a blue and white star in the center of the table - it was surrounded by 16 chairs, upholstered in red leather and there were 3 complete circles of chairs surrounding the table. A few hundred photographers occupied raised positions at two ends of the room. The red lights of the television cameras winked on and off, as they were tested. A small man walked around between the second and third row of chairs - they were upholstered in brown not red and put green porcelain bowls down on a brown carpet to serve as ash trays. At seven minutes before the hour of noon, President Eisenhower walked in followed by Mr. Dulles. He blinked 3 times when the hard lights hit him... took 14 steps to the

chair, that had the little cardboard American flag in front of it. Light gray shit, blue tie with white figures, dark rimmed glasses in hand, the President then became the center of a little whirl pool of heads of Government. Shook hands with MacMillan of Britain and with Selwyn Lloyd. Germany's erect old Chancellor Adenauer came over to shake hands and Eisenhower slapped him on the back. The President stood with hands on hip or leaned on a chair. Smiled much, but the eyes were tired. There was a high flush high on his cheeks. A bell rang dimly in the distance and heads of Government sat down. Eisenhower slumped slightly to the left, resting his left elbow on the arm of the chair. Behind him, sat Dulles, McElroy, Twinning, Staws, Hagerty and the rest. Bech of Luxembourg began to speak. The President put on his headphones for the simultaneous translation, then took them off. Sometimes he looked at Bech at other times merely stared at the blue cloth on the table. Then it was time for French Premier Gaillard. Eisenhower tried the headphones again, motioned to Dulles who came up and tried to help him adjust the thing. Apparently, Dulles wasn't of much help, for the President soon removed them, and sat there with his elbows on the table - fingers interlaced and twisting gently but without tension. And then, it was time for the President to speak. The eyes of the other men at the table and of those in the 3 circles of seats surrounding the table swiveled around to Eisenhower. There sat the man who had said to atleast a few intimates, that if he could not come to this meeting, he would quit, he would resign the Presidency. His voice was clear but not loud. He had excellent command of his copy and frequently looked up from his script and bit off phrases in the old Eisenhower fashion. He transposed and interperlated words as he went along, read some exceedingly difficult sentences and had wit trouble with perhaps seven or eight words, which he previously would have handled with ease. He had trouble with "inevitable and irristable" he mispronounced"decay and abherrent."

However, when he had trouble with the word it didn't appear to bother or embarras him. At one point, he appeared almost amused at his own difficulity

To this reporter, the President appeared to tire a bit, at the end of his 19 minute speech, but he finished strong and clear. Again, ignoring his script and addressing himself directly to Premier Gaillard across the table. The President pocketed his glasses and smiling and shaking hands - left the room.

History is seldom determined by speeches. Today's speech was largely a reaffermation of generalities. If the American delegation has any new bold plan for strengthening NATO or for creating greater interdependence amongst its members, that plan was not revealed today. The speech will not determine the outcome of this conference or determine the shape of the future. But it was a very gallant effort.

This is Ed. Murrow in Paris.

LE SUEUR: In his speech, President Eisenhower ...

Ed. Trans. N.M.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, DECEMBER 16, 1957
7:45 - 8:00 PM EST

LARRY LESUEUR REPORTING

Good evening, everyone...Here's what happened today:

The Nato summit meeting opened in Paris. For a report on the latest developments, we switch at once to Ed Murrow in the French capital.

MURROW: This is Paris. President Eisenhower decided not to attend the NATO State dinner tonight. News Secretary Hagerty told us, that he had spoken with the President and with Dr. Snyder - that the President was fine. Had just decided that tonight he would be a 9:30 or 10:00 boy. Hagerty declined to say whether the President had been examined by Dr. Snyder. Mr. Hagerty said, "that the President was due to see the Italian Premier at nine tomorrow morning, Chancellor Adenauer at 9:30 and then he is scheduled to visit his old headquarters at SHAPE. This afternoon, in a closed session, the President and Mr. Dulles set forth the American proposals. In essence, they are as follows: We stand pat on our previous disarmament proposals. We want reunification of Germany and the rights of the Western powers in Berlin must be maintained.

The President promised that the United States would come at once and with all appropriate force to the assistance of any NATO nation subjected to armed attack. "This," he said, "is the resolve of the United States, of all parts and of all parties. An attack against one is an attack against all." There must be more consultation between NATO members. Eisenhower will propose to Congress that our development loan fund be increased from the present three hundred million by an additional six hundred and twenty-five million. He will also ask Congress to give the export-import bank an additional two billion.

Mr. Dulles then talked about retaliatory powers. He said, "we are willing to participate in a NATO atomic stock pile. Nuclear warheads would be deployed under United States custody and in the event of war, the Supreme Allied

Commander would release them for use. We are prepared to make available to other NATO countries intermediate range ballistic missiles, but each country would have to reach an agreement with the United States - with respect to material, training and what Mr. Dulles called, "other necessary arrangements."

We think, there ought to be some talk about which country should develop and produce specific weapons. We might then support and finance the making of certain weapons in Europe. We think our allies should have more information about nuclear weapons and Congress will be asked to pass the necessary legislation to make this possible. We are prepared to contribute to a talent development progaam to train 500 scientists from the NATO countries, also, if Congress agrees, we will give our allies information about nuclear submarines - like the Nautilus and the Sea Wolf. But, over-shadowing everything else here in Paris tonight, is the question whether President Eisenhower will be able to meet his commitments tomorrow.

We watched him at fairly close range this morning. The room in the Palais de Chaillot was dull and drab. The walls a dreary dispriited ellow. The round table in the center about 25 feet in diameter was covered with blue felt. There was a blue and white star in the center of the table - it was surrounded by 16 chairs, upholstered in red leather and there were three complete circles of chairs surrounding the table. A few hundred photographers occupied raised positions at two ends of the room. The red lights of the television camera winked on and off, as they were tested. A small man walked around between the second and third row of chairs - they were upholstered in brown not red and put green porcelain bowls down on a brown carpet to serve as ash trays. At seven minutes before the hour of noon, President Eisenhower walked in followed by Mr. Dulles. He blinked three times when the hard lights hit him...took fourteen steps to the chair, that had the little cardboard American flag in front of it. Light gray suit, blue tie with white figures, dark rimmed glasses in hand, the President then became the center of a little whirl pool of heads

of Government. Shook hands with MacMillan of Britain and with Selwyn Lloyd. Germany's erect old Chancellor Adenauer came over to shake hands and Eisenhower slapped him on the back. The President stood with hands on hip or leaned on a chair, smiled much, but the eyes were tired. There was a high flush high on his cheeks. A bell rang dimly in the distance and heads of Government sat down. Eisenhower slumped slightly to the left, resting his left elbow on the arm of the chair. Behind him, sat Dulles, McElroy, Twining, Staws, Hagerty, and the rest. Bech of Luxembourg began to speak. The President put on his headphones for the simultaneous translation, then took them off. Sometimes he looked at Bech at other times merely stared at the blue cloth on the table. Then it was time for French Premier Gaillard. Eisenhower tried the headphones again, motioned Dulles who came up and tried to help him adjust the thing. Apparently, Dulles wasn't of much help, for the President soon removed them, and sat there with his elbows on the table - fingers interlaced and twisting gently but without tension. And then, it was time for the President to speak. The eyes of the other men at the table and of those in the three circles of seats surrounding the table swiveled around to Eisenhower. There sat the man who had said to at least a few intimates, that if he could not come to this meeting, he would quit, he would resign the Presidency. His voice was clear but not loud. He had excellent command of his copy and frequently looked up from his script and bit off phrases in the old Eisenhower fashion. He transposed and interpolated words as he went along, read some exceedingly difficult sentences and had wit trouble with perhaps seven or eight words, which he previously would have handled with e ase. He had trouble with "inevitable and irrisistable". He mispronounced "decay and abhorrent." However, when he had trouble with the word it didn't appear to bother or embarrass him. At one point, he appeared almost amused at his own difficulty.

To this reporter, the President appeared to tire a bit, at the end of his

nineteen minute speech, but he finished strong and clear. Again, ignoring his script and addressing himself directly to Premier Gaillard across the table. The President pocketed his glasses and smiling and shaking hands, left the room.

History is seldom determined by speeches. Today's speech was largely a reaffirmation of generalities. If the American delegation has any new bold plan for strengthening NATO or for creating greater interdependence amongst its members, that plan was not revealed today. The speech will not determine the outcome of this conference or determine the shape of the future. But it was a very gallant effort.

This is Ed Murrow in Paris.

LESUEUR: In his speech, President Eisenhower called on the 15 NATO countries ...in the spirit of self-sacrifice to make an heroic effort to defend their way of life. Together, he said, "we possess today the most powerful military establishment in the world." But he warned against complacency, declaring that it is "imperative" to take the necessary defense measures "while the margin of power is still ours." Mr. Eisenhower reviewed the Western disarmament proposals. He invited Russia to join in bringing under rational control ..."the vast physical forces which cast a pall over the world." But until such control can be established, he said, "we must continue to create and sustain...within the free world...the necessary strength to make certain of the common security."

There were statements of policy...as the conference opened...by other heads of government. The Dutch prime minister said the Netherlands is prepared to accept the American offer to set up intermediate range ballistic missile bases on Dutch soil, if NATO military leaders deem it necessary for the defense of the free world. Chancellor Adenauer of West Germany suggested that a decision, as to missile bases, be deferred until next spring. He said it might be a good thing to negotiate with Russia... on the diplomatic level...

to see just what lies behind Premier Bulganin's latest flurry of messages. Said the old chancellor, "I should see no objection to an attempt to inquire from the Soviet government what precise conceptions form the basis for these proposals." Premier Gerhardsen of Norway suggested direct diplomatic negotiations between the United States and Russia, if necessary on the subject of disarmament. And he was cool toward the idea of setting up bases for intermediate range missiles on Norwegian soil. The proposal has aspects, he said, which the NATO governments "have not had sufficient time and opportunity to consider." Later, the prime minister of Denmark said flatly that his country will not permit the construction of missile bases on its territory. British Prime Minister MacMillan agreed with Chancellor Adenauer that the West should "not be unwilling" to discuss Bulganin's latest proposals...which hint at the need for another East-West meeting and call again, for an end to nuclear tests. And the young French premier, Felix Gaillard, called for an expansion of NATO responsibilities. NATO, he said, should react to Russian subversion in any part of the world---whether in North Africa or the Mdddle East. And he reiterated the Frenchdemand for more political consultation within NATO.

Paul-Henri Spaak, the secretary-general of NATO, announces that the conference will run an extra day...that it will wind up Thursday morning, instead of Wednesday night.

Today...at Cape Canaveral, Florida...the Air Force began the "countdown" for launching an Atlas intercontinental missile---and then, suddenly, called off the test. No official reason was given.

The Senate Preparedness Subcommittee continued its public hearings today on the United States missile program.. Garrison Norton, the assistant secretary of the Navy for air, said the Navy wanted to conduct the recent Vanguard satellite in secret...but was overruled by Murray Snyder, assistant secretary of defense.

Vice President Nixon told an Air Force Association meeting today that the

United States has...and will continue to have...over-all military superiority. Nixon said that if inter-service rivalry has caused delays, the public is entitled to know. He said, "There can be no sacred cows where defense is concerned."

And here in New York, the eight-day-old subway strike has ended. The striking motormen voted...a little more than an hour ago...to go back to work at once...on the basis of a new settlement plan advanced by Mayor Wagner.

This is Larry Lesueur. I'll be back in a moment with a Footnote to the News. Now a word from George Bryan.

GEORGE BRYAN: COMMERCIAL

LESUEUR: As the French say, "There's nothing so permanent as the Temporary." And the entire 15 nation summit conference in Paris meets inside a pre-fabricated building erected temporarily seven years ago...Its wooden floors were quickly reinforced to handle the suddenly-summoned NATO summit conference. One French official explained to the visiting newsmen, "If the floor falls in, that's our responsibility...But if the bar caves in, that's your responsibility.

This is Larry LeSueur...goodnite.

Lesueur for Murrow Tues., Dec. 17, 1957

Good evening, everyone...Here's what happened today:

It was decided...at the NATO summit meeting...to refer Premier Bulganin's recent proposals to the NATO permanent council. The task of the permanent council will be to work out a common policy toward these proposals, which include a demand for new East-West talks. Both Britain and West Germany feel that the possibility of new diplomatic negotiations with the Soviet Union, should be explored. The NATO heads of government also agreed today to continue pressing for a reunified Germany...and recorded their unanimous support for the Western disarmament proposals, which Russia has turned down. They also agreed that negotiations on disarmament should somehow be resumed. French Premier Pineau reportedly suggested that this be done, if necessary, on the

foreign ministers level. President Eisenhower was about 40 minutes late in getting to the afternoon session. News Secretary Hagerty said HIS delay was NOT due to illness. The session, he explained, was still dealing mainly with the drafting of proposals---with "papers". It had not progressed to MATTERS OF SUBSTANCE, and Mr. Eisenhower had not planned to attend until it did. Hagerty said it was his understanding that British Prime Minister Macmillan was not attending either. But when the meeting began, Mr. Eisenhower was the only head of government who was NOT present. He finally decided to go "in order to quiet apprehension." Hagerty said the President was "feeling fine". And this was borne out tonight when Mr. Eisenhower attended a formal dinner given by President Coty of France. (In a few minutes, we will switch to Paris for Ed Murrow's report on the NATO meeting).

Secretary of State Dulles has made news with a new article he wrote for Life Magazine. Dulles said...in this article...that the United States should step up its missile program. That there should be an intensification of the mutual security programs, both military and economic, and a higher degree of interdependence with our allies. But what stands out MOST about Mr. Dulles' article is his warning against accepting Russian promises.

Dulles said Russia is "gravely in default" on its PROMISES. And in view of the past record, he said, the only kind of world-wide armistice agreement we can rely upon is an armistice we ourselves can enfore. He said the East-West struggle has NEWLY entered a "prolonged and more intensive phase".. and what the Russian leaders want right now, most of all, is to achieve a success by diplomatic means." Dulles wrote this article BEFORE Premier Bulganin made his latest proposals. But Mr. Dulles' views are certain to be felt in Paris. where some of our staunchest allies are calling for a new diplomatic approach to Russia.

Today...on its third try...the Air Force successfully launched the Atlas intercontinental ballistic missile. The huge 100-ton rocket is designed to deliver a hydrogen warhead to a target as far away as 5-thousand miles. But the Defense Department says today's launching was "a limited-range test of several HUNDRED miles." According to the official announcement, "The missile flew its prescribed course and landed in the pre-selected impact area"--presumably somewhere far out in the SOUTH Atlantic but NOT the full distance for which the powerful three-stage rocket was designed. On the two PREVIOUS occasions WHEN the Atlas was test-fired at Cape Canaveral, the rocket misbehaved...and had to be destroyed shortly after rising from its launching pad. The Atlas tested TODAY rose 2-thousand feet and disappeared FROM SIGHT within a minute after take-off. Today's successful test CAME almost FOUR MONTHS after the Russians announced that they had successfully tested THEIR intercontinental ballistic missile.

Secretary of the Air Force James Douglas told the Senate Preparedness Subcommittee today that the United States will have an OPERATIONAL intercontinental ballistic missile within "two" years. And the Air Force, he said, expects to equip some units with INTERMEDIATE range ballistic missiles by a year from now. Douglas' testimony CAN NOT be described as reassuring. He conceded there is "a very real possibility" that Russia will be able...within the next year...to shoot a rocket, at least TO THE "vicinity" of the moon. The United States, he said, can do the same thing, if it wants to, "within the forseeable future." He did not set any date. ~~The Air Force chief of staff...General White...told the subcommittee that the United States must get about the business of conquering outer space. And the Air Force VICE chief of staff, General LeMay...SAID not enough is being done to meet the needs of the Strategic Air Command. SAC, he said, needs more B-52 bombers...and higher pay in order to keep its experienced men.~~

[redacted]

And now...for Ed Murrow's report on the NATO summit conference, we switch direct to Paris.

Tape runs 6:20

Ends on cue: "This is Ed Murrow in Paris."

We'll have Ed [redacted], [redacted]ing another report from Murrow tomorrow night.

This is LL, ~~for~~ see he back in a moment with a footnote to The News - Now a word from George Bergan

fifty-four years ago today, man took his first flight in a powered aircraft. And on the North Carolina beach where orville wright first flew, ground was broken TODAY for a museum. And in Washington, the Smithsonian unveiled a statue to Billy Mitchell, stormy prophet of air warfare. By co-incidence, this country today launched its first ocean-spanning rocket...while overhead, to the east, 500 miles up, a russian sputnick passed over, testifying to the sudden dawn of the space-age...

EDWARD R. MURROW WITH THE NEWS (LARRY LE SUEUR SUBSTITUTING)

Tuesday, December 17, 1957
7:45 - 8:00 P. M.

LE SUEUR: And now, for Ed. Murrow's report on the NATO Summit conference, we switch direct to Paris.

MURROW: This is Paris. This is a rather low pressure conference, so far. The President's plane was pressurized at sea level and at the end of two days, there are no signs that the conference is going to fly very high into the area of hope and accomplishment. The position of the American delegation has altered substantially since its arrival in Paris. Our spokesmen now say, "we're in no hurry to press our allies to accept intermediate range missiles, since it will be 18 months before we're in a position to deliver them." The emphasis on the military aspect and the military possibilities of this conference are now being de-emphasized. The stated purpose of this unusual meeting of head of Government was to strengthen NATO and to emphasize the interdependence of its members. It is clear that the nature of the threat which created NATO has changed. The cement that bound it together was fear - fear of the Soviet Union, that fear persists, but the efficacy of American retaliatory power is now in doubt. The United States is now vulnerable - but our allies are not more vulnerable than they were a year or two ago. In the recent past, we were in the position of helping them to help themselves - now, we are asking as well as giving. We need them as a contribution to our own defense. Many of them have less than complete trust in the stability of our leadership. The French want us to recognize the dominance of their position in North Africa, which we continue to refuse to do. The Italians, the British and the French would like a joint policy for the Middle-East. We haven't one of our own, except the Eisenhower doctrine, which events have demonstrated will not prevent Russian penetration of the Middle East; as for example, in Syria. The military men talk of a balanced force inside NATO,

under which each nation would contribute forces in accordance with its aptitude, industry and geographical location. But since, we haven't been able toachieve this inside the Pentagon, it's rather difficult to see how it can be done with 15 sovereign nations.

The American delegation came here with a plan to plant missiles on the territory of our allies, they don't want this done, at least not yet. This conference is quite clearly being influenced by what might be called 'a red letter.' There is no chair at the round table for Bulganin or for Khrushchev, but the shadow is here. Itis clear that many of our allies, certainly a majority, feel that we - the United States have been self righteously inflexible in our dealings with the Soviet Union. These allieswant to talk with the Russians some more, before freezing the present military and economic conflict in its present position. Todays seconds were secret. There was talk about the re-unification of Germany, the Bulganin letter, disarmament, the Middle-East and Africa. It was agreed that each nation would make its own reply to Bulganin's letter, which combined threat and promise, but that the final NATO communique would also deal with that letter in a general manner.

French Foreign Minister Pineau suggested today, that the Foreign Ministers of the United States, Britain, Canada and France, sit down and talk disarmament with the Russians. Selwyn Lloyd of Britain agreed to this. The American briefing officer, who was not present at the meeting, said he didn't know anything about this. The American briefing officer also said, "that Eisenhower did not speak at todays meeting,"but the Secretary General, Mr. Spark said that he did. And the French briefing officer said, that he spoke on every issue. The American briefing officer said, "there was a discussion of the Middle-East, but that Israel was not mentioned, but we were allowed to know, that the President suggested certain changes in the statement to be issued regarding Africa. One man, who has

had access to all the principals in this meeting told me today that the best that could be hoped for from this conference was, "a reaffermation of the basic principals of NATO."

During yesterdays closed session, there was a passing reference to Cyprus by Premier Melas of Greece, and the assembled statesmen and their subordinates froze. The degree of candor - even in secret discussions does not appear to be considerable. The conference will undoubtedly result in an announcement of closer political cooperation, a new scientific advisor for the Secretary General of NATO. There will be more money - the United States has already promised that. On the subject of missiles, the final agreement will merely recognize the availability of missiles for use by NATO members.

There is a certain atmosphere of age and uncertainty about this conference. Adenauer is past 80. Gaillard is not likely to grow old in office. The political tides do not run with MacMillan in Britain and there is but a heart beat between Eisenhower and Nixon. A chage in Administration in any of these countries might upset whatever balance is created here. There is another point worth considering, yesterday, the United States drew several billion dollars on that blue covered table, and so far as one reporter can judge, none of our allies was very much impressed. What is here involved is not so much dollars as destiny, and most of our allies are clearly of a mind, to talk again with the Russians before facing up to the question, that President Eisenhower posed yesterday, will we in freedom pay the price necessary to preserve freedom. No nation is threatening to run out on NATO, what we're seeing is a demonstration of the difficulity of running a coalition and the hazards of trying to do to much to soon at a conference of this kind without adequate preperation. Some of Mr. Eisenhower's advisors are now saying, that the principal accomplishment of this conference may be to give added moral impetus to NATO.

If that should turn out to be all that is accomplished, then the impetus moral or otherwise is likely to be in the direction of neutralism.

President Eisenhower appeared vigorous, alert and in excellent spirit when he visited his old headquarters at SHAPE this morning.

This is Ed. Murrow in Paris.

LE SUEUR: We'll have another report from Ed. Murrow tomarrow night.

ED. TRANS.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, DECEMBER 17, 1957
7:45 - 8:00 PM EST

LARRY LESUEUR REPORTING

Good evening, everyone...Here's what happened today:

It was decided...at the NATO summit meeting...to refer Premier Bulganin's recent proposals to the NATO permanent council. The task of the permanent council will be to work out a common policy toward these proposals, which include a demand for new East-West talks. Both Britain and West Germany feel that the possibility of new diplomatic negotiations with the Soviet Union should be explored. The NATO heads of government also agreed today to continue pressing for a reunified Germany...and recorded their unanimous support for the Western disarmament proposals, which Russia has turned down. They also agreed that negotiations on disarmament should somehow be resumed. French Premier Pineau reportedly suggested that this be done, if necessary, on the foreign ministers level. President Eisenhower was about 40 minutes late in getting to the afternoon session. News Secretary Hagerty said his delay was not due to illness. The session, he explained, was still dealing mainly with the drafting of proposals--with "papers." It had not progressed to matters of substance, and Mr. Eisenhower had not planned to attend until it did. Hagerty said it was his understanding that British Prime Minister Macmillan was not attending either. But when the meeting began, Mr. Eisenhower was the only head of government who was not present. He finally decided to go "in order to quiet apprehension." Hagerty said the President was "feeling fine." And this was borne out tonight when Mr. Eisenhower attended a formal dinner given by President Coty of France. (In a few minutes, we will switch to Paris for Ed Murrow's report on the NATO meeting.)

Secretary of State Dulles has made news with a new article he wrote for Life Magazine. Dulles said...in this article...that the United States should step up its missile program. That there should be an intensification of the

mutual security programs, both military and economic, and a higher degree of interdependence with our allies. But what stands out most about Mr. Dulles' article is his warning against accepting Russian promises. Dulles said Russia is "gravely in default" on its promises. And in view of the past record, he said, the only kind of world-wide armistice agreement we can rely upon is an armistice we ourselves can enforce. He said the East-West struggle has newly entered a "prolonged and more intensive phase"...and what the Russians leaders want right now, most of all, is to achieve a success by diplomatic means." Dulles wrote this article before Premier Bulganin made his latest proposals. But Mr. Dulles' views are certain to be felt in Paris...where some of our staunchest allies are calling for a new diplomatic approach to Russia.

Today...on its third try...the Air Force successfully launched the Atlas intercontinental ballistic misiile. The huge 100-ton rocket is designed to deliver a hydrogen warhead to a target as far away as 5-thousand miles. But the Defense Department says today's launching was "a limited-range test of several hundred miles." According to the official announcement, "The missile flew its prescribed course and landed in the pre-selected impact area"--- presumably somewhere far out in the South Atlantic but not the full distance for which the powerful three-stage rocket was designed. On the two previous occasions when the Atlas was test-fired at Cape Canaveral, the rocket misbehaved ...and had to be destroyed shortly after rising from its launching pad. The Atlas tested today rose 2-thousand feet and disappeared from sight within a minute after take-off. Today's successful test came almost four months after the Russians announced that they had successfully tested their intercontinental ballistic missile.

Secretary of the Air Force James Douglas told the Senate Preparedness Subcommittee today that the United States will have an operational intercontinental ballistic missile with "two"years. And the Air Force, he said, expects to equip some units with intermediate range ballistic missiles by a year from

now. Douglas' testimony can not be described as reassuring. He conceded there is "a very real possibility" that Russia will be able...within the next year...to shoot a rocket, at least to the "vicinity" of the moon. The United States, he said, can do the same thing, if it wants to, "within the forseeable future." He did not set any date.

And now...for Ed Murrow's report on the NATO summit conference, we switch direct to Paris.

MURROW: This is Paris. This as a rather low pressure conference, so far. The President's plane was pressurized at sea level and at the end of two days, there are no signs that the conference is going to fly very high into the area of hope and accomplishment. The position of the American delegation has altered substantially since its arrival in Paris. Our spokesmen now say, "we're in no hurry to press our allies to accept intermediate range missiles, since it will be 18 months before we're in a position to deliver them." The emphasis on the military aspect and the military possibilities of this conference are now being de-emphasized. The stated purpose of this unusual meeting of heads of Government was to strengthen NATO and to emphasize the interdependence of its members. It is clear that the nature of the threat which created NATO has changed. The cement that bound it together was fear - fear of the Soviet Union, that fear persists, but the efficacy of American retaliatory power is now in doubt. The United States is now vulnerable - but our allies are not more vulnerable than they were a year ot two ago. In the recent past, we were in the position of helping them to help themselves - now, we are asking as well as giving. We need them as a contribution to our own defense. Many of them have less than complete trust in the stability of our leadership. The French want us to recognize the dominance of their position in North Africa, which we continue to refuse to do. The Italians, the British and the French would like a joint policy for the Middle-East. We haven't one our own, except the Eisenhower doctrine, which events have demonstrated will

not prevent Russian penetration of the Middle East; as for example, in Syria. The military men talk of a balanced force inside NATO, under which each nation would contribute forces in accordance with its aptitude, industry and geographical location. But since, we haven't been able to achieve this inside the Pentagon, it's rather difficult to see how it can be done with 15 sovereign nations.

The American delegation came here with a plan to plant missiles on the territory of our allies; they don't want this done, at least not yet. This conference is quite clearly being influenced by what might be call 'a red letter.' There is no chair at the round table for Bulganin or for Khrushchev, but the shadow is there. It is clear that many of our allies, certainly a majority, feel that we - the United States have been self righteously inflexible in our dealings with the Soviet Union. These allies want to talk with the Russians some more, before freezing the present military and economic conflict in its present position. Today's seconds were secret. Lesueur for Murrow Wed., Dec. 18, 1957

Good evening, everyone.... Here's what happened today:

The Army has launched a large ~~missile~~ rocket from the test base at Cape Canaveral, Florida. The missile has not been officially identified. One report calls it the Jupiter ballistic missile, which has a range of about 15-hundred miles. Another report simply says that the Army has just launched "one of its mightiest ballistic missiles," and there is even speculation that another attempt has been made to launch an earth satellite. NONE of these reports is official---only speculation. The Pentagon says it will have no immediate comment.

1A

In Paris today, the NATO countries

Good evening, everyone...Here's what happened today.

[redacted]s CONDITIONALLY ACCEPTED [redacted]...the United States offer of intermediate-range ROCKET [redacted]e bases for Western Europe. The chiefs of government also agreed in principle to accept nuclear stockpiles and to step-up scientific cooperation and research. A scientific committee will be appointed...representing all fifteen members of the alliance... [redacted] with a chairman who will serve as counsellor to the NATO secretary general, Paul-Henri Spaak. It was also agreed...in the political field...to make a new approach to Russia for a resumption of negotiations on disarmament. And the door is left open for exploring the possibility of new [redacted] talks with Russia on other subjects, DIVIDING

dividing the East and West. A final resolution recommended increased economic cooperation among NATO members. Details on the location of the MEDIUM-RANGE ROCKET bases will be worked out later. This is a matter to be negotiated separately by the United States with each NATO country. And, of course, no bases will be imposed on any country against its will. Paul-Henri Spaak told reporters...after today's session. "Everything goes well, and the heads of government have reached final agreement on almost all points. Some details on A FEW things," he added, "have to be completed tomorrow." ONE of these details is how to approach Russia for new disarmament talks. ITS being suggested that this does not necessarily have to be done within the framework of the U.N. WHERE THE RUSSIANS HAVE REFUSED TO TALK WITH THE DISARMAMENT COMMISION - But it might, for example, be taken up on the foreign ministers level.

President Eisenhower will leave Paris by air late tomorrow...and arrive in Washington early Friday. Secretary of State Dulles will fly home by way of Madrid, where he will confer on Friday with Generalissimo Franco. Next Monday night, both President Eisenhower and Secretary Dulles will report to the American people on the NATO conference in a half-hour broadcast on radio and television.

Ed Murrow is covering the NATO summit meeting...and for his analysis of what's [redacted] happening there, we switch now to Paris.

Tape runs 6:20

Ends on cue: "This is Ed Murrow in Paris."

Russia's Nikita Khrushchev declared today that the deployment of nuclear weapons among the West European countries "is, in reality, a mortal blow to their security." He warned in a letter to the British WEEKLY "New Statesman and Nation", that...in EVENT of war..."shattering retaliatory attacks on the territories of those countries in which atomic bases are situated will be inevitable." But war, Khrushchev said, is NOT inevitable. And he renewed the Kremlin plea for "coexistence".

~~One part of the Khrushchev letter was aimed directly at Britain.~~ Referring to the fact that American nuclear weapons already are based on British soil, he said, "Just suppose that by the merest chance---say, for example, as a result of an incorrectly misunderstood order---death-dealing weapons of war are used from American military bases." In such an event, he said, "a crushing retaliatory blow would follow immediately...and the British people might find themselves suddenly in a situation of atomic war."

Khrushchev is NOW prosecuting a war of NERVES.

America's first FULL-SCALE reactor for producing PEACEFUL atomic power began feeding electricity today into the lines of the Duquesne Light Company in Pittsburgh. The electricity was generated by the nuclear power plant in nearby Shippingport, overlooking the Ohio River. The first flow of electricty...though on a small, test SCALE...marks a landmark in OUR power development. // the output will be GRADUALLY increased.

Chairman Strauss of the Atomic Energy Commission said today that the production of useful power from the "hydrogen" bomb FUSION reaction is "still remote." Strauss denied as "completely false" reports that Britain HAS suppressed an announcement of ITS success in the control of fusion, at his request. Development of economic thermonuclear power, STRAUSS said, is still in The REMOTE FUTURE.

Secretary of Agriculture Benson announceed today that government price supports for dairy products will be reduced to the legal minimum, beginning next April first.

-V
2T

The State Department has CANCELLED the passports of those 24 American youths who visited Red China last summer...and still have not come home. The department announces that, henceforth, their passports are "valid only for direct and immediate return to the United States." The 24 are among the group of 42 Americans who attended the Youth Festival in Moscow...and then went on to Peiping, despite the State Department ban on travel to Red China. Right now, the 24 youths are scattered in Italy, India, England and France. The OTHER Americans who made the trip either have returned to the United States, or are on their way. // 25

The premier of Indonesia held a news conference today...and laid it on the line. Indonesia, he said, has now OFFICIALLY taken over all major Dutch enterprises in the island republic. The premier served notice that if the Dutch want compensation, they will have to give up West New Guinea. But in ANY case, he said, Indonesia will see to it that the Netherlands never regains its powerful economic position in that part of the world.

That's L.L. I'll be back in a moment with a footnote to the News —

Now a word from Jerome Bryan.

Soviet Premier Bulganin may not be sitting-in XX with the 15 NATO leaders at the Palais de Chaillot in Paris, but some people ~~[illegible]~~ have gotten the impression that he is...A letter was addressed to Bulganin there today..it was from an old french peasant woman. XXX it said. The roof of my farmhouse is caving in and I have no money. Since Russia today is one of the largest, richest and most powerful nations in the world...surely it would be nothing for you to send me enough money for repairs.

This is Larry LeSueur---Good nite..

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS: (LARRY LE SUEUR SUBSTITUTING)

Wednesday, December 18, 1957
7:45 - 8:00 P. M.

LE SUEUR: Ed. Murrow is covering the NATO Summit meeting and for his analysis of whats happening there, we switch now to Paris.

MURROW: This is Paris. The final communique on this conference will be issued tomarrow afternoon. President Eisenhower will leave for Washington at 6,P.M. Paris time tomarrow. At the end of the third day of this conference, it is possible to conclude that it is not going to fail. It won't achieve what the American delegation had hoped, but a formula has been found. There is still some argument going on about the wording of the final communique, but it will be announced tomarrow that missiles and nuclear weapons will be made available to the members of NATO. Who gets them, who pays for them, where they will be placed, how soon they will be delivered - all these matters will be left undefined. In some cases, the arrangements will be negotiated by General Norstad, the Supreme Commander. In others, they will have to be direct agreements between the United States and the individual countries concerned. There will be language about closer political and economic and scientific cooperation and about the division of military responsibility. The two words to be applied to the achievements of this conference will be tentitive and slow. Nothing dramatic or decisive is going to happen immediately. That is because there is really no technique, no ground rules, no set procedures for running a conference of this kind. It is wholly unlike the American Congress, the British Parliament or any of the European legislative assemblies. The conference has not cought fire - has not been inspired or dominated by any individual or nation. The agreements announced tomarrow will be pmimarily a re-statement of aspirations, no nation will give up any real measure of sovereignty and NATO will not be

substantially strengthened. It may become stronger and more cohesive in the future, but that will be determined by events during the coming months or years.

There has been achieved here no agreement on a joint policy for the Middle East or for Algeria, nor for that matter for Formosa or for Cyprus. The issues and the areas that have heretofore caused friction between the allies remain unresolved, except insofar as the political and military leaders may have come to understand each other's problems and policies a little better as the result of informal conversation. There has been no sense of urgency and no real effort to resolve these problems that have caused the Alliance to itch! The British agree with most of our continental allies - that we must never abandon the possiblity of some kind of agreement with the Soviet Union. They're persuaded that in a democracy the people must be convinced that every honorable effort is being made to find some solution other then mutual annihilation. They recognize that strength is required for successful negotiations, but they do not share the opinion held by our State Department that the Russians are going to crack up as a result of internal stresses and strains. The British believe that some division of military effort can be accomplished, such as a common radar pool, but they agree with other military experts that such developments will be very slow in coming.

The British have expressed their willingness to do some more talking with the Russians about disarmament, but they are not willing to depart from the Western proposals advanced in London last summer. Proposals which the Russians have flatly rejected, and the United States delegation agrees entirely with the British on this point.

The British view is that the Russian purpose remains that of dividing the NATO countries, and that the neutralization of Germany would in effect mean the destruction of NATO. One gets the

impr

impression that the British - who for so long exercised the balance of power on the continent of Europe - now see themselves in the role of experienced mediator between the United States and our continental allies. They are, as of today, certainly the most robust and reliable ally we have.

Germany has occupied a rather special position at this conference. Not only because of the personality of Adenauer, but because Germany is the economic dynamo of Europe. It is the most strategic piece of real estate and until the question of the re-unification of Germany is settled, they'll be no real peace on this continent. There are very long memories here and there is fear, that the Germans might once again cast their lot with the Russians. For the hard fact is, that the Russians could give re-unification and the West cannot.

There is a basic and fateful question underlying all these marathon conversations and negotiations here in Paris. It has to do with Russia and it involves two words - capability and intention. That the Russians have the capability of destroying utterly our European allies is not doubted. That leaves the question of their intentions and that's the important thing, that's the nub of the disagreement. Capability is not really important where the intention is not in doubt. For example, the British are a nuclear power, they have in theory the capability of destroying Western Europe or the industrial complexes of the United States, but no one thinks they intend doing it - therefore, their capability is not regarded as a threat. Most of our NATO allies want to do some more probing about Russia's intentions before they commit themselves to the grim, expensive and prolonged competition necessary to bring into balance the capability for destruction. There is no disposition on the part of our allies to doubt Russian capability, but they are clearly in no haste to take risks or to make sacrifices until they make up their minds more completely on the subject of Russian intentions.

In some quarters, this may be called appeasement, but the fact is, that the countries nearest to Russia's crushing capability, frankly, such as Germany, Norway and Denmark have decided that they are prepared to take the risk.

This is Ed. Murrow in Paris.

LE SUEUR: Russia's Nikita Khrushchev declared today ...

Ed. Trans. N.M.

Secretary of State Dulles will fly home by way of Madrid, where he will confer on Friday with Generalissimo Franco. Next Monday night, both President Eisenhower and Secretary Dulles will report to the American people on the NATO conference in a half-hour broadcast on radio and television.

Ed Murrow is covering the NATO summit meeting...and for his analysis of what's happening there, we switch now to Paris.

MURROW: This is Paris. The final communique on this conference will be issued tomorrow afternoon. President Eisenhower will leave for Washington at 6 P.M. Paris time tomorrow. At the end of the third day of this conference, it is possible to conclude that it is not going to fail. It won't achieve what the American delegation had hoped, but a formula has been found. There is still some argument going on about the wording of the final communique, but it will be announced tomorrow that missiles and nuclear weapons will be available to the members of NATO. Who gets them, who pays for them, where they will be placed, how soon they will be delivered - all these matters will be left undefined. In some cases, the arrangements will be negotiated by General Norstad, the Supreme Commander. In others, they will have to be direct agreements between the United States and the individual countries concerned. There will be language about closer political and economic and scientific cooperation and about the division of military responsibility. The two words to be applied to the achievements of this conference will be tentative and slow. Nothing dramatic or decisive is going to happen

immediately. That is because there is really no technique, no ground rules, no set procedures for running a conference of this kind. It is wholly unlike the American Congress, the British Parliament or any of the European legislative assemblies. The conference has not caught fire - has not been inspired or dominated by any individual or nation. The agreements announced tomorrow will be primarily a re-statement of aspirations, no nation will give up any real measure of sovereignty and NATO will not be substantially strengthened. It may become stronger and more cohesive in the future, but that will be determined by events during the coming months or years.

There has been achieved here no agreement on a joint policy for the Middle East or for Algeria, nor for that matter for Formosa or for Cyprus. The issues and the areas that have heretofore caused friction between the allies remain unresolved, except insofar as the political leaders may have come to understand each other's problems and policies a little better as the result of informal conversation. There has been no sense of urgency and no real effort to resolve these problems that have caused the Alliance to itch. The British agree with most of our continental allies - that we must never abandon the possibility of some kind of agreement with the Soviet Union. They're persuaded that in a democracy the people must be convinced that every honorable effort is being made to find some solution other than mutual annihilation. They recognize that strength is required for successful negotiations, but they do not share the opinion held by our State Department that the Russians are going to crack up as a result of internal stresses and strains. The British believe that some division of military effort can be accomplished, such as a common radar pool, but they agree with other military experts that such developments will be very slow in coming.

The British have expressed their willingness to do some more talking with the Russians about disarmament, but they are not willing to depart from the Western proposals advanced in London last summer. Proposals which the

Russians have flatly rejected, and the United States delegation agrees entirely with the British on this point.

The British view is that the Russian purpose remains that of dividing the NATO countries, and that the neutralization of Germany would in effect mean the destruction of NATO. One gets the impression that the British - who for so long exercised the balance of power on the continent of Europe - now see themselves in the role of experienced mediator between the United States and our continental allies. They are, as of today, certainly the most robust and reliable ally we have.

Germany has occupied a rather special position at this conference. Not only because of the personality of Adenauer, but because Germany is the economic dynamo of Europe. It is the most strategic place of real estate and until the question of the re-unification of Germnay is settled, there'll be no real peace on this continent. There are very long memories here and there is fear, that the Germans might once again cast their lot with the Russians. For the hard fact is, that the Russians could give re-unification and the West cannot.

There is a basic and fateful question underlying all these marathon conversations and negotiations here in Paris. It has to do with Russia and it involves two words - capability and intention. That the Russians have the capability of destroying utterly our European allies is not doubted. That leaves the question of their intentions and that's the important thing, that's the nub of the disagreement. Capability is not really important where the intention is not in doubt. For example, the British are a nuclear power, they have in theory the capability of destroying Western Europe or the industrial complexes of the United States, but no one thinks they intend doing it - therefore their capability is not regarded as a threat. Most of our NATO allies want to do some more probing about Russia's intentions before they

commit themselves to the grim, expensive and prolonged competition necessary to bring into balance the capability for destruction. There is no disposition on the part of our allies to doubt Russian capability, but they are clearly in no haste to take risks or to make sacrifices until they make up their minds more completely on the subject of Russian intentions.

In some quarters, this may be called appeasement, but the fact is, that the countries nearest to Russia's crushing capability, frankly, such as Germany, Norway, and Denmark have decided that they are prepared to take the risk.

This is Ed Murrow in Paris.

LESUEUR: Russia's Nikita Khrushchev declared today...that the deployment of nuclear weapons among the West European countries "is, in reality, a mortal blow to their security." He warned in a letter to the British weekly "New Statesman and Nation," that in event of war..."shattering retaliatory attacks on the territories of those countries in which atomic bases are situated will be inevitable." But war, Khurshchev said, is not inevitable. And he renewed the Kremlin plea for "coexistence".

America's first full-scale reactor for producing peaceful atomic power began feeding electricity today into the lines of the Duquesne Light Company in Pittsburgh. The electricty was generated by the nuclear power plant in nearby Sh ppingport, overlooking the Ohio River. The first flow of electricity... though on a small, test scale marks a landmark in our power development. The output will be gradually increased.

Chairman Strauss of the Atomic Energy Commission said today that the production of useful power from the "hydrogen" bomb fusion reaction is "still remote." Strauss denied as "completely false" reports that Britain has surpressed an announcement of its success in the control of fusion at his request. Development of economic thermonuclear power, Strauss said, is still in the remote future.

Secretary of Agriculture Benson announced today that government price supports for dairy products will be reduced to the legal minimum, beginning next April first.

The State Department has cancelled the passports of those 24 American youths who visited Red China last summer...and still have not come home. The department announces that, henceforth, their passparts are "valid only for direct and immediate return to the United States."

The premier of Indonesia held a news conference today...and laid it one the line. Indonesia, he said, has now officially taken over all major Dutch enterprises in the island republic. The premier served notice that if the Dutch want compensation, they will have to give up West New Guinea. But in any case, he said, Indonesia will see to it that the Netherlands never regains its powerful economic position in that part of the world.

This is Larry Lesueur. I'll be back in a moment with a footnote to the news. Now a word from George Bryan.

GEORGE BRYAN: COMMERCIAL

LESUEUR: Soviet Premier Bulganin may not be sitting-in with the 15 NATO leaders at the Palais de Chaillot in Paiis, but some people have gotten the impression that he is...A letter was addressed to Bulganin there today...it was from an old french peasant woman. It. said, "The roof of my farmhouse is caving in and I have no money. Since Russia today is one of the largest richest, and most powerful nations in the world...surely it would be nothing for you to send me enough money for repairs."

This is Larry Lesueur---Good nite.

Lesueur for Murrow Thurs., Dec. 19, 1957

Good evening, everyone... Here's what happened today:

The first NATO summit conference ended with the issuance of a communique... summing up agreements reached during four days of talks. For a first-hand report, we switch immediately to Ed Murrow in Paris.

(Tape runs 7:23
Ends on cue: "This is Ed Murrow
in Paris.")

President Eisenhower will arrive in Washington tomorrow morning. Secretary of State Dulles is returning by way of Spain, where he will confer with Generalissimo Franco. And on Monday night, both the President and the Secretary of State will report to the American people. CBS Radio will carry their report at 8:30 p.m., Eastern Standard Time.

Chairman Green of the Senate Foreign Relations Committee said tonight that Mr. Dulles will be invited to testify before the committee ~~soon~~ just as soon as Congress reconvenes. SENATOR Green said: "The NATO communique is couched in such general terms that it is difficult to tell precisely what ~~XXX~~ were the results. NATO," he said, "will not be strengthened...nor will Soviet aggression be deterred...by a flow of words." Democratic Senator Humphrey of Minnesota... ~~who is~~ a member of the Senate Foreign Relations Committee...charges that the United States...in Paris..."aired its weaknesses" in a face-saving agreement. "Acceptance in principle," he says, "does not mean fulfillment in details." Another Democratic member of the committee...Fulbright of Arkansas...says the NATO meeting "revealed for all to see how inadequate and inept our foreign policy has been." ~~Fulbright also feels that the military aspect of the conference was over-emphasized. "We can't let our guard down," says Fulbright, "but there is no reason why we can't negotiate with Russia while we continue to build up our strength."~~ On the other hand, Senator Wiley of Wisconsin...who is the top-ranking Republican on the Foreign Relations Committee...calls the Paris meeting "another important landmark in collective security. "~~Critics who [illegible] the results," he says,~~

"should [redacted] Wiley is supported by Republican Senator Hickenlooper of Iowa, who says the conference gave "a reasonable unity to NATO"...and that it showed [redacted] "a determination to continue to explore "all" problems."

The first American official to arrive back in Washington from the NATO conference WAS Donald Quarles, the deputy secretary of defense. Quarles said he felt the NATO talks went "very well"...that there was "harmony" in understanding the problems and "blocking-out" real solutions." [redacted] And he advised The reporters who talked to him to be "cautious" about assuming that West Germany will refuse to allow missile bases on her territory.

The Air Force launched its Thor missile today at Cape Canaveral, Florida. The Defense Department says the test was "a success"...that the intermediate range ballistic missile "flew its prescribed course and landed in the pre-selected impact area." The Pentagon, incidentally, has announced [redacted] that the test of the Army Jupiter missile yesterday was NOT a success. It said: "The missile failed to complete its full flight because of mechanical difficulties."

In Moscow, it's announced that Russia...next year...will spend MUCH MORE [redacted] ON scientific research. [redacted] [redacted] per cent.

A [redacted] 1958. But, [redacted] (can be accepted [redacted]) [redacted] made in terms of rubles. [redacted] rubble is worth about 25 cents...but this is an [redacted] value. Consequently [redacted] on the Russian budget, [redacted] the [redacted] previous years [redacted] is being spent in a [redacted] they are not entirely trustworthy. The Supreme Soviet or rubber stamp parliament also was told today that Russia plans...next year..to increase the output of heavy industry by more than 8 percent and production of consumer goods by just 6 percent.

In Washington, Secretary of Labor Mitchell told a news conference today that...in terms of the national economy...he expects 1958 to be "a reasonably good year." Mr. Mitchell [redacted] foresees more strikes and some more [redacted] unemployment. But, he said, there is no prospect of large-scale, prolonged unemployment. And he expects an improvement in the situation around [redacted] the middle of the year.

All major railroads in the country TODAY asked the Inter-state Commerce Commission ~~today~~ for permission to raise their freight rates "on a selective basis." No figures were announced.

~~A~~ a federal judge in Washington today sentenced John Frank, Former FBI agent, to serve FROM eight months to two years in prison.. for failing to register as an agent of the Dominican Republic in the United States. ~~Frank was allowed to remain~~ free on bond. ~~pending~~ an appeal.

In Paris the 15 western allies agreed "in principle" on continental rocket bases. ~~But that doesn't actually commit any European nation to the stationing of American rockets on its soil. That's been left [redacted]~~

Just before he left for Paris, Mr. Dulles was asked what he would think of A POSSIBLE agreement "in principle" on rocket bases...

He said he didn't favor agreements "in principle." Recalled his first diplomatic experience at Versailles in 1919, where they mostly spoke french. Said whenever he heard of an agreement "en principe" he always felt discouraged..

[redacted]

" Because," said Mr. Dulles, " I knew it would probably never get anywhere."

This is LL - Good Nite

This is Larry Lesueur. I'll be back in a moment with a Footnote to the News. Now a word from George Bryan.

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS (LARRY LE SUEUR SUBSTITUTING)

Thursday, December 19, 1957
7:45 - 8:00 P. M.

LE SUEUR: For a first hand report we switch immediately to Ed. Murrow in Paris.

MURROW: This is Paris. The final communique re-dedicates the Alliance to the principals of the North Atlantic Treaty. Our unity and our strength are indespensable to our own security and to the peace of the world. The Alliance remains ready to discuss any reasonable proposal for comprehensive and controlled disarmament. NATO must organize its political and economic strength in order to counter Russian moves in other parts of the world. The communique re-guarantees the security of Berlin, calls upon the Russians to honor their pledge - made at the Summit meeting in July of 1955 - when they promised the re-unification of Germany by means of free elections.

On the Middle East, NATO believes that the stability of this important area is vital to world peace. And about the same thing is said in regard to Africa. The situation in Indonesia is viewed with concern. Plans are being made for closer political consultation between the members of NATO. The Alliance prefers that any disarmament talks with Russia be held within the framework of the United Nations. If nothing is achieved there, then there could be a meeting at the Foreign Ministers level.

Stocks of nuclear warheads and intermediate range missiles will be established. Plans are being made for the standardization and integration of NATO weapons and forces - particularly in Certain aspects of air and naval defense. There will be further measures to promote the coordination of research development and manufacture of modern weapons.

Each Government agrees to reappraise its program for scientific and technical education and fundamental research. A NATO science committee will be established forthwith. And, there is a long section advocating closer economic relations between the member nations.

It amounts to an agreement in principle. An agreement in principle is basically an agreement not to disagree in public. It leaves everybody free to place his own specific interpretation upon the principle. For example; the agreement in principle on missiles and nuclear stock piles leaves the Germans, the Norwegians and the Danes completely free to reject the weapons. Likewise, it leaves the British free to go ahead with the construction of at least four launching sites which they are preparing to do.

What will now happen is this. General Norstad, the Supreme Commander will figure out where he and his staff would like to locate the missiles and stock pile the weapons. In making his decision, he will obviously have to combine military and political judgement - in some cases, he may have to advance military reasons to support a political position taken by one of our allies. Once a nation has agreed to receive the hardware, then a special treaty will have to be worked out between that country and the United States. There is an awful lot of tedious and tiresome negotiating ahead. This conference has not strengthened the military force of NATO. If its recommendations are carried out, that military force may be increased but not for a couple of years. Meanwhile, there is no reason to assume that the Russians will stand still. In the absence of any agreement, they too will be increasing their strength. What the West has lost is something that can't be bought with dollars or with agreement in principal - for what we have lost is time. Most of our allies, including the British want to use the time while we're

trying to catch up, to do some probing of Russian intentions. If the American delegation learned only one thing at this conference, it must have been, that our allies deplore, aregret and resent what they regard the American practice of dismissing all Russian suggestions for parleys as mere prepoganda, unworthy of our attention or serious consideration. It has to be remembered that every head of Government here is faced with the Parliamentary opposition at home, he must have regard for the changing tides of public opinion. The British for example, went along with the proposition to talk some more with the Russians - partly because British public opinion has recently (indistinct) by the knowledge that our strategic bombers based on British airfields had been flying about over their heads loaded with hydrogen bombs. There will be plenty of room for disagreement between the allies as to the form and conduct of the exploratory talks with the Russians. But, we in the United States will be inclined to say, that we spent many months and much effort producing the best plan we could at the London conference. The Russians turned these plans down flatly, now, why should we rush about trying to develop other plans and proposals each time the Russians say no.

Some of our continental allies, however, will want to take a long hard look at the possibility of a neutralized Germany or some kind of agreement that would deny nuclear weapons to Germany, Poland and Czechoslovakia.

One of the interesting side lights of this conference, has been the really substantial influence of Mr. George Kennan's broadcast upon continental leaders. Neither the British nor ourselves like his speeches, but his words have carried great weight on the continent. Before President Eisenhower took off late this afternoon

he issued a statement saying he was sorry he couldn't have stayed longer, he was happy that the work here had been conducted frankly in friendship and cooperation. The President said, "he felt the discussions and the decisions should make war less likely." He was confident that the American people and the people of the other NATO nations will endorse and support the decisions taken. He ended his message, "good bye and see you again." Most people who have watched him here will probably agree that he meant it, he would like to come back again. He bore up well under thestrain of this trip. The achievements of this conference were not sensational, but some progress was made, and President Eisenhower in calling upon the military leaders - late in life, would like to have history remember him as a man who contributed to the cause of peace.

My colleague from Moscow, Dan Schorr flew in yesterday and I am going to ask him to tell us briefly what he thinks the Russian reaction will be to this communique and the developments here.

SCHORR: Well, Ed., it seems to me that the Russian reaction will be very soon in coming. The Supreme Soviets their version of a Parliament is meeting now and there will probably be a foreign policy address made in the course of their discussion. When they asked for talks and proposeda nuclear free Central Europe, it was not merely for the purpose of having talks - it was for the purpose of heading off missile bases, and it seems to me that they will judge their success in this conference to the extent that they have headed off those bases. What they want really is (indistinct) ...? A decleration that there will be no nuclear missile bases in Western Europe. As it now looks, we still plan to establish them in at least some of the countries - there is a decleration of principal that you spoke of that they could be established in any country. To that extent, it is unsatisfactory to the Russians. The way they will

counter this, it seems to me, will be to pick at the weakest point. We have said in NATO - talks and nuclear weapons both. They will say, you can't have the two. And the one establishes a poor atmosphere for the other, and they will demand that we give up entirely the idea of nuclear bases, missile bases in Western Europe. That will probably start soon.

MURROW: Thank you very much, Dan Schorr.

This is Ed. Murrow in Paris.

LE SUEUR: President Eisenhower will arrive in Washington tomarrow morning.

Ed. Trans. N.M.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, DECEMBER 19, 1957
7:45 - 8:00 PM EST

LARRY LESUEUR REPORTING

Good evening, everyone...Here's what happened today:

The first NATO summit conference ended with the issuance of a communique ...summing up agreements reached during four days of talks. For a first-hand report, we switch immediately to Ed Murrow in Paris.

MURROW: This is Paris. The final communique re-dedicates the Alliance to the principles of the North Atlantic Treaty. Our unity and our strength are indispensable to our own security and to the peace of the world. The Alliance remains ready to discuss any reasonable proposal for comprehensive and controlled disarmament. NATO must organize its political and economic strength in order to counter Russian moves in other parts of the world. The communque re-guarantees the security of Berlin, calls upon the Russians to honor their pledge - made at the Summit meeting in July of 1955 - when they promised the re-unification of Germany by means of free elections.

On the Middle East, NATO believes that the stability of this important area is vital to world peace. And about the same thing is said in regard to Africa. The situation in Indonesia is viewed with concern. Plans are being made for closer political consultation between the members of NATO. The Alliance prefers that any disarmament talks with Russia be held within the framework of the United Nations. If nothing is achieved there, then there could be a meeting at the Foreign Ministers level.

Stocks of nuclear warheads and intermediate range missiles will be established. Plans are being made for the standardization and integration of NATO weapons and forces - particularly in certain aspects of air and naval defense. There will be further measures to promote the coordination of research development and manufacture of modern weapons. Each government agrees to reappraise its program for scientific and technical education and

fundemental research. A NATO science committee will be established forthwith. And, there is a long section advocating closer economic relations between the member nations.

It amounts to an agreement in principle. An agreement in principle is basically an agreement not to disagree in public. It leaves everybody free to place his own specific interpretation upon the principle. For example; the agreement in principle on missiles and nuclear stock piles leaves the Germans, the Norwegians and the Danes completely free to reject the weapons. Likewise, it leaves the British free to go ahead with the construction of at least four launching sites which they are preparing to do.

What will now happen is this. General Norstad, the Supreme Commander will figure out where he and his staff would like to locate the missiles and stock pile the weapons. In making his decision, he will obviously have to combine military and political judgment - in some cases, he may have to advance military reasons to support a political position taken by one of our allies. Once a nation has agreed to receive the hardware, then a special treaty will have to be worked out between that country and the United States. There is an awful lot of tedious and tiresome negotiating ahead. This conference has not strengthened the military force of NATO. If its recommendations are carried out, that military force may be increased but not for a couple of years. Meanwhile, there is no reason to assume that the Russians will stand still. In the absence of any agreement, they too will be increasing their strength. What the West has lost is something that can't be bought with dollars or with agreement in principle -- for what we have lost is time. Most of our allies, including the British want to use the time while we're trying to catch up, to do some probing of Russian intentions. If the American delegation learned only one thing at this conference, it must have been, that our allies deplore, regret and resent what they regard the

American practice of dismissing all Russian suggestions for parleys as mere propaganda, unworthy of our attention or serious consideration. It has to be remembered that every head of Government here is faced with the Parliamentary opposition at home, he must have regard for the changing tides of public opinion. The British for example, went along with the proposition to talk some more with the Russians - partly because British public opinion has recently (indistinct) by the knowledge that our strategic bombers based on British airfields had been flying about over their heads loaded with hydrogen bombs. There will be plenty of room for disagreement between the allies as to the form and conduct of the exploratory talks with the Russians. But, we in the United States will be inclined to say, that we spent many months and much effort producing the best plan we could at the London conference. The Russians turned these plans down flatly, now, why should we rush about trying to develop other plans and proposals each time the Russians say no.

Some of our continental allies, however, will want to take a long hard look at the possibility of a neutralized Germany or some kind of agreement that would deny nuclear weapons to Germany, Poland and Czechoslovakia.

One of the interesting sidelights of this conference, has been the really substantial influence of Mr. George Kennan's broadcast upon continental leaders. Neither the British nor ourselves like his speeches, but his words have carried great weight on the continent. Before President Eisenhower took off late this afternoon he issued a statement saying he was sorry he couldn't have stayed longer, he was happy that the work here had been conducted frankly in friendship and cooperation. The President said, "he felt the discussions and the decisions should make war less likely." He was confident that the American people and the people of the other NATO nations will endorse and support the decisions taken. He ended his message, "Good bye and see you again." Most people who have watched him here will probably

agree that he meant it, he would like to come back again. He bore up well under the strain of this trip. The achievements of this conference ware not sensational, but some progress was made, and President Eisenhower in calling upon the military leaders - late in life, would like to have history remember him as a man who contributed to the cause of peace.

My colleague from Moscow, Dan Schorr flew in yesterday and I am going to ask him to tell us briefly what he thinks the Russian reaction will be to this communique and the developments here.

SCHORR: Well, Ed, it seems to me that the Russian reaction will be very soon in coming. The Supreme Soviets their version of a Parliament is meeting now and there will probably be a foreign policy address made in the course of their discussion. When they asked for talks and proposed a nuclear free Central Europe, it was not merely for the purpose of having talks - it was for the purpose of heading off missile bases, and it seems to me that they will judge their success in this conference to the extent that they have headed off those bases. What they want really is (indistinct)...? A declaration that there will be no nuclear missile bases in Western Europe. As it looks, we still plan to establish them in at least some of the countries There is a declaration of principle that you spoke of that they could be established in any country. They will say, you can't have the two. And the one establishes a poor atmosphere for the other, and they will demand that we give up entirely the idea of nuclear bases, missile bases in Western Europe. That will probably start soon.

MURROW: Thank you very much, Dan Schorr. This is Ed Murrow in Paris.

LESUEUR: President Eisenhower will arrive in Washington tomorrow morning. Secretary of State Dulles is returning by way of Spain, where he will confer

with Generalissimo Franco. And on Monday night, both the President and the Secretary of State will report to the American people. CBS Radio will carry their report at 8:30 P.M. Eastern Standard Time.

Chairman Green of the Senate Foreign Relations Committee said tonight that Mr. Dulles will be invited to testify before the committee just as soon as Congress reconvenes. Senator Green said, "The NATO communique is couched in such general terms that it is difficult to tell precisely what were the results. NATO," he said, "will not be strengthened...nor will Soviet aggression be deterred...by a flow of words." Democratic Senator Humphrey of Minnesota...a member of the Senate Foreign Relations Committee ...charges that the United States...in Paris..."aired its weaknesses" in a face-saving agreement. "Acceptance in principle," he says, "does not mean fulfillment in details." Another Democratic member of the committee... Fulbright of Arkansas...says the NATO meeting "revealed for all to see how inadequate and inept our foreign policy has been." On the other hand, Senator Wiley of Wisconsin...who is the top-ranking Republican on the Foreign Relations Committee...calls the Paris meeting "another important landmark in collective security. Wiley is ss supported by Republican Senator Hickenlooper of Iowa, who says the conference gave "a reasonable unity to NATO"...and that it showed "a determination to continue to explore all problems."

The first American official to arrive back in Washington from the NATO conference was Donald Quarles, the deputy secretary of defense. Quarles said he felt the NATO talks went "very well"...that there was "harmony" in understanding the problems and "blocking-out real solutions." And he advised the reporters who talked to him to be "cautious" about assuming that West Germany will refuse to allow missile bases on her territory.

The Air Force launched its Thor missile today at Cape Canaveral, Florida. The Defense Department says the test was, "a success"...that the intermediate

range missile "flew its prescribed course and landed in the pre-selected impact area." The Pentagon, incidentally, has announced that the test of the Army Jupiter missile yesterday was not a success. It said: "The missile failed to complete its full flight because of mechanical difficulties."

In Moscow, it's announced that Russia...next year...will spend much more on scientific research. The Supreme Soviet or rubber stamp parliament also was told today that Russia plans...next year...to increase the output of heavy ind ustry by more than 8 per cent and production of consumer goods by just 6 per cent.

In Washington, Secretary of Labor Mitchell told a news conference today that...in terms of the national economy...he expects 1958 to be "a reasonably good year." Mr. Mitchell foresees more strikes and some more unemployment. But, he said, there is no prospect of large-scale, prolonged unemployment. And he expects an improvement in the situation around the middle of the year.

A federal judge in Washington today sentenced John Frank, former FBI agent to serve from eight months to two years in prison...for failing to register as an agent of the Domincan Republic in the United States.

In Paris the 15 western allies agreed "in principle" on continental rocket bases. Just before he left for Paris, Mr. Dulles was asked what he would think of a possible agreement "in principle" on rocket bases... He said he didn't favor agreements "in principle." Recalled his first diplomatic experience at Versailles in 1919, where they mostly spoke French.. said whenever he heard of an agreement "en principe" he always felt discouraged. "Because," said Mr. Dulles, "I knew it would probably never get anywhere."

This is Larry LeSueur. Goodnite.

Lesueur for Murrow Fri., Dec. 20, 1957

Good evening, everyone... Here's what happened today:

The National Education Association called on the Federal Government to give public schools the "massive financial support necessary for national survival." The association proposes that Congress vote the federal money necessary to provide at least 20-thousand scholarships a year for college undergraduates...and 3-thousand fellowships a year for graduate study. Congress is ALSO asked to vote at least 25-million dollars a year for strengthening STATE departments of education. Some of THIS money would go for raising teachers' salaries. The National Education Association estimates the program...if adopted...would require expenditure of a billion dollars next year, and then increase in cost...as the program is expanded...until it entails more than FOUR billion dollars in 1962.

The program would be on a CONTINUING basis. And, as such, it represents a sharp departure from previous N.E.A. proposals...which centered on federal aid for school construction and were of a temporary, emergency nature. The legislative commission of the N.E.A. argues that federal financial support for education at all levels has become a national necessity. "There can be no doubt," it says, "that present world conditions require bold answers."

President Eisenhower returned to Washington today from the NATO summit conference. And within an hour after his arrival, he was back at work at his White House desk. His first public act...after returning this morning... was to witness the swearing-in of "Sumner G. Whittier" as administrator of veterans affairs. This afternoon, Mr. Eisenhower gave Vice President Nixon a personal report on what happened at the NATO meeting. But he cancelled an appointment he had with Percival Brundage, director of the budget.

Secretary of Defense McElroy came back from Paris today...and said - he is asking Congress for an ADDITIONAL billion dollars for his department for "THIS" fiscal year. McElroy said the extra money is needed now for missile development. The present fiscal year expires next June 30 —

and what McElroy wants is a SUPPLEMENTAL appropriation.//.in addition to whatever may be needed for defense in the NEXT fiscal year. Total defense spending for THAT year is expected to run close to 40-billion dollars.

Secretary of State Dulles stopped off in Madrid today.//.on his way home from the NATO conference.//.and talked with Generalissimo Franco for two hours and 20 minutes.// Dulles said he gave Franco "an intimate report and interpretation of the conference."// The question of establishing missile bases in Spain, he said, was [redacted] not discussed.

The steps taken by Britain's Conservative Government at the NATO summit meeting were approved in the House of Commons today by a vote of 289 to 251. The balloting came after a brisk five-hour debate, in which the Labourites accused Prime Minister Macmillan of surrendering too much British SOVEREIGNTY. They had misgivings...in particular...about the establishment of American intermediate-range missile bases in Britain. Labourite Leader Aneurin Bevan demanded that the bases be "under the complete control of the British people, through the British government." And he again decried the presence...over British territory...of American aircraft carrying hydrogen bombs. Bevan doubted that the international situation justified such measures. "It seems to me," he said, "to BE a state of mobilization only one step short of war itself." Prime Minister Macmillan declared, in reply, that the American bombers were simply trying to achieve "the highest state of readiness." "And I for one," he said, "am glad that it is so. If you have a deterrent, it seems to me that the more prepared and ready it is, the more likely it is to do its work." As for control of the American missile bases--that is, the launching of ROCKETS from Britain--Macmillan said the government DOES have complete veto power.

In Russia, the Communist Party newspaper Pravda said today that the Paris conference showed the existence of "serious differences" among the NATO allies. "The cause of these differences," said Pravda, "lies in the fact that each country is perfectly willing to cede to OTHERS the right of installing missile bases--that is, the right of committing suicide." The government newspaper Izvestia said the conference "had been unable to by-pass the vitally important problem of strengthening the cause of peace"...as represented by the Bulganin letters. This--was Russia's reference to the expressed willingness of the NATO countries to discuss disarmament on the foreign ministers level...and the NATO communique statement that they "are always ready to settle international problems by negotiation, taking into account the legitimate interests of all."

Russia's Supreme Soviet...its rubber-stamp parliament...heard a report today that this year's Soviet harvest failed to reach its production quota. It ALSO heard a report from one of Russia's outstanding scientists that "greater efforts are still needed in order to surpass the United States on all scientific fronts." He warned the Russians "not to

overestimate their scientific achievement."

In Washington, the

[redacted] government announces that living costs went up in November to reach a new all-time high. The cost of living has now risen every month for the last 15 months, EXCEPT in October when there was no change. The government says the new increase...of four-tenths of one percent in the consumer price index...was due primarily to higher auto prices. The cost of clothing and services ALSO rose in November, with FOOD prices showing a seasonal decline. Today's development means an automatic pay raise for a million workers in the steel, aluminum, aircraft and meat-packing industries...whose income is pegged to living costs. The wage boosts range from one to five cents an hour.

For some time a campaign has been waged in Washington to release the top-secret Gaither Committee Report on the relative strength of the United States and the Soviet Union. This is the report that stunned official Washington at the time of the Sputniks with its estimate of what it will cost in money and effort to catch up with the Soviet Union in missiles and to stay abreast in world power. Some of it involves military security and cannot be published. But it is argued that everything else should be broadcast if the public is to know its peril and give full support to the radical changes needed in national policy.

Today the Washington Post and Times-Herald, in a copyrighted article by Chalmers Roberts, discloses the main conclusions of the Gaither Committee. He does not quote from the report itself, but he says it portrays a United States in the gravest danger in its history, and moving in a frightening course to the status of a second-class power. It finds America exposed to an almost immediate threat from SOVIET missiles. And it outlines both a short-term and a long-term course of action.

The report gives overriding priority, SAYS Mr. Roberts, to the revitalization of the American retaliatory offensive force as the principal deterrent to an all-out Russian attack. It says there must be a rapidly rising

military budget through 1970, reaching the sum of 46-billion dollars by 1960 and 61, an increase of 8 billions over the present defense expenditure. It calls for an additional 5-billions a year for several years to build civilian shelters against radiation dangers. It recommends a sweeping reorganization of the Pentagon command system and of the current roles and missions of the armed services. It points to the need for much greater preparedness to fight limited wars. It calls for a far larger outlay for basic scientific research, and an increased foreign aid program, especially for the economic assistance of underdeveloped countries. It stresses the importance of maintaining our present alliances, and it repudiates the concept of "fortress America".

"This report," says Mr. Roberts, "was presented to President Eisenhower at an extraordinary session of the National Security Council on November 7, four days after the launching of the second Sputnik." At that dramatic meeting" he writes, "with some 45 persons crowded into the White House broadcast room, two of the President's most valued friends in the financial world - John J. McCloy and Robert Lovett, pledged to Mr. Eisenhower the complete backing of the American financial community if he would approve the program proposed. They

expressed their conviction ~~that~~ the American public would shoulder the burden of such major increases in the budget. They said the American economy was capable of carrying the load."

President Eisenhower indicated at that meeting and in subsequent conversations, says Mr. Roberts, "a nagging fear that the American people would balk at paying the bill, though personally he would like to do the things called-for in the report. Some participants at the meeting," says Mr. Roberts, "felt ~~that~~ the President was even fearful that the publication of the gloomy findings of the report would panic the American people into going off in all directions at once." 3

The Gaither Committee was ready with its report at the crucial moment, but that was quite fortuitous. It had been set-up to estimate the need of a gigantic civil defense program. The Civil Defense Administration had asked for a 40-billion-dollar shelter program. The President had thrown up his hands, but asked the National Security Council to study the question. So the committee was set up, with a membership of scientists, educators and business men, to examine the need for shelters. First, it came to the conclusion that shelters from blast from direct or near-hits by nuclear bombs were impractical, and the need was for shelters against radiation and fall-out. But

once it began studying defense against nuclear missiles, it saw it had to go further. It needed to know the values of war deterrents in general. Finally, it realized it had to make a study of national policy across the board. 4

It drafted its conclusions in a Washington Then complacently dedicated - to the economy crusade spearheaded by Secretaries Humphrey and Wilson. Military expenditure was being cut back, including scientific research and missile development, and a tax cut for next year's budget was eagerly hoped for. The committee might or might not have shaken Washington with its findings without the Sputniks. But the Soviet Union came along with the alarm clock and the top men of the Administration at least, listened with closest attention to its findings. Now it remains to be seen whether the full report - minus the outright security features - will be permitted to reach the American people with its gloom and its recommendations.

This is L.L. - I'll be back in a moment with a footnote to the News - First a word from George Bryan

~~This is L.L. I'll be back in a moment with a footnote to the News - But first a word from George Bryan~~

A russian newspaper today called Secretary of State John Foster Dulles a LIAR, and also a writer of "dirty articles and cock and bull yarns."

The Moscow's Paper's anger was aroused by an article Mr. Dulles wrote for Life Magazine. The Russians Say Lenin was misquoted. accuse Dulles with "falsifying History" FOR crediting Lenin with the maxim: "PROMISES ARE LIKE PIE CRUST" made to be broken... Lenin certainly used that phrase SAID the Russian Newspaper but he was only quoting an old English proverb.

This is Larry LeSueur...Ed Murrow will be back on Monday.. Good nite.

7:45 - 8:00 PM EST

LARRY LESUEUR REPORTING

Good evening, everyone...Here's what happened today:

The National Education Association called on the Federal Government to give public schools the "massive financial support necessary for national survival." The association proposes that Congress vote the federal money necessary to provide at least 20-thousand scholarships a year for college undergraduates...and 3-thousand fellowships a year for graduate study. Congress is also asked to vote at least 25-million dollars a year for strengthening state departments of education. Some of this money would go for raising teachers' salaries. The National Education Association estimates the program ...if adopted...would require expenditure of a billion dollars next year, and then increase in cost...as the program is expanded...until it entails more than four billion dollars in 1962. This program would be on a continuing basis. And, as such, it represents a sharp departure frompprevious N.E.A. proposals...which centered on federal aid for school construction and were of a temporary, emergency nature. The legislative commission of the N.E.A. argues that federal financial support for education at all levels has become a national necessity. "There can be no doubt," it says, "that present world conditions require bold answers."

President Eisenhower returned to Washington today from the NATO summit conference. And within an hour after his arrival, he was back at work at his White House desk. His first public act...after returning this morning... was to witness the swearing-in of Sumner G. Whittier as administrator of veterans affairs. This afternoon, Mr. Eisenhower gave Vice President Nixon a personal report on what happened at the NATO meeting. But he cancelled an appointment he had with Percival Brundage, director of the budget.

Secretary of Defense McElroy came back from Paris today..and said he is asking Congress for an additional billion dollars for his department for this fiscal year. McElroy said the extra money is needed now for missile development. The present fiscal year expires next June 30 - and what McElroy wants is a supplemental appropriation...in addition to whatever may be needed for defense in the next fiscal year. Total defense spending for that year is expected to run close to 40-billion dollars.

Secretary of State Dulles stopped off in Madrid today...on his way home from the NATO conference...and talked with Generalissimo Franco for two hours and twenty minutes. Dulles said he gave Franco "an intimate report and interpretation of the conference." The question of establishing missile bases in Spain, he said, was not discussed.

The steps taken by Britain's Conservative Government at the NATO summit meeting were approved in the House of Commons today by a vote of 289 to 251. The balloting came after a brisk five-hour debate, in which the Labourites accused Prime Minister Macmillan of surrendering too much British sovereignity. They had misgivings...in particular...about the establishment of American intermediate-range missile bases in Britain. Labourite Leader Aneurin Bevan demanded that the bases "be under the complete control of the British people, through the British government." And he again decried the presence...over British territory...of American aircraft carrying hydrogen bombs. Bevan doubted that the international situation justified such measures. "it seems to me," he said, "to be a state of mobilization only one step short of war itself." Prime Minister Macmillan delared, in reply, that the American bombers were simply trying to achieve "the highest state of readiness." "And I for one," he said, "am glad that it is so. If you have a deterrent, it seems to me that the more prepared and ready it is, the more likely it is to do its work." As for control of the American missile bases---that is,

the launching of rockets from Britain---Macmillan said the government does have complete veto power.

In Russia, the Communist Party newspaper Pravda said today that the Paris conference showed the existence of "serious differences" among the NATO allies. "The cause of these differences," said Pravda, "lies in the fact that each country is perfectly willing to cede to others the right of installing missile bases---that is, the right of committing suicide." The government newspaper Izvestia said the conference "had been unable to by-pass the vitally important problem of strengthening the cause of peace"... as represented by the Bulganin letters. This was Russia's reference to the expressed willingness of the NATO countries to discuss disarmament on the foreign ministers level...and the NATO communique statement that they "are always ready to settle international problems by negotiation, taking into account the legitimate interests of all."

Russia's Supreme Soviet...its rubber-stamp parliament...heard a report today that this year's Soviet harvest failed to reach its production quota. It also heard a report from one of Russia's outstanding scientists that "greater efforts are still needed in order to surpass the United States on all scientific fronts." He warned the Russians "not to overestimate their scientific achievement."

In Washington, the government announces that living costs went up in November to reach a new all-time high. The cost of living has now risen every month for the last 15 months, except in October when there was no change. The government says the new increase...of four-tenths of one percent in the consumer price index...was due primarily to higher auto prices. The cost of clothing and services also rose in November, with food prices showing a seasonal decline. Today's development means an automatic pay rise for a million workers in the steel, aluminum, aircraft and meat-packing industries... whose income is pegged to living costs. The wage boosts range from one to

five cents an hour.

For some time a campaign has been waged in Washington to release the top-secret Gaither Committee Report on the relative strength of the United States and the Soviet Union. This is the report that stunned official Washington at the time of the Sputniks with its estimate of what it will cost in money and effort to catch up with the Soviet Union in missiles and to stay abreast in world power. Some of it involves military security and cannot be published. GEORGE BRYAN: COMMERCIAL

LESUEUR: A Russian newspaper today called Secretary of State John Foster Dulles a liar, and also a writer of "dirty articles and cock and bull yarns."

The Moscow's Paper's anger was aroused by an article Mr. Dulles wrote for Life Magazine...The Russians say Lenin was misquoted...accuse Dulles with "falsifying History" for crediting Lenin with the maxim: "Promises are like pie crust - made to be broken"... Lenin certainly used that phrase said the Russian newspaper but he was only quoting an old English proverb.

This is Larry LeSueur...Ed Murrow will be back on Monday. Good nite.

Edward R. Murrow Mon., Dec. 23, 1957

This is the news:

President Eisenhower and Secretary of State Dulles will report to the nation tonight on last week's NATO conference. Their broadcast will be carried by most of these CBS Radio stations at 8:30 p.m., Eastern Standard Time. Mr. Eisenhower met this morning with the National Security Coumcil...and, presumably, the subject matter of tonight's report was discussed.

The President said this afternoon...at the annual Christmas tree lighting ceremony...that "peace and goodwill are words only...hollow and empty...unless we confirm them in courage, self-sacrifice, patience, sweat and toil." Mr. Eisenhower noted that he would be reporting to the American people on the NATO conference later this evening. "But," he said,

"let me say here, in dedication to peace...in our determination and readiness collectively to sustain that peace...that we are firmly joined with our NATO partners, as indeed we are with other friendly countries around the world."

Secretary Dulles today sent Christmas greetings to State Department personnel, in this country and overseas. He said, "We pledge ourselves anew to seek the realization of our hopes for the welfare and betterment of all peoples everywhere. I am confident," he said, "that together we shall meet the challenges that lie ahead."

The Moscow radio tonight quoted Communist Party Boss Khrushchev as saying that he is "more optimistic than ever" over the prospects for world peace. Khrushchev reportedly expressed this optimism last week in an interview with Edward Pickering, editor of the London Daily Express. The Moscow radio quotes Khrushchev as saying that the big factor now is the change in "relations of force between the capitalist and socialist countries"... a change, he said, which favors the socialist countries---that is, the Communist states---because, in his words, "they could never by their very nature contemplate an aggressive war." The Russian leader repeated

his call for new East-West talks... but, this time, did not go into detail. (I should like to discuss this question of negotiating with Russia in a few minutes).

President Nasser of Egypt today charged that "imperialist countries" plotted to overthrow his government a year ago....but failed because they offered a half-million-dollar bribe to someone who turned out to be a member of the Egyptian intelligence. Nasser spoke in Port Said, on the first anniversary of the evacuation of British and French troops. He did not name the "imperialist countries"...but said that after their failure in Egypt, they began looking for collaborators in Syria and Jordan. He claimed they were successful in Jordan...and added, "I consider this a temporary success." President Nasser accused "imperialists" of trying to isolate and starve Egypt. He said, "Today we celebrate Victory Day. We also celebrate victory in battles of the cold war, starvation and isolation." Nasser reviewed a military parade, featuring equipment from the Soviet bloc. And near him, on the reviewing stand, stood the representatives of half a dozen Communist states.

Secretary General Hammarskjold arrived in the Gaza Strip today...for a Christmas visit with United Nations troops. Hammarskjold plans before he leaves Egypt to confer with President Nasser. The 3 percent surcharge voted by the General Assembly to meet the cost of clearing the Suez Canal is expected to be discussed.

The President of Lebanon...and the shah of Iran...today issued a joint communique announcing their determination to defend their independence and oppose any foreign interference in their internal affairs. The communique was issued in Lebanon, where the Shah has been visiting for the past week. It said the two countries will seek to strengthen their cultural and economic ties.

The Israeli parliament tonight gave Prime Minister Ben Gurion a vote of confidence. The vote was 65 to 6, with 22 abstentions. The Israeli Communist Party had introduced a motion of no confidence...accusing Ben Gurion of "alignment with German militarism and the Eisenhower Doctrine." The reference to "German militarism" stems from the fact that the majority of Ben Gurion's cabinet had favored sending a two-man mission to West Germany. The plan was opposed...besides the Communists...by the left-wing

the plan -

Labor Unity Party...and has now been dropped.

President Eisenhower today named John Hannah, president of Michigan State University, to be the new chairman of the Civil Rights Commission. Hannah will succeed former Supreme Court Justice Stanley Reed...who resigned on grounds that the position was incompatible with his judicial responsibilities. [redacted] Hannah was named to membership on the commission last month. The vacancy [redacted] created by Reed's resignation has been filled by the appointment of Doyle Carlton, a Democrat who served as governor of Florida from 1929 to 1933. Carlton is a lawyer.

The Air Force today announced that it has [redacted] awarded a contract to the North American Aviation Corporation, for the construction of a prototype...or working model...of a jet bomber capable of speeds in excess of 2-thousand miles an hour.

Just before the NATO conference, the Soviet Government put on one of the busiest propaganda efforts in its history. It sent long, personal letters from Premier Bulganin to the heads of all the participating governments, warning them against arranging for American missile bases in Europe, and urging East-West negotiations. No one familiar with the NATO conference will deny that this effort had some real effect on it. The resolution to establish missile bases was adopted in principle, but the alliance went on record in favor of negotiations with the Soviet Union.

This was a distinct success for Soviet diplomacy, and some might have expected immediate evidence that Moscow was ready to take a comparable step of its own. The opportunity was there. The Supreme Soviet was in session and both Party Boss Khrushchev and Foreign Minister Gromyko were to make speeches. Now the speeches have been duly made, and it must be said that the West has not been much enlightened by them.

Khrushchev in particular seasoned what he had to say with a heavy dose of distortion of the United States and its policy. Where Gromyko sought to score off Secretary Dulles, Khrushchev's picture of the United States is a land -- to use his words -- "where a small but influential bunch of monopolists want to intensify the cold war so that it will grow into a shooting war."

There was much more in this vein. This, of course, is familiar Moscow bombast, but its use does not suggest that Khrushchev much wants or hopes for negotiations. He pulled out of the files all the recent peace offers the Soviet Union has made and proposed them all anew. He told the Supreme Soviet that it was only the refusal of the West to compromise that made agreement on them impossible.

If that had been all that was said, the Soviet victory in Paris would not seem to have meant much to those who worked so hard to bring it about. But a few phrases in Khrushchev's speech, and several passages in Gromyko's did leave the door open by a crack.

Khrushchev urged top level negotiations that start off with the recognition of the status quo in the world. Recognition of the status quo may be the Kremlin's present objective. He proposed a summit meeting ~~on~~ this ~~[illegible]~~ preceded by a conference between the United States and the Soviet Union alone. He said he was sure that if agreement could be reached with the United States - without, he stressed, prejudicing the interest of other countries -- the world would change for the better. This meeting with the United States seems to be the second Kremlin objective.

Khrushchev, however, warned against making disarmament conditional on political solutions, such as the unification of Germany. So that closes the door on the approach to which the West has been committed. Khrushchev made a great play on the idea that the history of the two competing social systems -- capitalist and communist -- should be decided, not by rockets and nuclear bombs, but "by the fact of which system insures greater material and spiritual benefits to man." Thus stated, Washington could not ask for a better formula. But with political solutions ruled out, the formula gets nowhere.

The key to the Kremlin's thinking may be found in the Gromyko speech. He seemed to recognize it to be futile to seek far-flung political agreements, and urged that some progress, even if slight, be sought in what he called "mutual undertakings of a moral nature." Disarmament, he argued, can only come as the result of lessened tensions, and the tensions cannot be lessened by tackling disarmament first. He rejected outright the NATO proposal for a conference on the foreign minister level on disarmament. He proposed instead either a special session of the United Nations Assembly or an international disarmament conference, presumably meaning one to which Red China would come. And he also plugged for a summit conference.

The upshot of the Soviet response to NATO is to discourage anything better than a slow, point-at-a-time approach, starting first of all to explore the possibility of excluding atomic weapons from Central Europe, as Bulganin suggested. / Presumably similar so-called "moral" issues could follow. / But the great and truly moral questions, such as a divided Germany, and a throttled Hungary, are to be kept off the agenda.

So NATO has spoken and the Kremlin has answered. It must be said that though the road of negotiations lies ahead, it is both narrow and rocky. Certainly it is not paved with the Kremlin's good intentions. / Negotiations with the Russians have always been tortuous, confusing and highly exasperating. Nothing in this picture suggests that they are going to change.

George Ryan

Word for Today

The leaders of Russia are being "difficult" again...this time in the matter of resuming disarmament talks. I have found this quotation in Harper's Weekly. It says: "It is a gloomy moment in history. Russia hangs like a cloud, dark and silent upon the horizon of Europe. Of our troubles, no man can see the end." This appeared in Harper's a hundred years ago---in 1857.

Goodnight and good luck!

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

MONDAY, DECEMBER 23, 1957
7:45 - 8:00 PM EST

This is the news:

President Eisenhower and Secretary of State Dulles will report to the nation tonight on last week's NATO conference. Their broadcast will be carried by most of these CBS Radio stations at 8:30 P.M., Eastern Standard Time. Mr. Eisenhower met this morning with the National Security Council...and, presumably the subject matter of tonight's report was discussed.

The President said this afternoon...at the annual Christmas tree lighting ceremony...that "peace and good will are words only...hollow and empty...unless we confirm them in courage, self-sacrifice, patience, sweat and toil." Mr. Eisenhower noted that he would be reporting to the American people on the NATO conference later this evening. The reference to "German militarism" stems from the fact that the majority of Ben Gurion's cabinet had favored sending a two-man mission to West Germany. The plan was opposed...besides the Communists...by the left-wing Labor Unity Party...and the plan has now been dropped.

President Eisenhower today named John Hannah, president of Michigan State University, to be the new chairman of the Civil Rights Commission. Hannah will succeed former Supreme Court Justice Stanley Reed...who resigned on grounds that the position was incompatible with his judicial responsibilities. Hannah was named to membership on the commission last month. The vacancy created by Reed's resignation has been filled by the appointment of Doyle Carlton, a Democrat who served as governor of Florida from 1929 to 1933. Carlton is a lawyer.

The Air Force today announced that it has awarded a contract to the North American Aviation Coporation, for the construction of a prototype...or working model...of a jet bomber capable of speeds in excess of 2-thousand miles an hour.

Just before the NATO conference, the Soviet Government put on one of the busiest propaganda efforts in its history. It sent long, personal letters from Premier Bulganin to the heads of all the participating governments, warning them against arranging for American missile bases in Europe, and urging East-West negotiations. No one familiar with the NATO conference will deny that this effort had some real effect. The resolution to establish missile bases was adopted in principle, but the alliance went on record in favor of negotiations with the Soviet Union.

This was a distinct success for Soviet diplomacy, and some might have

expected immediate evidence that Moscow was ready to take a comparable step of its own. The opportunity was there. The Supreme Soviet was in session and both Party Boss Khrushchev and Foreign Minister Gromyko were to make speeches. Now the speeches have been duly made, and it must be said that the West has not been much enlightened by them.

Khrushchev in particular seasoned what he had to say with a heavy dose of distortion of the United States and its policy. Where Gromyki sought to score off Secretary Dulles, Khrushchev's picture of the United States is a land - to use his words - "where a small but influential bunch of monopolists, want to intensify the cold war so that it will grow into a shooting war." There was much more in this vein. This, of course, is familiar Moscow bombast, but its use does not suggest that Khrushchev much wants or hopes for negotiations. He pulled out of the files all the recent peace offers the Soviet Union has made and proposed them all anew. He told the Supreme Soviet that it was only the refusal of the West to compromise that made agreement on them impossible.

If that had been all that was said, the Soviet victory in Paris would not seem to have meant much to those who worked so hard to bring it about. But a few phrases in Khrushchev's speech, and several passages in Gromyko's did leave the door open by a crack.

Khrushchev urged top level negotiations that start off with the recognition of the status quo in the world. Recognition of the status quo may be the Kremlin's present objective. He proposed a summit meeting preceded by a conference between the United States and the Soviet Union alone. He said he was sure that if agreement could be reached with the United States - without, he stressed, prejudicing the interest of other countries - the world would change for the better. This meeting with the United States seems to be the second Kremlin objective.

Khrushchev, however, warned against making disarmament conditional on

political solutions, such as the unification of Germany. So that closes the door on the approach to which the West has been committed. Khrushchev made a great play on the idea that the history of the two competing social systems - capitalist and communist - should be decided, not by rockets and nuclear bombs, but "by the fact of which system insures greater material and spiritual benefits to man " Thus stated, Washington could not ask for a better formula. But with political solutions ruled out, the formula gets nowhere.

The key to the Kremlin's thinking may be found in the Gromyko speech. He seemed to recognize it to be futile to seek far-flung political agreements, and urged that some progress, even if slight, be sought in what he called "mutual undertakings of a moral nature." Disarmament, he argued, can only come as a result of lessened tensions, and the tensions cannot be lessened by tackling disarmament first. He rejected outright the NATO proposal for a comference on the foreign minister level on disarmament. He proposed instead either a special session of the United Nations Assembly or an international disarmament conference, presumably meaning one to which Red China would come. And he also plugged for a summit conference.

The upshot of the Soviet response to NATO is to discourage anything better than a slow, point-at-atime approach, starting first of all to explore the possibility of excluding atomic weapons from Central Europe, as Bulganin suggested. Presumably similar so-called "moral" issues could follow. But the great and truly moral questions, such as a divided Germany, and a throttled Hungary, are to be kept off the agenda.

So NATO has spoken and the Kremlin has answered. It must be said that though the road of negotiations lies ahead, it is both narrow and rocky. Certainly it is not paved with the Kremlin's good intentions. Negotiations with the Russians have always been tortuous, confusing and highly exasperating. Nothing in this picture suggests that they are going to change.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The leaders of Russia are being "difficult" again...this time in the matter of resuming disarmament talks. I have found this quotation in Harper's Weekly. It says: "It is a gloomy moment in history. Russia hangs like a cloud, dark and silent upon the horizon of Europe. Of our troubles, no man can see the end." This appeared in Harper's a hundred years ago---in 1857.

Goodnight and good luck!

Edward R. Murrow Tues., Dec. 24, 1957

This is the news:

Former Representative James P. President Eisenhower thanked Richards for the "effective and skillful manner" in which he had discharged his responsibilities. / Richards told the President that his work with Secretary of State Dulles is "evidence that, in the field of foreign policy, there need be no place for party partisanship." / And he praised Mr. Dulles for his "courage, wisdom and integrity." / The White House...in announcing the

—)

resignation...did not say whether a successor to Richards will be named.

The White House today confirmed the recess appointment of Charles W. Yost, a career diplomat, to be our new ambassador to Syria. There has not been an American ambassador in Syria for some time. Yost will succeed James S. Moose, Jr., who was called back to Washington for reassignment.

The United Press says that Russia is sending a new ambassador to Washington. According to U.P., Russia has informed the United States that it is replacing its present ambassador, George Zaroubin, with M.A. Menshikov, a candidate member of the Communist Party's powerful central committee. Zaroubin has been in Washington since 1952. Reportedly, he is being reassigned as deputy foreign minister in charge of personnel in the Soviet foreign office.

Communist Party Boss Khrushchev said today that Russia is "considering a further cut in its armed forces." Khrushchev claimed... in a speech in Kiev... that this was being done "in view of a number of statements by the NATO countries in which they said they were renouncing the use of force in relations with other countries." He also said that in making any cut, the Soviet government would preserve the level of the armed forces at such a level "as to safe-guard the defense interests of the country."

And he added that "thanks to the development of science and technology" this can be done at lower cost.

American officials in Washington...who decline to be identified... call the new Khrushchev statement a maneuver aimed at convincing the NATO countries of peaceful Soviet intent. They say it is logical to assume that the Russians...because of modern weapons...might be able to reduce their ground forces to some degree.

The Moscow radio today criticized the report which President Eisenhower and Secretary of State Dulles made last night to the American people on the NATO conference. Moscow said their report means that the United States "intends to continue its policy, as before, from a position of strength."

Mr. Eisenhower said...in the course of the broadcast...that a real start toward international peace and security cannot be made until there is "clear evidence of Communist integrity and sincerity in negotiation and action." Mr. Dulles...in effect...rejected Khrushchev's proposal of last week-end for a special meeting of the United Nations General Assembly on disarmament. "Eighty-two nations," he said, "obviously cannot be a negotiating body." Both the President and Secretary of State emphasized that the object of NATO is peace...and that the decisions taken in Paris

were designed to further peace and the security of the free world.

The Eisenhower-Dulles report has brought unfavorable reaction from Democratic members of Congress. House Speaker Rayburn complains that there was little in it that is new. And Senator Mansfield of Montana says, "I wish they had told us what they expect of us in the line of sacrifice and courage in the years ahead."

The International News Service says tonight that President Eisenhower plans to tell Soviet Premier Bulganin that Russia can give "clear evidence" of a desire for world peace by living up to its pledge on the reunification of Germany. That is, reunification on the basis of free elections. I.N.S. says it received this information from "a high Administration source."

The State Department announced today that the United States...in the near future...will start negotiating a new economic aid agreement with Yugoslavia. A department spokesman said there is no question of reconsidering the decision to end arms aid to Yugoslavia.

The government has extended its "voluntary" program for curbing foreign oil imports to five western states and Hawaii and Alaska. The five states affected are California, Oregon, Washington, Arizona and Nevada. And the program is now effective in all 48 states. The oil affected comes

mostly from Canada, Venezuela and the Middle East. The ~~avowed purpose is~~ to cut down on these imports in order to bolster the American oil industry...so that the ~~industry will be~~ geared to ~~maximum full~~ production in case of national emergency. The program was first instituted last ~~July~~ on the order of the President.

The White House announces that the first meeting of the new Civil Rights Commission will be held in Washington on January 3rd. The announcement comes ~~mm~~ just 24 hours after President Eisenhower ~~mmm~~ named President John Hannah of Mighigan State University as chairman of the commission.

Here in New York, the Long Island Railroad strike has been called off. ~~less than two hours after it started.~~ The Brotherhood of Railway Trainmen says, "All grievances have been settled." The grievances concerned working rules for holidays.

This reporter has tried to make clear from time to time that these broadcasts are in no sense the work of one man. The information received from C.B.S. correspondents at home and abroad form a substantial part of these reports.

At this time of year many of our foreign correspondents come home, not for the holidays but in order that we may all sit down and check notes, and prepare a few broadcasts.

Over the years this reporter has received [redacted] countless voice and cable messages from the chief of our Paris bureau, David Schoenbrun. He is here in the studio tonight, and I think I can say without embarrassing him that he has generally been first with the news, whether he has been working in Paris, North Africa or Indo-China; and he has a habit of seeing to it that in addition to being first, he first gets it right. His recent book - "As France Goes" - will tell you as much about that country as you'll find between the covers of any book in the English language.

I was in Paris last week with Schoenbrun, reporting the NATO conference, but tonight on Christmas Eve we have decided not to talk about international crises, or missiles, but rather to range over a few subjects that are of interest to us and perhaps to you.

1) What's the common quality you find amongst Europeans these days? Not just the French - all of them.

2) What's the common fear?

3) You've been abroad for about twenty years, looking at your own country from the outside. If you were granted a Christmas wish for the country, what would it be?

4) What's the basic difference in attitude between Europeans and Americans?

George Bryan

The Russian threat has to be met on several fronts -- economic and political as well as military. On this night before Christmas... when few creatures are stirring...one recalls a couplet written 200 years ago by Alexander Pope: "The mouse that always trusts to one poor hole can never be a mouse of any soul."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Tuesday, December 24, 1957
7:45 - 8:00 P.M.

MURROW: ... But tonight on Christmas Eve we've decided not to talk about international crises or missiles, but rather, to range over a few subjects that are of interest to us and, perhaps, to you. Welcome home, David.

SCHOENBRUN: Thank you, Ed.

MURROW: David, what's the common quality you find amongst the Europeans these days, not just the French, all of them.

SCHOENBRUN: I think, Ed, it's an overwhelming desire for peace. These people have had war, they don't believe there's going to be another one, and if there is, they hope - in fact, I think they're determined - to stay out of it. Peace is what binds all Europeans together, of all nations, and I think of all parties.

MURROW: Is this true in North Africa as well?

SCHOENBRUN: Yes, Ed, I think it's true. That may sound paradoxical because there's a war on in North Africa, in Algeria to be specific, but it's a peculiar kind of a war. There're less casualties in Algeria in a month than there are on the highways of France, in a weekend. If there were a real war in Algeria, Ed, if the French people had their hearts in it it would be over in no time at all. France is so strong they could wipe the rebels out. Their heart is not in it. Their pride has been hurt. They don't want to get out of Algeria and accept a public defeat. They don't know a way out. I don't think it contradicts my first statement, peace is what they want.

MURROW: Alright, David, what's the common fear in Europe?

SCHOENBRUN: Ed, I think the overriding fear is fear of disease and of depression. What these people want is security; physical security,

economic and financial security. I think I could make a suggestion, perhaps, to my own country, coming home here on Christmas Eve, and that is, instead of spending all of our money now in a panic - to make missiles, and Sputniks - perhaps we should put most of our money into a cure for cancer. I think we'd lick the Russians hands down in the cold war if we were the first ones to come up with a cure for this scourge of the human race.

MURROW: Well, David, you've been abroad now for about twenty years, but you come home frequently and have a chance to look at your own country, but most of the time you spend looking at it from the outside. If you were granted a Christmas wish, for the country, what would it be?

SCHOENBRUN: Ed, I guess it would be that we would recapture our pioneering spirit. Our country is becoming middle-aged, I'm afraid. We're getting rigid. You were at that Paris conference with me and you saw some of the things that were said by our President and our Secretary of State. Let's pick the Middle East for example. What were they in favor of in that final communique? They were in favor of stability. Our country is in favor of no change. This is ... is not American. I'd like to see our country recapture its spirit of adventure, its willingness to gamble, its belief in the future and I would like them also to recapture a bit of the rugged individualism that used to make America a unique country. I find a tendency towards conformism; the suburban life; putting Christmas wreaths on ... in order to impress your neighbors instead of believing in Christmas itself.

MURROW: You have a feeling that we're all living inside picture windows, is that right?

SCHOENBRUN: That's right, Ed, we've lost our privacy. Privacy

is a very rare thing. You can only get privacy now living anonymously in a big apartment house, in a big city. I think privacy is something we should cherish. I think we should like to spend more time with our own families and impress each other with our love and understanding and interest in each other and recapture the art of conversation - the true meaning of community - instead of this thing that I heal all the time when I come home, 'Where do we go now?' 'What do we do now?' 'What picture shall we see?' 'What's on the television set?' 'Who's on radio?' - as though people were afraid to be alone. Why are they so afraid to be alone with each other? That's something we used to have in the backwoods days and,I think, modern communications, for all the tremendous good that it has done in bringing more enlightened facts to the public has taken away our privacy and our ability to use our minds, Our muscles of the brain, I think, are growing soft.

MURROW: Well, David, what you said about communications may well be regarded by some as fouling our own nest, but I must say on this Christmas Eve that I agree with you entirely. And I hope you have a pleasant leave in this country. Thanks very much, David Schoenbrun.

SCHOENBRUN: Thank you, Ed.

Ed. trans. P. O.

~~Edward R. Murrow~~

~~Pawling, N.Y.~~

This is the news:

President Eisenhower led the nation in a quiet observance of Christmas. The President and First Lady exchanged their personal gifts last night, according to their custom. And today they were joined at the White House by Major and Mrs. John Eisenhower and the four grandchildren. Again there was an exchange of presents, followed by a Christmas dinner notable for the 38-pound Maryland turkey and the trimmings.

Mr. Eisenhower plans to leave tomorrow or Friday for his Gettysburg farm. The White House indicates he may remain there until after New Year's, working on messages to be delivered to Congress when it reconvenes.

(more)

9

In London, Queen Elizabeth today delivered her annual Christmas message. She remarked on "the speed with which things are changing all around us." But it would be wrong, she said, to blame our difficulties on the new inventions. She said, "The trouble is caused by unthinking people who carelessly throw away ageless ideals as if they were old and outworn machinery. Today we need a special kind of courage...not the kind needed in battle...but a kind which makes us stand up for everything that we know is right." The queen noted that two former British colonies, Ghana and Malaya, had this year become self-governing states. And she called this "a wonderful tribute to the efforts of men of goodwill who work together as friends."

The annual Christmas message was carried to the British people for the first time on television. Queen Elizabeth said she hoped the new medium would make the message "more personal and direct."

Prime Minister Nehru of India said today, "May this season of goodwill turn people's minds from war, violence and hatred to tolerance and peace." Nehru said this in appealing for funds to perpetuate the memory of Tagore, the famous Indian poet and philosopher. He was making the appeal on Christmas Day, he said, "because this is a day associated in millions of minds with peace and goodwill."

30

In Rome, Pope Pius prayed for world peace in three Christmas masses and then gave his papal blessing to a throng of 60-thousand persons gathered in St. Peter's Square.

In Korea, it was a white Christmas...and American servicemen attended special ~~Christmas~~ services. Cardinal Spellman is in Korea, as he has been at Christmas for six of the past seven years. Other American troops in West Germany gave parties for needy children. Among those attending were four thousand refugees from behind the Iron Curtain.

In Cummunist Hungary today, Cardinal Mindszenty said mass in the United States Legation, where he has taken refuge. In Warsaw, the Catholic primate of Poland, Cardinal Wyszynski, was denied permission to broadcast a Christmas message. But he did speak to more than a thousand persons attending midnight mass. He spoke of the "terrible peace of unfree people" ...and promised a brighter day "when we shall be happy and rejoice."

The Chinese Communist news agency reports the celebration of Christmas by Protestant and Catholic congregations in Shanghai, with masses and special candlelight services. Similar services reportedly were held in Peiping.

~~Second Story.~~

Red China today announced that production of grain in 1957 ~~reached a new all-time high. It said total grain production~~ under the ~~five-year program...ending this year...exceeded the goal~~ set, despite serious floods in 1954 and 1956.

In Moscow today, the Soviet government sent diplomatic notes to all foreign embassies...with regard to the so-called "peace resolution" adopted by the Supreme Soviet. The resolution proposed a halt to nuclear tests as of January first, a nuclear-free zone in Germany, and a non-aggression pact between countries belonging to NATO and the Warsaw Pact. The notes contain the full text of this resolution. And Russia asks that it be sent...not only

(more)

58

to the foreign ministries of the governments represented in Moscow...but to their parliaments as well.

Prime Minister Ben Gurion said today, "Israel must secure defensive weapons, some of which are only available in West Germany." Ben Gurion's government has been under attack...by left-wing parties...for dealing with the Germans. The prime minister declared flatly today that the mission to purchase modern defensive arms in West Germany has not been cancelled. Israel has ~~a large currency reserve in West Germany, under its reparations agreement.~~

A colleague of mine has returned to this country from assignment in the Middle East, and I have asked him to describe a small historic piece of the geography of that part of the world...and how it typifies the history of the present. Here is Winston Burdett.

(~~Informatively, Burdett tape runs five minutes and six seconds.~~ ends on cue, "Now here again is Ed Murrow." I think, Ed, that mood of Burdett's piece---which is beautifully done---is such that you can follow tastefully with your ~~mm~~ nativity reporting story. I figure your story runs thirty-six lines, or two minutes and fifty seconds. Then give normal cue to Bryan---that you will be back in moment with Word for Today, etc. A disk will ~~then~~ be played, ending with Bryan returning to you on cue "Now here is Mr. Murrow with the Word for Today." Word runs thirty seconds. Bryan reads twenty-second closing in New York. The only real difference in tonight's show is that instead of the usual long opening commercial, Bryan's opening runs only fifteen seconds. Will have complete run-down to ~~give Gene and Electra before airtime.~~ No sweat. Now here is Word).

~~(more)~~

W. Burdett..... Holy Land Story.

15:06

In the heart of the city of Jerusalem there is a famous place called the Mandelbaum Gate. It is a twentieth-century monument; and, in the nine years since the Arab-Israeli war, it has acquired some of the fascination of a historic landmark. The Mandelbaum Gate is the only place in Jerusalem-- indeed, the only point along the entire 390-mile frontier between Israel and Jordan, where there is authorized movement and passage between the two countries. It is not really a gate at all-- just a ruined, open place among bombed-out buildings... a little no man's land about a hundred yards wide... where Israeli and Jordanian sentries face each other across a waste of barbed-wire and sandbagged walls, concrete dragon's teeth and snipers' barriers. I have been on both sides of the Gate, but I've never had permission to go through. On a normal day, there's very little traffic: a United Nations Jeep now and then, racing through on its way to the UN Truce Headquarters up on the hill; every so often a foreign diplomat, in his limousine; and, rarely, a foreign tourist, on foot. There are three or four soldiers on guard at each post, and a big Welcome to Israel sign in front of the Israeli sentry-box. The only real difference is that the road into Israel is wide-open; while on the Jordan side, cars and trucks have to weave carefully between half a dozen tank-traps.

Every two weeks, the no man's land between the two posts springs to life. That is when a truck convoy from Israel comes through to carry supplies and replacements to the Israeli police garrison that guards the Hebrew University and Hadassa Hospital on top of Mount Scopus, inside Jordan. While Jordanian officers look on, UN inspectors examine everything the Israelis bring with them, from gas tanks to wallets; every egg and every piece of soap is counted, and put down on a manifest. The inspection takes about three hours, and then the little convoy moves on with three or four UN Jeeps as escort, two or three trucks with supplies, and two big steel vans inside which

the Israeli policemen are locked, so they can see nothing during their short journey into Arab Jordan. The only opening in these vans is a narrow slit for the driver. The only thing he sees is the wheels of the UN Jeep ahead of him; and so the grotesque little convoy sets out, the two vans looking like some blindfold prehistoric animals, with big scaley backs, treading warily through the narrow streets of [redacted] Jerusalem, and then up a winding road into open countryside and across the bare [redacted] hills that fold around the city.

Once a year, the border precautions at Mandelbaum Gate are relaxed. It is across this same little no man's land that Christmas pilgrims pass from Israel to visit the holy places in Jordan... the Church of the Holy Sepulchre, Gethsemane, the Mount of Olives, Bethlehem. A new world awaits the pilgrims on the Arab side, the biblical world of [redacted] old [redacted] Jerusalem, a glittering host of domes and spires and battlements; looking like a picture-book city in the clear light that pours down on the Judean hills. The number [redacted] of pilgrims from year to year varies with the political temperature. Only a few hundred went through last year in the aftermath of the Suez crisis. This year, there were more than five thousand- the happiest Christmas in a long while; and if Mary had come to Jerusalem this year, once again she would have found the inns filled.

Christmas was observed [redacted] along another Arab-Israeli frontier. There were lighted Christmas trees and dancing around open fires at the camps of the United Nations troops in the Gaza Strip and the Sinai desert. There was also a Christmas present for the European troops in the U.N. Emergency Force Hindu soldiers of the Indian battalion took over patrol duties up and down the Gaza border, so that Danes and Swedes and Norwegians, Canadians, Brazilians and Colombians could celebrate the holiday. The UN troops have one of the loneliest jobs in the world, [redacted] keeping watch at their forty [redacted] posts along the Gaza demarcation line and down across the Sinai deser

to Sharm-el-Sheik at the mouth of the Gulf of Aquaba. Each post is three or four tents on the side of a desert hill; and a mobile patrol is on 24-hour duty up and down the desolate border. But the morale of the UN troops is high; and oddly enough, the most popular post is the loneliest one of all-- Sharm El Sheik-- perhaps because it has the sea beneath it, and a spectacular backdrop of red and yellow peaks and crags.

The man who commands the UN troops, Dag Hammarskjold, spent Christmas Eve in Gaza, visiting the Swedish, Colombian and Yugoslav battalions at their camps. Hammarskjold told the Danish troops: "We all feel near to peace while among you."

He had good reason to feel proud. The first experiment in an international force to keep the peace has been successful-- far more successful than most people believed possible at Christmas time a year ago.

And now here again is Ed Murrow.

XXXXX

This is one night of the year when a mere reporter, with an imperfect knowledge of the past and none of the future, may be permitted to remind himself and his listeners, be they many or few, of one of the world's greatest pieces of reporting - by St. Matthew and St. Mark. (They collaborated on the story.) They tell us, according to the King James' version of their report, that "when Jesus was born in Bethlehem of Judea, in the days of Herod the King: "Behold there came wise men from the east to Jerusalem, saying: 'Where is he that is born King of the Jews? For we have seen his star in the east and have come to worship him.'" St. Luke reported that when Mary brought forth her first son, she wrapped him in swaddling clothes and laid him in a manger, because there was no room for them in the inn. "And there were in the same country shepherds abiding in the field, keeping watch over their flock by night. And, lo, the angel of the Lord came upon them - and they were sore afraid. And the angel said unto them: "Fear not, for behold I bring you tidings of great joy, which shall be to all people. For unto you is born this day, in the City of David, the Saviour, which is Christ the Lord."

Note well that the first thing the angel said was, "Fear not." Meanwhile, Herod had dispatched his wise men to search diligently for the young child. And the star which they saw in the east went before them, till it came and stood over where the young child was. When they saw the star they rejoiced, with exceeding great joy. And when they were come into the house, they saw the young child with Mary, his mother. And they fell down and worshipped him. And when they had opened their treasures they presented unto him gifts - gold, frankincense and myrrh.

The shepherds had been promised by the angel that they would find a babe wrapped in swaddling clothes. And, suddenly, there was with the angel a multitude of the heavenly host, praising God and saying, "glory to God in the highest and on earth peace and good will toward men." And so the wise men and the shepherds found Mary and Joseph and the

and the babe lying in the manger.

St. Matthew and St. Luke were good reporters. And they said...they reported that the shepherds were sore afraid. The sights they saw and the circumstances must have impressed and shaken those shepherds more than modern shepherds were shaken by the announcement of the hydrogen bomb, or Sputniks or intercontinental missiles. And yet, those two good reporters agree that the first words of the angel were, "Fear not!" Their reporting has survived every effort to suppress it. And the angel's advice was never more timely.

Whenever we search for words that combine strength, beauty and hope, we are led back to that one book. It seems to me that we in this country are committed, in good company, to combat evil things. And you will find in that same book and in the same mood you will find these phrases: "Whom shall I fear? Of whom shall I be afraid?" It seems to me that these sentiments are appropriate on this evening.

Word for Today

It is written...in ~~the~~ Poor Richard's Almanack, by Benjamin Franklin...

"Let no pleasure tempt thee, no profit allure ~~them~~ thee, no ambition corrupt thee, no example sway thee, no persuasion move thee to do anything which thou knowest to be evil. So shalt thou live jollily, for a good conscience is a continual Christmas."

Goodnight and good luck!

~~End of script. Line count just about right.~~

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Wednesday, December 25, 1957
7:45 - 8:00 P. M.

MURROW: A colleague of mine has returned to this c untry from assignment in the Middle East and I have asked him to describe a small historic piece ofthe geography of that part of the world, and how it typifies the history of the Present. Here is Winst n Burdett.

BURDETT: In the heart of the city of Jerusalem, there is a famous place called the Mandelbaum Gate. It is a 20th century monument and in the 9 years since the Arab-Israeli war, it has acquired some of the fascination of a historic landmark. The Mandelbaum Gate is the only place in Jerusalem - indeed the only paint along the entire 390 mile frontier between Israel and Jordan where there is authorized movement and passage between the two countries. It is not really a gate at all, just a ruined open place among bombed out buildings, a little no-man's land about 100 yards wide, where Israeli and Jordanian sentries face each other across a waste of barbed wire and sandbagged walls, concrete dragons teeth and snipers barriers. I've been on both sides of the gate, but I've never had permission to go through. On a normal day, there is very little traffic. A United Nations jeep now and then racing through on its way to the UN truce headquarters up on the hill, every so often a foreign diplomat in his limousine and now and then a foreign tourist on foot. There are three or four soldiers on guard at each post and a big Welcome to Israel sign in front of the Israeli sentry box.

The only real difference is, that the road into Israel is wide open, while on the Jordan side, the cars and trucks have to weave carefully between half a dozen tank traps. Every two weeks, the no-man's land between the two posts springs to life - that

is when the truck convoy from Israel comes through to carry supplies and replacements to the Israeli police garrison that guards the Hebrew University and Hadassah Hospital on top of Mt. Skopus inside Jordan. While Jordanian officers look on, UN inspectors examine everything the Israeli's bring with them - from gas tanks to wallets - every egg and every piece of soap is counted and put down on a manifest. The inspection takes abuut 3 hours and then the little convoy moves on, 3 or 4 UN jeeps as escort, 2 or 3 trucks with supplies and 2 big steel vans inside which the Israeli policemen are locked, so they can see nothing during their short journey into Arab-Jordan. The only opening in these vans is a narrow slit for the driver, the only thing he sees is the wheels of the UN jeep ahead of him, and so the grotesque little convoy sets out - the two vans looking like some blindfolded prehistoric animals with big scaly backs threading warly through the narrow streets of Jerusalem and then up a winding road into open country side and across the bare hills that fold around the city.

Once a year, the border pre-cautions at Mandelbaum Gate are relaxed. It's across the same no-Man's land that Christmas pilgrims pass from Israel to visit the holy places in Jordan, the Church of the Holy Sepulchre, Gethsemane, the Mt. of Olives, Bethlehem. A new world awaits the pilgrims on the Arab side - the Biblical World of old Jerusalem, a glittering host of domes and spires and battlements, looking like a picture book city in the clear light that pours down on the JJudahian hills. The number of pilgrims from year to year varies with the political temperature. Only a few hundred went through last year in the aftermath of the Suez crisis, this year, there were more than 5,000 - the happiest Christmas in a long while, and if Mary had come to Jerusalem this year - once again, she would have found the inns filled.

Christmas was observed along another Arab-Israeli frontier, there were lighted Christmas trees and dancing around open fires at the camps of the United Nations troops in the Gaza strip in the Sinai desert. There was also a Christmas present for the European troops of the UN Emergency force. Hindu soldiers of the Indian battalion took over patrol duties up and down the Gaza border, so that Danes and Swedes and Norwegians, Canadians, Brazilians and Columbians could celebrate the holiday.

The UN troops have one of the lonliest jobs in the world, keeping watch at their 40 posts along the Gaza demarcation line and down across the Sinai desert to Sharm El Sheikh at the mouth of the Gulf of Aquaba. Each post is 3 or 4 tents on the side of a desert hill and a mobile patrol is on 24-hour duty up and down the desoltate border. But the morale of the UN troops is very high, and oddly enough, the most popular post is the lonliest one of all - Sharm El Sheikh - perhaps because it has the sea beneath it and a speculator back drop of red and yellow peaks and cracks.

The man who commands the UN troops - Dag Hammarskjold spent Christmas Eve in Gaza visiting the Swedish, Columbian and Yugoslav battalions at their camps. Hammarskjold told the Danish troops, "we all feel near to peace while among you." He had good reason to feel proud, the first experiment in an international force to keep the peace has been successful, far more successful than most people believed possible at Christmas time a year ago.

And, now here again is Ed. Murrow.

MURROW: This is one night of the year when a mere reporter ....

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

WEDNESDAY, DECEMBER 25, 1957
7:45 - 8:00 PM EST

This is the news:

President Eisenhower led the nation in a quiet observance of Christmas. The President and First Lady exchanged their personal gifts last night, according to their custom. And today they were joined at the White House by Major and Mrs. John Eisenhower and the four grandchildren. Again there was an exchange of presents, followed by a Christmas dinner notable for the 38-pound Maryland turkey and the trimmings.

Mr. Eisenhower plans to leave tomorrow or Friday for his Gettysburg farm. The White House indicates he may remain there until after New Year's, working on messages to be delivered to Congress when it reconvenes.

In London, Queen Elizabeth today delivered her annual Christmas message. She remarked on "the speed with which things are changing all around us." But it would be wrong, she said, to blame our difficulties on the new inventions. She said, "The trouble is caused by unthinking people who carelessly throw away ageless ideals as if they were old and outworn machinery. Today we need a special kind of courage...not the kind needed in battle...but a kind which makes us stand up for everything that we know is right." The queen noted that two former British colonies, Ghana and Malaya, had this year become self-governing states. And she called this "a wonderful tribute to the efforts of men of goodwill who work together as friends." The annual Christmas message was carried to the British people for the first time on television. Queen Elizabeth said she hoped the new medium would make the message "more personal and direct."

Prime Minister Nehru of India said today, "May this season of goodwill turn people's minds from war, violence and hatred to tolerance and peace." Nehru said this in appealing for funds to perpetuate the memory of Tagore, the

the famous Indian poet and philosopher. He was making the appeal on Christmas Day, he said, "because this is a day associated in millions of minds with peace and goodwill."

In Rome, Pope Pius prayed for world peace in three Christmas masses and then gave his papal blessing to a throng of 60-thousand persons gathered in St. Peter's Square.

In Korea, it was a white Christmas...and American servicemen attended special services. Cardinal Spellman is in Korea, as he has been at Christmas for six of the past seven years. Other American troops in West Germany gave parties for needy children. Among those attending were four thousand refugees from behind the Iron Curtain.

In Communist Hungary today, Cardinal Mindszenty said mass in the United States Legation, where he has taken refuge. In Warsaw, the Catholic primate of Poland, Cardinal Wyszynski, was denied permission to broadcast a Christmas message. But he did speak to more than a thousand persons attending midnight mass. He spoke of the "terrible peace of unfree people"...and promised a brighter day "when we shall be happy and rejoice."

The Chinese Communist news agency reports the celebration of Christmas by Protestant and Catholic congregations in Shanghai, with masses and special candlelight services. Similar services reportedly were held in Peiping.

In Moscow today, the Soviet government sent diplomatic notes to all foreign embassies...with regard to the so-called "peace resolution" adopted by the Supreme Soviet. The resolution proposed a halt to nuclear tests as of January first, a nuclear-free zone in Germany, and a non-aggression pact between countries belonging to NATO and the Warsaw Pact. The notes contain the full text of this resolution. And Russia asks that it be sent...not only to the foreign ministries of the governments represented in Moscow...but to their parliaments as well.

Prime Minister Ben Gurion said today, "Israel must secure defensive weapons, some of which are only available in West Germany." Ben Gurion's government has been under attack...by left-wing parties...for dealing with the Germans. The prime minister declared flatly today that the mission to purchase modern defensive arms in West Germany has not been cancelled.

A colleague of mine has returned to this country from assignment in the Middle East, and I have asked him to describe a small historic piece of the geography of that part of the world...and how it typifies the history of the present. Here is Winston Burdett.

BURDETT: In the heart of the city of Jerusalem, there is a famous place called the Mandelbaum Gate. It is a 20th century monument and in the nine years since the Arab-Israeli war, it has acquired some of the fascination of a historic landmark. The Mandelbaum Gate is the only place in Jerusalem - indeed the only place along the entire 390 mile frontier between Israel and Jordan where there is authorized movement and passage between the two countries. It is not really a gate at all, just a ruined open place among bombed out buildings, a little no-man's land about 100 yards wide, where Israeli and Jordanian sentries face each other across a waste of barbed wire and sandbagged walls, concrete dragons teeth and snipers barriers. I've been on both sides of the gate, but I've never had permission to go through. On a normal day, there is very little traffic. A United Nations jeep now and then racing through on its way to the UN truce headquarters up on the hill, every so often a foreign diplomat in his limousine and now and then a foreign tourist on foot. There are three or four soldiers on guard at each post and a big Welcome to Israel sign in front of the Israeli sentry box.

The only real difference is, that the road into Israel is wide open, while on the Jordan side, the cars and trucks have to weave carefully between half a dozen tank traps. Every two weeks, the no-man's land between the two posts

springs to life - that is when the truck convoy from Israel comes through to carry supplies and replacements to the Israeli police garrison that guards the Hebrew University and Hadassah Hospital on top of Mt. Scopus inside Jordan. While Jordanian officers look on, UN inspectors examine everything the Israelis bring with them - from gas tanks to wallets - every egg and every piece of soap is counted and put down on a manifest. The inspection takes about 3 hours and then the little convoy moves on, 3 or 4 UN jeeps as escort, 2 or 3 trucks with supplies and 2 big steel vans inside which the Israeli policemen are locked, so they can see nothing during their short journey into Arab-Jordan. The only opening in these vans is a narrow slit for the driver, the only thing he sees is the wheels of the UN jeep ahead of him, and so the grotesque little convoy sets out - the two vans looking like some blindfolded prehistoric animals with big scaly backs threading warily through the narrow streets of Jerusalem and then up a winding road into open country side and across the bare hills that fold around the city.

Once a year, the border precautions at Mandelbaum Gate are relaxed. It's across the same no-Man's land that Christmas pilgrims pass from Israel to visit the holy places in Jordan, the Church of the Holy Sepulchre, Gethsemane, the Mt. of Okives, Bethlehem. A new world awaits the pilgrims on the Arab side - the Biblical World of old Jerusalem, a glittering host of domes and spires and battlements, looking like a picture book city in the clear light that pours down on the Judahian hills. The number of pilgrims from year to year varies with the political temperature. Only a few hundred went through last year in the aftermath of the Suez crisis; this year, there were more than 5,000 - the happiest Christmas in a long while, and if Mary had come to Jerusalem this year - once again, she would have found the inns filled.

Christmas was observed along another Arab-Israeli frontier, there were lighted Christmas trees and dancing around open fires at the camps of the

United Nations troops in the Gaza strip in the Sinai desert. There was also a Christmas present for the European troops of the UN Emergency force. Hindu soldiers of the Indian battalion took over patrol duties up and down the Gaza border, so that Danes and Swedes and Norwegians, Canadians, Brazilians and Columbians could celebrate the holiday.

The UN troops have one of the loneliest jobs in the world, keeping watch at their 40 posts along the Gaza demarcation line and down across the Siani desert to Sharm El Sheikh at the mouth of the Gulf of Aquaba. Each post is 3 or 4 tents on the side of a desert hill and a mobile patrol is on 24-hour duty up and down the desolate border. But the morale of the UN troops is very high, and oddly enough, the most popular post is the loneliest one of all - Sharm El Sheikh - perhaps because it has the sea beneath it and a spectacular backdrop of red and yellow peaks and cracks.

The man who commands the UN troops - Dag Hammarskjold spent Christmas Eve in Gaza visiting the Swedish, Columbian and Yugoslav battalions at their camps. Hammarskjold told the Danish troops, "We all feel near to peace while among you." He had good reason to feel proud, the first experiment in an international force to keep the peace has been successful, far more successful than most people believed possible at Christmas time a year ago.

And now here again is Ed Murrow.

MURROW: This is one night of the year when a mere reporter, with an imperfect knowledge of the past and none of the future, may be permitted to remind himself and his listeners, be they many or few, of one of the world's greatest pieces of reporting - by St. Matthew and St. Mark. (They collaborated on the story.) They tell us, according to the King James' version of their report, that "when Jesus was born in Bethlehem of Judea, in the days of Herod the King: "Behold there came wise men from the east to Jerusalem, saying: 'Where is he that is born King of the Jews? For we have seen his star in the east and have

have come to worship him.'" St. Luke reported that when Mary brought forth her first son, she wrapped him in swaddling clothes and laid him in a manger, because there was no room for them in the inn. "And there were in the same country shepherds abiding in the field, keeping watch over their flock by night. And, lo, the angel of the Lord came upon them - and they were sore afraid. And the angel said unto them: "Fear not, for behold I bring you tidings of great joy, which shall be to all people. Whenever we search for words that combine strength, beauty, and hope, we are led back to that one book. It seems to me that we in this country are

committed in good company, to combat evil things. And you will find in that same book and in the same mood you will find these phrases: "Whom shall I fear? Of whom shall I be afraid?" It seems to me that these sentiments are appropriate on this evening.

This is Ed Murrow. I'll be back in a moment with the Word for Today. But first, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: It is written...in Poor Richard's Almanackby Benjamin Franklin..."Let no pleasure tempt thee, no profit allure thee, no ambition corrupt thee, no example sway thee,no persuasion move thee to do anything which thou knowest to be evil. So shalt thou live jollily, for a good conscience is a continual Christmas."

Goodnight and good luck!

Edward R. Murrow Thurs., Dec. 26, 1957

This is the news:

Secretary of State Dulles said today that the United States is "working" on a reply to the letter Soviet Premier Bulganin sent President Eisenhower shortly before the NATO conference. Bulganin proposed a new high-level East-West meeting, a non-aggression pact between the NATO and Warsaw Treaty countries, and a halt to nuclear testing as of January first. Bulganin sent similar messages to Britain and France. And when reporters asked Mr. Dulles when the American reply might be expected, he said it was something that would have to be taken up with our NATO allies. Dulles made the

statement as he came out of a one-hour meeting with the President. He said it had been "a sort of end of the year chat"...that the State of the Union message to be delivered to Congress in two weeks also was discussed.

News Secretary Hagerty announced today that President Eisenhower will leave Washington tomorrow...to spend about a week at his Gettysburg farm. He said the President while in Gettysburg will work on the State of the Union message, as well as on other messages which must be sent up to Capitol Hill shortly after Congress reconvenes. He described Mr. Eisenhower as "feeling fine", after getting some rest following the NATO summit talks.

In Moscow today, the party newspaper Pravda accused President Eisenhower and Secretary of State Dulles of "delivering a Cold War sermon", in their report Monday night on the NATO conference. Pravda said, "One seeks in vain for constructive, realistic proposals to back up their words of peace." The paper repeated what Russian leaders had said earlier...that a foreign ministers meeting "would, in no way, be conducive to disarmament." And it again attacked "the notorious position-of-strength policy of the United States."

Anup Singh

The so-called Afro-Asian solidarity conference got underway in Cairo today -- about five hundred delegates from thirty-seven nations. They do not officially represent their governments, and the whole purpose of the conference is to prepare a series of anti-Western resolutions, denouncing colonialism, imperialism and the testing of nuclear weapons. For a first-hand report on what happened today we switch now to Frank Kearns in Cairo.

(Tape runs 2 mins.
Ends on cue: "---to Ed Murrow in N.Y.")

United Nations Secretary General Hammarskjold conferred in Cairo today with Egyptian Foreign Minister Fawzi...and was scheduled to have dinner tonight with President Nasser. The 3 percent surcharge, voted by the General Assembly, to meet the cost of clearing the Suez Canal, may have been discussed...along with other matters, which have not been announced.

President Bourguiba of Tunisia today demanded that France withdraw its remaining troops from the country by March 20. France...which granted independence to Tunisia almost two years ago...has asked that the evacuation of certain bases be delayed for six months, and that a French guard be allowed to stay behind for the protection of air bases. Bourguiba calls the request

unacceptable...because, he says, "it touches upon the principle of independence."

In Paris, the leaders of France's major political parties (except those of the extreme Right and Left) today approved changes in the constitution...aimed at curing the instability of French governments. One proposal would change the procedure followed for conducting votes of confidence in the National Assembly, making it more difficult to overthrow a premier. Another proposal would make it easier for the president of the republic to dissolve parliament...either at the request of the premier, or on his own initiative. To become effective, these proposals must be approved by a two-thirds majority vote in the Assembly. It could also be done through a national referendum.

The American Association for the Advancement of Science met today in Indianapolis. Its president, Dr. Paul Sears, urged an exchange of basic research ideas between Russia and the countries of the West. He said, "There is a great deal to be gained and nothing to be lost from such an exchange." He added that he was not referring to secret military data, or installations. "I'm talking," he said, "about experiments in basic research---in theoretical science."

Word for Today

The Russian offer to negotiate poses a dilemma. For example, do we sit down with them at a conference table now...or do we wait until we have come nearer to closing the gap in long-range missile development? The situation recalls the observation once made by Ralph Waldo Emerson. "This time like all other times," he said, "is a very good one---if we but knew what to do with it."

Goodnight and good luck!

murrow-schorr dec.26,1957

DAN SCHORR - MOSCOW

Gaby - ask Ediphone to tell you how Mr. Murrow introduced Dan. It was just a couple of sentences. EB.

MURROW: Do you think the Russians are serious about negotiating disarmament with Nato--either jointly or separately?

SCHORR: Yes, Ed, I think they are. Their immediate objective is to head off West European missile bases, which would offset their lead in intercontinental missiles. For this purpose, I think they would talk to Nato countries--preferably one at a time because that makes it easier to play one off against the other.

But, apart from that, I think they are anxious to get some agreement that would reduce the arms burden.

MURROW: Since they now have--or claim to have-- superirity over us in missiles, why are they so ~~anxious~~ eager for an agreement?

SCHORR: Because, Khrushchev is ~~under~~ caught in an economic squeeze. After the Hungarian rebellion, the Kremlin has to increase its aid to Hungary and the other satellites. Big commitments have also been made to underdeveloped countries like Syria and Egypt. At home, for domestic reasons, Khrushchev has had to promise a better life for the consumer. ~~xxxxxxxxxxx~~ Crops this year have not been too good, and some bugs have developed in the industrial reorganization program. Khrushchev badly needs to release some resources, and the way to do it

is by reducing the crushing burden of arms.

MURROW: Is that, you think, why Khrushchev has announced a further cut in armed forces manpower?

SCHORR: Yes, I think so. Khrushchev is trying to make ends meet in much the way that the Eisenhower administration did. We talked of a "bigger bang for a buck." Khrushchev, in effect, is talking--if I can use a phrase of Eric Sevareid--of a "bigger rumble for a ruble." Oddly, Khrushchev linked the manpower cut to Nato's promise not to use force--a promise Nato has made many times before. I think the manpower cut had already been decided, and Khrushchev simply took this as a convenient pretext. But it is significant that Khrushchev's reaction to the Nato decisions has been much milder than was expected. And I think this reflects his need for some kind of accommodation.

MURROW: Because of domestic economic troubles?

SCHORR: Yes, but economic troubles in Russia can't be considered in a vacuum. The farm and industrial programs, which are now having troubke--not disastrous trouble, mind you, but trouble--these programs are linked personally to Khrushchev. So is the policy of coexistence and disarmament. If his policies fail, Khrushchev will have trouble

holding onto power. The two purges this year--the Malenkov-Molotov purge, which he engineered, and the ouster of Marshal Zhukov, which I think was engineered in spite of Khrushchev--have narrowed the base of his support. He needs to show some success in his policy or the more orthodox doctrinaire Communists, like Suslov, who laannched the attack on Zhukov, may be at him.

MURROW: Well, let's get backx to disarmament. WhatThe Soviets oppose a foreign ministers' conference. What kind of parley to they want?

SCHORR: They're talking of a worldwide conference, but that's mainly propaganda--intended to appeal to China, India and other uncommitted countries. What Khrushchev really wants is a face to face meeting with President Eisenhower. He's made clear that he thinks in terms of power politics--and that the settlement must be made by the two countries with the real power. You'll notice that, before the Supreme Soviet, Khrushchev left it to Gromyko to talk of a worldwide meeting, but when he himself spoke , he talked about a meeting with the U.S.

MURROW: And does he think there would really be something to talk about?

SCHORR: I think that now he does. The Soviet press has been paying some attention to George Kennan's proposal for a neutralized strip in Central Europe, and apparently the Russians are persuading themselves--perhaps optimistically--that this idea is gaining support in the United States.

MURROW: Well, then, can we count on the Russians to relax a little?

SCHORR: No, not at all. While probing for disarmament and talking peace, the Russians are keeping their guard up--and, in fact, raising their guard. I'll give you one example--not disclosed before.

Recently, Soviet reservists--that is, men who have served their 3-year conscription period--were called back to induction centers and given new pre-mobilization instructions. They were told that in case mobilization is ordered, they must report to designated places at 3 A.M. the next day. If they can't reach those places--presumably because of bombing--alternate assembly places are listed. They must bring food with them for a 48-hour journey.

The reservists were told, verbally, not to fly into a panic over these instructions, but to take them seriously and not to tell anyone about them--not even their families. The instructions were summarized in a page pasted into their reservists' booklets. Now this pre-mobilization plan is not new. It was the plan in effect under Stalin and discontinued after his death in 1953. Its significant that it has now been revived.

I dom not know if this was connected with the Turkish-Syrian war scare, or whether it has a longer-range significance. But it has spread ~~xxxx~~ nervousness among the millions of reservists who felt that mobilization plans were being stepped up. So, you see, Ed, Russia is certainly not relaxing.

George Bryan

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Thursday, December 26, 1957
7:45 - 8:00 P. M.

MURROW: For a first hand report on what happened today, we switch now to Frank Kearns in Cairo.

KEARNS: Egypt's Parliament building is dark and silent tonight, but the conference corridors and chambers are still ringing with cries against the West in general against the United States in particular. Delegates to the Afroasian conference here just wound up their first days work a short time ago and everyone of the speakers has blasted the West. India's Dr. Enuteing?, one of the powers behind the conference described the Eisenhower Doctrine as a suttle sinister type of liberal imperalism. He also called for evacuation of all foreign troops from all African and Asian countries plus the re-unification of Korea and Vietnam.

The Indonesian delegation's leader lambasted colonialism. The Sudanese speaker called for an end to racial discrimination. He named and submitted the special report on imperialism, Egypt's so-called Red major Comrade Murray Ben accused America of trying to dominate the Middle-East. He too, attacked the Eisenhower Doctrine, charging that it is as he put it, "a political military alliance which gives insignificant aid in return for submission to America. The Algerian spokesman beerted American financial aid to France and military aid which he says, "was being used Against Algerian nationalists." This Algerian, incidentally, received the loudest applause of any speaker today. The man who got the 2nd warmest welcome was the leader of Russia's big delegation - 17 members and one of the highlights of tomorrow's plenary will be a special economic report by Soviet Russia. Another speaker tomorrow will be a speech by the widow of a Japanese fisherman killed in the Bikini H-bomb fall out. Plenty delegates are blasting nuclear weapons, guided missiles and missile bases. But, as one observer pointed out tonight, there is no criticism of Russian bases, text

or nuclear tests.

Now, back to Ed. Murrow in New York.

E. R. MURROW: United Nations Secretary General Hammarskjold conferred in Cairo today with Egyptian Foreign Minister Fawzi and was scheduled to have dinner tonight with President Nasser.

Our Moscow correspondent Daniel Schorr is home for a bit. First of all, welcome Dan and thanks for everything you have supplied this program over the last few years.

First question. Do you think the Russians are serious about negotiating disarmament with NATO either jointly or separately?

SCHORR: Yes Ed., I think they are. I think their immediate objective is to head off West European missile bases which would off-set their lead in inter-continental missiles and for this purpose I think they would talk to NATO countries, preferably one at a time, because that makes it easier to play one off against the other. But apart from theirfear of West European missile bases, I think they are just anxious to get some agreement that would reduce their arms burden.

E. R. MURROW: Well Dan., since they now have or at least they claim to have superiority over us in missiles, why are they so eager for an agreement?

SCHORR: Because, I think Khrushchev is cought in an economic squeeze. After the Hungarian rebellion the Kremlin had to increase aid to Hungary and to the other satellites and big commitments have also been made to under developed countries like Syria and Egypt. At home, for domestic reasons, Khrushchev has had to promise a better life for the consumer. Well, crops this year haven't been to good and some bugs have developed in the indurstrial reorganisation program. Khrushchev badly needs to release some resources and the way to do it is to reduce the crushing arms burden.

E. R. MURROW: Well Dan., do you think that's why Khrushchev has announced a further cut in armed forces manpower in Russia?

SCHORR: Yes Ed., I do. I think Khrushchev is trying to make ends meet in much the same way that the Eisenhower Administration did. You remember we talked of a bigger bang for buck?

E. R. MURROW: Yes I remember that.

SCHORR: Well, Khrushchev in effect is talking and I am borrowing a phrase now from Eric Sevareid, he's talking of a bigger rumble for a ruble. Oddly enough, Khrushchev linked to the manpower cut to NATO's promise not to use force. A promise that NATO has made many times before. Actually, I think the manpower cut had already been decided upon and Khrushchev simply took it as a convenient pretext. But it's significant that Khrushchev's reaction to the NATO decisions has been much milder than we expected, and I think this reflects his need for some kind of accomodation.

E. R. MURROW: Because of his domestic economic troubles?

SCHORR: Yes sir. Ya., but economic troubles in Russia can't be considered just in a vacuum by themselves. The farm and the industrial programs which are now in trouble - I mean not disastrous trouble, but trouble, these programs are linked personally to Khrushchev. So is the policy of co-existance and disarmament. If his policies fail, Khrushchev will have trouble holding on to power. The two purges this year, the Malenkov-Molotov purge - which he engineered and the ouster of Marshal Zhukov - which I think was engineered in spite of Khrushchev, these have narrowed the base of his support. He needs to show some success in his policy or the more orthodox doctrinarire Communist like Suslov, who launched the attack on Zhukov, they'll be at him.

E. R. MURROW: Well Dan., let's get back to disarmament. Well, the Russians oppose a Foreign Ministers conference, what kind of parley do they want if any?

SCHORR: Well, let me say first, I think they oppose a Foreign Ministers conference because they have no faith in the kind of conference that has been proposed, especially since Secretary Dulles has called it a procedural conference. They are talking now of some sort of world wide confdrence, but that's mainly propoganda, intended to appeal to China and to India and to the other un-commited countries. What Khrushchev really wants is a face to face meeting with President Eisenhower. He's made clear that he thinks in terms of power politics and a settlement must be made by the two cuuntries with the power. You'll ntoice, Ed., that before the Supreme Svoiet session, Khrushchev left it to Foreign Minister Gromyko to talk of that world wide meeting, but when he, Khrushchev spoke, he talked about a meeting with the United States.

E. R. MURROW: Well Dan., can we count on the Russians to relax a little now?

SCHORR: No. If I have given that impression I apologize I think that while they are probing for disarmament, while they are talking peace, the Russians are keeping up their guard and in fact - raising their guard. Let me give you one example, something I think hasen't been disclosed before. Recently, Soviet Reservists - that's the men who have served their 3-year conscription were called back and given new pre-mobilization instructions. They were told that in case mobilization is ordered, they must report to designated places at three o-clock in the morning of the next day, if they can't reach those phaces, presumbably because of bombing, alternate assembly places are listed. They must bring food with them for a 48-hour journey. They are told verbally not to fly into a panic over these instructions, but to take them seriously and not to tell anyone about them not even their families. Then, these instructions were summerized in a page pasted into the Reservists booklets. Now, this plan isn't new, it was a pre-mobilization plan in effect under Stalin discontinued after his death

in '53. What is significant is that it is now been revised. I don't know If this is connected with the Turkish-Syrian war scare or what, but it has spread nervousness among the millions of Reservists who felt that mobilizatio plans were being stepped up. So you see Ed., Russia is not relaxing.

E. R. MURROW: Well it's certainly clear from what you have just reported Dan., that they are not relaxing and as you said, that is information that has not heretofore been available and as you say, you don't place any specific interpretation upon it, is that right?

SCHORR: That's right.

E. R. MURROW: Thank you very much Daniel Schorr from Moscow.

This is Ed., Murrow., I'll be back in a moment with the word for today.

Now, here is George Bryan.

Ed. Trans. N. M.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

THURSDAY, DECEMBER 26, 1957
7:45 - 8:00 PM EST

This is the news:

Secretary of State Dulles said today that the United States is "working" on a reply to the letter Soviet Premier Bulganin sent President Eisenhower shortly before the NATO conference. Bulganin proposed a new high-level East-West meeting, a non-aggression pact between the NATO and Warsaw Treaty countries, and a halt to nuclear testing as of January first. Bulganin sent similar messages to Britain and France. And when reporters asked Mr. Dulles when the American reply might be expected, he said it was something that would have to be taken up with our NATO allies. Dulles made the statement as he came out of a one-hour meeting with the President. He said it had been "a sort of end of the year chat"...that the State of the Union message to be delivered to Congress in two weeks also was discussed.

News Secretary Hagerty announced today that President Eisenhower will leave Washington tomorrow...to spend about a week at his Gettysburg farm. He said the President while in Gettysburg will work on the State of the Union message, as well as on other messages which must be sent up to Capitol Hill shortly after Congress reconvenes. He described Mr. Eisenhower as "feeling fine," after getting some rest following the NATO summit talks.

In Moscow today, the party newspaper Pravda accused President Eisenhower and Secretary of State Dulles of "delivering a Cold War sermon," in their report Monday night on the NATO conference. Pravda said, "One seeks in vain for constructive, realistic proposals to back up their words of peace." The paper repeated what Russian leaders had said earlier...that a foreign ministers meeting "would, in no way, be conducive to disarmament." And it again attacked "the notorious position-of-strength policy of the United States."

The so-called Afro-Asian solidarity conference got underway in Cairo

today - about five hundred delegates from thirty-seven nations. They do not officially represent their governments, and the whole purpose of the conference is to prepare a series of anti-Western resolutions, denouncing colonialism, imperialism and the testing of nuclear weapons. For a first-hand report on what happened today we switch now to Frank Kearns in Cairo.

KEARNS: Egypt's Parliament building is dark and silent tonight, but the conference corridors and chambers are still ringing with cries against the West in general against the United States in particular. Delegates to the Afro-Asian conference here just wound up their first day's work a short time ago and everyone of the speakers has blasted the West. India's Dr. Anup Singh one of the powers behind the conference described the Eisenhower Doctrine as a subtle sinister type of liberal imperialism. He also called for evacuation of all foreign troops from all African and Asian countries plus the re-unification of Korea and Vietnam.

The Indonesian delegation's leader lambasted colonialism. The Sudanese speaker called for an end to racial discrimination. He named and submitted the special report on imperialism, Egypt's so-called Red major Comrade Murray Ben accused America of trying to dominate the Middle-East. He too, attacked the Eisenhower Doctrine, charging that it is as he put it, "a political military alliance which gives insignificant aid in return for submission to America. The Algerian spokesman decried American financial aid to France and military aid which he says, "was being used against Algerian nationalists." This Algerian, incidentally, received the loudest applause of any speaker today. The man who got the 2nd warmest wlecome was the leader of Russia's big delegation - 17 members and one of the highlights of tomorrow's plenary will be a special economic report by Soviet Russia. Another speaker tomorrow will be a speech by the widow of a Japanese fisherman killed in the Bikini H-Bomb fallout. Plenty of delegates are blasting nuclear weapons, guided missiles and

missile bases. But, as one observer pointed out tonight, there is no criticism of Russian bases or nuclear tests.

Now, back to Ed Murrow in New York.

MURROW: United Nations Secretary General Hammarskjold conferred in Cairo today with Egyptian Foreign Minister Fawzi and was scheduled to have dinner tonight with President Nasser. The three percent surcharge voted by the General Assembly to meet the cost of clearing the Suez Canal may have been discussed...along with other matters which have not been announced.

President Bourguiba of Tunisia today demanded that France withdraw its remaining troops from the country by March 20th. France...which granted independence to Tunisia almost two years ago...has asked that the evacuation of certain bases be delayed for six months, and that a French guard be allowed to stay behind for the protection of air bases. Bourguiba calls the request unacceptable...because, he says, "It touches upon the principle of independence".

The American Association for the Advancement of Science met today in Indianapolis. Its President, Dr. Paul Sears, urged an exchange of basic research ideas between Russia and the countries of the West. He said, "There is a great deal to be gained and nothing to be lost from such an exchange." He added that he was not referring to secret military data, or installations. "I'm talking," he said, "about experiments in basic research---in theoretical science."

Our Moscow correspondent Daniel Schorr is home for a bit. First of all, welcome Dan and thanks for everything you have supplied this program over the last few years.

First question. Do you think the Russians are serious about negotiating disarmament with NATO either jointly or separately?

SCHORR: Yes Ed, I think they are. I think their immediate objective is to head off West European missile bases which would offset their lead in intercontinental missiles and for this purpose I think they would talk to NATO counties preferably one at a time, because that makes it easier to play one off against the other. But apart for their fear of West European missile bases, I think they are just anxious to get some agreement that would reduce their arms burden.

MURROW: Well, Dan, since they now have or at least they claim to have superiority over us in missiles, why are they so eager for an agreement?

SCHORR: Because, I think Khrushchev is caught in an eocnomic squeeze. After the Hungarian rebellion the Kremlin had to increase aid to Hungary and to the other satellites and big commitments have also been made to underdeveloped countries like Syria and Egypt. At home, for domestic reasons, Khrushchev has had to promise a better life for the consumer. Well, crops this year haven't been too good and some bugs have developed in the industrial reorganization program. Khrushchev badly needs to relaase some resources and the way to do it is to reduce the crushing arms burden.

MURROW: Well, Dan, do you think that's why Khrushchev has announced a further

cut in armed forces manpower in Russia?

SCHORR: Yes Ed, I do. I think Khrushchev is trying to make ends meet in much the same way that the Eisenhower Administration did. You remember we talked of a bigger bang for a buck?

MURROW: Yes, I remember that.

SCHORR: Well, Khrushchev in effectis talking and I am borrowing a phrase now from Eric Sevareid, he's talking of a bigger rumble for a ruble. Oddly enough, Khrushchev linked to the manpower cut to NATO's promise not to use force. A promise that NATO has made many times before. Actually, I think the manpower cut had already been decided uponand Khrushchev simply took it as a convenient pretext. But it's significant that Khrushchev's reaction to the NATO decisions has been much milder than we expected, and I think this reflects his need for some kind of accommodation.

MURROW: Because of his domestic economic troubles?

SCHORR: Yes sir. Ya, but economic troubles in Russia can't be considered just an a vacuum by themselves. The farm and the industrial programs which are now in trouble - I mean not disastrous trouble, but trouble, these programs are linked personally to Khrushchev. So is the policy of co-existence and disarmament. If his policies fail, Khrushchev will have trouble holding on to power. The two purges this year, the Malenkov-Molotov purge - which he engineered and the ouster of Marshal Zhukov - which I think was engineered in spite of Khrushchev, these have narrowed the base of his support. He needs to show some success in his policy or the more orthodox doctrinaire Communists like Suslov, who launched the attack on Zhukov, they'll be at him.

MURROW: Well Dan, let's get back to disarmament. Well, the Russians oppose a Fpreign Ministers conference, what kind of parley do they want if any?

SCHORR: Well, let me say first, I think they oppose a Foreign Ministers conference because they have no faith in the kind of conference that has been

proposed, especially since Secretary Dulles has called it a procedural conference. They are talking now of some sort of world wide conference, but that's mainly propoganda, intended to appeal to China and to India and to the other uncommitted countries. What Khrushchev really wants is a face to face meeting with President Eisenhower. He's made clear that he thinks in terms of power politics and a settlement must be made by the two countries with the power. You'll notice Ed, that before the Supreme Soviet session, Khrushchev left it to Foreign Minister Gromyko to talk of that world wide meeting, but when he, Khrushchev spoke, he talked about a meeting with the United States.

MURROW: Well Dan, can we count on the Russians to relax a little now?

SCHORR: No. If I have given that impression I apologize. I think that while they are probing for disarmament, while they are talking peace, the Russians are keeping up their guard and in fact - raising their guard. Let me give you one example, something I think hasn't been disclosed before. Recently, Soviet Reservists - that's the men who have served their three year conscription were called back and given new pre-mobilization instructions. They were told that in case mobilization is ordered, they must report to designated places at three o'clock in the morning of the next day, if they can't reach those places, presumably because of bombing, alternate assembly paaces are listed. They must bring food with them for a 48-hour journey. They are told verbally not to fly into a panic over these instructions, but to take them seriously and not to tell anyone about them not even their families. Then, these instructions wer summarized in a page pasted into the Reservists booklets. Now, this plan isn't new; it was a premobilization plan in effect under Stalin discontinued after his death in '53. What is significant is that it hasnow been revised. I don't know if this is connected with the Turkish-Syrian war scare or what, but it has spread nervousness among the millinns of Reservists who felt that mobilization plans were being stepped up. So you see Ed, Russia is not relaxing.

MURROW: Well it's certainly clear from what you have just reported Dan, that they are not relaxing and as you said, that is information that has not heretofore been available and as you say, you don't place any specific interpretation upon it, is that right?

SCHORR: That's right.

MURROW: Thank you very much Daniel Schorr from Moscow.

This is Ed Murrow. I'll be back in a moment with the Word for Today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The Russian offer to negotiate poses a dilemma. For example, do we sit down with them at a conference table now...or do we wait until we have come nearer to closing the gap in long-range missile development? The situation recalls the observation once made by Ralph Waldo Emerson. "This time like all other times," he said, "is a very good one---if we but know what to do with it."

Goodnight and good luck!

Edward R. Murrow Fri., Dec. 27, 1957

This is the news:

Democratic Senator Chavez of New Mexico predicted today that a 40-billion-dollar defense budget will get rough treatment in Congress "so long as the President proposes a huge give-away in the form of foreign aid." Chavez is chairman of the Senate subcommittee on military appropriations. He said increased military spending alone "is not the answer to today's needs."

The Wall Street Journal reported today that President Eisenhower plans to ask Congress for a special 500-million-dollar fund, which he could use at his discretion to exploit any break-through in the missile-satellite field. News Secretary Hagerty refused this afternoon to confirm or deny the report. He told reporters, "All I can say is that the defense side of the budget has not been determined." He added, "I think it will be shortly."

Hagerty talked to correspondents in Gettysburg...where President Eisenhower has gone to spend six or seven days, resting and working on the messages to be delivered to Congress in the next few weeks. Hagerty said he is "quite sure" the President will not reply this week-end to the letter received from Soviet Premier Bulganin before the NATO summit conference. The White House said yesterday that Mr. Eisenhower is "working on a reply."

Bulganin proposed...among other things...the creation of a de-nuclearized zone in Central Europe. Under this proposal, Russia, Britain and the United States would agree not to stock nuclear weapons in either East or West Germany, Czechoslovakia or Poland. The Associated Press says that American officials in Washington are giving this part of the Bulganin letter "intensive study"....that the plan is regarded as unacceptable in its present form, but that it is an idea which may be pursued later as a means of reducing tension.

In his letter, Bulganin also proposed a new high-level East-West meeting, a non-aggression pact between the NATO and Warsaw Treaty countries, and a halt to nuclear testing as of January first. Washington sources report

→

a difference of opinion between Secretary of State Dulles and Harold Stassen on how to respond to Russia's disarmament proposals. (Stassen is President Eisenhower's special adviser on disarmament). Stassen reportedly is urging the Administration to follow up the Soviet bid by making new proposals of its own. And Dulles is said to be against taking such a step, [redacted] on grounds that there is little likelihood of [redacted] success at this time. James Reston of the New York Times says that Mr. Stassen "apparently is determined to force the question to a debate in the National Security Council." And that he will not resign...voluntarily... until the issue has been resolved.

Moscow Radio said today that the NATO proposal for a foreign ministers meeting on disarmament is a hopeful sign of good relations between Russia and the West. The broadcast [redacted] did not say that Russia would agree to such a conference---Soviet Foreign Minister Gromyko already has turned down the proposal. And only yesterday, [redacted] Pravda said a foreign ministers meeting would only be used by the West [redacted] "to make more anti-Soviet accusations."

Yugoslavia today publicly supported Russia's proposal for an East-West summit conference.

And in Washington, the State Department announced that the United States has signed an agreement with Yugoslavia...whereby Yugoslavia will receive an additional 7-million dollars" worth of surplus cotton and wheat. This arrangement is a supplement to the 1957 economic aid agreement.

In Cairo today, the so-called Afro-Asian solidarity conference heard an offer of economic aid from Russia. A Russian spokesman ~~told the~~ said the 37 ~~nations assembled~~ that Moscow "stands ready" to let the have money, either in the form of loans or outright grants, with no strings attached. He qualified the offer, saying that Russia would grant this aid "according to its economic capabilities."

The State Department today confirmed reports that Indonesia had tried to buy military equipment from the United States. The department said the request was made informally "about six months ago."...and that no decision had been reached. It conceded that it had received reports that Indonesia might seek to make weapon purchases, instead, from the Soviet bloc.

The United States Circuit Court of Appeals in New Orleans today reversed a lower court ruling that Dallas, Texas, must integrate its schools next month. The Court of Appeals said [redacted] the Dallas school system "should be accorded a reasonable further opportunity to meet their primary responsibility of integrating."

MURROW: Shortly before Dan Schorr returned from Moscow for the annual Years of Crisis program, I ~~suggested~~ told him on the telephone that Americans were puzzled and concerned about the army of scientists and engineers that Russia had trained...and I suggested to him that, with all the worry and speculation, it might be valuable to have a first-hand look at how the Soviets train their scientists. He is here with me tonight to give his report.

Dan, first off, how do you account for the success of Soviet scientific education? Is the course as tough as we hear?

SCHORR: Its a tough course, all right. But that isn't the whole story. At Moscow University, the average science student studies six years for his degree. In the first three years, its a rough six days a week, with 12 hours of classes, lab and homework...and with rigidly prescribed courses. In his second three years, the student gets two or three "free" days a week for work on his specialty. At the end, he has to write an original paper defending a thesis. But there are other factors ...the process of selecting students by competitive examinations...and the fact that every student who makes the grade

gets a stipend so that he doesn't have to worry about how he will live while he studies. Here, Ed, is how Dimitri Ivanenko, professor of nuclear physics, summed it up to me:

TAPE: I suppose there are 3 main points.....ending:
I suppose there are 3 main points, you see. (15 sec.)

Incidentally, Prof. Ivanenko also told me that the process of selection is so successful that no more than 10 to 15 percent of the students flunk out after they've been accepted.

MURROW: Judging from what you and the professor said, the economic factor is important. Are the stipend, and the prospect high pay after graduation, what tend to attract young Russians into science?

SCHORR: They are a factor, Ed, but one that I think we have somewhat exaggerated here in the United States. Science students told me that after graduation, as researchers they get about 1700 rubles a month--that's $170 at the tourist rate of exchange, no more than a skilled factory worker gets. They seemed surprised at the questions about pay, as though this was not an important element in their thinking. They put the emphasis on something

which I think was typified by this remark of Nikolai Mitskevich, 26-year-old postgraduate student in nuclear physics from Samarkand in Central Asia....groping for his words in English:

TAPE: It is I suppose.t...the perfection of natural laws. I like very much the beauty of natural laws. (21 seconds)

What young Mitskevich was trying to express is that scientists everywhere like science. They are fascinated by the problems it presents, and their greatest reward is the glimpse into the orderly realm of the natural universe. You'll notice, Ed, that Mitskevich, like many of the young scientists I spoke to, didn't talk Communist ideology. They talked about their work. The conditions have been created for them to be effective in that work. They have the labs and the facilities andthe opportunities. All that scientists really need is to be let loose in their work.

MURROW: Well, then, is the young Soviet scientist free to work as he wishes? Isn't there any control by the regime?

SCHORR: Sure there is, and the Soviet researcher is far from free. After graduation, the student has to repay the State for his free education and stipend by working for at least

three years at an assigned place. But the Soviet student is a product of the Soviet system and he accepts that as a matter of course. His assignment may not always be where he likes, but it is usually of a sort that gives him scope for his work.

Take, for example, Vladimir Golubov, who is getting an assignment in a place that many of us would think unpleasant.

TAPE : I should prefer to go to Siberia.....(out cue): I should like to go there. (26 seconds.)

In Novosibirsk, the Russians are building a new scientific research center. I don't think that Vladimir Golubov, who collects jazz records and likes the theatre, is going to Siberia without misgivings, despite the brave front he put up. But he's going willingly. Remember, Ed, that these are selected students...selected not only on the basis of merit, but for loyalty to the regime. Khrushchev has warned that students showing signs of rebelliousness will be replaced by people from factories who will show loyalty to the regime. And this has had its effect.

MURROW: Are you saying, then, that Soviet science is basically loyal to the Communist regime?

SCHORR: Not entirely, Ed. The young ones go along because that is their only way to achieve the education they want. But science and education are fundamentally in conflict with the strait-jacket of Communist ideology. The authorities have a hard time getting students to attend--and when they attend, to pay attention--to the prescribed courses in Marxism, Leninism and that sort of thing.

And, as they get along in science, many find that the structure of Communist ideology is not based on the reason that they find in their own scientific fields. I think it significant that Alexander Topchiyev, secretary of the Academy of Sciences, has had to issue a stern warning to scientists who, in his words, ignore the ideological struggle. He has said that "vagueness, neutrality, non-partisanship" are "intolerable"...an indication that there is a lot of neutrality and non-partisanship.

I have the impression that the scientists are, by and large, impatient with Communist gobbledygook, restive under party control. They are happy to make Sputniks because that is the work they love,

but not so happy about the politics that go with the Sputniks. Some day the Soviets may find that the science they have nurtured is a frankenstein monster. I don't want to overdramatize this, but we have already seen the rebellions of the writers, the composers, the army--all so far contained. But wait until the Kremlin faces, as I think it will some day, the revolt of the Sputnik-makers.

George Ryan

Word for Today

to the capital

The Russians have made no mistake in estimating the importance of education. And it is no less important in this country if freedom is to survive. Thomas Jefferson once said, very truly, "If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be."

Goodnight and good luck!

CBS RADIO DIVISION

EDWARD R. MURROW WITH THE NEWS

Friday, December 27, 1957
7:45 - 8:00 P. M.

E. R. MURROW: Shortly before Dan Schorr returned from Moscow for the annual YEARS OF CRISIS program, I told him on the telephone, that Americans were puzzled and concerned about the army of scientists and engineers that Russia had trained, and I suggested to him that, with all the worry and speculation, it might be valuable to have a first hand look at how the Soviets trained their scientists. Dan Schorr is here with me tonight to give his report.

Dan, first off, how do you account for the success of Soviet scientific education? Is the course as tough as we hear?

SCHORR: It's a tough course alright, Ed, but that isn't the whole story. At Moscow University, the average science student studies 6-years for his degree. In the first 3-years, it's a tough 6-days a week with 12-hours of classes, lab and homework and with rigidly prescribed courses. In his 2nd 3-years, the student gets 2 or 3-free days a week for work on hiespeciality. At the end, he has to write an original paper defending a thesis. But, there are other factors. The process of selecting students by competitive examinations and the fact that every student who makes the grade gets a stipend so that he doesn't have to worry about he'll live while he studies.

Here Ed, is how Dimitri Ivanyenko, Professor of nuclear physics summed it up to me.

IVANYENKO: I suppose 3 ... 3 main points you see. Good competition, have program and will develop a program and economical conditions for education during education. I suppose 3 ... 3 main points you see.

SCHORR: Incidentaly, Professor Ivanyenko also told me that

the process of selection is so successful that no more than 10 to 15% of the students flunk out after they've been accepted.

E. R. MURROW: Well, judging from what you say, Dan, and what the Professor said, the economic factor is important. Are the stipend and the prospective high pay after graduation what tend to attract young Russians into science?

SCHORR: Ed, they are a factor, but one that I think that we have somewhat exaggerated here in the United States. Science students at Moscow University told me, that after graduation, as researchers they get about 1700 rubles a month - that's a $170.00 at a tourist rate of exchange, no more than a skilled factory worker gets. They seemed surprised at the questions about pay - as though this was not an important element in their thinking. They put emphasis on something which I think was typified by this remark of Nikoli Mitskavich, 26-year old post-graduate student in nuclear physics from Samarkan in Central Asia. He's groping for his words in English.

MITSKAVICH: (indistinct) ... if it is possible to say so in English life of science to study ... to study the profound nature allows. I like very much the beauty of the natural laws.

SCHORR: What young Mitskavich was trying to express I think, is that scientists everywhere like science. They are fascinated by the problems it presents - their greatest reward is the glimpse into the orderly realm of the natural universe. You'll notice, Ed, that Mitskavich like many of the young scientists I spoke to, didn't talk communist ideology, they talked about their work in science. The conditions have been created for them to be effective in that work. They have the labs and the facilities and the opportunities. All that scientists really need is to be let loose in their work.

MURROW: Well, Dan, is the young Soviet scientist free to work as he wishes. Isn't there any control by the regime?

SCHORR: Oh, sure there is, and the Soviet researcher is far from free. After graduation, the student has to repay the State for his free education and his stipend by working for at least 3-years at an assigned place. But, the Soviet student is a product of the Soviet system and he accepts that as a matter of course. His assignment may not always be where he likes, but it's usually of a sort that gives him scope for his work. Take for example, Vladimir Golubov, whose getting an assignment in a place, that many of us would think unpleasant.

GOLUBOV: I should prefer to go to Siberia and work there as a social worker in physics.

SCHORR: Why Siberia? Are they opening up ... (inter.)

GOLUBOV: I want to go there as a patriot.

SCHORR: As a patriot.

GOLUBOV: yes.

SCHORR: They are opening a new scientific city in Novosibirsk.

GOLUBOV: Yes,yes.

SCHORR: Is that where you would like to go?

GOLUBOV: I should like to go there.

SCHORR: I don't think Golubov who collects jazz records and likes theatre is going to Siberia without misgivings inspite of his brave front, but he is going willingly. Remember, Ed, that these are selected students, ~~selected~~ not only on the basis of merit but for loyalty to the regime. Khruschchev has warned that students who show signs of rebellion will be replaced by people from factories who will be loyal to the regime and that has had its effect.

MURROW: Well, are you saying then that Soviet ~~SCIENCE~~ science is basically loyal to the Communist regime?

SCHORR: Not entirely. The young ones go along because

that's the only way to achieve the education they want. But, science and education are fundamentally in conflict with the straight jacket of Communist ideology. The authorities have had a hard time getting students to attend and when they attend to pay attention to the prescribed courses in Marxism and that kind of thing. And as they get along in science, many find that the structure of Communist ideology isn't based on thbe reason that they find in their own scientific fields. Significantly, Alexander Topchief, Secretary of the Academy of Sciences issued a stern warning to scientists, who ? in his words, ignored the ideological struggle. I have the impression that the scientists by and large are impatient with Communist gobbledygook, rested under Party control. They are happy to make Sputniks because that's the work they love, but not so happy about the politics that go with the Sputniks. Someday, the Soviets may find that the science they have natured is a Frankenstein monster. I don't want to over dramatize it, you've already seen however, rebellions of writers, composers and the Army - all, so far contained. But, wait until the Kremlin faces as I think it will someday the revolts of the Sputnik makers.

E. R. MURROW: Thank you very much Dan Schorr.

This is Ed. Murrow, I'll be back in a moment with the word for today. Now, here is George Bryan.

Ed. Trans.

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

FRIDAY, DECEMBER 27, 1957
7:45 - 8:00 PM EST

This is the news:

Democratic Senator Chavez of New Mexico predicted today that a 40-billion dollar defense budget will get rough treatment in Congress "so long as the President proposes a huge give-away in the form of foreign aid." Chavez is chairman of the Senate subcommittee on military appropriations." He said increased military spending alone "is not the answer to today's needs."

The Wall Street Journal reported today that President Eisenhower plans to ask Congress for a special 500-million-dollar fund, which he could use at his discretion to exploit any break-through in the missile-satellite field. News Secretary Hagerty refused this afternoon to confirm or deny the report. He told reporters,"All I can say is that the defense side of the budget has not been determined." He added, "I think it will be shortly."

Hagerty talked to correspondents in Gettysburg...where President Eisenhower has gone to spend six or seven days resting and working on the messages to be delivered to Congress in the next few weeks. Hagerty said he is "quite sure" the President will not reply this week-end to the letter received from Soviet Premier Bulganin before the NATO summit conference. The White House said yesterday that Mr. Eisenhower is "working on a reply."

Bulganin proposed...among other things...the creation of a denuclearized zone in Central Eurppe. Under this proposal, Russia, Britain, and the United States would agree not to stock nuclear weapons in either East or West Germany, Czechoslovakia or Poland. The Associated Press says that American officials in Washington are giving this part of the Bulganin letter "intensive study"...that the plan is regarded as unacceptable in its present form, but that it is an idea which may be pursued later as a means of reducing tension.

In his letter, Bulganin also proposed a new high-level East-West meeting,

a non-aggression pact between the NATO and Warsaw Treaty countries, and a halt to nuclear testing as of January first. Washington sources report a difference of opinion between Secretary of State Dulles and Harold Stassen on how to respond to Russia's disarmament proposals. (Stassen is President Eisenhower's special adviser on disarmament.) Stassen reportedly is urging the Administration to follow up the Soviet bid by making new proposals of its own. And Dulles is said to be against taking such a step, on grounds that there is little likelihood of success at this time. James Reston of the New York Times says that Mr. Stassen "apparently is determined to force the question to a debate in the National Security Council." And that he will not resign...voluntarily...until the issue has been resolved.

Moscow Radio said today that the NATO proposal for a foreign ministers meeting on disarmament is a hopeful sign of good relations between Russia and the West. The broadcast did not say that Russia would agree to such a conference Soviet Foreign Minister Gromyko already has turned down the proposal. And only yesterday, Pravda said a foreign ministers meeting would only be used by the West "to make more anti-Soviet accusations."

Yugoslavia today publicly supported Russia's proposal for an East-West summit conference.

And in Washington, the State Department announced that the United States has signed an agreement with Yugoslavia...whereby Yugoslavia will receive an additional 7-million dollars worth of surplus cotton and wheat. This arrangement is a supplement to the 1957 economic aid agreement.

In Cairo today, the so-called Afro-Asian solidarity conference heard an offer of economic aid from Russia. A Russian spokesman said that Moscow "stands ready" to let the 39 nations have money, either in the form of loans or outright grants with no strings attached. He qualified the offer, saying that Russia would grant this aid "according to its economic capabilities."

The State Department today confirmed reports that Indonesia had tried to buy military equipment from the United States. The department said the request was made informally "about six months ago" and that no decision had been reached. It conceded that it had received reports that Indonesia might seek to make weapon purchases instead from the Soviet bloc.

The United States Circuit Court of Appeals in New Orleans today reversed a lower court ruling that Dallas, Texas must integrate its schools next month. The court of Appeals said the Dallas school system "should be accorded a reasonable further opportunity to meet their primary responsibility of integrating."

Shortly before Dan Schorr returned from Moscow for the annual YEARS OF CRISIS program, I told him on the telephone, that Americans were puzzled and concerned about the army of scientists and engineers that Russia had trained, and I suggested to him that, with all the worry and speculation, it might be valuable to have a first hand look at how the Soviets trained their scientists. Dan Schorr is here with me tonight to give his report.

Dan, first off, how do you account for the success of Soviet scientific education? Is the course as tough as we hear?

SCHORR: It's a tough course all right, Ed, but that isn't the whole story. At Moscow University, the average science student studies 6-years for his degree. In the first-3-years, it's a tough 6-days a week with 12-hours of classes, lab and homework and with rigidly prescribed courses. In his second 3-years, the student gets 2 or 3-free days a week for work on his specialty. At the end, he has to write an original paper defending a thesis. But, there are other factors. The process of selecting students by competitive examinations and the fact that every student who makes the grade gets a stipend so that he doesn't have to worry about how he'll live while he studies.

Here Ed, is how Dimitri Ivanyenko, Professor of nuclear physics summed it up to me.

IVANYENKO: I suppose 3...3 main points you see. Good competition, have program and will develop a program and economical conditions for education during education. I suppose 3...3 main points you see.

SCHORR: Incidentally, Professor Ivanyenko also told me thtt the process of selection is so successful that no more than 10 to 15% of the students flunk out after they've been accepted.

MURROW: Well, judging from what you say, Dan, and what the Professor said, the economic factor is important. Are the stipend and the prospective high pay after graduation what tend to attract young Russians into science?

SCHORR: Ed, they are a factor, but one that I think that we have somewhat exaggerated here in the United States. Science students at Moscow University told me, that after graduation, as researchers they get about 1700 rubles a month - that's a $170.00 at a tourist rate of exchange, no more than a skilled factory worker gets. They seemed surprised at the questions about pay - as though this was not an important element in their thinking. They put emphasis on something which I think was typified by this remark of Nikoli Mitskavich, 26-year old post-graduate student in nuclear physics from Samarkan in Central Asia, He's groping for his words in English.

MITSKAVICH: (indistinct)...if it is possible to say so in English life of science to study...to study the profound nature allows. I like very much the beauty of the natural laws.

SCHORR: What young Mitskavich was trying to express I think, is that scientists everywhere like science. They are fascinated by the problems it presents - their greatest reward is the glimpse into the orderly realm of the natural universe. You'll notice, Ed, that Mitskavich like many of the young scientists I spoke to, didn't talk communist ideology, they talked about their work in science. The conditions have been created for them to be effective in that work. They have the labs and the facilities and the opportunities. All that scientists really

need is to be let loose in their work.

MURROW: Well, Dan, is the young Soviet scientist free to work as he wishes. Isn't there any control by the regime?

SCHORR: Oh, sure there is, and the Soviet researcher is far from free. After graduation, the student has to repay the State for his free education and his stipend by working for at least 3-years at an assigned place. But, the Soviet student is a product of the Soviet system and he accepts that as a matter of course. His assignment may not always be where he likes, but it's usually of a sort that gives him scope for his work. Take for example, Vladimir Golubov, who's getting an assignment in a place, that many of us would think unpleasant.

GOLUBOV: I should prefer to go to Siberia and work there as a social worker in physics.

SCHORR: Why Siberia? Are they opening up...(inter.)

GOLUBOV: I want to go there as a patriot.

SCHORR: As a patriot.

GOLUBOV: Yes.

SCHORR: They are opening a new scientific city in Novosibirsk.

GOLUBOV: Yes, yes.

SCHORR: Is that where you would like to go?

GOLUBOV: I should like to go there.

SCHORR: I don't thinkGolubov who collects jazz records and likes theatre is going to Siberia without misgivings in spite of his brave front, but he is going willingly. Remember, Ed, that these are selected students, selected not only on the basis of merit but for loyalty to the regime. Khurshchev has warned that students who show signsof rebellion will be replaced by people from factories who will be loyal to the regime and that has had its effect.

MURROW: Well, are you saying then that Soviet science is basically loyal to the Communist regime?

SCHORR: Not entirely. The young ones go along because that's the only way to

achieve the education they want. But, science and education are fundamentally in conflict with the straight jacket of Communist ideology. The authorities have had a hard time getting students to attend and when they attend to pay attention to the prescribed courses in Marxism and that kind of thing. And as they get along in science, many find that the structure of Communist ideology isn't based on the reason that they find in their own scientific fields. Significantly, Alexander Topchiyev, Secretary of the Academy of Sciences issued a stern warning to scientists, who in his words, ignored the ideological struggle. I have the impression that the scientists by and large are impatient with Communist gobbledygook, restiveunder Party control. They are happy to make Sputniks because that's the work they love, but not so happy about the politics that go with the Sputniks. Some day, the Soviets may find that the science they have nurtured is a Frankenstein monster. I don't want to over-dramatize it, you've already seen however, rebellions of writers, composers and the Army - all, so far contained. But, wait till the Kremlin faces as I think it will some day the revolts of the Sputnik makers.

MURROW: Thank you very much Dan Schorr.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: The Russians have made no mistake in estimating the importance of education to their system. And it is no less important in this country if freedom is to survive. Thomas Jefferson once said, very truly, "If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be."

Goodnight and good luck!

Edward R. Murrow Mon., Dec. 30, 1957

This is the news:

President Eisenhower today approved a four-year education program with the emphasis on science. The program was drawn up under the direction of Secretary of Welfare Folsom and submitted to the President this morning in Gettysburg. Over the four years, the plan would cost the Federal Government about a billion dollars with the states putting up an additional 800-million. It would provide 10-thousand scholarships a year for promising high school students who want to attend college. Preference would be shown to students of science and mathematics...but not to the exclusion of students interested in other subjects. One thousand fellowships would be provided "to encourage more able college students to continue into graduate study." After the first year, the number of fellowships would be increased.

Federal money would be provided for counseling students in preparation for higher education. /And there would be grants to states...on a matching basis...to test the aptitude of students between the seventh and ninth grades. Also, matching funds would be available to help the states obtain more science and mathematics teachers. /Folsom told reporters...after seeing the President this morning...that the four-year program is necessary to meet the country's "critical security needs."/ He said education is "more crucially important than ever before." But the "main support" of education, he said, "must come in the future, as in the past, from state, local and private sources."

Republican Senator Ives of New York says "the whole idea of the education program is excellent." /But it is impossible, he says, to predict how the plan will fare in Congress in light of the uncertainty over the budget picture. /Another Republican senator...John Sherman Cooper of Kentucky... believes the Administration program is too limited. "Much more is required," he says, "if we're to have an educational system of real quality to meet today's needs." Democratic Senator O'Mahoney says it's another case of "too little and too late." And William Carr, executive secretary of the

→

National Education Association accuses the Administration of failing to make "a realistic appraisal" of the nation's school needs.

White House News Secretary Hagerty said today that President Eisenhower will send a special message to Congress on his education program.

The State Department announces that when Secretary Dulles goes to Turkey next month for the Baghdad Pact meeting he will also a make a brief stop-over in Iran. The department says that Dulles wants "to acquaint himself first-hand with Iranian thinking on recent international developments." Iran is a member of the Baghdad Pact, and Dulles will stop over there on his way to the Baghdad Pact meeting.

Prime Minister Ben Gurion of Israel announced today that he will resign within the next 24 hours because of the split in his coalition government. The government crisis began two weeks ago, when Ben Gurion accused two cabinet ministers...belonging to the leftist Labor Unity Party...of "leaking" information on his plan to send a mission to West Germany to buy arms. ~~The leftists have continued to oppose the sending of such a mission, and Ben Gurion said today he was resigning because he had been "unable to repair [illegible] the damage."~~ When Ben Gurion does resign, the Israeli president

is expected to ask him to form a new government.

The Afro-Asian conference in Cairo is reported drafting a series of resolutions reflecting Soviet foreign policy. The resolutions are due to be presented on Wednesday, at the conclusion of the conference. And they are said to include a demand for the elimination of foreign military bases and an immediate end to nuclear weapons tests. The economic committee of the conference reportedly is ready to approve a resolution calling for the nationalization of private property, as proposed last week by the Soviet delegate. Forty countries are represented at the Cairo meeting [redacted] in a non-official capacity.

Premier Gaillard of France has told U.S. News and World Report...in a copyrighted interview...that he favors a summit conference with the [redacted] Soviet Union. Gaillard, however, added a condition. And that is that the meeting "be prepared in advance in a manner sufficient to assure that it would not be purely a [redacted] forum for propaganda, either for one side or the other." He suggested that a foreign ministers meeting be held "as soon as possible" to pave the way for an eventual conference of heads of government.

Reports from London tonight say that British Prime Minister Macmillan has drafted a note to Soviet Premier Bulganin...leaving the door open for a summit conference on Cold War issues.

Russia announced today that the first Sputnik...launched in October... is losing altitude and "will cease to exist in the first days of January." The satellite presumably will burn itself out...like a meteor...in the dense layer of atmosphere surrounding the earth. Moscow makes no reference to the life-expectancy of the second satellite that was launched in November.

In Washington, Democratic Representative Porter of Oregon today urged the Defense Department to take steps to insure...through an information program...that World War Three is not set off by accident. Porter said "fallible" human beings are in control of nuclear weapons. "Aside from mechanical defects," he said, "an accidental explosion could be caused by drunkenness, mental breakdown, misguided idealism or treason."

Edward R. Murrow: December 30, 1957. 7.45 p.m.

The first basic proposal of the Eisenhower Administration for keeping the United States abreast of the Soviet Union was unveiled today in a four-year program for the expansion of education. It is a billion-dollar program spread over four years, and this, it may be assumed, is the most that the Administration is planning to do in the fields covered. What Congress will do with this figure remains to be seen. If past experience is a guide, it will subtract from it rather than add to it. It is easier to persuade Congress to spend money on weapons than on schools and scholarships.

The first question to be asked is whether a billion-dollar program is large enough. The increased spending on weapons will come to many billions in four years. If the recommendation of the Gaither committee is followed, the increase in defense ~~expenditure~~ spending will rise to 8 billion dollars a year. That would be 32 billions in four years. Admittedly, catching up with the Russians in weapons is far more urgent, in terms of national security, than education. But it is not thirty-two times more urgent. Education is also vital to national security, as the Soviet Union demonstrated by getting ahead in developing long-range rockets. That was the result of the Soviet Union's

investment in scientific and technical education.

The United States is spending on education about two percent of its national income, in round numbers just under seventeen billion dollars. The Soviet Union is spending probably six to seven percent of its national income on education. Our national income is probably three times as large as that of the Soviet Union, so that the total outlay on education in the two countries may be about even. But in the field of scientific and technical education the Soviet Union is already turning out more engineers than we are - fifty thousand to our thirty thousand.

It is often pointed out that the rate of economic growth in the Soviet Union is slowing down and is sure to slow down still more, as though this means that the Soviet Union will never catch up with us in volume of output and standard of living. But at this moment, the economy of the United States is not expanding at a normal rate, and in some respects is actually falling behind. What matters quite as much as weapons, in keeping ahead of the Soviet Union, is the maintenance of steady economic expansion in this country. And for this, education, particularly the education of scientists, engineers and technicians, is vital.

If and when our expansion moves upward again at a normal rate, we must

be sure we are educating enough technical and engineering manpower to staff our own economy in the years ahead. And this we are not doing, not at present, and not with the booster given by the Folsom program. The Soviet Union, however, does appear to be keeping its educational program in line with the rate of its economic expansion. And the time may come when the Soviet Union will be in a position to raise its standard of living as well as to take over the servicing of a large part of the under-developed world.

The program announced by Secretary Folsom aims at setting up ten thousand annual scholarships for college students. This does not mean that every worthy student will be able to go to college, which is theoretically possible in the Soviet Union. Mr. Folsom said that two hundred thousand of the ablest students in the United States now stop their education below the college level. In four years we may have forty thousand more scholarship students in college. This will help us turn out as many engineers and other specialists as the Soviet Union, but it will not guarantee that we can. And it does not take care of all the gifted students available.

It should be noted that the Folsom program does not stress scientific and mathematical education exclusively. It is the pride of American education that, at its best, it turns out well-rounded graduates, not only

capable in their specialties, but also grounded in the humanities. This makes for able citizens as well as able specialists, which is essential to the health of the American democracy. The Soviet system substitutes for the humanities a compulsory study of Lenin and Marx.

Our educational task is still bigger than the Russians. We have to offer our students just as good a training in science or engineering as they do, and in addition give them a grounding in the humanities. This means that we must spend more in effort and money than they are spending. In these terms the Folsom program is no more than a good start. It does not assure that we shall stay ahead in the future. It does not allow for our own expansion in population and production, nor for the possibility of a more rapid economic growth than ours, by the Soviet Union. It isn't that we cannot afford to spend more on education. If the Russians can spend six percent of their national income on it, we can too. But this is well beyond the scope of the Folsom program or anything else being mentioned in Administration circles.

Back in a moment.

George Bryan

Word for Today

It would seem that ~~America~~ we need to get ~~its~~ our priorities straight with regard to education. Elbert Hubbard said, "This will never be a civilized country until we expend more money for books than we do for chewing gum." And many centuries ago, when Sparta was frightening the Athenians, Pericles said, "I am more worried about our own faults than about the plans of our enemies."

Tues., Dec. 31, 1957
7:45 - 8:00 PM EST

This is the news:

President Tito of Yugoslavia said today...in a New Year's statement... that the world needs an East-West settlement if it is to survive. Tito criticized the recent NATO meeting for its preoccupation with missile bases and the distribution of nuclear weapons. But, at the same time, he praised President Eisenhower for making a "constructive" proposal on aid to underdeveloped countries. Tito said, "The eleventh hour has now struck for a much broader meeting at the highest level, at which all countries...large and small...should be represented." This is a time, he said, for "goodwill and conversations."

President Heuss of West Germany issued a New Year's statement, calling on the leaders of East and West to free themselves of the "handcuffs of slogans and ideologies" and parley. He said western countries, particularly the United States, must be prepared to engage in "intelligent secret diplomacy" to reach world accords. The Nineteenth Century pronouncement by Von Clausewitz that war is merely an extension of

politics, he said, is dead. The West German president said that now "war has become a statement of the bankruptcy of a nation's political policies."

Sir Winston Churchill said...in London...that NATO "should not limit to Europe the scope of mutual assistance and sympathy among its members." "We cannot," he said, "have the closest exchanges here and be indifferent to the interests of our friends in their problems overseas." Churchill made no direct reference to such problems as those of France in Algeria and of the Netherlands in Indonesia. He expressed this view in a New Year's message to the Primrose League, a Conservative Party organizatio of which he is grand master. Churchill said, "The New Year can be a period of hope and gain for the free world."

(Via Western Union)

Edward R. Murrow
Pawling, N.Y.

Fole Churchill...

In Washington, President Meany of the AFL-CIO said today that because of Russian scientific advances and a faltering domestic economy, the United States in the new year faces a situation "as crucial, in its own way, as Pearl Harbor." ~~He [illegible] military strength [illegible] agencies who are likening [illegible] marked for [illegible] under the Communist plan.~~

"The idea," said Meany, "that the Communists fear an American balanced budget more than an arsenal of modern weapons is ridiculous." He said American workers "are prepared to shoulder their just share of the cost of preparedness." But, he said, "we ~~[illegible]~~ insist that it be apportioned on the basis of equal sacrifice." Meany said ~~[illegible]~~ organized labor will continue to seek higher wages because it believes that "the long-run good health of our economy depends upon consumer spending and consumer buying power."

(more)

(4)

In Gettysburg today, President Eisenhower worked on the budget message he will send to Congress on January 13th. Mr. Eisenhower was joined in the task by Budget Director Brundage. And Dr. James Killian, the President's scientific adviser, sat in on the conference...which lasted more than two hours. News Secretary Hagerty said afterwards that...with two or three exceptions...the budget for practical purposes in now complete. Hagerty said, "The President expects to present a budget which will be in balance and, we hope, allow for a small surplus." It will be a record peacetime budget, perhaps in the neighborhood of 74-billion dollars. When a reporter asked if it would mean higher taxes, Hagerty said, "Not that I know of." But he added that there will be no tax reductions. Hagerty confirmed that the President personally will read the State of the Union message to Congress on January 9th. The message, he said, will run half as long as usual---only about 30 minutes. He said this is not being done to conserve Mr. Eisenhower's energy...but "to put things in proper perspective." The State of the Union message will concentrate on matters related to defense. Other subjects...normally included...will be dealt with in the budget message.

A federal judge...in El Paso, Texas...today dismissed the government's perjury case against Clinton Jencks, the former union official who had been convicted of filing a false non-Communist affidavit with the National Labor Relations Board. Last June, the Supreme Court upset the conviction... ruling that reports made to the F.B.I. by prosecution witnesses should have been made available to the defense. The Supreme Court ordered a new trial. In dismissing the case today, Federal Judge Thomason acted on the motion of the Justice Department...asking that it be dropped. The department said it would rather have the case dismissed than open the F.B.I. files.

65

One of America's top weather experts told President Eisenhower today that if Russia wins the race for wide-scale control of weather, "the results could be even more disastrous that nuclear warfare." The warning came from Howard Orville, chairman of the President's national advisory committee on weather control.

69

Radio Moscow said today that Russian scientists have made "substantial progress" in harnessing the power of the hydrogen bomb. The broadcast claimed that "Soviet physicists, for the first time in the world, obtained a temperature of over one million degrees." Both the United States and Britain have similar programs... aimed at "taming" the tremendous energies released in a thermonuclear explosion for peaceful purposes.

In Jerusalem, the President of Israel today accepted the resignation of Prime Minister Ben Gurion and his five-party coalition cabinet. The president is now expected to ask Ben Gurion to form a new government. If he does, Ben Gurion may exclude from it the two small leftist parties which have been opposing his policies.

[redacted] Dec 31

The announcement that Secretary Dulles will attend the Bagdad Pact meeting in Turkey the end of next month was not intended as the American reply to the unofficial Afro-Asian conference now being held in Cairo. Any relation between the two, the State Department might say, is purely coincidental. But coincidental or not, the effect of the Dulles visit on opinion in Afro-Asia n countrie s will not be favorable to our interests. The Cairo conference is expected to pass a resolution denouncing the pact as endangering the independence of Arab countries, not to mention a spate of resolutions generally anti-Western a nd pro-Soviet in tone.

¶ The effect of the Dulles trip on some of our Western friends also will be considerable. They do not much like the heavy military accent of American aid policy, which they think emphasises American reluctance to seek middle ground with the Soviet Union. Part of Mr. Dulles' foreign policy wa s quietly but unmistakably reversed at the recent NATO meeting in Paris. Now the Dulles trip will appear to be a resumption of his former activities and purposes. At least it will be read as demonstrating that he has not undergone any change of heart or thinking as the result of his Paris experience.

Actually the Dulles visit is not being undertaken to advertise or strengthen the military side of the B a gda d pact.The suggestion is being made that the United States may now join the pact formally, and that Mr. Dulles would not incur so much disfavor if he did not ha ve this important step in mind. But it can be said on competent authority that no such step is contemplated at this time. The rea son for the trip is that the pact members are suffering from a feeling of neglect, and all Mr. Dulles means to do is to pay them some attention. He decided to do it before going to Paris an d long befor e the Cairo meeting got under way.

Probably the worst result of the trip is that it will seem to support the ca se being made against the United States by speakers at the Afro-Asian conference. This meeting has turned out to be a Soviet field day. Indeed the Soviet success has been so sweeping as to set up a small reaction in favor of truth and sobriety. Some of the resolutions condemning the West have even been moderated a t the insistence of Egytian and Indian leaders. The Egyptians ~~insisted on~~ led one resolution ~~being~~ dropped altogethe r which denounced the United States for alleged atrocities in South Korea . Egyptians and India ns

joined in modifying a resolution that would have held the United States responsible for racial discrimination. The Indian representative argued that the United States government had taken action against such discrimination, and if any government was to be named it would have to be South Africa.

However the conference did adopt a Soviet proposal for a holiday in nuclear testing to start at once, while efforts are made to work out an agreement on halting the manufacture of nuclear weapons. Again it is shown how inadequately the western disarmament proposals have been dramatized and publicized. For it is the United States who pressed to have the manufacture of nuclear weapons stopped forthwith under adequate international inspection, and offered to suspend tests as soon as the Soviet Union agreed to it.

The Cairo conference is not unimportant, but it should not count as the authentic voice of the Afro-Asian countries unofficially attending. President Nasser encouraged the calling of the unofficial meeting, hoping it would lead to a second formal meeting of the governments represented at Bandung. It appears that he has ambitions to take Prime Minister Nehru's place as leader of the Afro-Asian world. But one thing Nasser did not want was to have the Soviet Union capture

the conference, either outright or behind the scenes. Both he and Nehru are neutralists, but they believe that neutralism can be genuine, and not a cloak for communist inspiration and control.

¶ The Kremlin has not used the soft pedal at Cairo. It has been promising unlimited aid, with money at nominal interest rates, and it makes sure that everyone knows it will deliver arms at the drop of a hat. The reaction that has set in against Soviet dominance shows that some leaders in Africa and Asia are by no means ready to move, lock-stock-and-barrel, into the Soviet camp. But if the West stands to gain anything in these countries, it will not be by such moves as Mr. Dulles' attendance at the Bagdad pact meeting. Indeed it looks as though our best hope is that the Kremlin presses its advantage too hard and too clumsily.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

GEORGE BRYAN: COMMERCIAL

MURROW: These words by Heinrich Heine: "The New Year is at the door. I wish for the stupid a little understanding and for the understanding a little poetry. I wish a heart for the rich, and a little bread for the poor. But above all, I wish that we may blackguard each other as little as possible during the New Year."

EDWARD R. MURROW WITH THE NEWS
CBS RADIO NETWORK

TUESDAY, DECEMBER 31, 1957
7:45 - 8:00 PM EST

This is the news:

President Tito of Yugoslavia said today...in a New Year's statement...that the world needs an East-West settlement if it is to survive. Tito criticized the recent NATO meeting for its preoccupation with missile bases and the distribution of nuclear weapons. But, at the same time, he praised President Eisenhower for making a "constructive" proposal on aid to underdeveloped countries. Tito said, "The eleventh hour has now struck for a much broader meeting at the highest level, at which all countries...large and small...should be represented." This is a time, he said, for "goodwill and conversations."

President Heuss of West Germany issued a New Year's statement, calling on the leaders of East and West to free themselves of the "handcuffs of slogans and ideologies" and parley. He said western countries, particularly the United States, must be prepared to engage in "intelligent secret diplomacy" to reach world accords. The Nineteenth Century pronouncement by Von Clausewitz that war is merely an extension of politics, he said, is dead. The West German president said that now "war has become a statement of the bankruptcy of a nation's political policies."

Sir Winston Churchill said...in London...that NATO "should not limit to Europe the scope of mutual assistance and sympathy among its members. "We cannot," he said, "have the closest exchanges here and be indifferent to the interests of our friends in their problems overseas." Churchill made no direct reference to such problems as those of France in Algeria and of the Netherlands in Indonesia. He expressed this view in a New Year's message to the Primrose League, A Conservative Party organization of which he is grand master. Churchill said, "The New Year can be a period of hope and gain for the free world."

In Washington, President Meany of the AFL-CIO said today that because of Russian scientific advances and a faltering domestic economy, the United States

in the new year faces a situation "as crucial, in its own way, as Pearl Harbor." "The idea," said Meany, "that the Communists fear an American balanced budget more than an arsenal of modern weapons is ridiculous." He said American workers "are prepared to shoulder their just share of the cost of preparedness." But, he said, "we insist that it be apportioned on the basis of equal sacrifice." Meany said organized labor will continue to seek higher wages because it believes that "the long-run good health of our economy depends upon consumer spending and consumer buying power."

In Gettysburg today, President Eisenhower worked on the budget message he will send to Congress on January 13th. Mr. Eisenhower was joined in the task by Budget Director Brundage. And Dr. James Killian, the President's scientific adviser, sat in on the conference...which lasted more than two hours. News Secretary Hagerty said afterwards that...with two or three exceptions...the budget for practical purposes is now complete. Hagerty said, "The President expects to present a budget which will be in balance and, we hope, allow for a small surplus." It will be a record peacetime budget, perhaps in the neighborhood of 74-billion dollars. When a reporter asked if it would mean higher taxes, Hagerty said, "Not that I know of." But he added that there will be no tax reductions. Hagerty confirmed that the President personally will read the State of the Union message to Congress on January 9th. The message, he said, will run half as long as usual--only about 30 minutes. He said this is not being done to conserve Mr. Eisenhower's energy...but "to put things in proper perspective." The State of the Union message will concentrate on matters related to defense. Other subjects...normally included ...will be dealt with in the budget message.

A federal judge ...in El Paso, Texas...today dismissed the government's perjury case against Clinton Jencks, the former union official who had been convicted of filing a false non-Communist affidavit with the National Labor Relations Board. Last June, the Supreme Court upset the conviction...ruling that reports

made to the F.B.I. by prosecution witnesses should have been made available to the defense. The Supreme Court ordered a new trial. In dismissing the case today, Federal Judge Thomason acted on the motion of the Justice Department...asking that it be dropped. The department said it would rather have the case dismissed than open the F.B.I. files.

One of America's top weather experts told President Eisenhower today that if Russia wins the race for wide-scale control of weather, "the results could be even more disastrous than nuclear warfare." The warning came from Howard Orville, chairman of the President's national advisory committee on weather control.

Radio Moscow said today that Russian scientists have made "substantial progress" in harnessing the power of the hydrogen bomb. The broadcast claimed that "Soviet physicists, for the first time in the world, obtained a temperature of over one million degrees." Both the United States and Britain have similar programs...aimed at "taming" the tremendous energies released in a thermonuclear explosion for peaceful purposes.

In Jerusalem, the President of Israel today accepted the resignation of Prime Minister Ben Gurion and his five-party coalition cabinet. The president is now expected to ask Ben Gurion to form a new government. If he does, Ben Gurion may exclude from it the two small leftist parties which have been opposing his policies.

The announcement that Secretary Dulles will attend the Baghdad Pact meeting in Turkey the end of next month was not intended as the American reply to the unofficial Afro-Asian conference now being held in Cairo. Any relation between the two, the State Department might say, is purely coincidental. But coincidental or not, the effect of the Dulles visit on opinion in Afro-Asian countries will not be favorable to our interests. The Cairo conference is expected to pass a resolution denouncing the pact as endangering the independence of Arab countries, not to mention a spate of resolutions generally anti-Western and pro-Soviet in tone.

The effect of the Dulles trip on some of our Western friends also will be considerable. They do not much like the heavy military accent of American aid policy, which they think emphasized American reluctance to seek middle ground with the Soviet Union. Part of Mr. Dulles' foreign policy was quietly but unmistakably reversed at the recent NATO meeting in Paris. Now the Dulles trip will appear to be a resumption of his former activities and purposes. At least it will be read as demonstrating that he has not undergone any change of heart or thinking as the result of his Paris experience.

Actually the Dulles visit is not being undertaken to advertise or strengthen the military side of the Baghdad Pact. The suggestion is being made that the United States may now join the pact formally, and that Mr. Dulles would not incur so much disfavor if he did not have this important step in mind. But it can be said on competent authority that no such step is contemplated at this time. The reason for the trip is that the pact members are suffering from a feeling of neglect, and all Mr. Dulles means to do is to pay them some attention. He decided to do it before going to Paris and long before the Cairo meeting got under way.

Probably the worst result of the trip is that it will seem to support the case being made against the United States by speakers at the Afro-Asian conference. This meeting has turned out to be a Soviet field day. Indeed the Soviet success has been so sweeping as to set up a small reaction in favor of truth and sobriety. Some of the resolutions condemning the West have even been moderated at the insistence of Egyptian and Indian leaders. The Egyptians had one resolution dropped altogether which denounced the United States for alleged atrocities in South Korea. Egyptians and Indians joined in modifying a resolution that would have held the United States responsible for racial discrimination. The Indian representative argued that the United States government has taken action against such discrimination, and if any government is to be named it would have to be South Africa.

However, the conference did adopt a Soviet proposal for a holiday in nuclear testing to start at once while efforts are made to work out an agreement on halting the manufacture of nuclear weapons. Again it is shown how inadequately the western disarmament proposals have been dramatized and publicized. For it is the United States who pressed to have the manufacture of nuclear weapons stopped forthwith, under adequate international inspection, and offered to suspend tests as soon as the Soviet Union agreed to it.

The Cairo conference is notunimportant, but it should not count as the authentic voice of the Afro-Asian countries unofficially attending. President Nasser encouraged the calling of the unofficial meeting, hoping it would lead to a second formal meeting of the governments represented at Bandung. It appears that he has ambitions to take Prime Minister Nehru's place as leader of the Afro-Asian world. But one thing Nasser did not want was to have the Soviet Union capture the conference, either outright or behind the scenes. Both he and Nehru are neutralists, but they believe that neutralism can be genuine, and not a clock for communist inspiration and control.

The Kremlin has not used the soft pedal at Cairo. It has been promising unlimited aid, with money at nominal interest rates, and it makes sure that everyone knows it will deliver arms at the drop of a hat. The reaction that has set in against Soviet dominance shows that some leaders in Africa and Asia are by no means ready to move, lock-stock-and-barrel, into the Soviet camp. But if the West stands to gain anything in these countries, it will not by by such moves as Mr. Dulles' attendance at the Baghdad pact meeting. Indeed, it looks as though our best hope is that the Kremlin presses its advantage too hard and too clumsily.

This is Ed Murrow. I'll be back in a moment with the word for today. Now, here is George Bryan.

TELEVISION AND POLITICS

by Edward R. Murrow

You have done me much honor by inviting me here tonight, and "Beggar that I am, I am even poor in thanks." The wounded walls of this venerable building retain the echoes of words that have lifted men's hearts and inspired them to a sense of duty, and to deeds which will live in men's minds so long as the English language endures.

To stand here is a frightening experience for one who is accustomed to face only a camera or a microphone, for there is no case upon the record of either of those instruments yawning, falling asleep, or discoursing with its neighbor. You are a captive audience. We are met in a city where this reporter left all of his youth and much of his heart.

I am to try to talk to you about television and politics. Both professions involve curious contradictions, and when combined represent a dangerous mixture. Being without substantial credentials in either area, being without political affiliation or technical skill - knowing only that the long waves are short and the short waves are long - I take refuge in a remark of my fellow-countryman who said: "It is better to know less than to know so much that ain't so". So much that we think we know about both television and politics ain't so. My own attitude towards politicians has ranged from sympathy to affection, although as a political reporter I have found the late Vice President Barkley's advice to be sound. He counselled: "A political reporter must be agin everybody, some".

Your political storm has passed - ours is approaching; no doubt the results will not be as bad as they seem. For we both believe in progress by persuasion,

and we both believe with Dean Inge that even though counting heads is not an ideal way to govern, at least it is better than breaking them.

I must speak primarily of politics and television in terms of my own country, hoping that I am sufficiently far from home to pose as an expert.

But duty demands that I first deliver a message from my grandfather. He was an officer on Stonewall Jackson's staff during our Civil War. In my youth, he was a venerable, bearded old gentleman, many times wounded and entirely unreconstructed. It may be that he was not as venerable as he appeared to me, but as you will know from our recent history, we are more inclined to venerate, to attribute special qualities to old soldiers, than are you. My grandfather once said: "If you ever get to that England country, look carefully; they must be right stout people. Why, they tell me that during the war there was a place called Manchester where they wove cotton, and their young 'uns were hungry. And yet when we managed to get a smidgeon of cotton out through the northern blockade, they wouldn't weave it. Now," he said, "as I understand it, they weren't against us, they were just against slavery, and they let their young 'uns go hungry for a principle. They helped to whip us, no doubt about that. But they must be real stout folks." The old man's grandson had the high honor of seeing their grandchildren demonstrate that they were as stout and steady, as grim and gay as their ancestors. No one who lived among you during those days, when most men save Britons despaired of Britain's life, will ever be quite the same.

I remember driving in the country behind Dover in the late autumn of 1940, with Gerald Barry. All road signs had been removed. The Germans were expected on the beaches the first foggy morning. We were lost. Mr. Barry asked a farmer in a field for directions. The farmer asked, as he had been instructed to do by

the wireless, for our identity cards. We presented them, received clear and concise directions, and then thinking to have a little fun with the farmer, Mr. Barry said: "And where is your identity card?" The farmer laughed and said: "No fear, I know who I be." You all knew who you were, where you came from, and whither you were going. You didn't talk much about it, but to me it seemed you were engaged in the business of being worthy of your ancestors and digging new root-holds in freedom for your descendants.

Tonight we are to examine politics and television, and it must be done in the light of perpetual crisis. Having undertaken massive research on this subject, you will excuse me for not saying that the television camera has revolutionized politics, and that it is an all-seeing X-ray eye which will make it inevitable that the voter will sort out the charlatan from the statesman. Nor shall I remind you that in my country we have more television sets than bathtubs. For candor compels me to confess that I do not know what this fascinating statistic proves. Television has been variously described as the opiate of the people, a group of midgets in a black box, and the most powerful instrument of communication yet devised. It was to "revolutionize politics" but it hasn't. I do know of one Senator who was badly beaten in the last election who is entirely convinced that the major reason for his defeat was that he so far forgot himself as to correct his wife's pronunciation during a television program. He was inundated with furious letters from female viewers, and is persuaded that they voted him out of office. The moral of this story probably is that a penalty must be paid for correcting one's wife in front of a television camera or anywhere else.

There is also the case of a politician who ran for public office four times, always assisted by his wife. Three times he won; once he was defeated. In all

three victorious campaigns his wife was pregnant; the occasion when he went down to defeat, she wasn't. It would seem that no general law regarding television and politics can be formulated as a result of this experience.

Probably the single most effective use of television in politics occurred in my own country during the 1952 presidential campaign. General Eisenhower was the Republican nominee, having been selected after a bitter Convention battle over Senator Taft - not because he was better qualified but because leaders of the Republican Party thought he had a better chance of winning. Richard Nixon, a relatively obscure Senator from California, was the Vice Presidential candidate. The two men were campaigning in different parts of the country when it was disclosed that a group of California citizens had raised a special fund for Senator Nixon, and it amounted to approximately eighteen thousand dollars. This disclosure created a political storm equal to that produced in your country by the Zinoviev Letter. What came to be known as the "Nixon Fund" was to be used to pay for transportation, hotel expenses, telephone tolls, Christmas cards, advertising and general publicity. When the storm broke, excited politicians of both Parties took counsel. The Democrats demanded that the Republicans jettison Nixon as their candidate. Many Republican newspapers echoed the demand. Candidate Eisenhower echoed uncertainty. Many professional Republican politicans said privately that Nixon must go or the Party would be lost. Many personal friends and political cronies urged Nixon to resign for the good of the Party. Nixon and his advisors finally decided that he should make a nation-wide television explanation. The necessary arrangements were made, and the tension and suspense mounted. Would the Senator quit or try to ride out the storm? He hadn't made up his own mind until a few hours before air time. When he faced the cameras he talked from notes, made an explanation of the fund which probably would not entirely have satisfied a

Royal Commission, said he didn't think he ought to quit because he wasn't a quitter, and "incidentally" said Nixon, "Pat is not a quitter." At this point the camera panned around to show Mrs. Nixon's profile. "After all", said the Senator, "her name was Patricia Ryan and she was born on St. Patrick's Day, and you know the Irish never quit." Nixon admitted that he had received one gift after his election to the Senate. He spoke as follows: "It was a little cocker spaniel dog - black and white spotted - and our little girl Tricia, the six-year-old, named it Checkers. And you know, the kids love that dog, and I just want to say this right now, that regardless of what they say about it we're going to keep it." Checkers was not present in the studio.

As the clock ran out,the candidate for Vice President, with tears in his eyes and voice, was saying: "Wire and write to the Republican National Committee on whether you think I should stay or get off, and whatever their decision is, I will abide."

The result was sensational - telegrams, telephone calls, came pouring in; Eisenhower and Nixon staged a reunion, posed for pictures with arms around each other; and said Eisenhower to Nixon: "You're my boy!" No Hollywood writer would have dared write such a script, but it worked. Without question, Nixon was saved by television, although any fair-minded observer would probably have to give some of the credit to his wife, the Irish and to Checkers. Still the fact remains that the climate of opinion could not have been changed so quickly had television not been available to transmit throughout the country this amazing performance, which caused many to weep, and only a few to laugh.

Senator Joseph R. McCarthy, of Wisconsin, could not play upon the human emotions with the same skill as his friend, Richard Nixon. The trail that he left

on the face of my country will not soon fade, and there may be others who will try to follow in his footsteps. His weapon was fear. He was a politically unsophisticated man with a flair for publicity; and he was powerfully aided by the silence of timid men who feared to be the subject of his unfounded accusations. He polluted the channels of communication, and every radio and television network, every newspaper and magazine publisher who did not speak out against him, contributed to his evil work and must share part of the responsibility for what he did, not only to our fellow citizens but to our self-respect. He was in a real sense the creature of the mass media. They made him. They gave nation-wide circulation to his mouthings. They defended their actions on the grounds that what he said was news, when they knew he lied. His initial appearances on television were in the role of a man whose sole desire was to oust communists from government and all responsible positions. That was his announced objective. The overwhelming majority of people undoubtedly sympathized with him. It has been said repeatedly that television caused his downfall. This is not precisely true. His prolonged exposure during the so-called Army-McCarthy Hearings, certainly did something to diminish his stature. He became something of a bore. But his downfall really stemmed from the fact that he broke the rules of the club, the United States Senate, when he began attacking the integrity, the loyalty of fellow Senators, he was censured by that body, and was finished. The timidity of television in dealing with this man when he was spreading fear throughout the land, is not something to which this art of communication can ever point with pride, nor should it be allowed to forget it.

Being aware that I am in the presence of my masters in science, politics and television, it is my purpose to contend only that the development of television is potentially more important than the development of the zipper. This may be an

unreasonably optimistic view, for we may all remember that Rutherford, who first understood nuclear transmutations, held the view - regarded as reasonable at that time - that no practical use would be found on this minor planet for nuclear energy. In this perilous present we may discover that television and politics can be blended in such a way as to produce a more informed and enlightened electorate.

The politician in my country seeks votes, affection and respect, in that order. This is not unique or surprising. His is a trying profession, for the politician must spend an inordinate amount of time with bores. He has practically no mechanism to keep them at a distance. He is even less protected than the bus driver who at least has his "No Talking" sign, or the doctor with his stethoscope. The politician of necessity leads an isolated life, so far as his colleagues are concerned, because most of them are his rivals. Many of them are men of undoubted charm, ability and incredible energy, and yet too often they lack purpose or appetite for anything beyond their own careers. With few notable exceptions, they are simply men who want to be loved. They are, by and large, not specialists but general practitioners. They require supreme confidence in their own intelligence and ability. Few among them can make an objective appraisal of ability such as Andre Gide did when he was asked by a foreigner: "Who is France's greatest poet?" And he replied: "Victor Hugo, alas!"

As professionals, politicians are hard-working, not particularly dissolute. Some even prefer success to pleasure. But when it comes to television, the politician is severely handicapped. He is trained in the art of inexactitude. His words tend to be blunt or rounded, because if they have a cutting edge they may later return to wound him.

The politician has little time for contemplation or solitude. He fears to

step off the escalator, lest others pass him by. There have been a few exceptions. Prime Minister Nehru, who may be said to have been indoctrinated, contends that all politicians would be better off for a few years in jail. Ben Gurion may retire for a spell to his kibbutz in the Negev, confident that he will be recalled. Tiberius went away for seven years before reaching the pinnacle of his power. But today most politicians do not have time even to prepare those well-rehearsed improvisations that are so effective on television. They must choose between talking at length and precisely, and probably boring their audience; or talking briefly and misleading the audience. One United States Senator attempted to establish ground rules for political performances on television by introducing a bill that would have required all politicians who wore makeup or used visual aids of any kind (referred to in the trade as "idiot cards"), to make public announcement of the fact. This proposal did not become law.

In fact there are very few laws, either in politics or in television. And this is undoubtedly a good thing, otherwise elections would be decided by those who constantly burn candles on the altar of public opinion polls. Stimson Bullitt, in his little book, "What it means to be a politician", writes: "People often resent a politician for his failure to be both delicately responsive to public wishes, and a self-sustaining leader who leads. He disappoints them if he is not at once a thistledown on the breeze and a game fish that swims upstream. Hiram Gill was elected Mayor of Seattle on a "closed town" platform. He kept his promise and was dismissed from office at the next election. He ran again on an "open town" platform, was elected, kept this promise, and was again defeated. This confused Gill, who just wanted to be Mayor. Another attitude which makes for disappointed citizens and exasperated politicians, is people's dislike of a cocksure manner, and their concurrent wish that a politician be sure he knows the

answers, since they did not elect him to doubt and ponder. They want a humble Messiah. A politician also knows that many of his constituents wish him to perform the functions of his profession, yet be above politics, where President Eisenhower tried to be, and where they think President Lincoln was. There is a common wish that he be both subservient and dignified; that he run petty errands and run them as though he were descending Sinai with tablets of stone."

In a free society, politics essentially involve the resolution of conflict. It is part of television's duty to define, illuminate and illustrate the nature of the conflict - to supply the voter with the raw material upon which informed opinion may be based. Thucydides said: "We both alike know that into the discussion of human affairs the question of justice arises only where the pressure of necessity is equal; that the strong take what they can, and the weak grant what they must." The true function of television in politics is to operate a market place in which ideas may compete on an equal footing. It is true that the voter may elect to purchase the secondrate, shopworn or shoddy idea. He may mistake a mobile countenance for an agile mind. He may vote for Profile rather than for Principle. An unruly lock of hair may be more effective than a disciplined mind. There is no way to guarantee that television will prevent the voter from being as wrong as he has been so often in the past. Television offers no guarantee that demagogues can be kept from political power. It merely provides them with wider and more intimate, more immediate circulation. I would suggest that the evidence so far indicates that television can retard or accelerate a trend in public opinion, but it cannot reverse it. The hope so fondly held by enthusiasts a few years ago, the hope that television would make certain that the voter would sort out the phony from the statesman, is not proved. I would doubt that under today's system of communication a Lincoln or a Jefferson could be nominated or elected. According

to all reports, Jefferson had a most abrasive voice, and did not suffer fools gladly. While being interviewed on some panel program he might have told a particularly obnoxious questioner just what he thought of him, and that, of course, would have been fatal. Mr. Lincoln did not move gracefully, was not a handsome man, had a wife who was no political asset, and he was a solitary man. In our present society, he probably would have been examined at an early age by a psychiatrist, received an unfavorable report, have been told his attitude toward "togetherness" was altogether wrong, and advised to enter a trade school if he could gain admittance. On the other hand, it is conceivable that Woodrow Wilson might have won his fight for the League of Nations, and thereby changed world history, had he been able to use the tools of television and radio. He was a rather pedantic persuader, and these instruments wouldn't have changed him, but they would have given his ideas wider circulation; and the efforts of those who attempted to distort those ideas, might have had less success. It is part of the brief history of television that circulation is directly related to controversy.

But it is well to bear in mind that no large section of the public demands more information or a better presentation of it. Public affairs is a form of specialization. It is <u>not</u> recreation. The public as such does not feel the call to specialize, even in its own good. On the whole, it is unenterprising - it wants its fun. By the time most people turn on the television set, the work of the day is over. There is a welcome break in drudgery. Most people, after working hours, prefer to be called away from reality, not made to face it. There is a limit upon the attention the public is willing to devote to politics. This would be true even if television fulfilled its functions to the utmost. Television by itself does not usher in the democratic millenium, and its inability to do so is not its own peculiar failure. It is due to the unwillingness of men and women, even in the

highly developed democracies of Britain and the United States, to take more trouble to govern themselves better.

Both radio and television started as novelties, not as sociological or political devices. Their social importance was not at first imagined. They cost a great deal of money to develop. The pioneers in what Americans call "the industry" were businessmen and financiers, not scholars, statesmen or politicians. They still do not put public service first, for the simple reason that in my country it must pay its way. Business success has to come first.

In a competitive society, political broadcasts must compete. Generally they don't. For example, when Secretary of State Herter returned from the Geneva Conference of Foreign Ministers - a conference which had dominated the headlines and news reports for many weeks - he made a fifteen-minute report to the nation on television. It was delivered at 9 o'clock at night, was broadcast by two of the three television networks. It secured a total audience of approximately thirteen million. At the same time, the third network presented an assembly-line predictable Western, a thrilling distortion of our history called "Rifleman". According to the measurement, slightly more than twenty-two million people viewed this contribution to escapism.

In 1957, President Eisenhower and Secretary of State Dulles delivered a half-hour report on the Summit Conference. They did a little better than Secretary of State Herter. They were competing with a bunch of "good guys" and "bad guys" in a Western epic called "Wells Fargo". The gun slingers had almost precisely the same audience as the word slingers.

In 1958, President Eisenhower spoke solo for half-an-hour to a Republican gathering. A non-politico on another network - fellow named Bat Masterson, who

wears a bowler hat and goes about bashing people over the head with a gold-headed cane, was viewed by more than twice the number of people who watched the President. And on the third network, a personable young singer named Patti Page atrracted the attention of a few million more citizens than the President.

During the 1956 Presidential campaign, the average audience for all night-time political programs was roughly sixty percent below the average audience for regular entertainment programs.

As you know, we Americans have a great fondness for facts and figures, the kind of research that involves knowing more and more about less and less. During our last presidential campaign, both major Parties began to buy the last five minutes of a popular entertainment program. They were sort of hitch-hiking with their political message at the end of a popular program. It worked pretty well, too. But this produced trouble for the entertainment program immediately following; for it seems that about fifteen percent of the people went away during that five-minute period, and they didn't come back for the following program. This was bad - bad for the networks and for the sponsor of the following show.

There isn't much evidence that the advent of television has altered traditional voting habits. In certain areas there was no television during the 1952 campaign. By 1956 the magic box had arrived, but it produced no significant change in the traditional pattern of voting.

The television viewer is not fascinated by political orations. This may be due in part to the absence of meaningful controversy. The voter isn't interested. One of our most distinguished jurists - Judge Learned Hand - has remarked: "Doubtless things might become uncomfortable enough to arouse them, but, given

reasonable opportunity for personal favors, and not too irksome control, they are content to abdicate their sovereignty and to be fleeced, if the shepherds will only shear them in their sleep."

It may be that television magnifies all the facets of personality, the defects along with the merits. This ability of television to magnify the components of personality is not necessarily pure gain. A man's weaknesses may be brought to light, which is all to the good. But that is not all that happens, because a public leader in the age of television must be popular as well as sincere. He must have a quality not considered essential in the past, that is, simplicity. A politician to be popular must not be too complicated. He must not appear to be too subtle. He must be accessible, must be able to avoid the difficult question without appearing to do so.

We may have an illustration of this in the two races between Eisenhower and Stevenson for the presidency. Both men televised well; both had the necessary modicum of histrionics. But Eisenhower was simple, while Stevenson was considerably less so. Stevenson was more deft, had greater command of language and overtone, and had much more humor. But Stevenson just plain didn't like television. He resented the tyranny of the clock, the bright lights, the makeup, everything about it; and it showed.

Eisenhower may not be at all the characteristic leader in the age of modern communications, but he proved to be much easier for the public to be sure about. There was no doubt about his personality. He was a friendly, good, kind, paternal, successful General who stood above familiar political considerations, and could be trusted because he was not complicated. Eisenhower conveyed the impression that he would like to step out of the receiving set and, in the American vernacular,

"press the flesh" - shake hands - slap the viewer on the back and say: "We're just ordinary guys but together we can get the job done."

Stevenson, on the other hand, gave the impression that things were pretty complicated and would require some hard thinking and difficult decisions.

I am not saying that Stevenson would have won if there had been no modern communication. But his gifts of oratory and political analysis, his ability to improvise sentences that would parse, his mastery of debate and the wealth of his ideas would have counted more in earlier times. Such gifts, I suspect, count more in newsprint and radio than they do on the television screen.

Simplicity communicates itself more easily than complexity in persons: and it also does when it comes to issues. And this is part of the change brought about by television. This is by no means a boon. It surely is essential to have abstruse and complex ideas simplified, so that many can understand them. But we live in an age in which intelligence may not be able to simplify truthfully. The frontiers of knowledge have been pushed back, and the more that comes to be known, the less is understood, or perhaps I should say completely understood, even by the wisest. And since politics and television, more than ever before, have to take account of much of this abstruse and complicated knowledge, the art of self-government is not going to be perfected by the process of simplification alone. Indeed, looking ahead to the time when human destinies are to be determined by the uses or abuses of new sources of almost unlimited physical power, one may well ask if democracy will be able to develop the competence to deal with these complexities. If so, it must be through a broadening of education and a use of communications not yet realized, or perhaps even conceived.

I would suggest that the art of government in the near future, if it is to

improve or indeed survive, must develop along one of two approaches: either through a society in which politics - the whole art of governing - is left exclusively to the wise, or through an intellectually improved democracy. A society of the wise does not need television. Democracy, I suggest, cannot do its work well without it.

Supposing that freedom is more important than safety, then the tyranny of the wise is only less objectionable than the tyranny of the unwise. The choice we face is between a despotism of the ruthlessly ambitious, not of the wise, and of an intelligent democracy. The function of television in either kind of state is sure to be of tremendous importance. But in a free society it might almost be called supreme.

In a totalitarian state the role of television will not be to teach or facilitate self-government. It must be the opposite. Its purpose must be to make the governed content not to govern themselves. It will be to distract, and indeed to entertain. I suggest that what we are now asking from television is precisely what the totalitarian dictators will order when their countries have as many television sets per capita as we have. For people whose standard of living is rising, and who do not feel that their poverty is a sacrifice they are paying for the future, will need to be distracted if they are to be ruled by a despot.

It is surely ironic that we in the United States and Britain who ask for so much entertainment from television - so much escapism - so much insulation from harsh reality - are not having such programs imposed upon us by tyrants. We have been making the choice freely. But we have made it without any awareness of the nature, intensity and inevitability of the contest between the democracies and totalitarianism. We have reached our present prosperity and seeming security

without taking much heed. But now our societies must take on a new and more conscious development, and television must rise to a more constructive task. We must rid ourselves of our allergy to unpleasant and disturbing information.

I have acknowledged the natural limits to the performance of this task. I have admitted that television of itself cannot usher in the Utopia of freedom. I have ventured to suggest that the great drag on the growth of democracy is that people do not care to specialize in self-government, even if they know vaguely that the science of government never was as difficult as it is growing to be. Television is a tool that is not being used to finish the job of Education.

It is the duty of the politician to see to it that the controls imposed on television do not prevent it from being a medium where ideas may compete for the allegiance of the viewer. And it is the duty of those who control television to use it as a sound mirror to reflect conditions as they are. If what is reflected on the end of that tube is bigotry, poverty, discrimination or prejudice, that is good and wholesome so long as the picture be true. Where there is controversy it must be reflected. We have no alternative system so long as we are dedicated to the proposition that the voter in the polling booth is sovereign.

Television must find a little time to remind us of our inheritance, and it must find more than a little time for the dissenters, the heretics, the minority spokesmen who may be tomorrow's majority.

The editing of informational film for television presents problems that are without precedent. It is only a slight exaggeration to say that you may read verbatim text of what a man has said, but you do not understand what he means unless you see him say it. It is impossible to edit from text alone. A demonstration of how the spoken word plus picture can be misunderstood when reduced

to cold print, occurred in connection with a recent interview with Field Marshal Montgomery of Alamein. It was presented in my country as a conversation lasting an hour. The Field Marshal was blunt, unequivocal and most amiable. He was less than enchanted by certain aspects of American foreign and military policy. He indicated that some of our leaders had been, and were, fallible. He thought it important that if war should come again to Europe, American blood should be shed on the first day. And he said, to the accompaniment of laughter by all participating in the program, that he had promised his Continental friends that if necessary he, the Field Marshal, would shoot one himself. Now the British Press, working only from the text of the interview, broke out in a rash of headlines to the effect that, "Monty has done it again!", "Americans Outraged by Montgomery Attack"; in general this savage blow at Anglo-American amity was deplored. The fact was that, judged by all normal standards of measurement, the Americans loved it. There were a couple of critical editorials, but they appeared in papers that would denounce the arrival of manna, if it were stamped "Made in Britain".

As a result of this program I saw exactly three critical communications from viewers - many requests for a repeat performance, or for "More of Montgomery".

I do not blame my friends in Fleet Street for their treatment of this incident. After all, they were working from text and had not seen and heard the Field Marshal say these things which they were sure would outrage the Americans. It illustrates one of the differences between print and television. What is said is important, but how it's said may be equally important. And it may be said hopefully that perhaps this reaction on the part of my fellow-countrymen reflects a developing maturity. And it should be added that those who were distressed about what they regarded as the Field Marshal's indiscretions should see and hear some of his comments on the American scene, for which we did not have time! We

are saving those for a subsequent report, and I venture to predict that the alliance will survive the shock. After all, the Field Marshal didn't say very much that couldn't be turned up by a careful reading of the British Press. He just said it a little more bluntly, and looked the Americans squarely in the eye and smiled when he said it.

The ability to smile and to wait is just about the indispensable asset in interviewing a soldier or a politician, if the interview is being filmed. If you put a direct question, the interviewee will answer it as he has probably answered that same question dozens of times before. Then begins the waiting game. He thinks he has given you the definitive answer. You manage a slightly uncomprehending, puzzled expression, and you can watch his mind work. He hears that compulsive whirr of the camera in the background, and he says to himself (and I've known one or two to say it out loud to the interviewer): "You stupid oaf, if you didn't comprehend that, I'll put it in language you can understand", and proceeds to do so. Then, in the course of editing, you throw out the first answer and use the second one. And, as Mark Twain would have said: "That's about all, or maybe more than I know about conducting an interview."

I trust that you will not regard it as a violation of your hospitality if I venture a few personal comments upon your recent rather demure General Election. It would be a churlish visitor indeed, who failed to remark the technical excellence displayed by the entire television fraternity. This was particularly true in the presentation of the results.

I have heard none of your fellow-countrymen complain that television failed to report the campaign adequately and fairly. It should be possible to draw some profound conclusions as to the influence of television upon this General Election.

But that must be left to a bolder and wiser man. That the issues were aired cannot be doubted. The restraint of all partisans was remarkable. I would doubt that smoother production, better camera work, tighter editing in the Party political broadcasts would have altered the results substantially. It seems to me at least possible that television in this election did the one thing that it does superbly well. It aroused curiosity and excited interest; and that may be one reason why political meetings were so well attended. The voters may have seen the candidates on television, but they still retain the belief that if they see them in person they may be able to tell what they are really like.

I have somewhat the feeling that in both our countries the politicians are unduly fascinated by the mechanics of this new method of communication - a little too inclined to make political television a competition between film cutters and producers, rather than a competition of ideas and convictions. There is, I suggest, no substitute for the man who has at least a mild fire in his belly, and is able to pierce that screen with his own conviction. Also, there is no substitute for brevity; for brevity is good, both when we are and are not understood. For example, speaking strictly in terms of communication and not politics, I would have thought that the ten-minute talk by Jo Grimmond was as effective as anything presented during the recent campaign. That effort had none of the technical competence of the Labour Party broadcasts. He did not appear to be speaking down to us from Cloud 7, while moving from an almost unseen globe of the world to the casual leaning position on the lectern, as did Prime Minister Macmillan at his final effort at persuasion.

Of one thing I am sure. In the area of political television, we are all ignorant. We need to know much more than we do. In my own country we know a great deal about what will sell goods and services. We have spent vast sums on

research. And similar efforts have been made in this country. But we do not know enough, we have not been sufficiently interested, to try to determine what sells ideas. You can sell goods by repetition; there is some evidence that you can even sell them through irritation. But we don't know with any degree of accuracy how we sell or convey ideas. We ought to try to find out. My own conviction is that there is no substitute, no technique, no use of film that can replace the individual who has conviction, and who can in some mysterious manner convey that conviction to the viewer. May I try to illustrate this with an example that has nothing to do with politics? We once undertook a program on the peacetime uses of nuclear energy. We filmed eighteen hundred coal cars in a marshalling yard. We then filmed a simulated block of enriched uranium on a desk alongside an office typewriter. That represented the equivalent in fission fuel to the eighteen hundred coal cars filled with fossil fuel. We thought we were using this instrument of television in a most effective fashion. But immediately after this sequence, we did a ten-minute interview with Admiral Hyman Rickover. Now our unscientific survey indicated that most of our viewers had not seen, or at least had not remembered this unique contribution to visual communication. But they did remember Admiral Rickover and what he said. There is, I suspect, no substitute, even in television, for people.

Even in this age of bigness, where small farms are being taken over by bigger farms, where small businesses are being taken over by bigger ones, the individual remains the primary means of communication between the politician and the viewer. In political television, this represents a danger, particularly in a parliamentary system. It may mean that the Party leaders become more important symbols than the local candidate. The viewer is exposed, of necessity, more frequently to the national leader than to the local candidate. I do not know the results of Granada's "Operation Marathon", but anyone deeply concerned with the relationship between

television and the continuation of democratic processes must applaud the effort to prevent political television from becoming too big - from concentrating too much on the national political figures.

The politician who uses television should beware of booby traps, for a record is made of what he says. This is more dangerous than the writing of a book. For on a subsequent occasion, his utterances or his promises may return to bite him. If during a subsequent campaign his extravagant language is quoted in print or on radio, he may cry "foul", or "I have been misquoted", or "the statement was torn from context". But if he can be shown on film or a kinescope, no question remains as to what he said, where and when. If I were a politician concerned about future campaigns, I should collect and hoard the utterances of my opponent, in the hope that upon a subsequent occasion I might be able to convict him of false promises, double-dealing, insincerity, out of his own mouth, supported by his own picture, while saying these despicable and dishonorable things.

Perhaps the most important thing to be said about television and politics is that the politicians, whoever they are, should not be permitted to control television. Let them use it; let them be as persuasive as they may be. But do not permit them to use this instrument to prevent today's minority from becoming tomorrow's majority.

There is a tendency to believe that television becomes meaningful in relation to politics only when a General Election is imminent or in progress. This of course is not true. It is, or it should be, the business of television to provide in picture and sound the exposure of what is happening day by day and week by week in order that the voter may in due course make up his mind as to the Party which will produce in fact a picture of his country which is more pleasing and more satisfying to him.

The relationship between television and the politician should be at arm's length; the eye of the camera should pursue the politician to the very limits of privacy and decency. When the politicians complain, as they have in several countries, that television turns their proceedings into a circus, it should be made clear that the circus was already there, and that television has merely demonstrated that not all the performers are well trained. In short, the politicians ought to leave television alone, but never at any time should television leave the politician alone, except when he seeks refuge in his home, or when he becomes so boring as to drive viewers back to radio or a good book.

I would suppose that the important thing for politicians and others who use television to remember is that the fact that voice and picture can be transmitted from one end of the country to the other does not confer upon the speaker greater wisdom, perception or effectiveness than was the case when his voice reached only from one end of the street to the other. This new instrument only gives wider circulation to the cry of "Hope!" or "Havoc!" It doesn't make either more imminent or more believable.

The informative program can compete successfully for the listener's attention, but it must be good and it must be fair, and it must be fearless. Television won't save us, and probably it won't destroy us, but we should be mindful of Bernard Shaw's counsel: "We must get what we want, or we will come to want what we get."

It is a limited medium; it can amuse, entertain, and it can sell goods. It can also arouse curiosity, stimulate interest, cause the viewer to read and argue. It can stretch the horizon of his interest. But it can't reason - and is no substitute for reading.

In ancient times, cartographers were wont to label unknown or unexplored areas

of the map with the legend, "Here be dragons". In both television and politics, this Anglo-American partnership ought to go searching for dragons. We are both disposed to sit at home juggling our prejudices while we think we are thinking, sending out an occasional missionary to preach to the already converted. It is true that our political systems and our television systems differ. Your politicians are liable to answer a particularly outrageous or libellous statement from their opponents by saying: "You may be right", or "There may be something in what you say". Whereas our politicians would be content merely to label his opponent as the lineal descendant of thieves and traitors. Some of the exchanges between our two countries resemble the First Mate who wrote in the ship's log: "The Captain was drunk today." Whereupon the Captain made the entry: "The First Mate was sober today."

We need to argue more. This alliance is not a fragile thing likely to collapse if our differences are exposed. We ought to use television to explore the areas where the dragons live. We are both so preoccupied with the Russian menace that we forget our own potential. After all, freedom of expression is one of the hallmarks of our societies. By exercising it we lose only our prejudice and our ignorance.

In the field of television we have a few items for export that may be superior in quality to "Wagon Train", "Wells Fargo" or "I Love Lucy". And certainly the American viewer is isolated from the best product of British television. Something should be done about it, and the doing would not be difficult.

It would be cruel and inhumane to require our fellow citizens to read both Hansard and the Congressional Record. This would most certainly undermine faith in the alliance, cause lawyers to laugh and philosophers to weep. But there is no reason why we could not establish a weekly session of what might be called a

"Mid-Atlantic Parliament" by way of television. The dragons might object, but I foresee no opposition from other sources save the timid and those who fear the truth. Why not a weekly conversation piece between a Member of Parliament and a Senator or Representative? An old-fashioned argument, using this newfangled instrument. If you are offended, as you were when we tried to stop you flying a commercial airline across the Pacific, or when we refused to accept a low British bid for a hydro-electric plant, let's argue it out. Likewise, when you are reluctant to have American intermediate range missiles on British soil, or are somewhat less than enthusiastic about American bombers flying about over your heads with a bellyfull of nuclear weapons, let's argue about that. There would be no shortage of controversy - controversy makes good television. It wouldn't be very expensive. Certainly, there is no shortage of politicians, and we might just possibly learn something. The right to disagree, indeed to revile each other in public, is one of the many things that makes us different from totalitarian states. The option needs to be exercised.

There are, it is true, subtle differences in the debating techniques employed in the House of Commons and in Congress, but the language has not diverged to the point where we fail to understand each other's insults, and it is some time since honorable gentlemen wore swords or members of Congress carried pistols.

I think it was von Clausewitz who said that in war the first duty was to recognize one's enemy. Surely in peacetime the first duty is to recognize one's friends. And the second duty is to argue with them in complete candor. I am told that the width of the carpet dividing the House of Commons was determined by the length of two rapiers, in order that Honorable Members might not puncture each other in the heat of debate. If we use this electronic instrument properly, the

Atlantic Ocean need be no wider than that carpet in the House of Commons.

This is not to suggest that politics should represent the only television traffic between our two countries. This instrument, if properly used, can be made to transport our fellow-citizens across the Atlantic faster than the most modern Jet. It can make us acquainted. It can cross-fertilize our cultures and it can strengthen our common heritage. Neither our broadcasters nor our politicians are doing their best, while the Russians are doing their worst. If this alliance of ours flinches or falters - it will be because we have failed to communicate with each other. Our policies may from time to time reflect fear, but our purpose is as clear in the perilous present as it was to all of you in the days when this island stood for a whole year - the one Fortress of Freedom, ready, waiting, and indeed eager to defend the faith.

The common purpose is clear - we desire and are determined to live in the same kind of world. We argue about methods and tactics, not about objectives. Television and Radio can and should reflect those arguments - should record our accomplishments and frustrations, our common hopes and fears. To speak our minds, whether face to face or at a distance through electronic devices, is part of our heritage. May it continue to be our habit.

EDWARD R. MURROW WITH THE NEWS (CHARLES COLLINGWOOD SUBSTITUTING)

July 21, 1955
7:45 - 8:00 P. M.

COLLINGWOOD: Good evening. The Big Four at Geneva took up the problem of disarmament today and President Eisenhower injected a dramatic proposal into the discussions. He suggested that the United States and Russia turn over to each other a complete blueprint of their military establishments and provide full facilities for aerial reconnaissances and photography of anything the other side wanted to check on. For a report on the President's proposal and its reception, here is a recorded report from CBS NEWS correspondent BLAIR CLARK in Geneva.

CLARK: A conference which many thought was all over but the final communique came to new and dramatic life here this afternoon when President Eisenhower proposed his bilateral Russian-American arms inspection system. The idea of American observers flying over and photographing Russian arms installations and Russian observers checking our arms level - the same way, galvanized and intrigued this Big Four meeting. The President had begun his speech on disarmament with a general statement on the difficulity of arms inspection. "The scientists new weapons had made it harder. But, we were for disarmament," said the President. And, prepared to enter into what he called "A sound and reliable agreement making possible the reduction of armament." "General agreement without adequate inspection safeguards do not" he said, "brighten the prospects for peace. Scientific ways of checking on nuclear arms have so far not been made certain, but should controls, such as those proposed by the French, have not yet shown themselves adequate." Then, came the President's proposition, addressed to the Russians. "I have been searching my heart and mind," he said, "for something that I could say here

that could convince everyone of the great sincerity of the United States in approaching the problem of disarmament." Very quickly, he said, "the United States and the Russians should take a practical step - make an arrangement between themselves - immediately. We should," he said, " "exchange blueprints of our military establishments - from one end of our country to the other. Next," as the President put it, "provide within our countries unrestricted facilities for aerial photography of the other country on a reciprocal basis. Aerial reconnaissances by the Russians in America and by the Americans in Russia." What he was proposing, Mr. Eisenhower said, was only the beginning of a comprohensive system of inspection and disarmament. With these words this Big Four conference came to light. The period of the contest of cordiality as a hope for an optimistic final communique was over. Something had happened!

The presence here of Admiral Radford and General Grunther was explained. After the President had spoken, the French Premier strongly praised the Eisenhower Plan, but boosted again his own budgetary transfer plan. Then, British Prime Minister Sir Anthony Eden spoke. He barely mentioned the Eisenhower suggestion and instead proposed what he called "A more modest plan for inspection of forces along both sides of the Iron Curtain." With the hope that it would spread out later on from its center.

The speculation here is that Eden thought the Russians would never accept the Eisenhower Plan and was offering something to fall back on. But When it was the Russians turn, Marshal Bulganin neither mentioned or answered the Eisenhower proposal, instead, he offered the already known Russian plan for agreed arms levels to be followed later by abolition of atomic weapons. The Foreign Ministers have been instructed to consider all four plans and try to reconcile them in a series of recommendations - a task calling for as much imagination as the Pfesident himself exhibited today.

Now, back to Charles Collingwood in New York.

COLLINGWOOD: That was Blair Clark in Geneva.

As the President finished his remarks, a fuse blew and the conference room was plunged in darkness. The President said with a grin, "I didn't expect to blow out the lights, but I have finished my remarks." The Russians joined in the laughter.

There are conflicting reports on the Russian reaction to President Eisenhower's proposal itself. White House News spokesman James Hagerty to whom Blair Clark had spoken, said the Russians listened but said nothing. But, a French spokesman quoted Soviet Premier Bulganin as saying "We have all been deeply moved by the very sincere decleration just made by President Eisenhower on what is probably the most important question before the conference." There was no other indication of Soviet reaction.

In Washington, Senate Democratic and Republican leaders apparently were informed in advance about the President's proposal and had already approved it before it was made in Geneva today, although they did not know at what point the plan would be put forward. Chairman George, of the Senate Foreign Relations committee made this clear. He commented that the proposal would be an acid test of sincerity. George went on to say, that "We certainly have nothing to lose from the military view point because we live in a fish bowl" explaining that matters in a free country cannot be kept secret. Although, Most congressional leaders praised the President's idea, they were not very optimistic that the Russians would accept it. Democratic Senate Leader Lyndon Johnson who is recovering in Bethesda Naval Hospital from a heart attack called the President's proposal "the daring imaginitive stroke for which a war-weary world has been waiting" and said "it will test the good faith of the Communists." Chairman Richards of the House Foreign Affairs committee called it a bold and daring move on the part of the President, but said,

he thought"there's as much chance for a snowball in hell as there is for the Russians to say yes."

In other news. Greece has decided to appeal to the United Nations on the Cyprus issue.

PT/n.m.
